PREFACE TO REVISED AND ENLARGED EDITION, 1901.

FOR the present enlarged edition of this work the original five volumes, published in 1894-5, have undergone a thorough revision. Some subjects not treated before have been introduced, and the treatment of some others has been amplified; while matter which appeared as a Supplement in the earlier editions is now given its alphabetical and chronological place in the main body of the work. The records and narratives in those volumes end at the time of their first publication—1894-5. In the new volume now added they are carried on through the six eventful years which have since gone by, and close soon after the closing of the century. So far as practicable, the material used in this later volume is drawn from official sources, — from statements of fact that are made with official responsibility, in despatches, reports, diplomatic correspondence, and other state papers, published with governmental sanction. Important documents connected with the greater events of the time, such as treaties, international agreements, new constitutions of government, and other legislative acts, are given generally in full, from officially printed texts. The aim, in fact, has been to prepare for students and inquirers a compilation of recent history as nearly authentic in its sources as can be gathered thus immediately after the events, and to organize it for “ready reference” in the form that has had approval in the older work.

PREFACE TO THE ORIGINAL EDITION.

THIS work has two aims : to represent and exhibit the better Literature of History in the English language, and to give it an organized body — a system — adapted to the greatest convenience in any use, whether for reference, or for reading, for teacher, student, or casual inquirer.

The entire contents of the work, with slight exceptions readily distinguished, have been carefully culled from some thousands of books,—embracing the whole range (in the English language) of standard historical writing, both general and special : the biography, the institutional and constitutional studies, the social investigations, the archeological researches, the ecclesiastical and religious discussions, and all other important tributaries to the great and swelling main stream of historical knowledge. It has been culled as one might pick choice fruits, careful to choose the perfect and the ripe, where such are found, and careful to keep their flavor unimpaired. The flavor of the Literature of History, in its best examples, and the ripe quality of its latest and best thought, are faithfully preserved in what aims to be the garner of a fair selection from its fruits.

History as written by those, on one hand, who have depicted its scenes most vividly, and by those, on the other hand, who have searched its facts, weighed its evidences, and pondered its meanings most critically and deeply, is given in their own words. If commoner narratives are sometimes quoted, their use enters but slightly into the construction of the work. The whole matter is presented under an arrangement which imparts distinctness to its topics, while showing them in their sequence and in all their large relations, both national and international.

For every subject, a history more complete, I think, in the broad meaning of "History," is supplied by this mode than could possibly be produced on the plan of dry synopsis which is common to encyclopedic works. It holds the charm and interest of many styles of excellence in writing, and it is read in a clear light which shines directly from the pens that have made History luminous by their interpretations.

Behind the Literature of History, which can be called so in the finer sense, lies a great body of the Documents of History, which are unattractive to the casual reader, but which even he must sometimes have an urgent wish to consult. Full and carefully chosen texts of a large number of the most famous and important of such documents — charters, edicts, proclamations, petitions, covenants, legislative acts and ordinances, and the constitutions of

many countries — have been accordingly introduced and are easily to be found.

The arrangement of matter in the work is primarily alphabetical, and secondarily chronological. The whole is thoroughly indexed, and the index is incorporated with the body of the text, in the same alphabetical and chronological order.

Events which touch several countries or places are treated fully but once, in the connection which shows their antecedents and consequences best, and the reader is guided to that ampler discussion by references from each caption under which it may be sought. Economies of this character bring into the compass of five volumes a body of History that would need twice the number, at least, for equal fulness on the monographic plan of encyclopedic works.

Of my own, the only original writing introduced is in a general sketch of the history of *Europe*, and in what I have called the "*Logical Outlines*" of a number of national histories, which are printed in colors to distinguish the influences that have been dominant in them. But the extensive borrowing which the work represents has not been done in an unlicensed way. I have felt warranted, by common custom, in using moderate extracts without permit. But for everything beyond these, in my selections from books now in print and on sale, whether under copyright or deprived of copyright, I have sought the consent of those, authors or publishers, or both, to whom the right of consent or denial appears to belong. In nearly all cases I have received the most generous and friendly responses to my request, and count among my valued possessions the great volume of kindly letters of permission which have come to me from authors and publishers in Great Britain and America. A more specific acknowledgment of these favors will be appended to this preface.

The authors of books have other rights beyond their rights of property, to which respect has been paid. No liberties have been taken with the text of their writings, except to abridge by omissions, which are indicated by the customary signs. Occasional interpolations are marked by enclosure in brackets. Abridgment by paraphrasing has only been resorted to when unavoidable, and is shown by the interruption of quotation marks. In the matter of different spellings, it has been more difficult to preserve for each writer his own. As a rule this is done, in names, and in the divergences between English and American orthography; but, since much of the matter quoted has been taken from American editions of English books, and since both copyists and printers have worked under the habit of American spellings, the rule may not have governed with strict consistency throughout.

ACKNOWLEDGMENTS.

IN MY preface I have acknowledged in general terms the courtesy and liberality of authors and publishers, by whose permission I have used much of the matter quoted in this work. I think it now proper to make the acknowledgment more specific by naming those persons and publishing houses to whom I am in debt for such kind permissions. They are as follows:

AUTHORS.

Evelyn Abbott, M. A.; President Charles Kendall Adams; Prof. Herbert B. Adams; Prof. Joseph H. Allen; Sir William Anson, Bart.; Rev. Henry M. Baird; Mr. Hubert Howe Bancroft; Hon. S. G. W. Benjamin; Sir Walter Besant; Prof. Albert S. Bolles; John G. Bourinot, F. S. S.; Henry Bradley, M. A.; Rev. James Franck Bright, D. D.; Daniel G. Brinton, M. D.; Prof. William Hand Browne; Prof. George Bryce; Rt. Hon. James Bryce, M. P.; Prof. J. B. Bury; Mr. Lucien Carr; Gen. Henry B. Carrington; Mr. John D. Champlin, Jr.; Mr. Charles Carleton Coffin; Hon. Thomas M. Cooley; Prof. Henry Coppée; Rev. Sir George W. Cox, Bart.; Gen. Jacob Dolson Cox; Mrs. Cox (for "Three Decades of Federal Legislation," by the late Hon. Samuel S. Cox); Prof. Thomas F. Crane; Rt. Rev. Mandell Creighton, Bishop of Peterborough; Hon. J. L. M. Curry; Hon. George Ticknor Curtis; Prof. Robert K. Douglas; J. A. Doyle, M. A.; Mr. Samuel Adams Drake; Sir Mountstuart E. Grant-Duff; Hon. Sir Charles Gavan Duffy; Mr. Charles Henry Eden; Mr. Henry Sutherland Edwards; Orrin Leslie Elliott, Ph. D.; Mr. Loyall Farragut; The Ven. Frederic William Farrar, Archdeacon of Westminster; Prof. George Park Fisher; Prof. John Fiske; Mr. Wm. E. Foster; William Warde Fowler, M. A.; Prof. Edward A. Freeman; Prof. James Anthony Froude; Mr. James Gairdner; Arthur Gilman, M. A.; Mr. Parke Godwin; Mrs. M. E. Gordon (for the "History of the Campaigns of the Army of Va. under Gen. Pope," by the late Gen. George H. Gordon); Rev. Sabine Baring-Gould; Mr. Ulysses S. Grant, Jr. (for the "Personal Memoirs" of the late Gen. Grant); Mrs. John Richard Green (for her own writings and for those of the late John Richard Green); William Greswell, M. B.; Maj. Arthur Griffiths; Frederic Harrison, M. A.; Prof. Albert Bushnell Hart; Mr. William Heaton; Col. Thomas Wentworth Higginson; Prof. B. A. Hinsdale; Miss Margaret L. Hooper (for the writings of the late Mr. George Hooper); Rev. Robert F. Horton; Prof. James K. Hosmer; Col. Henry M. Hozier; Rev. William Hunt; Sir William Wilson Hunter; Prof. Edmund James; Mr. Rossiter Johnson; Mr. John Foster Kirk; The Very Rev. George William Kitchen, Dean of Winchester; Col. Thos. W. Knox; Mr. J. S. Landon; Hon. Emily Lawless; William E. H. Lecky, LL. D.; D. C. L.; Mrs. Margaret Levi (for the "History of British Commerce," by the late Dr. Leone Levi); Prof. Charlton T. Lewis; The Very Rev. Henry George Liddell, Dean of Christ Church, Oxford; Hon. Henry Cabot Lodge; Prof. Richard Lodge; Rev. W. J. Loftie; Mrs. Mary S. Long (for the "Life of General Robert E. Lee," by the late Gen. A. L. Long); Mrs. Helen Lossing (for the writings of the late Benson J. Lossing); Charles Lowe, M. A.; Charles P. Lucas, B. A.; Justin McCarthy, M. P.; Prof. John Bach McMaster; Hon. Edward McPherson; Prof. John P. Mahaffy; Capt. Alfred T. Mahan, U. S. N.; Col. George B. Malleson; Sir Clements R. Markham, F. R. S.; Prof. David Masson; The Very Rev. Charles Merivale, Dean of Ely; Prof. John Henry Middleton; Mr. J. G. Cotton Minchin; William R. Morfill, M. A.; Rt. Hon. John Morley, M. P.; Mr. John T. Morse, Jr.; Sir William Muir; Mr. Harold Murdock; Rev. Arthur Howard Noll; Miss Kate Norgate; C. W. C. Oman, M. A.; Mr. John C. Palfrey (for "History of New England," by the late John Gorham Palfrey); Francis Parkman, LL. D.; Edward James Payne, M. A.; Charles Henry Pearson, M. A.; Mr. James Breck Perkins; Mrs. Mary E. Phelan (for the "History of Tennessee," by the late James Phelan); Col. George E. Pond; Reginald L. Poole, Ph. D.; Mr. Stanley Laue-Poole; William F. Poole, LL. D.; Maj. John W. Powell; Mr. John W. Probyn; Prof. John Clark Ridpath; Hon. Ellis H. Roberts; Hon. Theodore Roosevelt; Mr. John Codman Ropes; J. H. Rose, M. A.; Prof. Josiah Royce; Rev. Philip Schaff; James Schouler, LL. D.; Hon. Carl Schurz; Mr. Eben Greenough Scott; Sir J. R. Seeley; Prof. Nathaniel Southgate Shaler; Mr. Edward Morse Shepard; Col. M. V. Sheridan (for the "Personal Memoirs" of the late Gen. Sheridan); Mr. P. T. Sherman (for the "Memoirs" of the late Gen. Sherman); Samuel Smiles, LL. D.; Prof. Goldwin Smith; Prof. James Russell Soley; Mr. Edward Stanwood; Leslie Stephen, M. A.; Prof. H. Morse Stephens; Mr. Simon Sterne; Charles J. Stillé, LL. D.; Sir John Strachey; Rt. Rev. William Stubbs, Bishop of Oxford; Prof. William Graham Sumner; Prof. Frank William Taussig; Mr. William Roscoe Thayer; Prof. Robert H. Thurston; Mr. Telemachus T. Timayenis; Henry D. Traill, D. C. L.; Gen. R. de Trobriand; Mr. Bayard Tuckerman; Samuel Epes Turner, Ph. D.; Prof. Herbert Tuttle; Prof. Arminius Vambéry; Mr. Henri Van Laun; Gen. Francis A. Walker; Sir D. Mackenzie Wallace; Spencer Walpole, LL. D.; Alexander Stewart Webb, LL. D.; Mr. J. Talboys Wheeler; Mr. Arthur Silva White; Sir Monier Monier-Williams; Justin Winsor, LL. D.; Rev. Frederick C. Woodhouse; John Yeats, LL. D.; Miss Charlotte M. Yonge.

Providence, R. I.: Messrs. J. A. & R. A. Reid.

A list of books quoted from will be given in the final volume.

I am greatly indebted to the remarkable kindness of a number of eminent historical scholars, who have critically examined the proof sheets of important articles and improved them by their suggestions. My debt to Miss Ellen M. Chandler, for assistance given me in many ways, is more than I can describe.

In my publishing arrangements I have been most fortunate, and I owe the good fortune very largely to a number of friends, among whom it is just that I should name Mr. Henry A. Richmond, Mr. George E. Matthews, and Mr. John G. Milburn. There is no feature of these arrangements so satisfactory to me as that which places the publication of my book in the hands of the Company of which Mr. Charles A. Nichols, of Springfield, Massachusetts, is the head.

I think myself fortunate, too, in the association of my work with that of Mr. Alan C. Reiley, from whose original studies and drawings the greater part of the historical maps in these volumes have been produced.

J. N. LARNED.

ABRAHAM, The Plains of. That part of the high plateau of Quebec on which the memorable victory of Wolfe was won, September 13, 1759. The plain was so called "from Abraham Martin, a pilot known as Maitre Abraham, who had owned a piece of land here in the early times of the colony."—F. Parkman, *Montcalm and Wolfe*, v. 2, p. 289.—For an account of the battle which gave distinction to the Plains of Abraham, see CANADA (NEW FRANCE): A. D. 1759, (JUNE—SEPTEMBER).

ABSENTEEISM IN IRELAND.—In Ireland, "the owners of about one-half the land do not live on or near their estates, while the owners of about one fourth do not live in the country. . . . Absenteeism is an old evil, and in very early times received attention from the government. . . . Some of the disadvantages to the community arising from the absence of the more wealthy and intelligent classes are apparent to every one. Unless the landlord is utterly poverty-stricken or very unenterprising, 'there is

a great deal more going on' when he is in the country. . . . I am convinced that absenteeism is a great disadvantage to the country and the people. . . . It is too much to attribute to it all the evils that have been set down to its charge. It is, however, an important consideration that the people regard it as a grievance; and think the twenty-five or thirty millions of dollars paid every year to these landlords, who are rarely or never in Ireland, is a tax grievous to be borne." — D. B. King, *The Irish Question*, pp. 5-11.

ABUL ABBAS, Caliph, A. D. 750-754.

ABUNA OF ABYSSINIA.—"Since the days of Frumentius [who introduced Christianity into Abyssinia in the 4th century] every orthodox Primate of Abyssinia has been consecrated by the Coptic Patriarch of the church of Alexandria, and has borne the title of Abuna"—or Abuna Salama, "Father of Peace."—H. M. Hozier, *The British Expedition to Abyssinia*, p. 4.

ABURY, OR AVEBURY.—STONEHENGE.—CARNAC.—"The numerous circles of stone or of earth in Britain and Ireland, varying in diameter from 30 or 40 feet up to 1,200, are to be viewed as temples standing in the closest possible relation to the burial-places of the dead. The most imposing group of remains of this kind in this country [England] is that of Avebury [Abury], near Devizes, in Wiltshire, referred by Sir John Lubbock to a late stage in the Neolithic or to the beginning of the bronze period. It consists of a large circle of unworked upright stones 1,200 feet in diameter, surrounded by a fosse, which in turn is also surrounded by a rampart of earth. Inside are the remains of two concentric circles of stone, and from the two entrances in the rampart proceeded long avenues flanked by stones, one leading to Beckhampton, and the other to West Kennett, where it formerly ended in another double circle. Between them rises Silbury Hill, the largest artificial mound in Great Britain, no less than 130 feet in height. This group of remains was at one time second to none, 'but unfortunately for us [says Sir John Lubbock] the pretty little village of Avebury [Abury], like some beautiful parasite, has grown up at the expense and in the midst of the ancient temple, and out of 650 great stones, not above twenty are still standing. In spite of this it is still to be classed among the finest ruins in Europe. The famous temple of Stonehenge on Salisbury Plain is probably of a later date than Avebury, since not only are some of the stones used in its construction worked, but the surrounding barrows are more elaborate than those in the neighbourhood of the latter. It consisted of a circle 100 feet in diameter, of large upright blocks of sarsen stone, 12 feet 7 inches high, bearing imposts dovetailed into each other, so as to form a continuous architrave. Nine feet within this was a circle of small foreign stones . . . and within this five great trilithons of sarsen stone, forming a horse-shoe; then a horse-shoe of foreign stones, eight feet high, and in the centre a slab of micaceous sandstone called the altar-stone. . . . At a distance of 100 feet from the outer line a small ramp, with a ditch

outside, formed the outer circle, 300 feet in diameter, which cuts a low barrow and includes another, and therefore is evidently of later date than some of the barrows of the district."—W. B. Dawkins, *Early Man in Britain*, ch. 10.—"Stonehenge . . . may, I think, be regarded as a monument of the Bronze Age, though apparently it was not all erected at one time, the inner circle of small, unwrought, blue stones being probably older than the rest; as regards Abury, since the stones are all in their natural condition, while those of Stonehenge are roughly hewn, it seems reasonable to conclude that Abury is the older of the two, and belongs either to the close of the Stone Age, or to the commencement of that of Bronze. Both Abury and Stonehenge were, I believe, used as temples. Many of the stone circles, however, have been proved to be burial places. In fact, a complete burial place may be described as a dolmen, covered by a tumulus, and surrounded by a stone circle. Often, however, we have only the tumulus, sometimes only the dolmen, and sometimes again only the stone circle. The celebrated monument of Carnac, in Brittany, consists of eleven rows of unhewn stones, which differ greatly both in size and height, the largest being 22 feet above ground, while some are quite small. It appears that the avenues originally extended for several miles, but at present they are very imperfect, the stones having been cleared away in places for agricultural improvements. At present, therefore, there are several detached portions, which, however, have the same general direction, and appear to have been connected together. . . . Most of the great tumuli in Brittany probably belong to the Stone Age, and I am therefore disposed to regard Carnac as having been erected during the same period."—Sir J. Lubbock, *Prehistoric Times*, ch. 5.

ABYDOS.—An ancient city on the Asiatic side of the Hellespont, mentioned in the *Iliad* as one of the towns that were in alliance with the Trojans. Originally Thracian, as is supposed, it became a colony of Miletus, and passed at different times under Persian, Athenian, Lacedæmonian and Macedonian rule. Its site was at the narrowest point of the Hellespont—the scene of the ancient romantic story of Hero and Leander—nearly opposite to the town of Sestus. It was in the near neighborhood of Abydos that Xerxes built his bridge of boats; at Abydos, Alcibiades and the Athenians won an important victory over the Peloponnesians. See GREECE: B. C. 480, and 411-407.

ABYDOS, Tablet of.—One of the most valuable records of Egyptian history, found in the ruins of Abydos and now preserved in the British Museum. It gives a list of kings whom Ramses II. selected from among his ancestors to pay homage to. The tablet was much mutilated when found, but another copy more perfect has been unearthed by M. Mariette, which supplies nearly all the names lacking on the first.—F. Lenormant, *Manual of Ancient Hist. of the East*, v. 1, bk. 3.

ABYSSINIA: Embraced in ancient Ethiopia. See ETHIOPIA.

Fourth Century.—Conversion to Christianity.—"Whatever may have been the effect produced in his native country by the conversion of Queen Candace's treasurer, recorded in the Acts of the Apostles [ch. VIII.], it would

appear to have been transitory; and the Ethiopian or Abyssinian church owes its origin to an expedition made early in the fourth century by Meropius, a philosopher of Tyre, for the purpose of scientific inquiry. On his voyage homewards, he and his companions were attacked at a place where they had landed in search of water, and all were massacred except two youths, Ædesius and Frumentius, the relatives and pupils of Meropius. These were carried to the king of the country, who advanced Ædesius to be his cup-bearer, and Frumentius to be his secretary and treasurer. On the death of the king, who left a boy as his heir, the two strangers, at the request of the widowed queen, acted as regents of the kingdom until the prince came of age. Ædesius then returned to Tyre, where he became a presbyter. Frumentius, who, with the help of such Christian traders as visited the country, had already introduced the Christian doctrine and worship into Abyssinia, repaired to Alexandria, related his story to Athanasius, and . . . Athanasius . . . consecrated him to the bishoprick of Axum [the capital of the Abyssinian kingdom]. The church thus founded continues to this day subject to the see of Alexandria."—J. C. Robertson, *Hist. of the Christian Church*, bk. 2, ch. 6.

6th to 16th Centuries.—Wars in Arabia.—

Struggle with the Mahometans.—Isolation from the Christian world.—"The fate of the Christian church among the Homerites in Arabia Felix afforded an opportunity for the Abyssinians, under the reigns of the Emperors Justin and Justinian, to show their zeal in behalf of the cause of the Christians. The prince of that Arabian population, Dunaan, or Dsunovas, was a zealous adherent of Judaism; and, under pretext of avenging the oppressions which his fellow-believers were obliged to suffer in the Roman empire, he caused the Christian merchants who came from that quarter and visited Arabia for the purposes of trade, or passed through the country to Abyssinia, to be murdered. Elesbaan, the Christian king of Abyssinia, made this a cause for declaring war on the Arabian prince. He conquered Dsunovas, deprived him of the government, and set up a Christian, by the name of Abraham, as king in his stead. But at the death of the latter, which happened soon after, Dsunovas again made himself master of the throne; and it was a natural consequence of what he had suffered, that he now became a fiercer and more cruel persecutor than he was before. . . . Upon this, Elesbaan interfered once more, under the reign of the emperor Justinian, who stimulated him to the undertaking. He made a second expedition to Arabia Felix, and was again victorious. Dsunovas lost his life in the war; the Abyssinian prince put an end to the ancient, independent empire of the Homerites, and established a new government favourable to the Christians."—A. Neander, *General History of the Christian Religion and Church*, second period, sect. 1.—"In the year 593, as nearly as can be calculated from the dates given by the native writers, the Persians, whose power seems to have kept pace with the decline of the Roman empire, sent a great force against the Abyssinians, possessed themselves once more of Arabia, acquired a naval superiority in the gulf, and secured the principal ports on either side of it.

It is uncertain how long these conquerors retained their acquisition; but, in all probability their ascendancy gave way to the rising greatness of the Mahometan power; which soon afterwards overwhelmed all the nations contiguous to Arabia, spread to the remotest parts of the East, and even penetrated the African deserts from Egypt to the Congo. Meanwhile Abyssinia, though within two hundred miles of the walls of Mecca, remained unconquered and true to the Christian faith; presenting a mortifying and galling object to the more zealous followers of the Prophet. On this account, implacable and incessant wars ravaged her territories. . . . She lost her commerce, saw her consequence annihilated, her capital threatened, and the richest of her provinces laid waste. . . . There is reason to apprehend that she must shortly have sunk under the pressure of repeated invasions, had not the Portuguese arrived [in the 16th century] at a seasonable moment to aid her endeavours against the Moslem chiefs."—M. Russell, *Nubia and Abyssinia*, ch. 3.—"When Nubia, which intervenes between Egypt and Abyssinia, ceased to be a Christian country, owing to the destruction of its church by the Mahometans, the Abyssinian church was cut off from communication with the rest of Christendom. . . . They [the Abyssinians] remain an almost unique specimen of a semi-barbarous Christian people. Their worship is strangely mixed with Jewish customs."—H. F. Tozer, *The Church and the Eastern Empire*, ch. 5.

Fifteenth-Nineteenth Centuries.—European Attempts at Intercourse.—Intrusion of the Gallas.—Intestine conflicts.—"About the middle of the 15th century, Abyssinia came in contact with Western Europe. An Abyssinian convent was endowed at Rome, and legates were sent from the Abyssinian convent at Jerusalem to the council of Florence. These adhered to the Greek schism. But from that time the Church of Rome made an impress upon Ethiopia. . . . Prince Henry of Portugal . . . next opened up communication with Europe. He hoped to open up a route from the West to the East coast of Africa [see PORTUGAL; A. D. 1415-1460], by which the East Indies might be reached without touching Mahometan territory. During his efforts to discover such a passage to India, and to destroy the revenues derived by the Moors from the spice trade, he sent an ambassador named Covillan to the Court of Shoa. Covillan was not suffered to return by Alexander, the then Negoos [or Negus, or Nagash—the title of the Abyssinian sovereign]. He married nobly, and acquired rich possessions in the country. He kept up correspondence with Portugal, and urged Prince Henry to diligently continue his efforts to discover the Southern passage to the East. In 1498 the Portuguese effected the circuit of Africa. The Turks shortly afterwards extended their conquests towards India, where they were baulked by the Portuguese, but they established a post and a toll at Zeyla, on the African coast. From here they hampered and threatened to destroy the trade of Abyssinia," and soon, in alliance with the Mahometan tribes of the coast, invaded the country. "They were defeated by the Negoos David, and at the same time the Turkish town of Zeyla was stormed and burned by a Portuguese fleet." Considerable intimacy of friendly relations was maintained for some time between the

Abyssinians and the Portuguese, who assisted in defending them against the Turks. "In the middle of the 16th century . . . a migration of Gallas came from the South and swept up to and over the confines of Abyssinia. Men of lighter complexion and fairer skin than most Africans, they were Pagan in religion and savages in customs. Notwithstanding frequent efforts to dislodge them, they have firmly established themselves. A large colony has planted itself on the banks of the Upper Takkazie, the Jidda and the Bashilo. Since their establishment here they have for the most part embraced the creed of Mahomet. The province of Shoa is but an outlier of Christian Abyssinia, separated completely from co-religionist districts by these Galla bands. About the same time the Turks took a firm hold of Massowah and of the lowland by the coast, which had hitherto been ruled by the Abyssinian Bahar Nagash. Islamism and heathenism surrounded Abyssinia, where the lamp of Christianity faintly glimmered amidst dark superstition in the deep recesses of rugged valleys." In 1558 a Jesuit mission arrived in the country and established itself at Fremona. "For nearly a century Fremona existed, and its superiors were the trusted advisors of the Ethiopian throne. . . . But the same fate which fell upon the company of Jesus in more civilized lands, pursued it in the wilds of Africa. The Jesuit missionaries were universally popular with the Negroes, but the prejudice of the people refused to recognise the benefits which flowed from Fremona." Persecution befell the fathers, and two of them won the crown of martyrdom. The Negroes, Facilidas, "sent for a Coptic Abuna [ecclesiastical primate] from Alexandria, and concluded a treaty with the Turkish governors of Massowah and Souakin to prevent the passage of Europeans into his dominions. Some Capuchin preachers, who attempted to evade this treaty and enter Abyssinia, met with cruel deaths. Facilidas thus completed the work of the Turks and the Gallas, and shut Abyssinia out from European influence and civilization. . . . After the expulsion of the Jesuits, Abyssinia was torn by internal feuds and constantly harassed by the encroachments of and wars with the Gallas. Anarchy and confusion ruled supreme. Towns and villages were burnt down, and the inhabitants sold into slavery. . . . Towards the middle of the 18th century the Gallas appear to have increased considerably in power. In the intestine quarrels of Abyssinia their alliance was courted by each side, and in their country political refugees obtained a secure asylum." During the early years of the present century, the campaigns in Egypt attracted English attention to the Red Sea. "In 1804 Lord Valentia, the Viceroy of India, sent his Secretary, Mr. Salt, into Abyssinia;" but Mr. Salt was unable to penetrate beyond Tigre. In 1810 he attempted a second mission and again failed. It was not until 1848 that English attempts to open diplomatic and commercial relations with Abyssinia became successful. Mr. Plowden was appointed consular agent, and negotiated a treaty of commerce with Ras Ali, the ruling Galla chief."—H. M. Hozier, *The British Expedition to Abyssinia, Introduct.*

A. D. 1854-1889.—Advent of King Theodore.—His English captives and the Expedition which released them.—"Consul Plowden had

been residing six years at Massowah when he heard that the Prince to whom he had been accredited, Ras Ali, had been defeated and dethroned by an adventurer, whose name, a few years before, had been unknown outside the boundaries of his native province. This was Lij Kâsa, better known by his adopted name of Theodore. He was born of an old family, in the mountainous region of Kwara, where the land begins to slope downwards towards the Blue Nile, and educated in a convent, where he learned to read, and acquired a considerable knowledge of the Scriptures. Kâsa's convent life was suddenly put an end to, when one of those marauding Galla bands, whose ravages are the curse of Abyssinia, attacked and plundered the monastery. From that time he himself took to the life of a freebooter. . . . Adventurers flocked to his standard; his power continually increased; and in 1854 he defeated Ras Ali in a pitched battle, and made himself master of central Abyssinia." In 1855 he overthrew the ruler of Tigre. "He now resolved to assume a title commensurate with the wide extent of his dominion. In the church of Deregye he had himself crowned by the Abuna as King of the Kings of Ethiopia, taking the name of Theodore, because an ancient tradition declared that a great monarch would some day arise in Abyssinia." Mr. Plowden now visited the new monarch, was impressed with admiration of his talents and character, and became his counsellor and friend. But in 1860 the English consul lost his life, while on a journey, and Theodore, embittered by several misfortunes, began to give rein to a savage temper. "The British Government, on hearing of the death of Plowden, immediately replaced him at Massowah by the appointment of Captain Cameron." The new Consul was well received, and was entrusted by the Abyssinian King with a letter addressed to the Queen of England, soliciting her friendship. The letter, duly despatched to its destination, was pigeon-holed in the Foreign Office at London, and no reply to it was ever made. Insulted and enraged by this treatment, and by other evidences of the indifference of the British Government to his overtures, King Theodore, in January, 1864, seized and imprisoned Consul Cameron with all his suite. About the same time he was still further offended by certain passages in a book on Abyssinia that had been published by a missionary named Stern. Stern and a fellow missionary, Rosenthal with the latter's wife, were lodged in prison, and subjected to flogging and torture. The first step taken by the British Government, when news of Consul Cameron's imprisonment reached England, was to send out a regular mission to Abyssinia, bearing a letter signed by the Queen, demanding the release of the Captives. The mission, headed by a Syrian named Rassam, made its way to the King's presence in January, 1866. Theodore seemed to be placated by the Queen's epistle and promised freedom to his prisoners. But soon his moody mind became filled with suspicions as to the genuineness of Rassam's credentials from the Queen, and as to the designs and intentions of all the foreigners who were in his power. He was drinking heavily at the time, and the result of his "drunken cogitations was a determination to detain the mission—at any rate until by their means he should have obtained a supply of skilled artisans and machinery from England." Mr.

Rassam and his companions were accordingly put into confinement, as Captain Cameron had been. But they were allowed to send a messenger to England, making their situation known, and conveying the demand of King Theodore that a man be sent to him "who can make cannons and muskets." The demand was actually complied with. Six skilled artisans and a civil engineer were sent out, together with a quantity of machinery and other presents, in the hope that they would procure the release of the unfortunate captives at Magdala. Almost a year was wasted in these futile proceedings, and it was not until September, 1867, that an expedition consisting of 4,000 British and 8,000 native troops, under General Sir Robert Napier, was sent from India to bring the insensate barbarian to terms. It landed in Annesley Bay, and, overcoming enormous difficulties with regard to water, food-supplies and transportation, was ready, about the middle of January, 1868, to start upon its march to the fortress of Magdala, where Theodore's prisoners were confined. The distance was 400 miles, and several high ranges of mountains had to be passed to reach the interior table-land. The invading army met with no resistance until it reached the Valley of the Beshilo, when it was attacked (April 10) on the plain of Aroge or Arogi, by the whole force which Theodore was able to muster, numbering a few thousands, only, of poorly armed men. The battle was simply a rapid slaughtering of the barbaric assailants, and when they fled, leaving 700 or 800 dead and 1,500 wounded on the field, the Abyssinian King had no power of resistance left. He offered at once to make peace, surrendering all the captives in his hands; but Sir Robert Napier required an unconditional submission, with a view to displacing him from the throne, in accordance with the wish and expectation which he had found to be general in the country. Theodore refused these terms, and when (April 13) Magdala was bombarded and stormed by the British troops—slight resistance being made—he shot himself at the moment of their entrance to the place. The sovereignty he had successfully concentrated in himself for a time was again divided. Between April and June the English army was entirely withdrawn, and "Abyssinia was sealed up again from intercourse with the outer world."—*Cassell's Illustrated Hist. of Eng.*, v. 9, ch. 28.—"The task of permanently uniting Abyssinia, in which Theodore failed, proved equally impracticable to John, who came to the front, in the first instance, as an ally of the British, and afterwards succeeded to the sovereignty. By his fall (10th March, 1889) in the unhappy war against the Dervishes or Moslem zealots of the Soudan, the path was cleared for Menilek of Shoa, who enjoyed the support of Italy. The establishment of the Italians on the Red Sea littoral . . . promises a new era for Abyssinia."—T. Nöldeke, *Sketches from Eastern Hist.*, ch. 9.

ACADEMY, The Athenian.—"The Academia, a public garden in the neighbourhood of Athens, was the favourite resort of Plato, and gave its name to the school which he founded. This garden was planted with lofty plane-trees,

and adorned with temples and statues; a gentle stream rolled through it."—G. H. Lewes, *Biog. Hist. of Philosophy*, 6th Epoch.—The masters of the great schools of philosophy at Athens "chose for their lectures and discussions the public buildings which were called gymnasia, of which there were several in different quarters of the city. They could only use them by the sufferance of the State, which had built them chiefly for bodily exercises and athletic feats. . . . Before long several of the schools drew themselves apart in special buildings, and even took their most familiar names, such as the Lyceum and the Academy, from the gymnasia in which they made themselves at home. Gradually we find the traces of some material provisions, which helped to define and to perpetuate the different sects. Plato had a little garden, close by the sacred Eleusinian Way, in the shady groves of the Academy. . . . Aristotle, as we know, in later life had taught in the Lyceum, in the rich grounds near the Ilissus."—W. W. Capes, *University Life in Ancient Athens*, pp. 31-33.—For a description of the Academy, Lyceum, etc., see GYMNASIA, GREEK.—On the suppression of the Academy, see ATHENS: A. D. 529.

ACADEMY, The French.—Founded by Cardinal Richelieu, in 1635, for the refining of the language and the literary taste of France. Its forty members are styled "the Immortals." Election to a seat among them is a high object of ambition among French writers.

ACCAD.—ACCADIANS. See BABYLONIA, PRIMITIVE: and SEMITES.

ACCOLADE.—"The concluding sign of being dubbed or adopted into the order of knighthood was a slight blow given by the lord to the cavalier, and called the accolade, from the part of the body, the neck, whereon it was struck. . . . Many writers have imagined that the accolade was the last blow which the soldier might receive with impunity: but this interpretation is not correct, for the squire was as jealous of his honour as the knight. The origin of the accolade it is impossible to trace, but it was clearly considered symbolical of the religious and moral duties of knighthood, and was the only ceremony used when knights were made in places (the field of battle, for instance), where time and circumstances did not allow of many ceremonies."—C. Mills, *Hist. of Chivalry*, v. 1, p. 53, and foot-note.

ACHÆAN CITIES, League of the.—This, which is not to be confounded with the "Achaian League" of Peloponnesus, was an early League of the Greek settlements in southern Italy, or Magna Græca. It was "composed of the towns of Siris, Pandosia, Metabus or Metapontum, Sybaris with its offsets Posidonia and Laus, Croton, Caulonia, Temesa, Terina and Pyxus. . . . The language of Polybius regarding the Achæan symmarchy in the Peloponnesus may be applied also to these Italian Achæans; 'not only did they live in federal and friendly communion, but they made use of the same laws, and the same weights, measures and coins, as well as of

the same magistrates, councillors and judges.”

—T. Mommsen, *Hist. of Rome*, bk. 1, ch. 10.

ACHÆAN LEAGUE. See GREECE: B. C. 280-146.

ACHÆMENIDS, The.—The family or dynastic name (in its Greek form) of the kings of the Persian Empire founded by Cyrus, derived from an ancestor, Achæmenes, who was probably a chief of the Persian tribe of the Pasargadae. “In the inscription of Behistun, King Darius says: ‘From old time we were kings; eight of my family have been kings, I am the ninth; from very ancient times we have been kings.’ He enumerates his ancestors: ‘My father was Vistacpa, the father of Vistacpa was Arsama; the father of Arsama was Ariyaramna, the father of Ariyaramna was Khaispis, the father of Khaispis was Hakhamanis; hence we are called Hakhamanisiya (Achæmenids).’ In these words Darius gives the tree of his own family up to Khaispis; this was the younger branch of the Achæmenids. Teispes, the son of Achæmenes, had two sons; the elder was Cambyses (Kambujiya) the younger Ariamnes; the son of Cambyses was Cyrus (Kurus), the son of Cyrus was Cambyses II. Hence Darius could indeed maintain that eight princes of his family had preceded him; but it was not correct to maintain that they had been kings before him and that he was the ninth king.”—M. Duncker, *Hist. of Antiquity*, v. 5, bk. 8, ch. 3.

ALSO IN G. Rawlinson, *Family of the Achæmenids*, app. to bk. 7 of *Herodotus*.—See, also, PERSIA, ANCIENT.

ACHAÏA.—“Crossing the river Larissus, and pursuing the northern coast of Peloponnesus south of the Corinthian Gulf, the traveller would pass into Achaia—a name which designated the narrow strip of level land, and the projecting spurs and declivities between that gulf and the northernmost mountains of the peninsula. . . . Achæan cities—twelve in number at least, if not more—divided this long strip of land amongst them, from the mouth of the Larissus and the northwestern Cape Araxus on one side, to the western boundary of the Sikyon territory on the other. According to the accounts of the ancient legends and the belief of Herodotus, this territory had been once occupied by Ionian inhabitants, whom the Achæans had expelled.”—G. Grote, *Hist. of Greece*, pt. 2, ch. 4 (v. 2).—After the Roman conquest and the suppression of the Achaian League, the name Achaia was given to the Roman province then organized, which embraced all Greece south of Macedonia and Epirus.—See GREECE: B. C. 280-146.—“In the Homeric poems, where . . . the ‘Hellenes’ only appear in one district of Southern Thessaly, the name Achæans is employed by preference as a general appellation for the whole race. But the Achæans we may term, without hesitation, a Pelasgian people, in so far, that is, as we use this name merely as the opposite of the term ‘Hellenes,’ which prevailed at a later time, although it is true that the Hellenes themselves were nothing more than a particular branch of the Pelasgian stock. . . . [The name of the] Achæans, after it had dropped its earlier and more universal application, was preserved as the special name of a population dwelling in the north of the Peloponnesus and the south of Thessaly.”—G. F. Schömann, *Antiq. of Greece: The State, Int.*—“The ancients regarded them

[the Achæans] as a branch of the Æolians, with whom they afterwards reunited into one national body, i. e., not as an originally distinct nationality or independent branch of the Greek people. Accordingly, we hear neither of an Achæan language nor of Achæan art. A manifest and decided influence of the maritime Greeks, wherever the Achæans appear, is common to the latter with the Æolians. Achæans are everywhere settled on the coast, and are always regarded as particularly near relations of the Ionians. . . . The Achæans appear scattered about in localities on the coast of the Ægean so remote from one another, that it is impossible to consider all bearing this name as fragments of a people originally united in one social community; nor do they in fact anywhere appear, properly speaking, as a popular body, as the main stock of the population, but rather as eminent families, from which spring heroes; hence the use of the expression ‘Sons of the Achæans’ to indicate noble descent.”—E. Curtius, *Hist. of Greece*, bk. 1, ch. 3.

ALSO IN M. Duncker, *Hist. of Greece*, bk. 1, ch. 2, and bk. 2, ch. 2.—See, also, ACHAIA, and GREECE: THE MIGRATIONS.

A. D. 1205-1387.—**Mediæval Principality.**—Among the conquests of the French and Lombard Crusaders in Greece, after the taking of Constantinople, was that of a major part of the Peloponnesus—then beginning to be called the Morea—by William de Champlitte, a French knight, assisted by Geoffrey de Villehardouin, the younger—nephew and namesake of the Marshal of Champagne, who was chronicler of the conquest of the Empire of the East. William de Champlitte was invested with this Principality of Achaia, or of the Morea, as it is variously styled. Geoffrey Villehardouin represented him in the government, as his “bailly,” for a time, and finally succeeded in supplanting him. Half a century later the Greeks, who had recovered Constantinople, reduced the territory of the Principality of Achaia to about half the peninsula, and a destructive war was waged between the two races. Subsequently the Principality became a fief of the crown of Naples and Sicily, and underwent many changes of possession until the title was in confusion and dispute between the houses of Anjou, Aragon and Savoy. Before it was engulfed finally in the Empire of the Turks, it was ruined by their piracies and ravages.—G. Finlay, *Hist. of Greece from its Conquest by the Crusaders*, ch. 8.

ACHRADINA.—A part of the ancient city of Syracuse, Sicily, known as the “outer city,” occupying the peninsula north of Ortygia, the island, which was the “inner city.”

ACHRIDA, Kingdom of.—After the death of John Zimisceus who had reunited Bulgaria to the Byzantine Empire, the Bulgarians were roused to a struggle for the recovery of their independence, under the lead of four brothers of a noble family, all of whom soon perished save one, named Samuel. Samuel proved to be so vigorous and able a soldier and had so much success that he assumed presently the title of king. His authority was established over the greater part of Bulgaria, and extended into Macedonia, Epirus and Illyria. He established his capital

at Achrida (modern Ochrida, in Albania), which gave its name to his kingdom. The suppression of this new Bulgarian monarchy occupied the Byzantine Emperor, Basil II., in wars from 981 until 1018, when its last strongholds, including the city of Achrida, were surrendered to him.—G. Finlay, *Hist. of the Byzantine Empire from 716 to 1057*, bk. 2, ch. 2, sect. 2.

ACRABA, Battle of, A. D. 633.—After the death of Mahomet, his successor, Abu Bekr, had to deal with several serious revolts, the most threatening of which was raised by one Moseilama, who had pretended, even in the life-time of the Prophet, to a rival mission of religion. The decisive battle between the followers of Moseilama and those of Mahomet was fought at Acraba, near Yemama. The pretender was slain and few of his army escaped.—Sir W. Muir, *Annals of the Early Caliphate*, ch. 7.

ACROPOLIS OF ATHENS, The.—“A road which, by running zigzag up the slope was rendered practicable for chariots, led from the lower city to the Acropolis, on the edge of the platform of which stood the Propylæa, erected

by the architect Mnesicles in five years, during the administration of Pericles. . . . On entering through the gates of the Propylæa a scene of unparalled grandeur and beauty burst upon the eye. No trace of human dwellings anywhere appeared, but on all sides temples of more or less elevation, of Pentellic marble, beautiful in design and exquisitely delicate in execution, sparkled like piles of alabaster in the sun. On the left stood the Erectheion, or fane of Athena Polias; to the right, that matchless edifice known as the Hecatompodon of old, but to later ages as the Parthenon. Other buildings, all holy to the eye of an Athenian, lay grouped around these master structures, and, in the open spaces between, in whatever direction the spectator might look, appeared statues, some remarkable for their dimensions, others for their beauty, and all for the legendary sanctity which surrounded them. No city of the ancient or modern world ever rivalled Athens in the riches of art. Our best filled museums, though teeming with her spoils, are poor collections of fragments compared with that assemblage of gods and heroes which peopled the Acropolis, the genuine Olympos of the arts.”—J. A. St. John, *The Hellenes*, bk. 1, ch. 4.—“Nothing in ancient Greece or Italy could be compared with the Acropolis of Athens, in its combination of beauty and grandeur, surrounded as it was by temples and theatres among its rocks, and encircled by a city abounding with monuments, some of which rivalled those of the Acropolis. Its platform formed one great sanctuary, partitioned only by the boundaries of the . . . sacred portions. We cannot, therefore, admit the suggestion of Chandler, that, in addition to the temples and other monuments on the summit, there were houses divided into regular streets. This would not have been consonant either with the customs or the good taste of the Athenians. When the people of Attica crowded into Athens at the beginning of the Peloponnesian war, and religious prejudices gave way, in every possible case, to the necessities of the occasion, even then the Acropolis remained uninhabited. . . . The western end of the Acropolis, which furnished the only access to the summit of the hill, was one hundred and sixty eight feet in breadth, an opening so narrow that it appeared practicable to the artists of Pericles to fill up the space with a single building which should serve the purpose of a gateway to the citadel, as well as of a suitable entrance to that glorious display of architecture and sculpture which was within the inclosure. This work [the Propylæa], the greatest production of civil architecture in Athens, which rivalled the Parthenon in felicity of execution, surpassed it in boldness and originality of design. . . . It may be defined as a wall pierced with five doors, before which on both sides were Doric hexastyle porticoes.”—W. M. Leake, *Topography of Athens*, sect. 8.—See, also, **ATTICA.**

.... **In diplomatic service.** See UNITED STATES OF AM.: A. D. 1782 (APRIL); 1782 (SEPTEMBER—NOVEMBER). **Presidential administration.** See UNITED STATES OF AM.: A. D. 1796-1801. **Death.** See same: A. D. 1826.

ADAMS, John Quincy.—The Treaty of Ghent. See UNITED STATES OF AM.: A. D. 1814 (DECEMBER). **As President.** See same: A. D. 1824-1829. **Defending right of Petition.** See same: 1842.

ADAMS, Samuel, in and after the American Revolution. See UNITED STATES OF AM.: A. D. 1772-1773; 1774 (SEPTEMBER); 1775 (MAY); 1787-1789.

ADDA, Battle of the (A. D. 490). See ROME: A. D. 488-526.

AD DECIMUS, Battle of (A. D. 533). See VANDALS: A. D. 533-534.

ADEL.—**ADALING.**—**ATHEL.**—“The homestead of the original settler, his house, farm-buildings and enclosure, ‘the toft and croft,’ with the share of arable and appurtenant common rights, bore among the northern nations [early Teutonic] the name of Odal, or Edhel; the primitive mother village was an Athelby, or Athelham; the owner was an Athelbonde: the same word Adel or Athel signified also nobility of descent, and an Adaling was a nobleman.”—W. Stubbs, *Const. Hist. of Eng.*, ch. 3, sect. 24.—See, also, ALOD, and ETHEL.

ADELAIDE, The founding and naming of. See AUSTRALIA: A. D. 1800-1840.

ADELANTADOS.—An early title given to the governors in Spanish America.

ADELBERT COLLEGE. See EDUCATION, MODERN: REFORMS: A. D. 1804-1891.

ADEN.—A port on the southern coast of Arabia, taken by Great Britain from the Sultan of Aden in 1839. Adjacent territory, with Perim and other neighboring islands, has been acquired since, affording a naval and coaling station important to the domination of the Red Sea and the Suez Canal.

ADIABENE.—A name which came to be applied anciently to the tract of country east of the middle Tigris, embracing what was originally the proper territory of Assyria, together with Arbelitis. Under the Parthian monarchy it formed a tributary kingdom, much disputed

between Parthia and Armenia. It was seized several times by the Romans, but never permanently held.—G. Rawlinson, *Sixth Great Oriental Monarchy*, p. 140.

ADIRONDACKS, The. See AMERICAN ABORIGINES: ADIRONDACKS.

ADIS, Battle of (B. C. 256). See PUNIC WAR, THE FIRST.

ADITES, The.—“The Cushites, the first inhabitants of Arabia, are known in the national traditions by the name of Adites, from their progenitor, who is called Ad, the grandson of Ham.”—F. Lenormant, *Manual of Ancient Hist.*, bk. 7, ch. 2.—See ARABIA.

ADJUTATORS. See ENGLAND: A. D. 1647 (APRIL—AUGUST).

ADLIYAH, The. See ISLAM.

ADMIRALTY ISLES. See MELANESIA.

ADOLPH (of Nassau), King of Germany, A. D. 1291-1298.

ADOLPHUS FREDERICK, King of Sweden, A. D. 1751-1771.

ADOPTIONISM.—A doctrine, condemned as heretical in the eighth century, which taught that “Christ, as to his human nature, was not truly the Son of God, but only His son by adoption.” The dogma is also known as the Felician heresy, from a Spanish bishop, Felix, who was prominent among its supporters. Charlemagne took active measures to suppress the heresy.—J. I. Mombert, *Hist. of Charles the Great*, bk. 2, ch. 12.

ADRIA, Proposed Kingdom of. See ITALY: A. D. 1343-1389.

ADRIAN VI., Pope, A. D. 1522-1523.

ADRIANOPLE.—**HADRIANOPLE.**—A city in Thrace founded by the Emperor Hadrian and designated by his name. It was the scene of Constantine's victory over Licinius in A. D. 323 (see ROME: A. D. 305-323), and of the defeat and death of Valens in battle with the Goths (see GOTHs (VISIGOTHs): A. D. 378). In 1361 it became for some years the capital of the Turks in Europe (see TURKS: A. D. 1360-1389). It was occupied by the Russians in 1829, and again in 1878 (see TURKS: A. D. 1826-1829, and A. D. 1877-1878), and gave its name to the Treaty negotiated in 1829 between Russia and the Porte (see GREECE: A. D. 1821-1829).

ADRUMETUM. See CARTHAGE, THE DOMINION OF.

ADUATUCI, The. See BELGÆ.

ADULLAM, Cave of.—When David had been cast out by the Philistines, among whom he sought refuge from the enmity of Saul, “his first retreat was the Cave of Adullam, probably the large cavern not far from Bethlehem, now called Khureitun. From its vicinity to Bethlehem, he was joined there by his whole family, now feeling themselves insecure from Saul's fury. . . . Besides these were outlaws from every part, including doubtless some of the original Canaanites—of whom the name of one at least has been preserved, Ahimelech the Hittite. In the vast columnar halls and arched chambers of this subterranean palace, all who had any grudge against the existing system gathered round the hero of the coming age.”—Dean Stanley, *Lect's on the Hist. of the Jewish Church*, lect. 22.

ADULLAMITES, The. See ENGLAND: A. D. 1865-1868.

ADWALTON MOOR, Battle of (A. D. 1643).—This was a battle fought near Bradford, June 29, 1643, in the great English Civil War. The Parliamentary forces, under Lord Fairfax, were routed by the Royalists, under Newcastle. —C. R. Markham, *Life of the Great Lord Fairfax*, ch. 11.

ÆAKIDS (Æacids).—The supposed descendants of the demi-god Æakus, whose grandson was Achilles. (See MYRMIDONS.) Miltiades, the hero of Marathon, and Pyrrhus, the warrior King of Epirus, were among those claiming to belong to the royal race of Æakids.

ÆDHILING. See ETHEL.

ÆDILES, Roman. See ROME: B. C. 494-492.

ÆDUI.—ARVERNI.—ALLOBROGES.—“The two most powerful nations in Gallia were the Ædui [or Hædui] and the Arverni. The Ædui occupied that part which lies between the upper valley of the Loire and the Saone, which river was part of the boundary between them and the Sequani. The Loire separated the Ædui from the Bituriges, whose chief town was Avaricum on the site of Bourges. At this time [B. C. 121] the Arverni, the rivals of the Ædui, were seeking the supremacy in Gallia. The Arverni occupied the mountainous country of Auvergne in the centre of France and the fertile valley of the Elaver (Allier) nearly as far as the junction of the Allier and the Loire. . . . They were on friendly terms with the Allobroges, a powerful nation east of the Rhone, who occupied the country between the Rhone and the Isara (Isère). . . . In order to break the formidable combination of the Arverni and the Allobroges, the Romans made use of the Ædui, who were the enemies both of the Allobroges and the Arverni. . . . A treaty was made either at this time or somewhat earlier between the Ædui and the Roman senate, who conferred on their new Gallic friends the honourable title of brothers and kinsmen. This fraternizing was a piece of political cant which the Romans practiced when it was useful.”—G. Long, *Decline of the Roman Republic*, v. 1, ch. 21.—See, also, GAULS.

ÆGÆ. See EDESSA (MACEDONIA).

ÆGATIAN ISLES, Naval Battle of the (B. C. 241). See PUNIC WAR, THE FIRST.

ÆGEAN, The.—“The Ægean, or White Sea, . . . as distinguished from the Euxine.”—E. A. Freeman, *Historical Geog. of Europe*, p. 413, and foot-note.

ÆGIALEA.—ÆGIALEANS.—The original name of the northern coast of Peloponnesus, and its inhabitants. See GREECE: THE MIGRATIONS.

ÆGIKOREIS. See PHYLÆ.

ÆGINA.—A small rocky island in the Saronic gulf, between Attica and Argolis. First colonized by Achæans it was afterwards occupied by Dorians (see GREECE: THE MIGRATIONS) and was unfriendly to Athens. During the sixth century B. C. it rose to great power and commercial importance, and became for a time the most brilliant center of Greek art. At the period of the Persian war, Ægina was “the first maritime power in Greece.” But the Æginetans were at that time engaged in war with Athens, as the allies of Thebes, and rather than forego their enmity, they offered submission to the Persian king. The Athenians thereupon appealed to Sparta, as the head of Greece, to interfere, and the Æginetans were compelled to

give hostages to Athens for their fidelity to the Hellenic cause. (See GREECE: B. C. 492-491.) They purged themselves to a great extent of their intended treason by the extraordinary valor with which they fought at Salamis. But the sudden pre-eminence to which Athens rose cast a blighting shadow upon Ægina, and in 429 B. C. it lost its independence, the Athenians taking possession of their discomfited rival.—C. Thirlwall, *Hist. of Greece*, v. 1, ch. 14.

ALSO IN G. Grote, *Hist. of Greece*, pt. 2, v. 4, ch. 36.—See, also, ATHENS: B. C. 489-480.

B. C. 458-456.—Alliance with Corinth in war with Athens and Megara.—Defeat and subjugation. See GREECE: B. C. 458-456.

B. C. 431.—Expulsion of the Æginetans from their island by the Athenians.—Their settlement at Thyrea. See GREECE: B. C. 431-429.

B. C. 210.—Desolation by the Romans.—The first appearance of the Romans in Greece, when they entered the country as the allies of the Ætolians, was signalized by the barbarous destruction of Ægina. The city having been taken, B. C. 210, its entire population was reduced to slavery by the Romans and the land and buildings of the city were sold to Attalus, king of Pergamus.—E. A. Freeman, *Hist. of Federal Govt.*, ch. 8, sect. 2.

ÆGINETAN TALENT. See TALENT.

ÆGITIUM, Battle of (B. C. 426).—A reverse experienced by the Athenian General, Demosthenes, in his invasion of Ætolia, during the Peloponnesian War.—Thucydides, *History*, bk. 3, sect. 97.

ÆGOSPOTAMI (Aigospotamoi), Battle of. See GREECE: B. C. 405.

ÆLFRED. See ALFRED.

ÆLIA CAPITOLINA.—The new name given to Jerusalem by Hadrian. See JEWS: A. D. 130-134.

ÆLIAN AND FUFIAN LAWS, The.—“The Ælian and Fufian laws (leges Ælia and Fufia) the age of which unfortunately we cannot accurately determine . . . enacted that a popular assembly [at Rome] might be dissolved, or, in other words, the acceptance of any proposed law prevented, if a magistrate announced to the president of the assembly that it was his intention to choose the same time for watching the heavens. Such an announcement (obnuntiatio) was held to be a sufficient cause for interrupting an assembly.”—W. Ihne, *Hist. of Rome*, bk. 6, ch. 16.

ÆMILIAN WAY, The.—“M. Æmilius Lepidus, Consul for the year 180 B. C. . . . constructed the great road which bore his name. The Æmilian Way led from Ariminum through the new colony of Bononia to Placentia, being a continuation of the Flaminian Way, or great north road, made by C. Flaminius in 220 B. C. from Rome to Ariminum. At the same epoch, Flaminius the son, being the colleague of Lepidus, made a branch road from Bononia across the Apennines to Arretium.”—H. G. Liddell, *Hist. of Rome*, bk. 5, ch. 41.

ÆMILIANUS, Roman Emperor, A. D. 253.

ÆOLIANS, The.—“The collective stock of Greek nationalities falls, according to the view of those ancient writers who laboured most to obtain an exact knowledge of ethnographic relationships, into three main divisions, Æolians,

Dorians and Ionians. . . . All the other inhabitants of Greece [not Dorians and Ionians] and of the islands included in it, are comprised under the common name of Æolians—a name unknown as yet to Homer, and which was incontestably applied to a great diversity of peoples, among which it is certain that no such homogeneity of race is to be assumed as existed among the Ionians and Dorians. Among the two former races, though even these were scarcely in any quarter completely unmixed, there was incontestably to be found a single original stock, to which others had merely been attached, and as it were engrafted, whereas, among the peoples assigned to the Æolians, no such original stock is recognizable, but on the contrary, as great a difference is found between the several members of this race as between Dorians and Ionians, and of the so-called Æolians, some stood nearer to the former, others to the latter. . . . A thorough and careful investigation might well lead to the conclusion that the Greek people was divided not into three, but into two main races, one of which we may call Ionian, the other Dorian, while of the so-called Æolians some, and probably the greater number, belonged to the former, the rest to the latter.”—G. F. Schöman, *Antiq. of Greece: The State, pt. 1, ch. 2*.—In Greek myth., Æolus, the fancied progenitor of the Æolians, appears as one of the three sons of Hellen. “Æolus is represented as having reigned in Thessaly: his seven sons were Kretheus, Sisyphus, Athamas, Salomoneus, Deion, Magnes and Perieres: his five daughters, Canace, Alcýone, Peisidike, Calýce and Permede. The fables of this race seem to be distinguished by a constant introduction of the God Poseidon, as well as by an unusual prevalence of haughty and presumptuous attributes among the Æolid heroes, leading them to affront the gods by pretences of equality, and sometimes even by defiance.”—G. Grote, *Hist. of Greece, pt. 1, ch. 6*.—See, also, THESSALY, DORIANS AND IONIANS, and ASIA MINOR: THE GREEK COLONIES.

ÆQUIANS, The. See OSCANS; also LATTUM; and ROME; B. C. 458.

ÆRARIANS.—Roman citizens who had no political rights. See CENSORS, ROMAN.

ÆRARIUM, The. See FISCUS.

ÆSOPUS INDIANS. See AMERICAN ABO-RIGINES: ALGONQUIAN FAMILY.

ÆSTII, or ÆSTYI, The.—“At this point [beyond the Suiones] the Suevic Sea [the Baltic], on its eastern shore, washes the tribes of the Æstii, whose rites and fashions and styles of dress are those of the Suevi, while their language is more like the British. They worship the mother of the gods and wear as a religious symbol the device of a wild boar. . . . They often use clubs, iron weapons but seldom. They are more patient in cultivating corn and other produce than might be expected from the general indolence of the Germans. But they also search the deep and are the only people who gather amber, which they call glesum.”—“The Æstii occupied that part of Prussia which is to the north-east of the Vistula. . . . The name still survives in the form Estonia.”—Tacitus, *Germany, trans. by Church and Brodrick, with note*.—See, also, PRUSSIAN LANGUAGE, THE OLD.

ÆSYMNETÆ, An.—Among the Greeks, an expedient “which seems to have been tried

not unfrequently in early times, for preserving or restoring tranquility, was to invest an individual with absolute power, under a peculiar title, which soon became obsolete: that of æsymnetæ. At Cuma, indeed, and in other cities, this was the title of an ordinary magistracy, probably of that which succeeded the hereditary monarchy; but when applied to an extraordinary office, it was equivalent to the title of protector or dictator.”—C. Thirlwall, *Hist. of Greece, ch. 10*.

ÆTHEL.—ÆTHELING. See ÆTHEL, and ADEL.

ÆTHELBERT, ÆTHELFRIITH, ETC. See ÆTHELBERT, ETC.

ÆTOLIA.—ÆTOLIANS.—“Ætolia, the country of Diomed, though famous in the early times, fell back during the migratory period almost into a savage condition, probably through the influx into it of an Illyrian population which became only partially Hellenized. The nation was divided into numerous tribes, among which the most important were the Apodoti, the Ophioneis, the Eurytanes and the Agræans. There were scarcely any cities, village life being preferred universally. . . . It was not till the wars which arose among Alexander's successors that the Ætoliens formed a real political union, and became an important power in Greece.”—G. Rawlinson, *Manual of Ancient Hist., bk. 3*.—See also, AKARNANIANS, and GREECE: THE MIGRATIONS.

ÆTOLIAN LEAGUE, The.—“The Achaian and the Ætolian Leagues, had their constitutions been written down in the shape of a formal document, would have presented but few varieties of importance. The same general form of government prevailed in both; each was federal, each was democratic; each had its popular assembly, its smaller Senate, its general with large powers at the head of all. The differences between the two are merely those differences of detail which will always arise between any two political systems of which neither is slavishly copied from the other. . . . If therefore federal states or democratic states, or aristocratic states, were necessarily weak or strong, peaceful or aggressive, honest or dishonest, we should see Achaia and Ætolia both exhibiting the same moral characteristics. But history tells another tale. The political conduct of the Achaian League, with some mistakes and some faults, is, on the whole, highly honourable. The political conduct of the Ætolian League is, throughout the century in which we know it best [last half of third and first half of second century B. C.] almost always simply infamous. . . . The counsels of the Ætolian League were throughout directed to mere plunder, or, at most, to selfish political aggrandisement.”—E. A. Freeman, *Hist. of Federal Govt., ch. 6*.—The plundering aggressions of the Ætoliens involved them in continual war with their Greek kindred and neighbours, and they did not scruple to seek foreign aid. It was through their agency that the Romans were first brought into Greece, and it was by their instrumentality that Antiochus fought his battle with Rome on the sacreddest of all Hellenic soil. In the end, B. C. 189, the League was stripped by the Romans of even its nominal independence and sank into a contemptible servitude.—E. A. Freeman, *The same, ch. 7-9*.

A. D. 1803-1838.—Shah Soojah and Dost Mahomed.—English interference.—"Shah Soojah-ool Moolk, a grandson of the illustrious Ahmed Shah, reigned in Afghanistan from 1803 till 1809. His youth had been full of trouble and vicissitude. He had been a wanderer, on the verge of starvation, a pedlar, and a bandit, who raised money by plundering caravans. His courage was lightly reputed, and it was as a mere creature of circumstance that he reached the throne. His reign was perturbed, and in 1809 he was a fugitive and an exile. Runjeet Singh, the Sikh ruler of the Punjab, defrauded him of the famous Koh-i-noor, which is now the most precious of the crown jewels of England, and plundered and imprisoned the fallen man. Shah Soojah at length escaped from Lahore. After further misfortunes he at length reached the British frontier station of Loodianah, and in 1816 became a pensioner of the East India Company. After the downfall of Shah Soojah, Afghanistan for many years was a prey to anarchy. At length in 1826, Dost Mahomed succeeded in making himself supreme at Cabul, and this masterful man thenceforward held sway until his death in 1863, uninterruptedly save during the three years of the British occupation. Dost Mahomed was neither kith nor kin to the legitimated dynasty which he displaced. His father Poyndah Khan was an able statesman and gallant soldier. He left twenty-one sons, of whom Futeh Khan was the eldest, and Dost Mahomed one of the youngest. . . . Throughout his long reign Dost Mahomed was a strong and wise ruler. His youth had been neglected and dissolute. His education was defective, and he had been addicted to wine. Once seated on the throne, the reformation of our Henry V. was not more thorough than was that of Dost Mahomed. He taught himself to read and write, studied the Koran, became scrupulously abstemious, assiduous in affairs, no longer truculent, but courteous. . . . There was a fine rugged honesty in his nature, and a streak of genuine chivalry; notwithstanding the despite he suffered at our hands, he had a real regard for the English, and his loyalty to us was broken only by his armed support of the Sikhs in the second Punjab war. The fallen Shah Soojah, from

his asylum in Loodianah, was continually intriguing for his restoration. His schemes were long inoperative, and it was not until 1832 that certain arrangements were entered into between him and the Maharaja Runjeet Singh. To an application on Shah Soojah's part for countenance and pecuniary aid, the Anglo-Indian Government replied that to afford him assistance would be inconsistent with the policy of neutrality which the Government had imposed on itself; but it unwisely contributed financially toward his undertaking by granting him four months' pension in advance. Sixteen thousand rupees formed a scant war fund with which to attempt the recovery of a throne, but the Shah started on his errand in February, 1833. After a successful contest with the Ameers of Scinde, he marched on Candahar, and besieged that fortress. Candahar was in extremity when Dost Mahomed, hurrying from Cabul, relieved it, and joining forces with its defenders, he defeated and routed Shah Soojah, who fled precipitately, leaving behind him his artillery and camp equipage. During the Dost's absence in the south, Runjeet Singh's troops crossed the Attock, occupied the Afghan province of Peshawur, and drove the Afghans into the Khyber Pass. No subsequent efforts on Dost Mahomed's part availed to expel the Sikhs from Peshawur, and suspicious of British connivance with Runjeet Singh's successful aggression, he took into consideration the policy of fortifying himself by a counter alliance with Persia. As for Shah Soojah, he had crept back to his refuge at Loodianah. Lord Auckland succeeded Lord William Bentinck as Governor-General of India in March, 1836. In reply to Dost Mahomed's letter of congratulation, his lordship wrote: 'You are aware that it is not the practice of the British Government to interfere with the affairs of other independent States;' an abstention which Lord Auckland was soon to violate. He had brought from England the feeling of disquietude in regard to the designs of Persia and Russia which the communications of our envoy in Persia had fostered in the Home Government, but it would appear that he was wholly undecided what line of action to pursue. 'Swayed,' says Durand, 'by the vague apprehensions of a remote danger entertained by others rather than himself,' he despatched to Afghanistan Captain Burnes on a nominally commercial mission, which, in fact, was one of political discovery, but without definite instructions. Burnes, an able but rash and ambitious man, reached Cabul in September, 1837, two months before the Persian army began the siege of Herat. . . . The Dost made no concealment to Burnes of his approaches to Persia and Russia, in despair of British good offices, and being hungry for assistance from any source to meet the encroachments of the Sikhs, he professed himself ready to abandon his negotiations with the western powers if he were given reason to expect countenance and assistance at the hands of the Anglo-Indian Government. . . . The situation of Burnes in relation to the Dost was presently complicated by the arrival at Cabul of a Russian officer claiming to be an envoy from the Czar, whose credentials, however, were regarded as dubious, and who, if that circumstance has the least weight, was on his return to Russia utterly repudiated by Count Nesselrode. The Dost took small account of this emissary, con-

tinuing to assure Burnes that he cared for no connection except with the English, and Burnes professed to his Government his fullest confidence in the sincerity of those declarations. But the tone of Lord Auckland's reply, addressed to the Dost, was so dictatorial and supercilious as to indicate the writer's intention that it should give offence. It had that effect, and Burnes' mission at once became hopeless. . . . The Russian envoy, who was profuse in his promises of everything which the Dost was most anxious to obtain, was received into favour and treated with distinction, and on his return journey he effected a treaty with the Candahar chiefs which was presently ratified by the Russian minister at the Persian Court. Burnes, fallen into discredit at Cabul, quitted that place in August 1838. He had not been discreet, but it was not his indiscretion that brought about the failure of his mission. A nefarious transaction, which Kaye denounces with the passion of a just indignation, connects itself with Burnes' negotiations with the Dost; his official correspondence was unscrupulously mutilated and garbled in the published Blue Book with deliberate purpose to deceive the British public. Burnes had failed because, since he had quitted India for Cabul, Lord Auckland's policy had gradually altered. Lord Auckland had landed in India in the character of a man of peace. That, so late as April 1837, he had no design of obstructing the existing situation in Afghanistan is proved by his written statement of that date, that 'the British Government had resolved decidedly to discourage the prosecution by the ex-king Shah Soojah-ool-Moolk, so long as he may remain under our protection, of further schemes of hostility against the chiefs now in power in Cabul and Candahar.' Yet, in the following June, he concluded a treaty which sent Shah Soojah to Cabul, escorted by British bayonets. Of this inconsistency no explanation presents itself. It was a far cry from our frontier on the Sutlej to Herat in the confines of Central Asia—a distance of more than 1,200 miles, over some of the most arduous marching ground in the known world. . . . Lord William Bentinck, Lord Auckland's predecessor, denounced the project as an act of incredible folly. Marquis Wellesley regarded 'this wild expedition into a distant region of rocks and deserts, of sands and ice and snow,' as an act of infatuation. The Duke of Wellington pronounced with prophetic sagacity, that the consequence of once crossing the Indus to settle a government in Afghanistan would be a perennial march into that country."—A. Forbes, *The Afghan Wars*, ch. 1.

A. D. 1838-1842.—English invasion, and restoration of Soojah Dowlah.—The revolt at Cabul.—Horrors of the British retreat.—Destruction of the entire army, save one man, only.—Sale's defence of Jellalabad.—"To approach Afghanistan it was necessary to secure the friendship of the Sikhs, who were, indeed, ready enough to join against their old enemies; and a threefold treaty was contracted between Runjeet Singh, the English, and Shah Soojah for the restoration of the banished house. The expedition—which according to the original intention was to have been carried out chiefly

by means of troops in the pay of Shah Soojah and the Sikhs—rapidly grew into an English invasion of Afghanistan. A considerable force was gathered on the Sikh frontier from Bengal; a second army, under General Keane, was to come up from Kurrachee through Sindh. Both of these armies, and the troops of Shah Soojah, were to enter the highlands of Afghanistan by the Bolan Pass. As the Sikhs would not willingly allow the free passage of our troops through their country, an additional burden was laid upon the armies,—the independent Ameers of Sindh had to be coerced. At length, with much trouble from the difficulties of the country and the loss of the commissariat animals, the forces were all collected under the command of Keane beyond the passes. The want of food permitted of no delay; the army pushed on to Candahar. Shah Soojah was declared Monarch of the southern Principality. Thence the troops moved rapidly onwards towards the more important and difficult conquest of Cabul. Ghuznee, a fortress of great strength, lay in the way. In their hasty movements the English had left their battering train behind, but the gates of the fortress were blown in with gunpowder, and by a brilliant feat of arms the fortress was stormed. Nor did the English army encounter any important resistance subsequently. Dost Mohamed found his followers deserting him, and withdrew northwards into the mountains of the Hindoo Koosh. With all the splendour that could be collected, Shah Soojah was brought back to his throne in the Bala Hissar, the fortress Palace of Cabul. . . . For the moment the policy seemed thoroughly successful. The English Ministry could feel that a fresh check had been placed upon its Russian rival, and no one dreamt of the terrible retribution that was in store for the unjust violence done to the feelings of a people. . . . Dost Mohamed thought it prudent to surrender himself to the English envoy, Sir William Macnaghten, and to withdraw with his family to the English provinces of Hindostan [November, 1840]. He was there well received and treated with liberality; for, as both the Governor General and his chief adviser Macnaghten felt, he had not in fact in any way offended us, but had fallen a victim to our policy. It was in the full belief that their policy in India had been crowned with permanent success that the Whig Ministers withdrew from office, leaving their successors to encounter the terrible results to which it led. For while the English officials were blindly congratulating themselves upon the happy completion of their enterprise, to an observant eye signs of approaching difficulty were on all sides visible. . . . The removal of the strong rule of the Barrukzyes opened a door for undefined hopes to many of the other families and tribes. The whole country was full of intrigues and of diplomatic bargaining, carried on by the English political agents with the various chiefs and leaders. But they soon found that the hopes excited by these negotiations were illusory. The allowances for which they had bargained were reduced, for the English envoy began to be disquieted at the vast expenses of the Government. They did not find that they derived any advantages from the establishment of the new puppet King, Soojah Dowlah; and every Mahomedan, even the very king himself,

felt disgraced at the predominance of the English infidels. But as no actual insurrection broke out, Macnaghten, a man of sanguine temperament and anxious to believe what he wished, in spite of unmistakable warnings as to the real feeling of the people, clung with almost angry vehemence to the persuasion that all was going well, and that the new King had a real hold upon the people's affection. So completely had he deceived himself on this point, that he had decided to send back a portion of the English army, under General Sale, into Hindostan. He even intended to accompany it himself to enjoy the peaceful post of Governor of Bombay, with which his successful policy had been rewarded. His place was to be taken by Sir Alexander Burnes, whose view of the troubled condition of the country underlying the comparative calm of the surface was much truer than that of Macnaghten, but who, perhaps from that very fact, was far less popular among the chiefs. The army which was to remain at Candahar was under the command of General Nott, an able and decided if somewhat irascible man. But General Elphinstone, the commander of the troops at Cabul, was of quite a different stamp. He was much respected and liked for his honourable character and social qualities, but was advanced in years, a confirmed invalid, and wholly wanting in the vigour and decision which his critical position was likely to require. The fool's paradise with which the English Envoy had surrounded himself was rudely destroyed. He had persuaded himself that the frequently recurring disturbances, and especially the insurrection of the Ghilzies between Cabul and Jellalabad, were mere local outbreaks. But in fact a great conspiracy was on foot in which the chiefs of nearly every important tribe in the country were implicated. On the evening of the 1st of November [1841] a meeting of the chiefs was held, and it was decided that an immediate attack should be made on the house of Sir Alexander Burnes. The following morning an angry crowd of assailants stormed the houses of Sir Alexander Burnes and Captain Johnson, murdering the inmates, and rifling the treasure-chests belonging to Soojah Dowlah's army. Soon the whole city was in wild insurrection. The evidence is nearly irresistible that a little decision and rapidity of action on the part of the military would have at once crushed the outbreak. But although the attack on Burnes's house was known, no troops were sent to his assistance. Indeed, that unbroken course of folly and mismanagement which marked the conduct of our military affairs throughout this crisis had already begun. Instead of occupying the fortress of the Bala Hissar, where the army would have been in comparative security, Elphinstone had placed his troops in cantonments far too extensive to be properly defended, surrounded by an entrenchment of the most insignificant character, commanded on almost all sides by higher ground. To complete the unfitness of the position, the commissariat supplies were not stored within the cantonments, but were placed in an isolated fort at some little distance. An ill-sustained and futile assault was made upon the town on the 3d of November, but from that time onwards the British troops lay with incomprehensible supineness awaiting their fate in their defenceless

position. The commissariat fort soon fell into the hands of the enemy and rendered their situation still more deplorable. Some flashes of bravery now and then lighted up the sombre scene of helpless misfortune, and served to show that destruction might even yet have been averted by a little firmness. . . . But the commander had already begun to despair, and before many days had passed he was thinking of making terms with the enemy. Macnaghten had no course open to him under such circumstances but to adopt the suggestion of the general, and attempt as well as he could by bribes, cajolery, and intrigue, to divide the chiefs and secure a safe retreat for the English. Akbar Khan, the son of Dost Mohamed, though not present at the beginning of the insurrection, had arrived from the northern mountains, and at once asserted a predominant influence in the insurgent councils. With him and with the other insurgent chiefs Macnaghten entered into an arrangement by which he promised to withdraw the English entirely from the country if a safe passage were secured for the army through the passes. . . . While ostensibly treating with the Barrukzye chiefs, he intrigued on all sides with the rival tribes. His double dealing was taken advantage of by Akbar Khan. He sent messengers to Macnaghten proposing that the English should make a separate treaty with himself and support him with their troops in an assault upon some of his rivals. The proposition was a mere trap, and the envoy fell into it. Ordering troops to be got ready, he hurried to a meeting with Akbar to complete the arrangement. There he found himself in the presence of the brother and relatives of the very men against whom he was plotting, and was seized and murdered by Akbar's own hand [December 23]. Still the General thought of nothing but surrender. The negotiations were entrusted to Major Pottinger. The terms of the chiefs gradually rose, and at length with much confusion the wretched army marched out of the cantonments [January 6, 1842], leaving behind nearly all the cannon and superfluous military stores. An Afghan escort to secure the safety of the troops on their perilous journey had been promised, but the promise was not kept. The horrors of the retreat form one of the darkest passages in English military history. In bitter cold and snow, which took all life out of the wretched Sepoys, without proper clothing or shelter, and hampered by a disorderly mass of thousands of camp-followers, the army entered the terrible defiles which lie between Cabul and Jellalabad. Whether Akbar Khan could, had he wished it, have restrained his fanatical followers is uncertain. As a fact the retiring crowd—it can scarcely be called an army—was a mere unresisting prey to the assaults of the mountaineers. Constant communication was kept up with Akbar; on the third day all the ladies and children with the married men were placed in his hands, and finally even the two generals gave themselves up as hostages, always in the hope that the remnant of the army might be allowed to escape.”—J. F. Bright, *Hist. of England*, v. 4, pp. 61-66.—“Then the march of the army, without a general, went on again. Soon it became the story of a general without an army; before very long there was neither general nor army. It is idle to lengthen a tale of mere horrors. The strag-

gling remnant of an army entered the Jugdulluk Pass—a dark, steep, narrow, ascending path between crags. The miserable toilers found that the fanatical, implacable tribes had barricaded the pass. All was over. The army of Cabul was finally extinguished in that barricaded pass. It was a trap; the British were taken in it. A few mere fugitives escaped from the scene of actual slaughter, and were on the road to Jellalabad, where Sale and his little army were holding their own. When they were within sixteen miles of Jellalabad the number was reduced to six. Of these six five were killed by straggling marauders on the way. One man alone reached Jellalabad to tell the tale. Literally one man, Dr. Brydon, came to Jellalabad [January 13] out of a moving host which had numbered in all some 16,000 when it set out on its march. The curious eye will search through history or fiction in vain for any picture more thrilling with the suggestions of an awful catastrophe than that of this solitary survivor, faint and reeling on his jaded horse, as he appeared under the walls of Jellalabad, to bear the tidings of our Thermopylae of pain and shame. This is the crisis of the story. With this at least the worst of the pain and shame were destined to end. The rest is all, so far as we are concerned, reaction and recovery. Our successes are common enough; we may tell their tale briefly in this instance. The garrison at Jellalabad had received before Dr. Brydon's arrival an intimation that they were to go out and march toward India in accordance with the terms of the treaty extorted from Elphinstone at Cabul. They very properly declined to be bound by a treaty which, as General Sale rightly conjectured, had been 'forced from our envoy and military commander with the knives at their throats.' General Sale's determination was clear and simple. 'I propose to hold this place on the part of Government until I receive its order to the contrary.' This resolve of Sale's was really the turning point of the history. Sale held Jellalabad; Nott was at Candahar. Akbar Khan besieged Jellalabad. Nature seemed to have declared herself emphatically on his side, for a succession of earthquake shocks shattered the walls of the place, and produced more terrible destruction than the most formidable guns of modern warfare could have done. But the garrison held out fearlessly; they restored the parapets, re-established every battery, retrenched the whole of the gates and built up all the breaches. They resisted every attempt of Akbar Khan to advance upon their works, and at length, when it became certain that General Pollock was forcing the Khyber Pass to come to their relief, they determined to attack Akbar Khan's army; they issued boldly out of their forts, forced a battle on the Afghan chief, and completely defeated him. Before Pollock, having gallantly fought his way through the Khyber Pass, had reached Jellalabad [April 16] the beleaguering army had been entirely defeated and dispersed. . . . Meanwhile the unfortunate Shah Soojah, whom we had restored with so much pomp of announcement to the throne of his ancestors, was dead. He was assassinated in Cabul, soon after the departure of the British, . . . and his body, stripped of its royal robes and its many jewels, was flung into a ditch."—J. McCarthy, *Hist. of our own Times*, v. 1, ch. 11.

A. D. 1842-1869.—The British return to Cabul.—Restoration of Dost Mahomed.—It was not till September that General Pollock "could obtain permission from the Governor-General, Lord Ellenborough, to advance against Cabul, though both he and Nott were burning to do so. When Pollock did advance, he found the enemy posted at Jugdulluck, the scene of the massacre. 'Here,' says one writer, 'the skeletons lay so thick that they had to be cleared away to allow the guns to pass. The savage grandeur of the scene rendered it a fitting place for the deed of blood which had been enacted under its horrid shade, never yet pierced in some places by sunlight. The road was strewn for two miles with mouldering skeletons like a charnel house.' Now the enemy found they had to deal with other men, under other leaders, for, putting their whole energy into the work, the British troops scaled the heights and steep ascents, and defeated the enemy in their strongholds on all sides. After one more severe fight with Akbar Khan, and all the force he could collect, the enemy were beaten, and driven from their mountains, and the force marched quietly into Cabul. Nott, on his side, started from Candahar on the 7th of August, and, after fighting several small battles with the enemy, he captured Ghuzni, where Palmer and his garrison had been destroyed. From Ghuzni General Nott brought away, by command of Lord Ellenborough, the gates of Somnauth [said to have been taken from the Hindu temple of Somnauth by Mahmoud of Ghazni, the first Mohammedan invader of India, in 1024], which formed the subject of the celebrated 'Proclamation of the Gates,' as it was called. This proclamation, issued by Lord Ellenborough, brought upon him endless ridicule, and it was indeed at first considered to be a satire of his enemies, in imitation of Napoleon's address from the Pyramids; the Duke of Wellington called it 'The Song of Triumph.' . . . This proclamation, put forth with so much flourishing of trumpets and ado, was really an insult to those whom it professed to praise, it was an insult to the Mohammedans under our rule, for their power was gone, it was also an insult to the Hindoos, for their temple of Somnauth was in ruins. These celebrated gates, which are believed to be imitations of the original gates, are now lying neglected and worm-eaten, in the back part of a small museum at Agra. But to return, General Nott, having captured Ghuzni and defeated Sultan Jan, pushed on to Cabul, where he arrived on the 17th of September, and met Pollock. The English prisoners (amongst whom were Brigadier Shelton and Lady Sale), who had been captured at the time of the massacre, were brought, or found their own way, to General Pollock's camp. General Elphinstone had died during his captivity. It was not now considered necessary to take any further steps; the bazaar in Cabul was destroyed, and on the 12th of October Pollock and Nott turned their faces southwards, and began their march into India by the Khyber route. The Afghans in captivity were sent back, and the Governor-General received the troops at

Ferozepoor. Thus ended the Afghan war of 1838-42. . . . The war being over, we withdrew our forces into India, leaving the son of Shah Soojah, Fathi Jung, who had escaped from Cabul when his father was murdered, as king of the country, a position that he was unable to maintain long, being very shortly afterwards assassinated. In 1842 Dost Mahomed, the ruler whom we had deposed, and who had been living at our expense in India, returned to Cabul and resumed his former position as king of the country, still bearing ill-will towards us, which he showed on several occasions, notably during the Sikh war, when he sent a body of his horsemen to fight for the Sikhs, and he himself marched an army through the Khyber to Peshawur to assist our enemies. However, the occupation of the Punjab forced upon Dost Mahomed the necessity of being on friendly terms with his powerful neighbour; he therefore concluded a friendly treaty with us in 1854, hoping thereby that our power would be used to prevent the intrigues of Persia against his kingdom. This hope was shortly after realized, for in 1856 we declared war against Persia, an event which was greatly to the advantage of Dost Mahomed, as it prevented Persian encroachments upon his territory. This war lasted but a short time, for early in 1857 an agreement was signed between England and Persia, by which the latter renounced all claims over Herat and Afghanistan. Herat, however, still remained independent of Afghanistan, until 1863, when Dost Mahomed attacked and took the town, thus uniting the whole kingdom, including Candahar and Afghan Turkestan, under his rule. This was almost the last act of the Ameer's life, for a few days after taking Herat he died. By his will he directed that Shere Ali, one of his sons, should succeed him as Ameer of Afghanistan. The new Ameer immediately wrote to the Governor-General of India, Lord Elgin, in a friendly tone, asking that his succession might be acknowledged. Lord Elgin, however, as the commencement of the Liberal policy of 'masterly inactivity' neglected to answer the letter, a neglect which cannot but be deeply regretted, as Shere Ali was at all events the de facto ruler of the country, and even had he been beaten by any other rival for the throne, it would have been time enough to acknowledge that rival as soon as he was really ruler of the country. When six months later a cold acknowledgement of the letter was given by Sir William Denison, and when a request that the Ameer made for 6,000 muskets had been refused by Lord Lawrence, the Ameer concluded that the disposition of England towards him was not that of a friend; particularly as, when later on, two of his brothers revolted against him, each of them was told by the Government that he would be acknowledged for that part of the country which he brought under his power. However, after various changes in fortune, in 1869 Shere Ali finally defeated his two brothers Afzool and Azim, together with Afzool's son, Abdurrahman."—P. F. Walker, *Afghanistan*, pp. 45-51.

A. D. 1869-1881.—The second war with the English and its causes.—The period of disturbance in Afghanistan, during the struggle

of Shere Ali with his brothers, coincided with the vice royalty of Lord Lawrence in India. The policy of Lord Lawrence, "sometimes slightly spoken of as masterly inactivity, consisted in holding entirely aloof from the dynastic quarrels of the Afghans . . . and in attempting to cultivate the friendship of the Ameer by gifts of money and arms, while carefully avoiding topics of offence. . . . Lord Lawrence was himself unable to meet the Ameer, but his successor, Lord Mayo, had an interview with him at Umballah in 1869. . . . Lord Mayo adhered to the policy of his predecessor. He refused to enter into any close alliance, he refused to pledge himself to support any dynasty. But on the other hand he promised that he would not press for the admission of any English officers as Residents in Afghanistan. The return expected by England for this attitude of friendly non-interference was that every other foreign state, and especially Russia, should be forbidden to mix either directly or indirectly with the affairs of the country in which our interests were so closely involved. . . . But a different view was held by another school of Indian politicians, and was supported by men of such eminence as Sir Bartle Frere and Sir Henry Rawlinson. Their view was known as the Sindh Policy as contrasted with that of the Punjab. It appeared to them desirable that English agents should be established at Quetta, Candahar, and Herat, if not at Cabul itself, to keep the Indian Government completely informed of the affairs of Afghanistan, and to maintain English influence in the country. In 1874, upon the accession of the Conservative Ministry, Sir Bartle Frere produced a memorandum in which this policy was ably maintained. . . . A Viceroy whose views were more in accordance with those of the Government, and who was likely to be a more ready instrument in [its] hands, was found in Lord Lytton, who went to India intrusted with the duty of giving effect to the new policy. He was instructed . . . to continue payments of money, to recognise the permanence of the existing dynasty, and to give a pledge of material support in case of unprovoked foreign aggression, but to insist on the acceptance of an English Resident at certain places in Afghanistan in exchange for these advantages. . . . Lord Lawrence and those who thought with him in England prophesied from the first the disastrous results which would arise from the alienation of the Afghans. . . . The suggestion of Lord Lytton that an English Commission should go to Cabul to discuss matters of common interest to the two Governments, was calculated . . . to excite feelings already somewhat unfriendly to England. He [Shere Ali] rejected the mission, and formulated his grievances. . . . Lord Lytton waived for a time the despatch of the mission, and consented to a meeting between the Minister of the Ameer and Sir Lewis Pelly at Peshawur. . . . The English Commissioner was instructed to declare that the one indispensable condition of the Treaty was the admission of an English representative within the limits of Afghanistan. The almost piteous request on the part of the Afghans for the relaxation of this demand proved unavailing, and the sudden death of the Ameer's envoy formed a good excuse for breaking off the negotiation. Lord Lytton treated the Ameer as incorrigible, gave

him to understand that the English would proceed to secure their frontier without further reference to him, and withdrew his native agent from Cabul. While the relations between the two countries were in this uncomfortable condition, information reached India that a Russian mission had been received at Cabul. It was just at this time that the action of the Home Government seemed to be tending rapidly towards a war with Russia. . . . As the despatch of a mission from Russia was contrary to the engagements of that country, and its reception under existing circumstances were an unfriendly aspect, Lord Lytton saw his way with some plausible justification to demand the reception at Cabul of an English embassy. He notified his intention to the Ameer, but without waiting for an answer selected Sir Neville Chamberlain as his envoy, and sent him forward with an escort of more than 1,000 men, too large, as it was observed, for peace, too small for war. As a matter of course the mission was not admitted. . . . An outcry was raised both in England and in India. . . . Troops were hastily collected upon the Indian frontier; and a curious light was thrown on what had been done by the assertion of the Premier at the Guildhall banquet that the object in view was the formation of a 'scientific frontier;' in other words, throwing aside all former pretences, he declared that the policy of England was to make use of the opportunity offered for direct territorial aggression. . . . As had been foreseen by all parties from the first, the English armies were entirely successful in their first advance [November, 1878]. . . . By the close of December Jellalabad was in the hands of Browne, the Shutargardan Pass had been surmounted by Roberts, and in January Stewart established himself in Candahar. When the resistance of his army proved ineffectual, Shere Ali had taken to flight, only to die. His refractory son Yakooob Khan was drawn from his prison and assumed the reins of government as regent. . . . Yakooob readily granted the English demands, consenting to place his foreign relations under British control, and to accept British agencies. With considerably more reluctance, he allowed what was required for the rectification of the frontier to pass into English hands. He received in exchange a promise of support by the British Government, and an annual subsidy of £60,000. On the conclusion of the treaty the troops in the Jellalabad Valley withdrew within the new frontier, and Yakooob Khan was left to establish his authority as best he could at Cabul, whither in July Cavagnari with an escort of twenty-six troopers and eighty infantry betook himself. Then was enacted again the sad story which precluded the first Afghan war. All the parts and scenes in the drama repeated themselves with curious uniformity—the English Resident with his little garrison trusting blindly to his capacity for influencing the Afghan mind, the puppet king, without the power to make himself respected, irritated by the constant presence of the Resident, the chiefs mutually distrustful and at one in nothing save their hatred of English interference, the people seething with anger against the infidel foreigner, a wild outbreak which the Ameer, even had he wished it, could not control, an attack upon the Residency and the complete destruction [Sept., 1879] after a

gallant but futile resistance of the Resident and his entire escort. Fortunately the extreme disaster of the previous war was avoided. The English troops which were withdrawn from the country were still within reach. . . . About the 24th of September, three weeks after the outbreak, the Cabul field force under General Roberts was able to move. On the 5th of October it forced its way into the Logar Valley at Charassiab, and on the 12th General Roberts was able to make his formal entry into the city of Cabul. . . . The Ameer was deposed, martial law was established, the disarmament of the people required under pain of death, and the country scoured to bring in for punishment those chiefly implicated in the late outbreak. While thus engaged in carrying out his work of retribution, the wave of insurrection closed behind the English general, communication through the Kuram Valley was cut off, and he was left to pass the winter with an army of some 8,000 men connected with India only by the Kybur Pass. . . . A new and formidable personage . . . now made his appearance on the scene. This was Abdurahman, the nephew and rival of the late Shere Ali, who upon the defeat of his pretensions had sought refuge in Turkestan, and was supposed to be supported by the friendship of Russia. The expected attack did not take place, constant reinforcements had raised the Cabul army to 20,000, and rendered it too strong to be assailed. . . . It was thought desirable to break up Afghanistan into a northern and southern province. . . . The policy thus declared was carried out. A certain Shere Ali, a cousin of the late Ameer of the same name, was appointed Wali or Governor of Candahar. In the north signs were visible that the only possible successor to the throne of Cabul would be Abdurahman. . . . The Bengal army under General Stewart was to march northwards, and, suppressing on the way the Ghuznee insurgents, was to join the Cabul army in a sort of triumphant return to Peshawur. The first part of the programme was carried out. . . . The second part of the plan was fated to be interrupted by a serious disaster which rendered it for a while uncertain whether the withdrawal of the troops from Afghanistan was possible. . . . Ayooob had always expressed his disapproval of his brother's friendship for the English, and had constantly refused to accept their overtures. Though little was known about him, rumours were afloat that he intended to advance upon Ghuznee, and join the insurgents there. At length about the middle of June [1880] his army started. . . . But before the end of June Farah had been reached and it seemed plain that Candahar would be assaulted. . . . General Burrows found it necessary to fall back to a ridge some forty-five miles from Candahar called Kush-y-Nakhud. There is a pass called Maiwand to the north of the high-road to Candahar, by which an army avoiding the position on the ridge might advance upon the city. On the 27th of July the Afghan troops were seen moving in the direction of this pass. In his attempt to stop them with his small force, numbering about 2,500 men, General Burrows was disastrously defeated. With difficulty and with the loss of seven guns, about half the English troops returned to Candahar. General Primrose, who was in command, had no

choice but to strengthen the place, submit to an investment, and wait till he should be rescued. . . . The troops at Cabul were on the point of withdrawing when the news of the disaster reached them." General Roberts at once pushed forward to the beleaguered city, and dispersed

the army of the Ameer. Candahar was then held by the British until the fall of 1881, when they withdrew, Abdurahman having apparently established himself in power, and the country being in a quieted state.—J. F. Bright, *Hist. of Eng., period 4*, pp. 534-544.

Moslem conquest and Moslem States in the North. See MAHOMETAN CONQUEST, &c.: A. D. 640-646; 647-709; and 908-1171; also BARBARY STATES; EGYPT: A. D. 1250-1517, and after; and SUDAN.

The inhabiting races.—The indigenous races of Africa are considered to be four in number, namely: the Negroes proper, who occupy a central zone, stretching from the Atlantic to the Egyptian Sudan, and who comprise an enormous number of diverse tribes; the Fulahs (with whom the Nubians are associated), settled mainly between Lake Chad and the Niger; the Bantus, who occupy the whole south, except its extremity; and the Hottentots, who are in that extreme southern region. Some anthropologists include with the Hottentots the Bosjesmans or Bushmen. The Kafirs and Bechuanas are Bantu tribes. The north and northeast are occupied by Semitic and Hamitic races, the latter including Abyssinians and Gallas.—A. H. Keane, *The African Races* (*Stanford's Compendium: Africa*, app.).

A. D. 1415-1884.—A chronological record of European Exploration, Missionary Settlement, Colonization and Occupation.

1415.—Conquest of Ceuta by the Portuguese.

1434-1461.—Portuguese explorations down the western coast, from Cape Bojador to Cape Mesurado, in Liberia, under the direction of Prince Henry, called the Navigator.

1442.—First African slaves brought into Europe by one of the ships of Prince Henry.

1471-1482.—Portuguese explorations carried beyond the Guinea Coast, and to the Gold Coast, where the first settlement was established.

1482.—Discovery of the mouth of the Zaire or Congo by the Portuguese explorer, Diogo Cao.

1485-1596.—Establishment of Roman Catholic missions on the western coast.

1486.—Unconscious rounding of the Cape of Good Hope by Bartholomew Diaz.

1490-1527.—Visit to Abyssinia of Pedro da Covilhão, or Covilham, the Portuguese explorer.

1497.—Voyage of Vasco da Gama round the Cape of Good Hope to India.

1505-1508.—Portuguese settlements and fortified stations established on the eastern coast.

1506.—Discovery of Madagascar by the Portuguese.

1552-1553.—Beginning of English voyages to the Guinea and Gold Coasts.

1560.—French trading to the Senegal and Gambia begun.

1562.—First slave-trading voyage of Sir John Hawkins to the Guinea Coast.

1578.—Founding of St. Paul de Loando, Portuguese capital on the west coast.

1582 (about).—Founding of the French post, St. Louis, at the mouth of the Senegal.

1595.—Opening of trade on the western coast by the Dutch.

1618-1621.—Exploration of the River Gambia for the Royal Niger Company of England.

1644.—Fort Dauphin founded by the French in the island of Madagascar.

1652.—Dutch settlement at the Cape of Good Hope.

1694-1724.—Exploration of the River Senegal for the Royal Senegal Company.

1723.—Exploration of the Gambia for the English Royal African Company.

1736.—Moravian Mission on the Gold Coast.

1737.—Moravian Mission planted by George Schmidt among the Hottentots.

1754.—Substantial beginning of the domination in Madagascar of the Hovas.

1761-1762.—Dutch expedition from Cape Colony beyond the Orange River.

1768-1773.—Journey of James Bruce to the fountains of the Blue Nile in Abyssinia.

1774.—Founding of a French colony in Madagascar by Count Benyowsky.

1781-1785.—Travels of M. Le Vaillant among the Hottentots and Kafirs.

1787.—Founding of the English settlement for freed slaves at Sierra Leone.

1788.—Formation of the African Association in England, for systematic exploration.

1795.—The Cape Colony taken from the Dutch by the English.

1795-1797.—The first exploring journey of Mungo Park, in the service of the African Association, from the Gambia.

1798.—Mission of Dr. John Vanderkemp to the Kafirs, for the London Missionary Society.

1798.—Journey of the Portuguese Dr. Lacerda from the Lower Zambesi to the kingdom of Cazembe, on Lake Moero.

1802-1806.—Restoration of Cape Colony to the Dutch and its reconquest by the English.

1802-1811.—Journey of the Pombeiros (negroes) across the continent from Angola to Tete.

1804.—Founding of the Church of England Mission in Sierra Leone.

1805.—Second expedition of Mungo Park from the Gambia to the Niger, from which he never returned.

1805.—Travels of Dr. Lichtenstein in Bechuanaland.

1810.—Missions in Great Namaqualand and Damaraland begun by the London Missionary Society.

1812.—Exploration of the Orange River and the Limpopo by Campbell, the missionary.

1812-1815.—Journey of Burckhardt under the auspices of the African Association, up the Nile, through Nubia, to Berbera, Shendy, and Suakin; thence through Jidda to Mecca, in the character of a Mussulman.

1816-1818.—Fatal and fruitless attempts to explore the lower course of the Niger.

1818.—Mission in Madagascar undertaken by the London Missionary Society.

1818.—Beginning, on the Orange River, of the missionary labors of Robert Moffat in South Africa.

1818.—Exploration of the sources of the Gambia by Gaspard Mollien, from Fort St. Louis, at the mouth of the Senegal.

1818-1820.—Exploration of Fezzan to its southern limit, from Tripoli, by Captain Lyon.

1820.—First Wesleyan Mission founded in Kafirland.

1820.—Treaty abolishing the slave-trade in Madagascar.

1821.—Mission-work in Kaffraria undertaken by the Glasgow Missionary Society.

1822.—Founding of the republic of Liberia. See SLAVERY, NEGRO: A. D. 1816-1847.

1822.—Official journey of Lieutenant Laing from Sierra Leone in the "Timannee, Kooranko and Soolima" countries.

1822-1825.—Expedition of Captain Clapper-ton, Dr. Oudney, and Colonel Denham, from Tripoli to Lake Tchad and beyond.

1825-1826.—Expedition of Major Laing, in the service of the British Government, from Tripoli, through the desert, to Timbuctoo, which he reached, and where he remained for a month. Two days after leaving the city he was murdered.

1825-1827.—Expedition of Captain Clapper-ton from the Bight of Benin to Sokoto.

1827.—Moravian Mission settled in the Tambookie territory, South Africa.

1827.—Journey of Linant de Bellefonds, for the African Association, up the White Nile to 13° 6' north latitude.

1827-1828.—Journey of Caillé from a point on the west coast, between Sierra Leone and the Gambia, to Jenné and Timbuctoo; thence to Fez and Tangier.

1828.—Undertakings of the Basle Missionary Society on the Gold Coast.

1830-1831.—Exploration of the Niger to the sea by Richard and John Lender, solving the question as to its mouth.

1830-1846.—French conquest and subjugation of Algiers.

1831.—Portuguese mission of Major Monteiro and Captain Gamitto to the court of Muata Cazembe.

1831.—Absorption of the African Association by the Royal Geographical Society of London.

1832-1834.—First commercial exploration of the lower Niger, from its mouth, by Macgregor Laird, with two steamers.

1833.—Mission in Basutoland established by the Evangelical Missionary Society of Paris.

1834.—Beginning of missionary labors under the American Board of Missions in South Africa.

1834.—Mission founded at Cape Palmas on the western coast, by the American Board for Foreign Missions.

1834.—The Great Trek of the Dutch Boers from Cape Colony and their founding of the republic of Natal.

1835.—Mission among the Zulus established by the American Board of Foreign Missions.

1835-1849.—Persecution of Christians in Madagascar.

1836-1837.—Explorations of Captain Sir James E. Alexander in the countries of the Great Namaquas, the Bushmen and the Hill Damaras.

1839-1841.—Egyptian expeditions sent by Mehemet Ali up the White Nile to latitude 6° 35' N.; accompanied and narrated in part by Ferdinand Werne.

1839-1843.—Missionary residence of Dr. Krapf in the kingdom of Shoa, in the Ethiopian highlands.

1840.—Arrival of Dr. Livingstone in South Africa as a missionary.

1841.—Expedition of Captains Trotter and Allen, sent by the British Government to treat with tribes on the Niger for the opening of commerce and the suppression of the slave trade.

1842.—Travels of Dr. Charles Johnston in Southern Abyssinia.

1842.—Gaboan Mission, on the western coast near the equator, founded by the American Board of Foreign Missions.

1842.—The Rhenish Mission established by German missionaries at Bethanien in Namaqualand.

1842.—Wesleyan and Norwegian Missions opened in Natal.

1842-1862.—French occupation of territory on the Gaboon and the Ogowe.

1843.—British annexation of Natal, and migration of the Boers to found the Orange Free State.

1843.—Exploration of the Senegal and the Falémé by Huard-Bessinières and Raffinel.

1843-1845.—Travels and residence of Mr. Parkyns in Abyssinia.

1843-1848.—Hunting journeys of Gordon Cumming in South Africa.

1844.—Mission founded by Dr. Krapf at Mombassa, on the Zanzibar coast.

1845.—Duncan's journey for the Royal Geographical Society from Whydah, via Abome, to Adofudia.

1845.—Mission to the Cameroons established by the Baptist Missionary Society of England.

1846.—Unsuccessful attempt of Raffinel to cross Africa from Senegal to the Nile, through the Sudan.

1846.—Mission of Samuel Crowther (afterwards Bishop of the Niger), a native and a liberated slave, to the Yoruba country.

1846.—Mission on Old Calabar River founded by the United Presbyterian Church in Jamaica.

1847-1849.—Interior explorations of the German missionaries Dr. Krapf and Mr. Rebmann, from Mombassa on the Zanzibar coast.

1848.—Founding of the Transvaal Republic by the Boers.

1849.—Missionary journey of David Livingstone northward from the country of the Bechuana, and his discovery of Lake Ngami.

1849-1851.—Journey of Ladislaus Magyar from Benguela to the kingdoms of Bihe and Moluwa on the interior table-land, and across the upper end of the Zambesi valley.

1850.—Sale of Danish forts at Quetta, Adda, and Fingo, on the western coast, to Great Britain.

1850-1851.—Travels of Andersson and Galton from Walfish Bay to Ovampo-land and Lake Ngami.

1850-1855.—Travels of Dr. Barth from Tripoli to Lake Tchad, Sokoto and the Upper Niger to Timbuctoo, where he was detained for nine months.

1851.—Discovery of the Zambesi by Dr. Livingstone.

1852-1863.—Hunting and trading journeys of Mr. Chapman in South Africa, between Natal and Walfish Bay and to Lake Ngami and the Zambesi.

1853.—Founding of the Diocese of Natal by the English Church and appointment of Dr. Colenso to be its bishop.

1853-1856.—Journey of Dr. Livingstone from Linyanti, the Makololo capital, up the Zambesi and across to the western coast, at St. Paul de Loando, thence returning entirely across the continent, down the Zambesi to Quilimane at its mouth, discovering the Victoria Falls on his way.

1853-1858.—Ivory-seeking expeditions of John Petherick, up the Bahr-el-Ghazel.

1853-1859.—Roman Catholic mission established at Gondokoro, on the Upper Nile.

1854.—Exploration of the Somali country—the "eastern horn of Africa"—by Captains Burton and Speke.

1855.—Beginning of attempts by the French governor of Senegal, General Faidherbe, to carry the flag of France into the Western Sudan.

1856-1859.—Journeys of Du Chaillu in the western equatorial regions, on the Gaboon and the Ogobai.

1857-1858.—Expedition of Captains Burton and Speke, from Zanzibar, through Uzaramo, Usagara, Ugogo, and Unyamwezi, to Ujiji, on Lake Tanganyika—making the first European discovery of the lake; returning to Kazé, and thence continued by Speke alone, during Burton's illness, to the discovery of Lake Victoria Nyanza.

1858.—Journey of Andersson from Walfish Bay to the Okavango River.

1858.—English mission station founded at Victoria on the Cameroons coast.

1858-1863.—Expedition of Dr. Livingstone, in the service of the British Government, exploring the Shiré and the Rovuma, and discovering and exploring Lake Nyassa—said, however, to have been known previously to the Portuguese.

1860-1861.—Journey of Baron von Decken from Mombassa on the Zanzibar coast, to Kilimanjaro mountain.

1860-1862.—Return of Speke, with Captain Grant, from Zanzibar to Lake Victoria Nyanza, visiting Karagwe, and Uganda, and reaching the outlet of the Nile; thence through Unyoro to Gondokoro, and homeward by the Nile.

1861.—Establishment of the Universities Mission by Bishop Mackenzie on the Upper Shiré.

1861-1862.—English acquisition of the town and kingdom of Lagos on the Bight of Benin by cession from the native ruler.

1861-1862.—Sir Samuel Baker's exploration of the Abyssinian tributaries of the Nile.

1861-1862.—Journey of Captain Burton from Lagos, on the western coast, to Abeokuta, the capital of the Akus, in Yoruba, and to the Cameroons Mountains.

1861-1862.—Journey of Mr. Baines from Walfish Bay to Lake Ngami and Victoria Falls.

1862.—Resumption of the Christian Mission in Madagascar, long suppressed.

1862-1867.—Travels of Dr. Rohlfs in Morocco, Algeria and Tunis, and exploring journey from the Gulf of the Syrtes to the Gulf of Guinea.

1863.—Travels of Winwood Reade on the western coast.

1863.—Incorporation of a large part of Kaffraria with Cape Colony.

1863.—Second visit of Du Chaillu to the western equatorial region and journey to Ashangoland.

1863-1864.—Official mission of Captain Burton to the King of Dahomey.

1863-1864.—Exploration of the Bahr-el-Ghazel from Khartoum by the wealthy Dutch heiress, Miss Tinné, and her party.

1863-1865.—Expedition by Sir Samuel Baker and his wife up the White Nile from Khartoum, resulting in the discovery of Lake Albert Nyanza, as one of its sources.

1864.—Mission of Lieutenant Mage and Dr. Quintin, sent by General Faidherbe from Senegal to the king of Segou, in the Sudan.

1866.—Founding of a Norwegian mission in Madagascar.

1866-1873.—Last journey of Dr. Livingstone, from the Rovuma River, on the eastern coast, to Lake Nyassa; thence to Lake Tanganyika, Lake Moero, Lake Bangweolo, and the Lualaba River, which he suspected of flowing into the Albert Nyanza, and being the ultimate fountain head of the Nile. In November, 1871, Livingstone was found at Ujiji, on Lake Tanganyika, by Henry M. Stanley, leader of an expedition sent in search of him. Declining to quit the country with Stanley, and pursuing his exploration of the Lualaba, Livingstone died May 1, 1873, on Lake Bangweolo.

1867.—Mission founded in Madagascar by the Society of Friends.

1867-1868.—British expedition to Abyssinia for the rescue of captives; overthrow and death of King Theodore.

1868.—British annexation of Basutoland in South Africa.

1869.—Christianity established as the state religion in Madagascar.

1869.—Fatal expedition of Miss Tinné from Tripoli into the desert, where she was murdered by her own escort.

1869-1871.—Explorations of Dr. Schweinfurth between the Bahr-el-Ghazel and the Upper Congo, discovering the Wellé River.

1869-1873.—Expedition of Dr. Nachtigal from Tripoli through Kuka, Tibesti, Borku, Wadai, Darfur, and Kordofan, to the Nile.

1870-1873.—Official expedition of Sir Samuel Baker, in the service of the Khedive of Egypt, Ismaïl Pasha, to annex Gondokoro, then named Ismalia, and to suppress the slave-trade in the Egyptian Sudan, or Equatoria.

1871.—Transfer of the rights of Holland on the Gold Coast to Great Britain.

1871.—Annexation of Griqualand West to Cape Colony.

1871.—Scientific tour of Sir Joseph D. Hooker and Mr. Ball in Morocco and the Great Atlas.

1871.—Missionary journey of Mr. Charles New in the Masai country and ascent of Mount Kilimanjaro.

1871-1880.—Hunting journeys of Mr. Selous in South Africa, beyond the Zambesi.

1872-1875.—Travels of the naturalist, Reinhold Buchholz, on the Guinea coast.

1872-1879.—Travels of Dr. Holub between the South African diamond fields and the Zambesi.

1873-1875.—Expedition of Captain V. L. Cameron, from Zanzibar to Lake Tanganyika,

and exploration of the Lake; thence to Nyan-gwe on the Lualaba, and thence across the continent, through Ulunda, to the Portuguese settlement at Benguela, on the Atlantic coast.

1873-1875.—Travels of the naturalist, Frank Oates, from Cape Colony to the Victoria Falls.

1873-1876.—Explorations of Gûsfeldt, Falkenstein and Pechuel-Loesche, under the auspices of the German African Association, from the Loango coast, north of the Congo.

1874.—British expedition against the Ashantees, destroying their principal town Coomassie.

1874.—Mission of Colonel Chaillé-Long from General Gordon, at Gondokoro, on the Nile, to M'tesé, king of Uganda, discovering Lake Ibrahim on his return, and completing the work of Speke and Baker, in the continuous tracing of the course of the Nile from the Victoria Nyanza.

1874-1875.—Expedition of Colonel C. Chaillé-Long to Lake Victoria Nyanza and the Makraka Niam-Niam country, in the Egyptian service.

1874-1876.—First administration of General Gordon, commissioned by the Khedive as Governor of Equatoria.

1874-1876.—Occupation and exploration of Darfur and Kordofan by the Egyptians, under Colonels Purdy, Mason, Prout and Colston.

1874-1877.—Expedition of Henry M. Stanley, fitted out by the proprietors of the New York Herald and the London Daily Telegraph, which crossed the continent from Zanzibar to the mouth of the Congo River; making a prolonged stay in the empire of Uganda and acquiring much knowledge of it; circumnavigating Lakes Victoria and Tanganyika, and exploring the then mysterious great Congo River throughout its length.

1874-1877.—Explorations of Dr. Junker in Upper Nubia and in the basin of the Bahr-el-Ghazel.

1875.—Expedition of Dr. Pogge, for the German African Association, from the west coast, south of the Congo, in the Congo basin, penetrating to Kawende, beyond the Ruru or Lulua River, capital of the Muata Yanvo, who rules a kingdom as large as Germany.

1875.—Expedition of Colonel Chaillé-Long into the country of the Makraka Niam-Niams.

1875.—Founding by Scottish subscribers of the mission station called Livingstonia, at Cape Maclear, on the southern shores of Lake Nyassa; headquarters of the mission removed in 1881 to Bandawé, on the same lake.

1875.—Mission founded at Blantyre, in the highlands above the Shire, by the Established Church of Scotland.

1875-1876.—Seizure of Berbera and the region of the Juba River, on the Somali Coast, by Colonel Chaillé-Long, for the Khedive of Egypt, and their speedy evacuation, on the remonstrance of England.

1876.—Conference at Brussels and formation of the International African Association, under the presidency of the king of the Belgians, for the exploration and civilization of Africa.

1876.—Voyage of Romolo Gessi around Lake Albert Nyanza.

1876.—Mission in Uganda established by the Church Missionary Society of England.

1876-1878.—Scientific explorations of Dr. Schweinfurth in the Arabian Desert between the Nile and the Red Sea.

1876-1880.—Explorations and French annexations by Svorgnand de Brazza between the Ogowé and the Congo.

1877.—The Livingstone Inland Mission, for Christian work in the Congo valley, established by the East London Institute for Home and Foreign Missions.

1877-1879.—Second administration of General Gordon, as Governor-General of the Sudan, Darfur and the Equatorial Provinces.

1877-1879.—War of the British in South Africa with the Zulus, and practical subjugation of that nation.

1877-1879.—Journey of Serpa Pinto across the continent from Benguela via the Zambesi.

1877-1880.—Explorations of the Portuguese officers, Capello and Ivens, in western and central Africa, from Benguela to the territory of Yacca, for the survey of the river Cuango in its relations to the hydrographic basins of the Congo and the Zambesi.

1878.—Founding in Glasgow of the African Lakes Company, or "The Livingstone Central Africa Company," for trade on Lakes Nyassa and Tanganyika; by which company the "Stevenson Road" was subsequently built between the two lakes above named.

1878.—Walfish Bay and fifteen miles around it (on the western coast, in Namaqualand) declared British territory.

1878.—Journey of Paul Soleillet from Saint-Louis to Segou.

1878-1880.—Royal Geographical Society's East Central African expedition, under Joseph Thomson, to the Central African lakes, Tanganyika, Nyassa and Leopold, from Zanzibar.

1879.—Establishment, by the Belgian International Society, of a station at Karema, on the eastern shore of Lake Tanganyika.

1879.—Formation of the International Congo Association and the engagement of Mr. Stanley in its service.

1879.—Missionary expeditions to the Upper Congo region by the Livingstone Inland Mission and the Baptist Missionary Society.

1879.—Journey of Mr. Stewart, of the Livingstonia Mission, on Lake Nyassa, from that lake to Lake Tanganyika.

1879.—Discovery of the sources of the Niger, in the hills about 200 miles east of Freetown, the capital of Sierra Leone, by the French explorers, Zweifel and Moustier.

1879-1880.—Journey of Dr. Oskar Lenz, under the auspices of the German African Society, from Morocco to Timbuctoo, and thence to the Atlantic coast in Senegambia. The fact that the Sahara is generally above the sea-level, and cannot therefore be flooded, was determined by Dr. Lenz.

1879-1881.—Expedition of Dr. Buchner from Loanda to Kawende and the kingdom of the Muata Yanvo, where six months were spent in vain efforts to procure permission to proceed further into the interior.

1880.—Mission established by the American Board of Foreign Missions in "the region of Bihé and the Coanza," or Quanza, south of the Congo.

1880-1881.—War of the British with the Boers of the Transvaal.

1880-1881.—Official mission of the German explorer, Gerhard Rohlfs, accompanied by Dr. Stecker, to Abyssinia.

1880-1884.—Campaigns in Upper Senegal, extending French supremacy to the Niger.

1880-1884.—German East African Expedition to explore, in the Congo basin, the region between the Lualaba and the Luapula.

1880-1886.—Explorations of Dr. Junker in the country of the Niam-Niam, and his journey from the Equatorial Province, through Unyoro and Uganda, to Zanzibar.

1880-1889.—Journey of Captain Casati, as correspondent of the Italian geographical review, "L'Esploratore," from Suakin, on the Red Sea, into the district of the Mombutu, west of Lake Albert, and the country of the Niam-Niam; in which travels he was arrested by the revolt of the Mahdi and forced to remain with Emin Pasha until rescued with the latter by Stanley, in 1889.

1881.—French protectorate over Tunis.

1881.—Portuguese expedition of Captain Andrada from Senna on the Zambesi River to the old gold mines of Manica.

1881.—Journey of F. L. and W. D. James from Suakin, on the Red Sea, through the Basé country, in the Egyptian Sudan.

1881.—Founding of a mission on the Congo, at Stanley Pool, by the Baptist Missionary Society of England.

1881-1884.—Expedition of Dr. Pogge and Lieutenant Wissmann to Nyangwe on the Lualaba, from which point Lieutenant Wissmann pursued the journey to Zanzibar crossing the continent.

1881-1885.—Revolt of the Mahdi in the Sudan; the mission of General Gordon; the unsuccessful expedition from England to rescue him; the fall of the city and his death.

1881-1887.—French protectorate established on the Upper Niger and Upper Senegal.

1882.—Italian occupation of Abyssinian territory on the Bay of Assab.

1882-1883.—German scientific expedition, under Dr. Böhm and Herr Reichard, to Lakes Tanganyika and Moero.

1882-1883.—Journey of Mr. H. H. Johnston on the Congo.

1883.—German acquisition of territory on Angra Pequena Bay, in Great Namaqualand.

1883.—Exploration of Masailand by Dr. Fischer, under the auspices of the Hamburg Geographical Society.

1883.—Explorations of Lieutenant Giraud in East Central Africa, descending for some distance the Luapula.

1883.—Scientific investigation of the basins of Lakes Nyassa and Tanganyika, by Mr. Henry Drummond, for the African Lakes Company.

1883.—Journey of M. Révoil in the South Somali country to the Upper Jub.

1883-1884.—Explorations of Mr. Joseph Thomson from Mombassa, through Masailand, to the northeast corner of the Victoria Nyanza, under the auspices of the Royal Geographical Society.

1883-1885.—War of the French with the Hovas of Madagascar, resulting in the establishment of a French protectorate over the island.

1883-1885.—Exploration of Lieutenant Giraud in the lake region.

1883-1886.—Austrian expedition, under Dr. Holub, from Cape Colony, through the Boer states, Bechuanaland and Matabeleland to the Zambesi, and beyond.

1884.—Annexation by Germany of the whole western coast (except Walfish Bay) between the

Portuguese possessions and those of the British in South Africa.

1884.—German occupation of territory on the Kameruns River, under treaties with the native chiefs. English treaties securing contiguous territory to and including the delta of the Niger.

1884.—German protectorate over Togoland on the Gold Coast declared.

1884.—Expedition of Dr. Peters, representing the Society of German Colonization, to the coast region of Zanzibar, and his negotiation of treaties with ten native chiefs, ceding the sovereignty of their dominions.

1884.—Crown colony of British Bechuanaland acquired from the South African Republic.

1884.—Portuguese Government expedition, under Major Carvalho, from Loanda to the Central African potentate called the Muata Yanvo.

1884.—Exploration of the Benué and the Adamawa, by Herr Flegel.

1884.—Scientific expedition of Mr. H. H. Johnston to Kilimanjaro Mountain.

1884.—Discovery of the M'bangi or Ubangi River (afterwards identified with the Wellé), by Captain Hansens and Lieutenant Van Gèle.

1884.—Exploration of Reichard in the south-eastern part of the Congo State.

A. D. 1884-1891.—Partition of the interior between European Powers.—"The partition of Africa may be said to date from the Berlin Conference of 1884-85 [see CONGO FREE STATE]. Prior to that Conference the question of inland boundaries was scarcely considered. . . . The founding of the Congo Independent State was probably the most important result of the Conference. . . . Two months after the Conference had concluded its labours, Great Britain and Germany had a serious dispute in regard to their respective spheres of influence on the Gulf of Guinea. . . . The compromise . . . arrived at placed the Mission Station of Victoria within the German sphere of influence." The frontier between the two spheres of influence on the Bight of Biafra was subsequently defined by a line drawn, in 1886, from the coast to Yola, on the Benué. The Royal Niger Company, constituted by a royal charter, "was given administrative powers over territories covered by its treaties. The regions thereby placed under British protection . . . apart from the Oil Rivers District, which is directly administered by the Crown, embrace the coastal lands between Lagos and the northern frontier of Camarons, the Lower Niger (including territories of Sokoto, Gandu and Borgo), and the Benué from Yola to its confluence." By a protocol signed December 24, 1885, Germany and France "defined their respective spheres of influence and action on the Bight of Biafra, and also on the Slave Coast and in Senegambia." This "fixed the inland extension of the German sphere of influence (Camarons) at 15° E. longitude, Greenwich. . . . At present it allows the French Congo territories to expand along the western bank of the M'bangi . . . provided no other tributary of the M'bangi-Congo is found to the west, in which case, according to the Berlin Treaty of 1884-85, the conventional basin of the Congo would gain an extension." On the 12th of May, 1886, France and Portugal signed a convention by which France "secured the exclusive control of both banks of the Casamanza (in Senegambia), and the Portuguese frontier in the south was advanced approximately

to the southern limit of the basin of the Casini. On the Congo, Portugal retained the Massabi district, to which France had laid claim, but both banks of the Loango were left to France." In 1884 three representatives of the Society for German Colonization—Dr. Peters, Dr. Jühlke, and Count Pfeil—quietly concluded treaties with the chiefs of Useghu, Ukami, Nguru, and Usagara, by which those territories were conveyed to the Society in question. "Dr. Peters . . . armed with his treaties, returned to Berlin in February, 1885. On the 27th February, the day following the signature of the General Act of the Berlin Conference, an Imperial Schutzbrief, or Charter of Protection, secured to the Society for German Colonization the territories . . . acquired for them through Dr. Peters' treaties: in other words, a German Protectorate was proclaimed. When it became known that Germany had seized upon the Zanzibar mainland, the indignation in colonial circles knew no bounds. . . . Prior to 1884, the continental lands facing Zanzibar were almost exclusively under British influence. The principal traders were British subjects, and the Sultan's Government was administered under the advice of the British Resident. The entire region between the Coast and the Lakes was regarded as being under the nominal suzerainty of the Sultan. . . . Still, Great Britain had no territorial claims on the dominions of the Sultan." The Sultan formally protested and Great Britain championed his cause; but to no effect. In the end the Sultan of Zanzibar yielded the German Protectorate over the four inland provinces and over Vitu, and the British and German Governments arranged questions between them, provisionally, by the Anglo-German Convention of 1886, which was afterwards superseded by the more definite Convention of July 1890, which will be spoken of below. In April 1887, the rights of the Society for German Colonization were transferred to the German East Africa Association, with Dr. Peters at its head. The British East Africa Company took over concessions that had been granted by the Sultan of Zanzibar to Sir William Mackinnon, and received a royal charter in September, 1888. In South-west Africa, "an enterprising Bremen merchant, Herr Lüderitz, and subsequently the German Consul-General, Dr. Nachtigal, concluded a series of political and commercial treaties with native chiefs, whereby a claim was instituted over Angra Pequena, and over vast districts in the Interior between the Orange River and Cape Frio. . . . It was useless for the Cape colonists to protest. On the 13th October 1884 Germany formally notified to the Powers her Protectorate over South-West Africa. . . . On 3rd August 1885 the German Colonial Company for South-West Africa was founded, and . . . received the Imperial sanction for its incorporation. But in August 1886 a new Association was formed—the German West-Africa Company—and the administration of its territories was placed under an Imperial Commissioner. . . . The intrusion of Germany into South-West Africa acted as a check upon, no less than a spur to, the extension of British influence northwards to the Zambezi. Another obstacle to this extension arose from the Boer insurrection." The Transvaal, with increased independence had adopted the title of South African Republic. "Zulu-land, having lost its independence, was partitioned: a third of its

territories, over which a republic had been proclaimed, was absorbed (October 1887) by the Transvaal; the remainder was added (14th May 1887) to the British possessions. Amatonga-land was in 1888 also taken under British protection. By a convention with the South African Republic, Britain acquired in 1884 the Crown colony of Bechuana-land; and in the early part of 1885 a British Protectorate was proclaimed over the remaining portion of Bechuana-land." Furthermore, "a British Protectorate was instituted [1885] over the country bounded by the Zambezi in the north, the British possessions in the south, 'the Portuguese province of Sofala' in the east, and the 20th degree of east longitude in the west. It was at this juncture that Mr. Cecil Rhodes came forward, and, having obtained certain concessions from Lobengula, founded the British South Africa Company. . . . On the 29th October 1889, the British South Africa Company was granted a royal charter. It was declared in this charter that 'the principal field of the operations of the British South African Company shall be the region of South Africa lying immediately to the north of British Bechuanaland, and to the north and west of the South African Republic, and to the west of the Portuguese dominions.'" No northern limit was given, and the other boundaries were vaguely defined. The position of Swazi-land was definitely settled in 1890 by an arrangement between Great Britain and the South African Republic, which provides for the continued independence of Swazi-land and a joint control over the white settlers. A British Protectorate was proclaimed over Nyassa-land and the Shiré Highlands in 1889-90. To return now to the proceedings of other Powers in Africa: "Italy took formal possession, in July 1882, of the bay and territory of Assab. The Italian coast-line on the Red Sea was extended from Ras Kasar (18° 2' N. Lat.) to the southern boundary of Raheita, towards Obok. During 1889, shortly after the death of King Johannes, Keren and Asmara were occupied by Italian troops. Menelik of Shoa, who succeeded to the throne of Abyssinia after subjugating all the Abyssinian provinces, except Tigre, dispatched an embassy to King Humbert, the result of which was that the new Negus acknowledged (29th September, 1889) the Protectorate of Italy over Abyssinia, and its sovereignty over the territories of Massawa, Keren and Asmara." By the Protocols of 24th March and 15th April, 1891, Italy and Great Britain define their respective Spheres of Influence in East Africa. "But since then Italy has practically withdrawn from her position. She has absolutely no hold over Abyssinia. . . . Italy has also succeeded in establishing herself on the Somál Coast." By treaties concluded in 1889, "the coastal lands between Cape Warsheikh (about 2° 30' N. lat.), and Cape Bedwin (8° 3' N. lat.)—a distance of 450 miles—were placed under Italian protection. Italy subsequently extended (1890) her Protectorate over the Somál Coast to the Jub river. . . . The British Protectorate on the Somál Coast facing Aden, now extends from the Italian frontier at Ras Hafún to Ras Jibute (43° 15' E. long.). . . . The activity of France in her Senegambian province, . . . during the last hundred years . . . has finally resulted in a considerable expansion of her territory. . . . The French have established a claim over the country intervening between our Gold

Coast Colony and Liberia. A more precise delimitation of the frontier between Sierra Leone and Liberia resulted from the treaties signed at Monrovia on the 11th of November, 1887. In 1888 Portugal withdrew all rights over Dehomé. . . . Recently, a French sphere of influence has been instituted over the whole of the Saharan regions between Algeria and Senegambia. . . . Declarations were exchanged (5th August 1890) between [France and Great Britain] with the following results: France became a consenting party to the Anglo-German Convention of 1st July 1890. (2.) Great Britain recognised a French sphere of influence over Madagascar. . . . And (3) Great Britain recognised the sphere of influence of France to the south of her Mediterranean possessions, up to a line from Say on the Niger to Barrua on Lake Tsad, drawn in such a manner as to comprise in the sphere of action of the British Niger Company all that fairly belongs to the kingdom of Sokoto." The Anglo-German Convention of July, 1890, already referred to, established by its main provisions the following definitions of territory: "The Anglo-German frontier in East Africa, which, by the Convention of 1886, ended at a point on the eastern shore of the Victoria Nyanza was continued on the same latitude across the lake to the confines of the Congo Independent State; but, on the western side of the lake, this frontier was, if necessary, to be deflected to the south, in order to include Mount M'fumbiro within the British sphere. . . . Treaties in that district were made on behalf of the British East Africa Company by Mr. Stanley, on his return (May 1889) from the relief of Emin Pasha. . . . (2.) The southern boundary of the German sphere of influence in East Africa was recognised as that originally drawn to a point on the eastern shore of Lake Nyassa, whence it was continued by the eastern, northern, and western shores of the lake to the northern bank of the mouth of the River Songwé. From this point the Anglo-German frontier was continued to Lake Tanganika, in such a manner as to leave the Stevenson Road within the British sphere. (3.) The Northern frontier of British East Africa was defined by the Jub River and the conterminous boundary of the Italian sphere of influence in Galla-land and Abyssinia up to the confines of Egypt; in the west, by the Congo State and the Congo-Nile watershed. (4.) Germany withdrew, in favor of Britain, her Protectorate over Vitu and her claims to all territories on the mainland to the north of the River Tana, as also over the islands of Patta and Manda. (5.) In South-West Africa, the Anglo-German frontier, originally fixed up to 22 south latitude, was confirmed; but from this point the boundary-line was drawn in such a manner eastward and northward as to give Germany free access to the Zambezi by the Chobe River. (6.) The Anglo-German frontier between Togo and Gold Coast Colony was fixed, and that between the Camarons and the British Niger Territories was provisionally adjusted. (7.) The Free-trade zone, defined by the Act of Berlin (1885) was recognised as applicable to the present arrangement between Britain and Germany. (8.) A British Protectorate was recognised over the dominions of the Sultan of Zanzibar within the British coastal zone and over the islands of Zanzibar and Pemba. Britain, however, undertook to use her influence to secure (what have since been acquired) corresponding advantages for

Germany within the German coastal zone and over the island of Mafia. Finally (9), the island of Heligoland, in the North Sea, was ceded by Britain to Germany." By a treaty concluded in June, 1891, between Great Britain and Portugal, "Great Britain acquired a broad central sphere of influence for the expansion of her possessions in South Africa northward to and beyond the Zambezi, along a path which provides for the uninterrupted passage of British goods and British enterprise, up to the confines of the Congo Independent State and German East Africa. . . . Portugal, on the East Coast secured the Lower Zambezi from Zumbo, and the Lower Shiré from the Ruco Confluence, the entire Hinterland of Mosambique up to Lake Nyassa and the Hinterland of Sofala to the confines of the South African Republic and the Matabele kingdom. On the West Coast, Portugal received the entire Hinterland behind her provinces in Lower Guinea, up to the confines of the Congo Independent State, and the upper course of the Zambezi. . . . On May 25th 1891 a Convention was signed at Lisbon, which has put an end to the dispute between Portugal and the Congo Independent State as to the possession of Lunda. Roughly speaking, the country was equally divided between the disputants. . . . Lord Salisbury, in his negotiations with Germany and Portugal, very wisely upheld the principle of free-trade which was laid down by the Act of Berlin, 1885, in regard to the free transit of goods through territories in which two or more powers are indirectly interested." "Thus, by the Anglo-German compact, the contracting powers reserved for their respective subjects a 'right of way,' so to speak, along the main channels or routes of communication. Through the application of the same principle in the recent Anglo-Portuguese Convention, Portugal obtains not only a 'right of way' across the British Zambesi zone, but also the privilege of constructing railways and telegraphs. She thereby secures free and uninterrupted connection between her possessions on the East Coast and those on the West Coast. A similar concession is made to Britain in the Zambesi basin, within the Portuguese sphere. Finally, the Zambesi itself has been declared free to the flags of all nations. Britain has stipulated for the right of preemption in the event of Portugal wishing to dispose of territories south of the Zambesi."—A. S. White, *The Development of Africa, second ed., rev.*, 1892.—See, also, SOUTH AFRICA, and UGANDA.

A. D. 1884-1895.—Chronology of European Exploration, Missionary Settlement, Colonization and Occupation.

1884-1885.—The Berlin Conference of Powers, held to determine the limits of territory conceded to the International Congo Association, to establish freedom of trade within that territory, and to formulate rules for regulating in future the acquisition of African territory.

1884-1885.—Journey of Mr. Walter M. Kerr from Cape Colony, across the Zambesi, to Lake Nyassa, and down the Shiré River to the coast.

1884-1885.—Travels of Mr. F. L. James and party in the Somali country.

1884-1887.—Exploration by Dr. Schinz of the newly acquired German territories in Africa.

1885.—Transfer of the rights of the Society of German Colonization to the German East Africa Company, and extension of imperial

protection to the territories claimed by the Company. German acquisition of Witu, north of Zanzibar.

1885.—Agreement between Germany and France, defining their respective spheres of influence on the Bight of Biafra, on the slave coast and in Senegambia.

1885.—Transformation of the Congo Association into the Independent State of the Congo, with King Leopold of Belgium as its sovereign.

1885.—British Protectorate extended to the Zambesi, over the country west of the Portuguese province of Sofala, to the 20th degree of east longitude.

1885.—British Protectorate extended over the remainder of Bechuanaland.

1885.—Italian occupation of Massowa, on the Red Sea.

1885.—Mission of Mr. Joseph Thomson, for the National African Company, up the Niger, to Sokoto and Gando, securing treaties with the sultans under which the company acquired paramount rights.

1885-1888.—Mission of M. Borelli to the kingdom of Shoa (Southern Ethiopia) and south of it.

1885-1889.—When, after the fall of Khartoum and the death of General Gordon, in 1885, the Sudan was abandoned to the Mahdi and the fanatical Mohammedans of the interior, Dr. Edward Schnitzer, better known as Emin Pasha, who had been in command, under Gordon, of the province of the Equator, extending up to Lake Albert, was cut off for six years from communication with the civilized world. In 1887 an expedition to rescue him and his command was sent out under Henry M. Stanley. It entered the continent from the west, made its way up the Congo and the Aruwimi to Yambuya; thence through the unexplored region to Lake Albert Nyanza and into communication with Emin Pasha; then returning to Yambuya for the rear-guard which had been left there; again traversing the savage land to Lake Albert, and passing from there, with Emin and his companions, by way of Lake Albert Edward Nyanza (then ascertained to be the ultimate reservoir of the Nile system) around the southern extremity of the Victoria Nyanza, to Zanzibar, which was reached at the end of 1889.

1886.—Settlement between Great Britain and Germany of the coast territory to be left under the sovereignty of the Sultan of Zanzibar, and of the "spheres of influence" to be appropriated respectively by themselves, between the lakes and the eastern coast, north of the Portuguese possessions.

1886.—Agreement between France and Portugal defining limits of territory in Senegambia and at the mouth of the Congo.

1886.—Transformation of the National African Company into the British Royal Niger Company, with a charter giving powers of administration over a large domain on the River Niger.

1886.—Mission station founded by Mr. Arnot at Bunkeya, in the southeastern part of the Congo State.

1886-1887.—Journey of Lieutenant Wissmann across the continent, from Luluaburg, a station of the Congo Association, in the dominion of Muata Yanvo, to Nyangwe, on the Lualaba, and thence to Zanzibar.

1886-1889.—Expeditions of Dr. Zintgraff in the Cameroons interior and to the Benue, for the bringing of the country under German influence.

1887.—Annexation of Zululand, partly to the Transvaal, or South African Republic, and the remainder to the British possessions.

1887.—French gunboats launched on the Upper Niger, making a reconnaissance nearly to Timbuctoo.

1887.—Indentity of the Wellé River with the M'bangi or Ubangi established by Captain Van Gèle and Lieutenant Liénart.

1887.—First ascent of Kilimanjaro by Dr. Hans Meyer.

1887-1889.—Exploration by Captain Binger of the region between the great bend of the Niger and the countries of the Gold Coast.

1887-1890.—Expedition of Count Teleki through Masailand, having for its most important result the discovery of the Basso-Narok, or Black Lake, to which the discoverer gave the name of Lake Rudolf, and Lake Stefanie.

1888.—Chartering of the Imperial British East Africa Company, under concessions granted by the sultan of Zanzibar and by native chiefs, with powers of administration over a region defined ultimately as extending from the river Umba northward to the river Jub, and inland to and across Lake Victoria near its middle to the eastern boundary of the Congo Free State.

1888.—British supremacy over Matabeleland secured by treaty with its King Lobengula.

1888.—British Protectorate extended over Amatongaland.

1888.—Ascent of Mt. Kilimanjaro by Mr. Ehlers and Dr. Abbott; also by Dr. Hans Meyer.

1888.—Travels of Joseph Thomson in the Atlas and southern Morocco.

1889.—Royal charter granted to the British South Africa Company, with rights and powers in the region called Zambesia north of British Bechuanaland and the South African Republic, and between the Portuguese territory on the east and the German territory on the west.

1889.—Will of King Leopold, making Belgium heir to the sovereign rights of the Congo Free State.

1889.—Protectorate of Italy over Abyssinia acknowledged by the Negus.

1889.—Portuguese Roman Catholic Mission established on the south shore of Lake Nyassa. Portuguese exploration under Serpa Pinto in the Lake Nyassa region, with designs of occupancy frustrated by the British.

1889.—Journey of M. Crampel from the Ogowé to the Likuala tributary of the Congo, and return directly westward to the coast.

1889.—Dr. Wolf's exploration of the southeast Niger basin, where he met his death.

1889.—Major Macdonald's exploration of the Benue, sometimes called the Tchadda (a branch of the Niger), and of its tributary the Kebbi.

1889.—Journey of Mr. H. H. Johnston north of Lake Nyassa and to Lake Leopold.

1889.—Journey of Mr. Sharpe through the country lying between the Shiré and Loangwa Rivers.

1889.—Mr. Pigott's journey to the Upper Tana, in the service of the Imperial British East Africa Company.

1889-1890.—British Protectorate declared over Nyassaland and the Shiré Highlands.

1889-1890.—Italian Protectorate established over territory on the eastern (oceanic) Somali coast, from the Gulf of Aden to the Jub River.

1889-1890.—Imperial British East Africa Company's expedition, under Jackson and Gedge, for the exploring of a new road to the Victoria Nyanza and Uganda.

1889-1890.—Captain Lugard's exploration of the river Sabakhi for the Imperial British East Africa Company.

1889-1890.—Journey of Lieutenant Morgen from the Cameroons, on the western coast to the Benue.

1889-1890.—French explorations in Madagascar by Dr. Catat and MM. Maistre and Foucart.

1890.—Anglo-German Convention, defining boundaries of the territories and "spheres of influence" respectively claimed by the two powers; Germany withdrawing from Vitu, and from all the eastern mainland coast north of the river Tana, and conceding a British Protectorate over Zanzibar, in exchange for the island of Heligoland in the North Sea.

1890.—French "sphere of influence" extending over the Sahara and the Sudan, from Algeria to Lake Tchad and to Say on the Niger, recognized by Great Britain.

1890.—Exploration of the river Sangha, an important northern tributary of the Congo, by M. Cholet.

1890.—Exploring journey of M. Hodister, agent of the Upper Congo Company, up the Lomami river and across country to the Lua-laba, at Nyangwe.

1890.—Journey of Mr. Garrett in the interior of Sierra Leone to the upper waters of the Niger.

1890.—Journey of Dr. Fleck from the western coast across the Kalihari to Lake Ngami.

1890-1891.—Italian possessions in the Red Sea united in the colony of Eritrea.

1890-1891.—Mission of Captain Lugard to Uganda and signature of a treaty by its king acknowledging the supremacy of the British East Africa Company.

1890-1891.—Exploration by M. Paul Crampel of the central region between the French territories on the Congo and Lake Tchad, ending in the murder of M. Crampel and several of his companions.

1890-1891.—Journey of Mr. Sharpe from Mandala, in the Shiré Highlands, to Garenganze, the empire founded by an African adventurer, Mshidi, in the Katanga copper country, between Lake Moero and the Luapula river on the east, and the Lualaba on the west.

1890-1891.—Journey of Lieutenant Mizon from the Niger to the Congo.

1890-1891.—Journey of Captain Becker from Yambuya, on the Aruwimi, north-northwest to the Wellé.

1890-1892.—Italian explorations in the Somali countries by Signor Robecchi, Lieutenant Baudi di Vesme, Prince Ruspoli, and Captains Bottego and Grixoni.

1890-1893.—Expedition of Dr. Stuhlmann, with Emin Pasha, from Bagamoyo, via the Victoria Nyanza and the Albert Edward, to the plateau west of the Albert Nyanza. From this point Dr. Stuhlmann returned, while Emin pursued his way, intending it is said, to reach Kibonge, on the right bank of the Congo, south

of Stanley Falls. He was murdered at Kinena, 150 miles northeast of Kibonge, by the order of an Arab chief.

1891.—Extension of the British Protectorate of Lagos over the neighboring districts of Addo, Igbessa, and Ilaro, which form the western boundary of Yoruba.

1891.—Treaty between Great Britain and Portugal defining their possessions; conceding to the former an interior extension of her South African dominion up to the southern boundary of the Congo Free State, and securing to the latter defined territories on the Lower Zambesi, the Lower Shiré, and the Nyassa, as well as the large block of her possessions on the western coast.

1891.—Convention between Portugal and the Congo Free State for the division of the disputed district of Lunda.

1891.—Convention of the Congo Free State with the Katanga Company, an international syndicate, giving the Company preferential rights over reputed mines in Katanga and Urua, with a third of the public domain, provided it established an effective occupation within three years.

1891.—French annexation of the Gold Coast between Liberia and the Grand Bassam.

1891.—Opening of the Royal Trans-African Railway, in West Africa, from Loanda to Ambaca, 140 miles.

1891.—Survey of a railway route from the eastern coast to Victoria Lake by the Imperial British East Africa Company.

1891.—Exploration of the Jub River, in the Somali country, by Commander Dundas.

1891.—Exploration by Captain Dundas, from the eastern coast, up the river Tana to Mount Kenia.

1891.—Mr. Bent's exploration of the ruined cities of Mashonaland.

1891.—Journey of M. Maistre from the Congo to the Shari.

1891.—Journeys of Captain Gallwey in the Benin country, West Africa.

1891.—Mission established by the Berlin Missionary Society in the Konde country, at the northern end of Lake Nyassa.

1891-1892.—Incorporation of the African Lakes Company with the British South Africa Company. Organization of the administration of Northern Zambesia and Nyassaland.

1891-1892.—Expedition of the Katanga Company, under Captain Stairs, from Bagamoyo to Lake Tanganyika, thence through the country at the head of the most southern affluents of the Congo, the Lualaba and the Luapula.

1891-1892.—Belgian expeditions under Captain Bia and others to explore the southeastern portion of the Congo Basin, on behalf of the Katanga Company, resulting in the determination of the fact that the Lukuga River is an outlet of Lake Tanganyika.

1891-1892.—Journey of Dr. James Johnston across the continent, from Benguela to the mouth of the Zambesi, through Bihe, Ganguela, Barotse, the Kalihari Desert, Mashonaland, Manica, Gorongoza, Nyassa, and the Shiré Highlands.

1891-1892.—Expedition of Mr. Joseph Thomson, for the British South Africa Company, from Kilimane or Quillimane on the eastern coast to Lake Bangweolo.

1891-1892.—Journey of Captain Montell from the Niger to Lake Tchad and to Tripoli.

1891-1892.—Exploration by Lieutenant Chaltin of the river Lulu, and the country between the Aruwimi and the Welle Makua Rivers, in the Congo State.

1891-1893.—Journey of Dr. Oscar Baumann from Tanga, on the eastern coast; passing to the south of Kilimanjaro, discovering two lakes between that mountain and the Victoria Nyanza.

1891-1894.—Expedition under the command of Captain Van Kerckhoven and M. de la Kéthulle de Ryhove, fitted out by the Congo Free State, for the subjugation of the Arabs, the suppression of the slave trade, and the exploration of the country, throughout the region of the Wellé or Ubangi Uellé and to the Nile.

1892.—Decision of the Imperial British East Africa Company to withdraw from Uganda.

1892.—Practical conquest of Dahomey by the French.

1892.—Journey of M. Méry in the Sahara to the south of Wargla, resulting in a report favorable to the construction of a railway to tap the Central Sudan.

1892.—French expedition under Captain Binger to explore the southern Sudan, and to act conjointly with British officials in determining the boundary between French and English possessions.

1892.—Journey of Mr. Sharpe from the Shiré River to Lake Moero and the Upper Luapula.

1892-1893.—Construction of a line of telegraph, by the British South African Company, from Cape Colony, through Mashonaland, to Fort Salisbury, with projected extension across the Zambesi and by the side of Lakes Nyassa and Tanganyika to Uganda,—and ultimately down the valley of the Nile.

1892-1893.—French scientific mission, under M. Dècle, from Cape Town to the sources of the Nile.

1892-1893.—Italian explorations, under Captain Böttogo and Prince Ruspoli, in the upper basin of the River Jub.

1893.—Brussels Antislavery Conference, ratified in its action by the Powers.

1893.—Official mission of Sir Gerald Porter to Uganda, sent by the British Government to report as to the expediency of the withdrawal of British authority from that country.

1893.—Scientific expedition of Mr. Scott-Elliott to Uganda.

1893.—Scientific expedition of Dr. Gregory, of the British Museum, from Mombassa, on the eastern coast, through Masailand to Mount Kenia.

1893.—Journey of Mr. Bent to Aksum, in Abyssinia, the ancient capital and sacred city of the Ethiopians.

1893-1894.—German scientific survey of Mount Kilimanjaro, under Drs. Lent and Volkens.

1893-1894.—Expedition of Mr. Astor Chanler and Lieutenant von Höhnelt from Witu, on the eastern coast, to the Jombini Range and among the Rendile.

1893-1894.—Explorations of Baron von Uechtritz and Dr. Passarge on the Benue.

1893-1894.—Journey of Baron von Schele from the eastern coast to Lake Nyassa, and thence by a direct route to Kihisa.

1893-1894.—Journey of Count von Götzen across the continent, from Dar-es-Salaam, on the eastern coast, to the Lower Congo.

1894.—Treaty between Great Britain and the Congo Free State, securing to the former a strip of land on the west side of the Nile between the Albert Nyanza and 10° north latitude, and to the latter the large Bahr-el-Ghazel region, westward. This convention gave offense to France, and that country immediately exacted from the Congo Free State a treaty stipulating that the latter shall not occupy or exercise political influence in a region which covers most of the territory assigned to it by the treaty with Great Britain.

1894.—Franco-German Treaty, determining the boundary line of the Cameroons, or Kamerun.

1894.—Treaty concluded by Captain Lugard, November 10, at Nikki, in Borgu, confirming the rights claimed by the Royal Niger Company over Borgu, and placing that country under British protection.

1894.—Agreement between the British South Africa Company and the Government of Great Britain, signed November 24, 1894, transferring to the direct administration of the Company the Protectorate of Nyassaland, thereby extending its domain to the south end of Lake Tanganyika.

1894.—Renewed war of France with the Hovas of Madagascar.

1894.—Expedition of Dr. Donaldson Smith from the Somali coast, stopped and turned back by the Abyssinians, in December.

1894.—Completed conquest of Dahomey by the French; capture of the deposed king, January 25, and his deportation to exile in Martinique. Decree of the French Government, June 22, directing the administrative organization of the "colony of Dahomey and Dependencies."

1894.—Occupation of Timbuctoo by a French force.

1894.—Journey of Count von Götzen across the continent, from the eastern coast, through Ruanda and the Great Forest to and along the Lowa, an eastern tributary of the Congo.

1894.—Exploration of the Upper Congo and the Lukuga by Mr. R. Dorsey Mohun, American Agent on the Congo, and Dr. Hinde.

1894.—Scientific expedition of Mr. Coryndon from the Cape to the Zambesi and Lake Tanganyika.

1894-1895.—War of the Italians in their colony of Eritrea with both the Abyssinians and the Mahdists. Italian occupation of Kassala.

1895.—Franco-British agreement, signed January 21, 1895, respecting the "Hinterland" of Sierra Leone, which secures to France the Upper Niger basin.

1895.—Convention between Belgium and France signed February 5, recognizing a right of preemption on the part of the latter, with regard to the Congo State, in case Belgium should at any time renounce the sovereignty which King Leopold desires to transfer to it.

AGENDICUM OR AGEDINCUM. See SENONES.

AGER PUBLICUS.—"Rome was always making fresh acquisitions of territory in her early history. . . . Large tracts of country became Roman land, the property of the Roman state, or public domain (*ager publicus*), as the Romans called it. The condition of this land, the use to which it was applied, and the disputes which it caused between the two orders at Rome, are among the most curious and perplexing questions in Roman history. . . . That part of newly-acquired territory which was neither sold nor given remained public property, and it was occupied, according to the Roman term, by private persons, in whose hands it was a *Possessio*. Hyginus and Siculus Flaccus represent this occupation as being made without any order. Every Roman took what he could, and more than he could use profitably. . . . We should be more inclined to believe that this public land was occupied under some regulations, in order to prevent disputes; but if such regulations existed we know nothing about them. There was no survey made of the public land which was from time to time acquired, but there were certainly general boundaries fixed for the purpose of determining what had become public property. The lands which were sold and given were of necessity surveyed and fixed by boundaries. . . . There is no direct evidence that any payments to the state were originally made by the Possessors. It is certain, however, that at some early time such payments were made, or, at least, were due to the state."—G. Long, *Decline of the Roman Republic*, ch. 11.

AGOGE, The.—The public discipline enforced in ancient Sparta; the ordinances attributed to Lycurgus, for the training of the young and for the regulating of the lives of citizens.—G. Schömann, *Antiq. of Greece: The State*, pt. 3, ch. 1.

AGORA, The.—The market-place of an ancient Greek city was, also, the centre of its political life. "Like the gymnasium, and even earlier than this, it grew into architectural splendour

with the increasing culture of the Greeks. In maritime cities it generally lay near the sea; in inland places at the foot of the hill which carried the old feudal castle. Being the oldest part of the city, it naturally became the focus not only of commercial, but also of religious and political life. Here even in Homer's time the citizens assembled in consultation, for which purpose it was supplied with seats; here were the oldest sanctuaries; here were celebrated the first festive games; here centred the roads on which the intercommunication, both religious and commercial, with neighbouring cities and states was carried on; from here started the processions which continually passed between holy places of kindred origin, though locally separated. Although originally all public transactions were carried on in these market-places, special local arrangements for contracting public business soon became necessary in large cities. At Athens, for instance, the gently rising ground of the Philopappos hill, called Pnyx, touching the Agora, was used for political consultations, while most likely, about the time of the Pisistratides, the market of Kerameikos, the oldest seat of Attic industry (lying between the foot of the Akropolis, the Areopagos and the hill of Theseus), became the agora proper, i. e., the centre of Athenian commerce. . . . The description by Vitruvius of an agora evidently refers to the splendid structures of post-Alexandrine times. According to him it was quadrangular in size [? shape] and surrounded by wide double colonades. The numerous columns carried architraves of common stone or of marble, and on the roofs of the porticoes were galleries for walking purposes. This, of course, does not apply to all market-places, even of later date; but, upon the whole, the remaining specimens agree with the description of Vitruvius."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, tr. by Hueffer, pt. 1, sect. 26.—In the Homeric time, the general assembly of freemen was called the Agora.—G. Grote, *Hist. of Greece*, pt. 1, ch. 20.

AGRÆI, The. See AKARNANIANS.

AGRARIAN LAWS, Roman.—"Great mistakes formerly prevailed on the nature of the Roman laws familiarly termed Agrarian. It was supposed that by these laws all land was declared common property, and that at certain intervals of time the state resumed possession and made a fresh distribution to all citizens, rich and poor. It is needless to make any remarks on the nature and consequences of such a law; sufficient it will be to say, what is now known to all, that at Rome such laws never existed, never were thought of. The lands which were to be distributed by Agrarian laws were not private property, but the property of the state. They were, originally, those public lands which had been the domain of the kings, and which were increased whenever any city or people was conquered by the Romans; because it was an Italian practice to confiscate the lands of the conquered, in whole or in part."—H. G. Liddell, *Hist. of Rome*, bk. 2, ch. 8.—See ROME: B. C. 376, and B. C. 183-121.

AGRI DECUMATES, The.—"Between the Rhine and the Upper Danube there intervenes a triangular tract of land, the apex of which touches the confines of Switzerland at Basel; thus separating, as with an enormous wedge, the provinces of Gaul and Vindelicia, and pre-

senting at its base no natural line of defence from one river to the other. This tract was, however, occupied, for the most part, by forests, and if it broke the line of the Roman defences, it might at least be considered impenetrable to an enemy. Abandoned by the warlike and predatory tribes of Germany, it was seized by wandering immigrants from Gaul, many of them Roman adventurers, before whom the original inhabitants, the Marcomanni, or men of the frontier, seem to have retreated eastward beyond the Hercynian forest. The intruders claimed or solicited Roman protection, and offered in return a tribute from the produce of the soil, whence the district itself came to be known by the title of the Agri Decumates, or Tithed Land. It was not, however, officially connected with any province of the Empire, nor was any attempt made to provide for its permanent security, till a period much later than that on which we are now engaged [the period of Augustus]."—C. Merivale, *Hist. of the Romans*, ch. 36.—"Wurtemberg, Baden and Hohenzollern coincide with the Agri Decumates of the Roman writers."—R. G. Latham, *Ethnology of Europe*, ch. 8.—See, also, ALEMANNI, and SUEVI.

AGRICOLA'S CAMPAIGNS IN BRITAIN. See BRITAIN: A. D. 78-84.

AGRIGENTUM.—Acragas, or Agrigentum, one of the youngest of the Greek colonies in Sicily, founded about B. C. 582 by the older colony of Gela, became one of the largest and most splendid cities of the age, in the fifth century B. C., as is testified by its ruins to this day. It was the scene of the notorious tyranny of Phalaris, as well as that of Theron. Agrigentum was destroyed by the Carthagenians, B. C. 405, and rebuilt by Timoleon, but never recovered its former importance and grandeur.—E. Curtius, *Hist. of Greece*, bk. 4, ch. 3.—See, also, PHALARIS, BRAZEN BULL OF.—Agrigentum was destroyed by the Carthagenians in 406 B. C. See SICILY: B. C. 409-405.—Rebuilt by Timoleon, it was the scene of a great defeat of the Carthagenians by the Romans, in 262 B. C. See PUNIC WAR, THE FIRST.

AIX-LA-CHAPELLE: The Capital of Charlemagne.—The favorite residence and one of the two capitals of Charlemagne was the city which the Germans call Aachen and the French have named Aix-la-Chapelle. "He ravished the ruins of the ancient world to restore the monumental arts. A new Rome arose in the depths of the forests of Austrasia—palaces, gates, bridges, baths, galleries, theatres, churches,—for the erection of which the mosaics and marbles of Italy were laid under tribute, and workmen summoned from all parts of Europe. It was there

that an extensive library was gathered, there that the school of the palace was made permanent, there that foreign envoys were pompously welcomed, there that the monarch perfected his plans for the introduction of Roman letters and the improvement of music."—P. Godwin, *Hist. of France: Ancient Gaul*, bk. 4, ch. 17.

AIX-LA-CHAPELLE, The Congress and Treaty which ended the War of the Austrian Succession (1748).—The War of the Austrian Succession, which raged in Europe, and on the ocean, and in India and America, from 1740 to 1748 (see AUSTRIA: A. D. 1718-1738, 1740-1741, and after), was brought to an end in the latter year by a Congress of all the belligerents which met at Aix-la-Chapelle, in April, and which concluded its labors on the 18th of October following. "The influence of England and Holland . . . forced the peace upon Austria and Sardinia, though both were bitterly aggrieved by its conditions. France agreed to restore every conquest she had made during the war, to abandon the cause of the Stuarts, and expel the Pretender from her soil; to demolish, in accordance with earlier treaties, the fortifications of Dunkirk on the side of the sea, while retaining those on the side of the land, and to retire from the conquest without acquiring any fresh territory or any pecuniary compensation. England in like manner restored the few conquests she had made, and submitted to the somewhat humiliating condition of sending hostages to Paris as a security for the restoration of Cape Breton. . . . The disputed boundary between Canada and Nova Scotia, which had been a source of constant difficulty with France, was left altogether undefined. The Assiento treaty for trade with the Spanish colonies was confirmed for the four years it had still to run; but no real compensation was obtained for a war expenditure which is said to have exceeded sixty-four millions, and which had raised the funded and unfunded debt to more than seventy-eight millions. Of the other Powers, Holland, Genoa, and the little state of Modena retained their territory as before the war, and Genoa remained mistress of the Duchy of Finale, which had been ceded to the king of Sardinia by the Treaty of Worms, and which it had been a main object of his later policy to secure. Austria obtained a recognition of the election of the Emperor, a general guarantee of the Pragmatic Sanction, and the restoration of everything she had lost in the Netherlands, but she gained no additional territory. She was compelled to confirm the cession of Silesia and Glatz to Prussia, to abandon her Italian conquests, and even to cede a considerable part of her former Italian dominions. To the bitter indignation of Maria Theresa, the Duchies of Parma, Placentia and Guastalla passed to Don Philip of Spain, to revert, however, to their former possessors if Don Philip mounted the Spanish throne, or died without male issue. The King of Sardinia also obtained from Austria the territorial cessions enumerated in the Treaty of Worms [see ITALY: A. D. 1743], with the important exceptions of Placentia, which passed to Don Philip, and of Finale, which remained

with the Genoese. For the loss of these he obtained no compensation. Frederick [the Great, of Prussia] obtained a general guarantee for the possession of his newly acquired territory, and a long list of old treaties was formally confirmed. Thus small were the changes effected in Europe by so much bloodshed and treachery, by nearly nine years of wasteful and desolating war. The design of the dismemberment of Austria had failed, but no vexed questions had been set at rest. . . . Of all the ambitious projects that had been conceived during the war, that of Frederick alone was substantially realized."—W. E. H. Lecky, *Hist. of Eng. 18th Century*, ch. 3.—"Thus ended the War of the Austrian succession. In its origin and its motives one of the most wicked of all the many conflicts which ambition and perfidy have provoked in Europe, it excites a peculiarly mournful interest by the gross inequality in the rewards and penalties which fortune assigned to the leading actors. Prussia, Spain and Sardinia were all endowed out of the estates of the house of Hapsburg. But the electoral house of Bavaria, the most sincere and the most deserving of all the claimants to that vast inheritance, not only received no increase of territory, but even nearly lost its own patrimonial possessions. . . . The most trying problem is still that offered by the misfortunes of the Queen of Hungary [Maria Theresa]. . . . The verdict of history, as expressed by the public opinion, and by the vast majority of writers, in every country except Prussia, upholds the justice of the queen's cause and condemns the coalition that was formed against her."—H. Tuttle, *Hist. of Prussia, 1745-1756*, ch. 2.

AKARNANIAN LEAGUE, The.—"Of the Akarnanian League, formed by one of the least important, but at the same time one of the most estimable peoples in Greece . . . our knowledge is only fragmentary. The boundaries of Akarnania fluctuated, but we always find the people spoken of as a political whole. . . . Thucydides speaks, by implication at least, of the Akarnanian League as an institution of old standing in his time. The Akarnanians had, in early times, occupied the hill of Olpai as a place for judicial proceedings common to the whole nation. Thus the supreme court of the Akarnanian Union held its sittings, not in a town, but in a mountain fortress. But in Thucydides' own time Stratos had attained its position as the greatest city of Akarnania, and probably the federal assemblies were already held there. . . . Of the constitution of the League we know but little. Ambassadors were sent by the federal body, and probably, just as in the Achaian League, it would have been held to be a breach of the federal tie if any single city had entered on diplomatic intercourse with other powers. As in Achaia, too, there stood at the head of the League a General with high authority. . . . The existence of coins bearing the name of the whole Akarnanian nation shows that there was unity enough to admit of a federal coinage, though coins of particular cities also occur."—

E. A. Freeman, *Hist. of Federal Govt.*, ch. 4, sect. 1.

AKARNANIANS (Acarnanians).—The Akarnanians formed "a link of transition" between the ancient Greeks and their barbarous or non-Hellenic neighbours in the Epirus and beyond. "They occupied the territory between the river Achelous, the Ionian sea and the Ambrakian gulf: they were Greeks and admitted as such to contend at the Pan-Hellenic games, yet they were also closely connected with the Amphilochoi and Agræi, who were not Greeks. In manners, sentiments and intelligence, they were half-Hellenic and half-Epirotic,—like the Ætolians and the Ozolian Lokrians. Even down to the time of Thucydides, these nations were subdivided into numerous petty communities, lived in unfortified villages, were frequently in the habit of plundering each other, and never permitted themselves to be unarmed. . . . Notwithstanding this state of disunion and insecurity, however, the Akarnanians maintained a loose political league among themselves. . . . The Akarnanians appear to have produced many prophets. They traced up their mythical ancestry, as well as that of their neighbours the Amphilochoians, to the most renowned prophetic family among the Grecian heroes,—Amphiaræus, with his sons Alkmæon and Ampilochus: Akarnan, the eponymous hero of the nation, and other eponymous heroes of the separate towns, were supposed to be the sons of Alkmæon. They are spoken of, together with the Ætolians, as mere rude shepherds, by the lyric poet Alkman, and so they seem to have continued with little alteration until the beginning of the Peloponnesian war, when we hear of them, for the first time, as allies of Athens and as bitter enemies of the Corinthian colonies on their coast. The contact of those colonies, however, and the large spread of Akarnanian accessible coast, could not fail to produce some effect in socializing and improving the people. And it is probable that this effect would have been more sensibly felt, had not the Akarnanians been kept back by the fatal neighbourhood of the Ætolians, with whom they were in perpetual feud,—a people the most unprincipled and unimprovable of all who bore the Hellenic name, and whose habitual faithlessness stood in marked contrast with the rectitude and steadfastness of the Akarnanian character."—G. Grote, *Hist. of Greece*, pt. 2, ch. 24.

ALABAMA CLAIMS, The: A. D. 1861-1862.—In their Origin.—The Earlier Confederate cruisers.—Precursors of the Alabama.—The commissioning of privateers, and of more officially commanded cruisers, in the American civil war, by the government of the Southern Confederacy, was begun early in the progress of the movement of rebellion, pursuant to a proclamation issued by Jefferson

Davis on the 17th of April, 1861. “Before the close of July, 1861, more than 20 of those depredators were afloat, and had captured millions of property belonging to American citizens. The most formidable and notorious of the sea-going ships of this character, were the Nashville, Captain R. B. Pegram, a Virginian, who had abandoned his flag, and the Sumter [a regularly commissioned war vessel], Captain Raphael Semmes. The former was a side-wheel steamer, carried a crew of eighty men, and was armed with two long 12-pounder rifled cannon. Her career was short, but quite successful. She was finally destroyed by the Montauk, Captain Worden, in the Ogeechee River. The career of the Sumter, which had been a New Orleans and Havana packet steamer named Marquis de Habana, was also short, but much more active and destructive. She had a crew of sixty-five men and twenty-five marines, and was heavily armed. She ran the blockade at the mouth of the Mississippi River on the 30th of June, and was pursued some distance by the Brooklyn. She ran among the West India islands and on the Spanish Main, and soon made prizes of many vessels bearing the American flag. She was everywhere received in British Colonial ports with great favor, and was afforded every facility for her piratical operations. She became the terror of the American merchant service, and everywhere eluded National vessels of war sent out in pursuit of her. At length she crossed the ocean, and at the close of 1861 was compelled to seek shelter under British guns at Gibraltar, where she was watched by the Tuscarora. Early in the year 1862 she was sold, and thus ended her piratical career. Encouraged by the practical friendship of the British evinced for these corsairs, and the substantial aid they were receiving from British subjects in various ways, especially through blockade-runners, the conspirators determined to procure from those friends some powerful piratical craft, and made arrangements for the purchase and construction of vessels for that purpose. Mr. Laird, a ship-builder at Liverpool and member of the British Parliament, was the largest contractor in the business, and, in defiance of every obstacle, succeeded in getting pirate ships to sea. The first of these ships that went to sea was the Oreto, ostensibly built for a house in Palermo, Sicily. Mr. Adams, the American minister in London, was so well satisfied from information received that she was designed for the Confederates, that he called the attention of the British government to the matter so early as the 18th of February, 1862. But nothing effective was done, and she was completed and allowed to depart from British waters. She went first to Nassau, and on the 4th of September suddenly appeared off Mobile harbor, flying the British flag and pennants. The blockading squadron there was in charge of Commander George H. Preble, who had been specially instructed not to give offense to foreign nations while enforcing the blockade. He believed the Oreto to be a British vessel, and while deliberating a few minutes as to what he should do, she passed out of range of his guns, and entered the harbor with a rich freight. For his seeming remissness Commander Preble was summarily dismissed from the service without a hearing—an act which subsequent events seemed to show was cruel injustice. Late in December

the Oreto escaped from Mobile, fully armed for a piratical cruise, under the command of John Newland Maffit. . . . The name of the Oreto was changed to that of Florida."—B. J. Lossing, *Field Book of the Civil War*, v. 2, ch. 21.—The fate of the Florida is related below—A. D. 1862-1865.—R. Semmes, *Memoirs of Service Afloat*, ch. 9-26.

ALSO IN J. Davis, *Rise and Fall of the Confederate Government*, ch. 30-31 (v. 2).

A. D. 1862-1864.—The Alabama, her career and her fate.—"The Alabama [the second cruiser built in England for the Confederates] . . . is thus described by Semmes, her commander: 'She was of about 900 tons burden, 230 feet in length, 32 feet in breadth, 20 feet in depth, and drew, when provisioned and coaled for cruise, 15 feet of water. She was barkentine-rigged, with long lower masts, which enabled her to carry large fore and aft sails, as jibs and try-sails. . . . Her engine was of 300 horse-power, and she had attached an apparatus for condensing from the vapor of sea-water all the fresh water that her crew might require. . . . Her armament consisted of eight guns.' . . . The Alabama was built and, from the outset, was 'intended for a Confederate vessel of war.' The contract for her construction was 'signed by Captain Bullock on the one part and Messrs. Laird on the other.' . . . On the 15th of May [1862] she was launched under the name of the 290. Her officers were in England awaiting her completion, and were paid their salaries 'monthly, about the first of the month, at Fraser, Trenholm & Co.'s office in Liverpool.' The purpose for which this vessel was being constructed was notorious in Liverpool. Before she was launched she became an object of suspicion with the Consul of the United States at that port, and she was the subject of constant correspondence on his part with his Government and with Mr. Adams. . . . Early in the history of this cruiser the point was taken by the British authorities—a point maintained throughout the struggle—that they would originate nothing themselves for the maintenance and performance of their international duties, and that they would listen to no representations from the officials of the United States which did not furnish technical evidence for a criminal prosecution under the Foreign Enlistment Act. . . . At last Mr. Dudley [the Consul of the United States at Liverpool] succeeded in finding the desired proof. On the 21st day of July, he laid it in the form of affidavits before the Collector at Liverpool in compliance with the intimations which Mr. Adams had received from Earl Russell. These affidavits were on the same day transmitted by the Collector to the Board of Customs at London, with a request for instructions by telegraph, as the ship appeared to be ready for sea and might leave any hour. . . . It . . . appears that notwithstanding this official information from the Collector, the papers were not considered by the law advisers until the 28th, and that the case appeared to them to be so clear that they gave their advice upon it that evening. Under these circumstances, the delay of eight days after the 21st in the order for the detention of the vessel was, in the opinion of the United States, gross negligence on the part of Her Majesty's Government. On the 29th the Secretary of the Commission of the Customs received a telegram from

Liverpool saying that 'the vessel 290 came out of dock last night, and left the port this morning.' . . . After leaving the dock she 'proceeded slowly down the Mersey.' Both the Lairds were on board, and also Bullock. . . . The 290 slowly steamed on to Moelfra Bay, on the coast of Anglesey, where she remained 'all that night, all the next day, and the next night.' No effort was made to seize her. . . . When the Alabama left Moelfra Bay her crew numbered about 90 men. She ran part way down the Irish Channel, then round the north coast of Ireland, only stopping near the Giant's Causeway. She then made for Terceira, one of the Azores, which she reached on the 10th of August. On 18th of August, while she was at Terceira, a sail was observed making for the anchorage. It proved to be the 'Agrippina of London, Captain McQueen, having on board six guns, with ammunition, coals, stores, &c., for the Alabama.' Preparations were immediately made to transfer this important cargo. On the afternoon of the 20th, while employed discharging the bark, the screw-steamer Bahama, Captain Tessier (the same that had taken the armament to the Florida, whose insurgent ownership and character were well known in Liverpool), arrived, 'having on board Commander Raphael Semmes and officers of the Confederate States steamer Sumter.' There were also taken from this steamer two 32-pounders and some stores, which occupied all the remainder of that day and a part of the next. The 22d and 23d of August were taken up in transferring coal from the Agrippina to the Alabama. It was not until Sunday (the 24th) that the insurgents' flag was hoisted. Bullock and those who were not going in the 290 went back to the Bahama, and the Alabama, now first known under that name, went off with '26 officers and 85 men.'—*The Case of the United States before the Tribunal of Arbitration at Geneva* (42d Cong., 2d Sess., Senate Ex. Doc., No. 31, pp. 146-171).—The Alabama "arrived at Porto Praya on the 19th August. Shortly thereafter Capt. Raphael Semmes assumed command. Hoisting the Confederate flag, she cruised and captured several vessels in the vicinity of Flores. Cruising to the westward, and making several captures, she approached within 200 miles of New York; thence going southward, arrived, on the 18th November, at Port Royal, Martinique. On the night of the 19th she escaped from the harbour and the Federal steamer San Jacinto, and on the 20th November was at Blanquilla. On the 7th December she captured the steamer Ariel in the passage between Cuba and St. Domingo. On January 11th, 1863, she sunk the Federal gunboat Hatteras off Galveston, and on the 30th arrived at Jamaica. Cruising to the eastward, and making many captures, she arrived on the 10th April, at Fernando de Noronha, and on the 11th May at Bahia, where, on the 13th, she was joined by the Confederate steamer Georgia. Cruising near the line, thence southward towards the Cape of Good Hope, numerous captures were made. On the 29th July she anchored in Saldanha Bay, South Africa, and near there on the 5th August, was joined by the Confederate bark Tuscaloosa, Commander Low. In September, 1863, she was at St. Simon's Bay, and in October was in the Straits of Sunda, and up to January 20, 1864, cruised in the Bay of Bengal and vicinity, visit-

ing Singapore, and making a number of very valuable captures, including the Highlander, Sonora, etc. From this point she cruised on her homeward track via Cape of Good Hope, capturing the bark Tycoon and ship Rockingham, and arrived at Cherbourg, France, in June, 1864, where she repaired. A Federal steamer, the Kearsarge, was lying off the harbour. Capt. Semmes might easily have evaded this enemy; the business of his vessel was that of a privateer; and her value to the Confederacy was out of all comparison with a single vessel of the enemy. . . . But Capt. Semmes had been twitted with the name of 'pirate;' and he was easily persuaded to attempt an *éclat* for the Southern Confederacy by a naval fight within sight of the French coast, which contest, it was calculated, would prove the Alabama a legitimate war vessel, and give such an exhibition of Confederate belligerency as possibly to revive the question of 'recognition' in Paris and London. These were the secret motives of the gratuitous fight with which Capt. Semmes obliged the enemy off the port of Cherbourg. The Alabama carried one 7-inch Blakely rifled gun, one 8-inch smooth-bore pivot gun, and six 32-pounders, smooth-bore, in broadside; the Kearsarge carried four broadside 32-pounders, two 11-inch and one 28-pound rifle. The two vessels were thus about equal in match and armament; and their tonnage was about the same."—E. A. Pollard, *The Lost Cause*, p. 549.—Captain Winslow, commanding the United States Steamer Kearsarge, in a report to the Secretary of the Navy written on the afternoon of the day of his battle with the Alabama, June 19, 1864, said: "I have the honor to inform the department that the day subsequent to the arrival of the Kearsarge off this port, on the 24th [14th] instant, I received a note from Captain Semmes, begging that the Kearsarge would not depart, as he intended to fight her, and would delay her but a day or two. According to this notice, the Alabama left the port of Cherbourg this morning at about half past nine o'clock. At twenty minutes past ten A. M., we discovered her steering towards us. Fearing the question of jurisdiction might arise, we steamed to sea until a distance of six or seven miles was attained from the Cherbourg break-water, when we rounded to and commenced steaming for the Alabama. As we approached her, within about 1,200 yards, she opened fire, we receiving two or three broadsides before a shot was returned. The action continued, the respective steamers making a circle round and round at a distance of about 900 yards from each other. At the expiration of an hour the Alabama struck, going down in about twenty minutes afterward, carrying many persons with her." In a report two days later, Captain Winslow gave the following particulars: "Toward the close of the action between the Alabama and this vessel, all available sail was made on the former for the purpose of again reaching Cherbourg. When the object was apparent, the Kearsarge was steered across the bow of the Alabama for a raking fire; but before reaching this point the Alabama struck. Uncertain whether Captain Semmes was not using some ruse, the Kearsarge was stopped. It was seen, shortly afterward, that the Alabama was lowering her boats, and an officer came alongside in one of them to say that they had surrendered,

and were fast sinking, and begging that boats would be despatched immediately for saving life. The two boats not disabled were at once lowered, and as it was apparent the Alabama was settling, this officer was permitted to leave in his boat to afford assistance. An English yacht, the Deerhound, had approached near the Kearsarge at this time, when I hailed and begged the commander to run down to the Alabama, as she was fast sinking, and we had but two boats, and assist in picking up the men. He answered affirmatively, and steamed toward the Alabama, but the latter sank almost immediately. The Deerhound, however, sent her boats and was actively engaged, aided by several others which had come from shore. These boats were busy in bringing the wounded and others to the Kearsarge; whom we were trying to make as comfortable as possible, when it was reported to me that the Deerhound was moving off. I could not believe that the commander of that vessel could be guilty of so disgraceful an act as taking our prisoners off, and therefore took no means to prevent it, but continued to keep our boats at work rescuing the men in the water. I am sorry to say that I was mistaken. The Deerhound made off with Captain Semmes and others, and also the very officer who had come on board to surrender."—In a still later report Captain Winslow gave the following facts: "The fire of the Alabama, although it is stated she discharged 370 or more shell and shot, was not of serious damage to the Kearsarge. Some 13 or 14 of these had taken effect in and about the hull, and 16 or 17 about the masts and rigging. The casualties were small, only three persons having been wounded. . . . The fire of the Kearsarge, although only 173 projectiles had been discharged, according to the prisoners' accounts, was terrific. One shot alone had killed and wounded 18 men, and disabled a gun. Another had entered the coal-bunkers, exploding, and completely blocking up the engine room; and Captain Semmes states that shot and shell had taken effect in the sides of his vessel, tearing large holes by explosion, and his men were everywhere knocked down."—*Rebellion Record*, v. 9, pp. 221-225.

Semmes, *Memoirs of Service Afloat, ch. 29-55*.—J. D. Bullock, *Secret Service of the Confederate States in Europe, v. 1, ch. 5*.

A. D. 1862-1865.—Other Confederate cruisers.—"A score of other Confederate cruisers roamed the seas, to prey upon United States commerce, but none of them became quite so famous as the Sumter and the Alabama. They included the Shenandoah, which made 38 captures, the Florida, which made 36, the Tallahassee, which made 27, the Tacony, which made 15, and the Georgia, which made 10. The Florida was captured in the harbor of Bahia, Brazil, in October, 1864, by a United States man-of-war [the Wachusett, commander Collins], in violation of the neutrality of the port. For this the United States Government apologized to Brazil and ordered the restoration of the Florida to the harbor where she was captured. But in Hampton Roads she met with an accident and sank. It was generally believed that the apparent acci-

dent was contrived with the connivance, if not by direct order, of the Government. Most of these cruisers were built in British shipyards."—R. Johnson, *Short Hist. of the War of Secession*, ch. 24.—The last of the destroyers of American commerce, the Shenandoah, was a British merchant ship—the Sea King—built for the Bombay trade, but purchased by the Confederate agent, Captain Bullock, armed with six guns, and commissioned (October, 1865) under her new name. In June, 1865, the Shenandoah, after a voyage to Australia, in the course of which she destroyed a dozen merchant ships, made her appearance in the Northern Sea, near Behring Strait, where she fell in with the New Bedford whaling fleet. "In the course of one week, from the 21st to the 28th, twenty-five whalers were captured, of which four were ransomed, and the remaining 21 were burned. The loss on these 21 whalers was estimated at upwards of \$3,000,000, and considering that it occurred . . . two months after the Confederacy had virtually passed out of existence, it may be characterized as the most useless act of hostility that occurred during the whole war." The captain of the Shenandoah destroyed 15 vessels even after he had news of the fall of Richmond. In August he surrendered his vessel to the British government, which delivered her to the United States.—J. R. Soley, *The Confederate Cruisers (Battles and Leaders*, v. 4). For statistics of the total losses inflicted by the eleven Confederate cruisers for which Great Britain was held responsible, see UNITED STATES OF AM. : 1865 (May).

A. D. 1862-1869.—Definition of the indemnity claims of the United States against Great Britain.—First stages of the Negotiation.—The rejected Johnson-Clarendon Treaty.—"A review of the history of the negotiations between the two Governments prior to the correspondence between Sir Edward Thornton and Mr. Fish, will show . . . what was intended by these words, 'generically known as the Alabama Claims,' used on each side in that correspondence. The correspondence between the two Governments was opened by Mr. Adams on the 20th of November, 1862 (less than four months after the escape of the Alabama), in a note to Earl Russell, written under instructions from the Government of the United States. In this note Mr. Adams submitted evidence of the acts of the Alabama, and stated: 'I have the honor to inform Your Lordship of the directions which I have received from my Government to solicit redress for the national and private injuries thus sustained.' . . . Lord Russell met this notice on the 19th of December, 1862, by a denial of any liability for any injuries growing out of the acts of the Alabama. . . . As new losses from time to time were suffered by individuals during the war, they were brought to the notice of Her Majesty's Government, and were lodged with the national and individual claims already preferred; but argumentative discussion on the issues involved was by common consent deferred. . . . The fact that the first claim preferred grew out of the acts of the Alabama explains how it was that all the claims growing out of the acts of all the vessels came to be 'generically known as the Alabama claims.' On the 7th of April, 1865, the war being virtually over, Mr. Adams renewed the discussion. He transmitted to Earl Russell an official report showing the

number and tonnage of American vessels transferred to the British flag during the war. He said: 'The United States commerce is rapidly vanishing from the face of the ocean, and that of Great Britain is multiplying in nearly the same ratio.' 'This process is going on by reason of the action of British subjects in cooperation with emissaries of the insurgents, who have supplied from the ports of Her Majesty's Kingdom all the materials, such as vessels, armament, supplies, and men, indispensable to the effective prosecution of this result on the ocean.' . . . He stated that he 'was under the painful necessity of announcing that his Government cannot avoid entailing upon the Government of Great Britain the responsibility for this damage.' Lord Russell . . . said in reply, 'I can never admit that the duties of Great Britain toward the United States are to be measured by the losses which the trade and commerce of the United States have sustained. . . . Referring to the offer of arbitration, made on the 26th day of October, 1863, Lord Russell, in the same note, said: 'Her Majesty's Government must decline either to make reparation and compensation for the captures made by the Alabama, or to refer the question to any foreign State.' This terminated the first stage of the negotiations between the two Governments. . . . In the summer of 1866 a change of Ministry took place in England, and Lord Stanley became Secretary of State for Foreign Affairs in the place of Lord Clarendon. He took an early opportunity to give an intimation in the House of Commons that, should the rejected claims be revived, the new Cabinet was not prepared to say what answer might be given them; in other words, that, should an opportunity be offered, Lord Russell's refusal might possibly be reconsidered. Mr. Seward met these overtures by instructing Mr. Adams, on the 27th of August, 1866, 'to call Lord Stanley's attention in a respectful but earnest manner, to 'a summary of claims of citizens of the United States, for damages which were suffered by them during the period of the civil war,' and to say that the Government of the United States, while it thus insists upon these particular claims, is neither desirous nor willing to assume an attitude unkind and uncunctious toward Great Britain. . . . Lord Stanley met this overture by a communication to Sir Frederick Bruce, in which he denied the liability of Great Britain, and assented to a reference, 'provided that a fitting Arbitrator can be found, and that an agreement can be come to as to the points to which the arbitration shall apply.' . . . As the first result of these negotiations, a convention known as the Stanley-Johnson convention was signed at London on the 10th of November, 1868. It proved to be unacceptable to the Government of the United States. Negotiations were at once resumed, and resulted on the 14th of January, 1869, in the Treaty known as the Johnson-Clarendon convention [having been negotiated by Mr. Reverdy Johnson, who had succeeded Mr. Adams as United States Minister to Great Britain]. This latter convention provided for the organization of a mixed commission with jurisdiction over 'all claims on the part of citizens of the United States upon the Government of Her Britannic Majesty, including the so-called Alabama claims, and all claims on the part of subjects of Her Britannic Majesty upon

the Government of the United States which may have been presented to either government for its interposition with the other since the 26th July, 1853, and which yet remain unsettled." The Johnson-Clarendon treaty, when submitted to the Senate, was rejected by that body, in April, "because, although it made provision for the part of the Alabama claims which consisted of claims for individual losses, the provision for the more extensive national losses was not satisfactory to the Senate."—*The Argument of the United States delivered to the Tribunal of Arbitration at Geneva, June 15, 1872, Division 13, sect. 2.*

A. D. 1869-1871.—Renewed Negotiations.—**Appointment and meeting of the Joint High Commission.**—The action of the Senate in rejecting the Johnson-Clarendon treaty was taken in April, 1869, a few weeks after President Grant entered upon his office. At this time "the condition of Europe was such as to induce the British Ministers to take into consideration the foreign relations of Great Britain; and, as Lord Granville, the British Minister of Foreign Affairs, has himself stated in the House of Lords, they saw cause to look with solicitude on the uneasy relations of the British Government with the United States, and the inconvenience thereof in case of possible complications in Europe. Thus impelled, the Government dispatched to Washington a gentleman who enjoyed the confidence of both Cabinets, Sir John Rose, to ascertain whether overtures for reopening negotiations would be received by the President in spirit and terms acceptable to Great Britain. . . . Sir John Rose found the United States disposed to meet with perfect correspondence of good-will the advances of the British Government. Accordingly, on the 26th of January, 1871, the British Government, through Sir Edward Thornton, finally proposed to the American Government the appointment of a joint High Commission to hold its sessions at Washington, and there devise means to settle the various pending questions between the two Governments affecting the British possessions in North America. To this overture Mr. Fish replied that the President would with pleasure appoint, as invited, Commissioners on the part of the United States, provided the deliberations of the Commissioners should be extended to other differences,—that is to say, to include the differences growing out of incidents of the late Civil War. . . . The British Government promptly accepted this proposal for enlarging the sphere of the negotiation." The joint High Commission was speedily constituted, as proposed, by appointment of the two governments, and the promptitude of proceeding was such that the British commissioners landed at New York in twenty-seven days after Sir Edward Thornton's suggestion of January 26th was made. They sailed without waiting for their commissions, which were forwarded to them by special messenger. The High Commission was made up as follows: "On the part of the United States were five persons,—Hamilton Fish, Robert C. Schenck, Samuel Nelson, Ebenezer Rockwood Hoar, and George H. Williams,—eminently fit representatives of the diplomacy, the bench, the bar, and the legislature of the United States; on the part of Great Britain, Earl De Grey and Ripon, President of the Queen's Council; Sir Stafford Northcote, Ex-Minister and actual Mem-

ber of the House of Commons; Sir Edward Thornton, the universally respected British Minister at Washington; Sir John [A.] Macdonald, the able and eloquent Premier of the Canadian Dominion; and, in revival of the good old time, when learning was equal to any other title of public honor, the Universities in the person of Professor Montague Bernard. . . . In the face of many difficulties, the Commissioners, on the 8th of May, 1871, completed a treaty [known as the Treaty of Washington], which received the prompt approval of their respective Governments."—C. Cushing, *The Treaty of Washington*, pp. 18-20, and 11-13.

A. D. 1871.—The Treaty of Washington.—The treaty signed at Washington on the 8th day of May, 1871, and the ratifications of which were exchanged at London on the 17th day of the following June, set forth its principal agreement in the first two articles as follows: "Whereas differences have arisen between the Government of the United States and the Government of Her Britannic Majesty, and still exist, growing out of the acts committed by the several vessels which have given rise to the claims generically known as the 'Alabama Claims;' and whereas Her Britannic Majesty has authorized Her High Commissioners and Plenipotentiaries to express in a friendly spirit, the regret felt by Her Majesty's Government for the escape, under whatever circumstances, of the Alabama and other vessels from British ports, and for the depredations committed by those vessels: Now, in order to remove and adjust all complaints and claims on the part of the United States and to provide for the speedy settlement of such claims which are not admitted by Her Britannic Majesty's Government, the high contracting parties agree that all the said claims, growing out of acts committed by the aforesaid vessels, and generically known as the 'Alabama Claims,' shall be referred to a tribunal of arbitration to be composed of five Arbitrators, to be appointed in the following manner, that is to say: One shall be named by the President of the United States; one shall be named by Her Britannic Majesty; His Majesty the King of Italy shall be requested to name one; the President of the Swiss Confederation shall be requested to name one; and His Majesty the Emperor of Brazil shall be requested to name one. . . . The Arbitrators shall meet at Geneva, in Switzerland, at the earliest convenient day after they shall have been named, and shall proceed impartially and carefully to examine and decide all questions that shall be laid before them on the part of the Governments of the United States and Her Britannic Majesty respectively. All questions considered by the tribunal, including the final award, shall be decided by a majority of all the Arbitrators. Each of the high contracting parties shall also name one person to attend the tribunal as its Agent to represent it generally in all matters connected with the arbitration." Articles 3, 4 and 5 of the treaty specify the mode in which each party shall submit its case. Article 6 declares that, "In deciding the matters submitted to the Arbitrators, they shall be governed by the following three rules, which are agreed upon by the high contracting parties as rules to be taken as applicable to the case, and

by such principles of international law not inconsistent therewith as the Arbitrators shall determine to have been applicable to the case: A neutral Government is bound—First, to use due diligence to prevent the fitting out, arming, or equipping, within its jurisdiction, of any vessel which it has reasonable ground to believe is intended to cruise or to carry on war against a Power with which it is at peace; and also to use like diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above, such vessel having been specially adapted, in whole or in part, within such jurisdiction, to warlike use. Secondly, not to permit or suffer either belligerent to make use of its ports or waters as the base of naval operations against the other, or for the purpose of the renewal or augmentation of military supplies or arms, or the recruitment of men. Thirdly to exercise due diligence in its own ports and waters, and, as to all persons within its jurisdiction, to prevent any violation of the foregoing obligations and duties. Her Britannic Majesty has commanded her High Commissioners and Plenipotentiaries to declare that Her Majesty's Government cannot assent to the foregoing rules as a statement of principles of international law which were in force at the time when the claims mentioned in Article 1 arose, but that Her Majesty's Government, in order to evince its desire of strengthening the friendly relations between the two countries and of making satisfactory provision for the future, agrees that in deciding the questions between the two countries arising out of those claims, the Arbitrators should assume that Her Majesty's Government had undertaken to act upon the principles set forth in these rules. And the high contracting parties agree to observe these rules as between themselves in future, and to bring them to the knowledge of other maritime powers, and to invite them to accede to them." Articles 7 to 17, inclusive, relate to the procedure of the tribunal of arbitration, and provide for the determination of claims, by assessors and commissioners, in case the Arbitrators should find any liability on the part of Great Britain and should not award a sum in gross to be paid in settlement thereof. Articles 18 to 25 relate to the Fisheries. By Article 18 it is agreed that in addition to the liberty secured to American fishermen by the convention of 1818, "of taking, curing and drying fish on certain coasts of the British North American colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty for [a period of ten years, and two years further after notice given by either party of its wish to terminate the arrangement] . . . to take fish of every kind, except shell fish, on the sea-coasts and shores, and in the bays, harbours and creeks, of the provinces of Quebec, Nova Scotia and New Brunswick, and the colony of Prince Edward's Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts and shores and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish; provided that, in so doing, they do not interfere with the rights of private property, or with British fishermen, in the peaceable use of any part of the said

coasts in their occupancy for the same purpose. It is understood that the above-mentioned liberty applies solely to the sea-fishery, and that the salmon and shad fisheries, and all other fisheries in rivers and the mouths of rivers, are hereby reserved exclusively for British fishermen." Article 19 secures to British subjects the corresponding rights of fishing, &c., on the eastern sea-coasts and shores of the United States north of the 39th parallel of north latitude. Article 20 reserves from these stipulations the places that were reserved from the common right of fishing under the first article of the treaty of June 5, 1854. Article 21 provides for the reciprocal admission of fish and fish oil into each country from the other, free of duty (excepting fish of the inland lakes and fish preserved in oil). Article 22 provides that, "Inasmuch as it is asserted by the Government of Her Britannic Majesty that the privileges accorded to the citizens of the United States under Article XVIII of this treaty are of greater value than those accorded by Articles XIX and XXI of this treaty to the subjects of Her Britannic Majesty, and this assertion is not admitted by the Government of the United States, it is further agreed that Commissioners shall be appointed to determine . . . the amount of any compensation which in their opinion, ought to be paid by the Government of the United States to the Government of Her Britannic Majesty." Article 23 provides for the appointment of such Commissioners, one by the President of the United States, one by Her Britannic Majesty, and the third by the President and Her Majesty conjointly; or, failing of agreement within three months, the third Commissioner to be named by the Austrian Minister at London. The Commissioners to meet at Halifax, and their procedure to be as prescribed and regulated by Articles 24 and 25. Articles 26 to 31 define certain reciprocal privileges accorded by each government to the subjects of the other, including the navigation of the St. Lawrence, Yukon, Porcupine and Stikine Rivers, Lake Michigan, and the Welland, St. Lawrence and St. Clair Flats canals; and the transportation of goods in bond through the territory of one country into the other without payment of duties. Article 32 extends the provisions of Articles 18 to 25 of the treaty to Newfoundland if all parties concerned enact the necessary laws, but not otherwise. Article 33 limits the duration of Articles 18 to 25 and Article 30, to ten years from the date of their going into effect, and "further until the expiration of two years after either of the two high contracting parties shall have given notice to the other of its wish to terminate the same." The remaining articles of the treaty provide for submitting to the arbitration of the Emperor of Germany the Northwestern water-boundary question (in the channel between Vancouver's Island and the continent)—to complete the settlement of Northwestern boundary disputes.—*Treaties and Conventions between the U. S. and other Powers* (ed. of 1889), pp. 478–493.

A. D. 1871–1872.—The Tribunal of Arbitration at Geneva, and its Award.—"The appointment of Arbitrators took place in due course, and with the ready good-will of the three neutral governments. The United States ap-

pointed Mr. Charles Francis Adams; Great Britain appointed Sir Alexander Cockburn; the King of Italy named Count Frederic Sclopis; the President of the Swiss Confederation, Mr. Jacob Stämpfli; and the Emperor of Brazil, the Baron d'Itajubá. Mr. J. C. Bancroft Davis was appointed Agent of the United States, and Lord Tenterden of Great Britain. The Tribunal was organized for the reception of the case of each party, and held its first conference [at Geneva, Switzerland] on the 15th of December, 1871, Count Sclopis being chosen to preside. "The printed Case of the United States, with accompanying documents, was filed by Mr. Bancroft Davis, and the printed Case of Great Britain, with documents, by Lord Tenterden. The Tribunal made regulation for the filing of the respective Counter-Cases on or before the 15th day of April next ensuing, as required by the Treaty; and for the convening of a special meeting of the Tribunal, if occasion should require; and then, at a second meeting, on the next day, they adjourned until the 15th of June next ensuing, subject to a prior call by the Secretary, if there should be occasion." The sessions of the Tribunal were resumed on the 15th of June, 1872, according to the adjournment, and were continued until the 14th of September following, when the decision and award were announced, and were signed by all the Arbitrators except the British representative, Sir Alexander Cockburn, who dissented. It was found by the Tribunal that the British Government had "failed to use due diligence in the performance of its neutral obligations" with respect to the cruisers Alabama and Florida, and the several tenders of those vessels; and also with respect to the Shenandoah after her departure from Melbourne, Feb. 18, 1865, but not before that date. With respect to the Georgia, the Sumter, the Nashville, the Tallahassee and the Chickamauga, it was the finding of the Tribunal that Great Britain had not failed to perform the duties of a neutral power. So far as relates to the vessels called the Sallie, the Jefferson Davis, the Music, the Boston, and the V. H. Joy, it was the decision of the Tribunal that they ought to be excluded from consideration for want of evidence. "So far as relates to the particulars of the indemnity claimed by the United States, the costs of pursuit of Confederate cruisers" are declared to be "not, in the judgment of the Tribunal, properly distinguishable from the general expenses of the war carried on by the United States," and "there is no ground for awarding to the United States any sum by way of indemnity under this head." A similar decision put aside the whole consideration of claims for "prospective earnings." Finally, the award was rendered in the following language: "Whereas, in order to arrive at an equitable compensation for the damages which have been sustained, it is necessary to set aside all double claims for the same losses, and all claims for 'gross freights' so far as they exceed 'net freights;' and whereas it is just and reasonable to allow interest at a reasonable rate; and whereas, in accordance with the spirit and letter of the Treaty of Washington, it is preferable to adopt the form of adjudication of a sum in gross, rather than to refer the subject of compensation for further discussion and deliberation to a Board of Assessors, as provided by Article X of the said

Treaty: The Tribunal, making use of the authority conferred upon it by Article VII of the said Treaty, by a majority of four voices to one, awards to the United States the sum of fifteen millions five hundred thousand Dollars in gold as the indemnity to be paid by Great Britain to the United States for the satisfaction of all the claims referred to the consideration of the Tribunal, conformably to the provisions contained in Article VII of the aforesaid Treaty." It should be stated that the so-called "indirect claims" of the United States, for consequential losses and damages, growing out of the encouragement of the Southern Rebellion, the prolongation of the war, &c., were dropped from consideration at the outset of the session of the Tribunal, in June, the Arbitrators agreeing then in a statement of opinion to the effect that "these claims do not constitute, upon the principles of international law applicable to such cases, good foundation for an award of compensation or computation of damages between nations." This declaration was accepted by the United States as decisive of the question, and the hearing proceeded accordingly.—C. Cushing, *The Treaty of Washington*.

ALANS, OR ALANI, The.—"The Alani are first mentioned by Dionysius the geographer (B. C. 30-10) who joins them with the Daci and the Tauri, and again places them between the latter and the Agathyrsi. A similar position (in the south of Russia in Europe, the modern Ukraine) is assigned to them by Pliny and Josephus. Seneca places them further west upon the Ister. Ptolemy has two bodies of Alani, one in the position above described, the other in Scythia within the Imaus, north and partly east of the Caspian. It must have been from these last, the successors, and, according to some, the descendants of the ancient Massagetæ, that the Alani came who attacked Pacorus and Tiridates [in Media and Armenia, A. D. 75]. . . . The result seems to have been that the invaders, after ravaging and harrying Media and Armenia at their pleasure, carried off a vast number of prisoners and an enormous booty into their own country."—G. Rawlinson, *Sixth Great Oriental Monarchy*, ch. 17.—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 6, note H.—"The first of this [the Tartar] race known to the Romans were the Alani. In the fourth century they pitched their tents in the country between the Volga and the Tanais, at an equal distance from the Black Sea and the Caspian."—J. C. L. Sismoudi, *Fall of the Roman Empire*, ch. 3.

ALARODIANS. — IBERIANS. — COLCHIANs.—"The Alarodians of Herodotus, joined with the Sapeires . . . are almost certainly the inhabitants of Armenia, whose Semitic name was Urarda, or Ararat. 'Alarud,' indeed, is a mere variant form of 'Ararud,' the l and r being undistinguishable in the old Persian, and 'Ararud' serves determinately to connect the Ararat of Scripture with the Urarda, or Urartha of the Inscriptions. . . . The name of Ararat is constantly used in Scripture, but always to denote a country rather than a particular mountain. . . . The connexion . . . of Urarda with the Babylonian tribe of Akkad is proved by the application in the inscriptions of the ethnic title of Burbur (?) to the Armenian king . . . ; but there is nothing to prove whether the Burbur or Akkad of Babylonia descended in a very remote age from the mountains to colonize the plains, or whether the Urardians were refugees of a later period driven northward by the growing power of the Semites. The former supposition, however, is most in conformity with Scripture, and incidentally with the tenor of the inscriptions."—H. C. Rawlinson, *Hist. of Herodotus*, bk. 7, app. 3.—"The broad and rich valley of the Kur, which corresponds closely with the modern Russian province of Georgia, was [anciently] in the possession of a people called by Herodotus Sapeires or Sapeires, whom we may identify with the Iberians of later writers. Adjoining upon them towards the south, probably in the country about Erivan, and so in the neighbourhood of Ararat, were the Alarodians, whose name must be connected with that of the great mountain. On the other side of the Sapeirian country, in the tracts now known as Mingrelia and Imeritia, regions of a wonderful beauty and fertility, were the Colchians,—dependents, but not exactly subjects, of Persia."—G. Rawlinson, *Five Great Monarchies: Persia*, ch. 1.

ALASKA: A. D. 1867.—Purchase by the United States.—As early as 1859 there were unofficial communications between the Russian and American governments, on the subject of the sale of Alaska by the former to the latter. Russia was more than willing to part with a piece of territory which she found difficulty in defending, in war; and the interests connected with the fisheries and the fur-trade in the north-west were disposed to promote the transfer. In March, 1867, definite negotiations on the subject were opened by the Russian minister at Washington, and on the 23d of that month he received from Secretary Seward an offer, subject to the President's approval, of \$7,200,000, on condition

that the cession be "free and unencumbered by any reservations, privileges, franchises, grants, or possessions by any associated companies, whether corporate or incorporate, Russian, or any other." "Two days later an answer was returned, stating that the minister believed himself authorized to accept these terms. On the 29th final instructions were received by cable from St. Petersburg. On the same day a note was addressed by the minister to the secretary of state, informing him that the tsar consented to the cession of Russian America for the stipulated sum of \$7,200,000 in gold. At four o'clock the next morning the treaty was signed by the two parties without further phrase or negotiation. In May the treaty was ratified, and on June 20, 1867, the usual proclamation was issued by the president of the United States." On the 18th of October, 1867, the formal transfer of the territory was made, at Sitka, General Rousseau taking possession in the name of the Government of the United States.—H. H. Bancroft, *Hist. of the Pacific States*, v. 28, ch. 28.

ALBA. — Alban Mount.—"Cantons . . . having their rendezvous in some stronghold, and including a certain number of clanships, form the primitive political unities with which Italian history begins. At what period, and to what extent, such cantons were formed in Latium, cannot be determined with precision; nor is it a matter of special historical interest. The isolated Alban range, that natural stronghold of Latium, which offered to settlers the most wholesome air, the freshest springs, and the most secure position, would doubtless be first occupied by the new comers. Here accordingly, along the narrow plateau above Palazuola, between the Alban lake (Lago di Castello) and the Alban mount (Monte Cavo) extended the town of Alba, which was universally regarded as the primitive seat of the Latin stock, and the mother-city of Rome, as well as of all the other Old Latin communities. Here, too, on the slopes lay the very ancient Latin canton-centres of Lanuvium, Aricia, and Tusculum. . . . All these cantons were in primitive times politically sovereign, and each of them was governed by its prince with the co-operation of the council of elders and the assembly of warriors. Nevertheless the feeling of fellowship based on community of descent and of language not only pervaded the whole of them, but manifested itself in an important religious and political institution—the perpetual league of the collective Latin cantons. The presidency belonged originally, according to the universal Italian as well as Hellenic usage, to that canton within whose bounds lay the meeting-place of the league; in this case it was the canton of Alba. . . . The communities entitled to participate in the league were in the beginning thirty. . . . The rendezvous of this union was, like the Pambœotia and the Panionia among the similar confederacies of the Greeks, the 'Latin festival' (feriæ Latinæ) at which, on the Mount of Alba, upon a day annually appointed by the chief

magistrate for the purpose, an ox was offered in sacrifice by the assembled Latin stock to the 'Latin god' (Jupiter Latiaris)."—T. Mommsen, *Hist. of Rome*, bk. 1, ch. 3.

Mediæval.—"From the settlement of the Servian Sclavonians within the bounds of the empire [during the reign of Heraclius, first half of the seventh century], we may . . . venture to date the earliest encroachments of the Illyrian or Albanian race on the Hellenic population. The Albanians or Arnauts, who are now called by themselves Skiptars, are supposed to be remains of the great Thracian race which, under various names, and more particularly as Paionians, Epirots and Macedonians, take an important part in early Grecian history. No distinct trace of the period at which they began to be co-proprietors of Greece with the Hellenic race can be found in history. . . . It seems very difficult to trace back the history of the Greek nation without suspecting that the germs of their modern condition, like those of their neighbours, are to be sought in the singular events which occurred in the reign of Heraclius."—G. Finlay, *Greece Under the Romans*, ch. 4, sect. 6.

A. D. 1443-1467.—Scanderbeg's War with the Turks.—"John Castriot, Lord of Emalithia (the modern district of Moghlena) [in Epirus or Albania] had submitted, like the other petty despots of those regions, to Amurath early in his reign, and had placed his four sons in the Sultan's hands as hostages for his fidelity. Three of them died young. The fourth, whose name was George, pleased the Sultan by his beauty, strength and intelligence. Amurath caused him to be brought up in the Mahometan creed; and, when he was only eighteen, conferred on him the government of one of the Sanjaks of the empire. The young Albanian proved his courage and skill in many exploits under Amurath's eye, and received from him the name of Iskanderbeg, the lord Alexander. When John Castriot died, Amurath took possession of his principalities and kept the son constantly employed in distant wars. Scanderbeg brooded over this injury; and when the Turkish armies were routed by Hunyades in the campaign of 1443, Scanderbeg determined to escape from their side and assume forcible possession of his patrimony. He suddenly entered the tent of the Sultan's chief secretary, and forced that functionary, with the poniard at his throat, to write and seal a formal order to the Turkish commander of the strong city of Croia, in Albania, to deliver that place and the adjacent territory to Scanderbeg, as the Sultan's viceroy. He then stabbed the secretary and hastened to Croia, where his strategem gained him instant admittance and submission. He now publicly abjured the Mahometan faith, and declared his intention of defending the creed of his forefathers, and restoring the independence of his

native land. The Christian population flocked readily to his banner and the Turks were massacred without mercy. For nearly twenty-five years Scanderbeg contended against all the power of the Ottomans, though directed by the skill of Amurath and his successor Mahomet, the conqueror of Constantinople."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 4.—"Scanderbeg died a fugitive at Lissus on the Venetian territory [A. D. 1467]. His sepulchre was soon violated by the Turkish conquerors; but the janizaries, who wore his bones encased in a bracelet, declared by this superstitious amulet their involuntary reverence for his valour. . . . His infant son was saved from the national shipwreck; the Castriots were invested with a Neapolitan dukedom, and their blood continues to flow in the noblest families of the realm."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 67.

ALBANY, N. Y.: A. D. 1623.—The first Settlement.—"In 1614, the year after the first Dutch traders had established their operations on Manhattan Island, they built a trading house, which they called Fort Nassau, on Castle Island, in the Hudson River, a little below the site of the present city of Albany. Three years later this small fort was carried away by a flood and the island abandoned. In 1623 a more important fortification, named Fort Orange, was erected on the site afterwards covered by the business part of Albany. That year, 'about eighteen families settled themselves at Fort Orange, under Adriaen Joris, who 'staid with them all winter,' after sending his ship home to Holland in charge of his son. As soon as the colonists had built themselves 'some huts of bark' around the fort, the Mahikanders or River Indians [Mohegans], the Mohawks, the Oneidas, the Onondagas, the Cayugas, and the Senecas, with the Mahawawa or Ottawawa Indians, 'came and made covenants of friendship . . . and desired that they might come and have a constant free trade with them, which was concluded upon.'"—J. R. Brodhead, *Hist. of the State of N. Y.*, v. 1, pp. 55 and 151.

ALBIGENSES, OR ALBIGEOIS, The.—“Nothing is more curious in Christian history than the vitality of the Manichean opinions. That wild, half poetic, half rationalistic theory of Christianity, . . . appears almost suddenly in the 12th century, in living, almost irresistible power, first in its intermediate settlement in Bulgaria, and on the borders of the Greek Empire, then in Italy, in France, in Germany, in the remotest West, at the foot of the Pyrenees. . . . The chief seat of these opinions was the south of France. Innocent III., on his accession, found not only these daring insurgents scattered in the cities of Italy, even, as it were, at his own gates (among his first acts was to subdue the Paterines of Viterbo), he found a whole province, a realm, in some respects the richest and noblest of his spiritual domain, absolutely dissevered from his Empire, in almost universal revolt from Latin Christianity. . . . In no [other] European country had the clergy so entirely, or it should seem so deservedly, forfeited its authority. In none had the Church more absolutely ceased to perform its proper functions.”—H. H. Milman, *Hist. of Latin Christianity*, bk. 9, ch. 8.—“By mere chance, the sects scattered in South France received the common name of Albigenses, from one of the districts where the agents of the church who came to combat them found them mostly to abound,—the district around the town of Alba, or Alby; and by this common name they were well known from the commencement of the thirteenth century. Under this general denomination parties of different tenets were comprehended together, but the Catharists seem to have constituted a predominant element among the people thus designated.”—A. Neander, *Gen. Hist. of the Christian Rel. and Ch.*, 5th per., div. 2, sect. 4, pt. 3.—“Of the sectaries who shared the errors of Gnosticism and Manichæism and opposed the Catholic Church and her hierarchy, the Albigenses were the most thorough and radical. Their errors were, indeed, partly Gnostic and partly Manichæan, but the latter was the more prominent and fully developed. They received their name from a district of Languedoc, inhabited by the Albigeois and surrounding the town of Albi. They are called Cathari and Patarini in the acts of the Council of Tours (A. D. 1163), and in those of the third Lateran, Publiciani (i. e., Paulicians). Like the Cathari, they also held that the evil spirit created all visible things.”—J. Alzog, *Manual of Univ. Ch. Hist.*, period 2, epoch 2, pt. 1, ch. 3, sect. 236.—“The imputations of

irreligion, heresy, and shameless debauchery, which have been cast with so much bitterness on the Albigenses by their persecutors, and which have been so zealously denied by their apologists, are probably not ill founded, if the word Albigenses be employed as synonymous with the words Provençaux or Languedocians; for they were apparently a race among whom the hallowed charities of domestic life, and the reverence due to divine ordinances and the homage due to divine truth, were often impaired, and not seldom extinguished, by ribald jests, by infidel scoffings, and by heart-hardening impurities. Like other voluptuaries, the Provençaux (as their remaining literature attests) were accustomed to find matter for merriment in vices which would have moved wise men to tears. But if by the word Albigenses be meant the Vaudois, or those followers (or associates) of Peter Waldo who revived the doctrines against which the Church of Rome directed her censures, then the accusation of dissoluteness of manners may be safely rejected as altogether calumnious, and the charge of heresy may be considered, if not as entirely unfounded, yet as a cruel and injurious exaggeration.”—Sir J. Stephen, *Lects. on the Hist. of France*, lect. 7.

A. D. 1209.—The First Crusade.—Pope “Innocent III., in organizing the persecution of the Catharins [or Catharists], the Patarins, and the Pauvres de Lyons, exercised a spirit, and displayed a genius similar to those which had already elevated him to almost universal dominion; which had enabled him to dictate at once to Italy and to Germany; to control the kings of France, of Spain, and of England; to overthrow the Greek Empire, and to substitute in its stead a Latin dynasty at Constantinople. In the zeal of the Cistercian Order, and of their Abbot, Arnaud Amalric; in the fiery and unwearied preaching of the first Inquisitor, the Spanish Missionary, Dominic; in the remorseless activity of Foulquet, Bishop of Toulouse; and above all, in the strong and un pitying arm of Simon de Montfort, Earl of Leicester, Innocent found ready instruments for his purpose. Thus aided, he excommunicated Raymond of Toulouse [A. D. 1207], as Chief of the Heretics, and he promised remission of sins, and all the privileges which had hitherto been exclusively conferred on adventurers in Palestine, to the champions who should enroll themselves as Crusaders in the far more easy enterprise of a Holy War against the Albigenses. In the first invasion of his territories [A. D. 1209], Raymond VI. gave way before the terrors excited by the 300,000 fanatics who precipitated themselves on Languedoc; and loudly declaring his personal freedom from heresy, he surrendered his chief castles, underwent a humiliating penance, and took the cross against his own subjects. The brave resistance of his nephew Raymond Roger, Viscount of Beziers, deserved but did not obtain success. When the crusaders surrounded his capital, which was occupied by a mixed population of the two Religions, a question was raised how, in the approaching sack, the Catholics should be distinguished from the Heretics. ‘Kill them all,’ was the ferocious reply of Amalric; ‘the Lord will easily know His own.’ In compliance with this advice, not one human being within the walls was permitted to survive;

and the tale of slaughter has been variously estimated, by those who have perhaps exaggerated the numbers, at 60,000, but even in the extenuating despatch, which the Abbot himself addressed to the Pope, at not fewer than 15,000. Raymond Roger was not included in this fearful massacre, and he repulsed two attacks upon Carcassonne, before a treacherous breach of faith placed him at the disposal of de Montfort, by whom he was poisoned after a short imprisonment. The removal of that young and gallant Prince was indeed most important to the ulterior project of his captor, who aimed at permanent establishment in the South. The family of de Montfort had ranked among the nobles of France for more than two centuries; and it is traced by some writers through an illegitimate channel even to the throne: but the possessions of Simon himself were scanty; necessity had compelled him to sell the County of Evreux to Philippe Auguste; and the English Earl of Leicester which he inherited maternally, and the Lordship of a Castle about ten leagues distant from Paris, formed the whole of his revenues."—E. Smedley, *Hist. of France*, ch. 4.

ALSO IN J. C. L. de Sismondi, *Hist. of the Crusades ag't the Albigenes*, ch. 1.—H. H. Milman, *Hist. of Latin Christianity*, bk. 9, ch. 8.—J. Alzog, *Man. of Universal Church Hist.*, period 2, epoch 2, pt. 1, ch. 3.—See, also, INQUISITION: A. D. 1203–1525.

A. D. 1210–1213.—The Second Crusade.—"The conquest of the Viscounty of Beziers had rather inflamed than satiated the cupidity of De Montfort and the fanaticism of Amalric [legate of the Pope] and of the monks of Citeaux. Raymond, Count of Toulouse, still possessed the fairest part of Languedoc, and was still suspected or accused of affording shelter, if not countenance, to his heretical subjects. . . . The unhappy Raymond was . . . again excommunicated from the Christian Church, and his dominions offered as a reward to the champions who should execute her sentence against him. To earn that reward De Montfort, at the head of a new host of Crusaders, attracted by the promise of earthly spoils and of heavenly blessedness, once more marched through the devoted land [A. D. 1210], and with him advanced Amalric. At each successive conquest, slaughter, rapine, and woes such as may not be described tracked and polluted their steps. Heretics, or those suspected of heresy, wherever they were found, were compelled by the legate to ascend vast piles of burning fagots. . . . At length the Crusaders reached and laid siege to the city of Toulouse. . . . Throwing himself into the place, Raymond . . . succeeded in repulsing De Montfort and Amalric. It was, however, but a temporary respite, and the prelude to a fearful destruction. From beyond the Pyrenees, at the head of 1,000 knights, Pedro of Arragon had marched to the rescue of Raymond, his kinsman, and of the counts of Foix and of Comminges, and of the Viscount of Béarn, his vassals; and their united forces came into communication with each other at Muret, a little town which is about three leagues distant from Toulouse. There, also, on the 12th of September [A. D. 1213], at the head of the champions of the Cross, and attended by seven bishops, appeared Simon de Montfort in full military array. The battle which followed was fierce, short and decisive. . . . Don Pedro

was numbered with the slain. His army, deprived of his command, broke and dispersed, and the whole of the infantry of Raymond and his allies were either put to the sword, or swept away by the current of the Garonne. Toulouse immediately surrendered, and the whole of the dominions of Raymond submitted to the conquerors. At a council subsequently held at Montpellier, composed of five archbishops and twenty-eight bishops, De Montfort was unanimously acknowledged as prince of the fief and city of Toulouse, and of the other counties conquered by the Crusaders under his command."—Sir J. Stephen, *Lect's on the Hist. of France*, lect. 7.

ALSO IN J. C. L. de Sismondi, *Hist. of Crusades ag't the Albigenes*, ch. 2.

A. D. 1217–1229.—The Renewed Crusades.—Dissolution of the County of Toulouse.—Pacification of Languedoc.—"The cruel spirit of De Montfort would not allow him to rest quiet in his new Empire. Violence and persecution marked his rule; he sought to destroy the Provençal population by the sword or the stake, nor could he bring himself to tolerate the liberties of the citizens of Toulouse. In 1217 the Toulousans again revolted, and war once more broke out betwixt Count Raymond and Simon de Montfort. The latter formed the siege of the capital, and was engaged in repelling a sally, when a stone from one of the walls struck him and put an end to his existence. . . . Amaury de Montfort, son of Simon, offered to cede to the king all his rights in Languedoc, which he was unable to defend against the old house of Toulouse. Philip [Augustus] hesitated to accept the important cession, and left the rival houses to the continuance of a struggle carried feebly on by either side." King Philip died in 1223 and was succeeded by a son, Louis VIII., who had none of his father's reluctance to join in the grasping persecution of the unfortunate people of the south. Amaury de Montfort had been fairly driven out of old Simon de Montfort's conquests, and he now sold them to King Louis for the office of constable of France. "A new crusade was preached against the Albigenes; and Louis marched towards Languedoc at the head of a formidable army in the spring of the year 1226. The town of Avignon had proffered to the crusaders the facilities of crossing the Rhone under her walls, but refused entry within them to such a host. Louis having arrived at Avignon, insisted on passing through the town: the Avignonnais shut their gates, and defied the monarch, who instantly formed the siege. One of the rich municipalities of the south was almost a match for the king of France. He was kept three months under its walls; his army a prey to famine, to disease and to the assaults of a brave garrison. The crusaders lost 20,000 men. The people of Avignon at length submitted, but on no dishonourable terms. This was the only resistance that Louis experienced in Languedoc. . . . All submitted. Louis retired from his facile conquest; he himself, and the chiefs of his army stricken by an epidemic which had prevailed in the conquered regions. The monarch's feeble frame could not resist it; he expired at Montpensier, in Auvergne, in November, 1226." Louis VIII. was succeeded by his young son, Louis IX. (Saint Louis), then a boy, under the regency of his energetic and capable mother, Blanche of

Castile. "The termination of the war with the Albigenses, and the pacification, or it might be called the acquisition, of Languedoc, was the chief act of Queen Blanche's regency. Louis VIII. had overrun the country without resistance in his last campaign; still, at his departure, Raymond VI. again appeared, collected soldiers and continued to struggle against the royal lieutenant. For upward of two years he maintained himself; the attention of Blanche being occupied by the league of the barons against her. The successes of Raymond VII., accompanied by cruelties, awakened the vindictive zeal of the pope. Languedoc was threatened with another crusade; Raymond was willing to treat, and make considerable cessions, in order to avoid such extremities. In April, 1229, a treaty was signed: in it the rights of De Montfort were passed over. About two-thirds of the domains of the count of Toulouse were ceded to the king of France; the remainder was to fall, after Raymond's death, to his daughter Jeanne, who by the same treaty was to marry one of the royal princes: heirs failing them, it was to revert to the crown [which it did in 1271]. On these terms, with the humiliating addition of a public penance, Raymond VII. once more was allowed peaceable possession of Toulouse, and of the part of his domains reserved to him. Alphonse, brother of Louis IX., married Jeanne of Toulouse soon after, and took the title of count of Poitiers; that province being ceded to him in apanage. Robert, another brother, was made count of Artois at the same time. Louis himself married Margaret, the eldest daughter of Raymond Berenger, count of Provence."—E. E. Crowe, *Hist. of France*, v. 1, ch. 2-3.—"The struggle ended in a vast increase of the power of the French crown, at the expense alike of the house of Toulouse and of the house of Aragon. The dominions of the count of Toulouse were divided. A number of fiefs, Beziers, Narbonne, Nîmes, Albi, and some other districts were at once annexed to the crown. The capital itself and its county passed to the crown fifty years later. . . . The name of Toulouse, except as the name of the city itself, now passed away, and the new acquisitions of France came in the end to be known by the name of the tongue which was common to them with Aquitaine and Imperial Burgundy [Provence]. Under the name of Languedoc they became one of the greatest and most valuable provinces of the French kingdom."—E. A. Freeman, *Hist. Geog. of Europe*, ch. 9.

The brutality and destructiveness of the Crusades.—"The Church of the Albigenses had been drowned in blood. These supposed heretics had been swept away from the soil of France. The rest of the Languedocian people had been overwhelmed with calamity, slaughter, and devastation. The estimates transmitted to us of the numbers of the invaders and of the slain are such as almost surpass belief. We can neither verify nor correct them; but we certainly know that, during a long succession of years, Languedoc had been invaded by armies more numerous than had ever before been brought together in European warfare since the fall of the Roman empire. We know that these hosts were composed of men inflamed by bigotry and unrestrained by discipline; that they had neither military pay nor magazines; that they provided for all their wants by the sword,

living at the expense of the country, and seizing at their pleasure both the harvests of the peasants and the merchandise of the citizens. More than three-fourths of the landed proprietors had been despoiled of their fiefs and castles. In hundreds of villages, every inhabitant had been massacred. . . . Since the sack of Rome by the Vandals, the European world had never mourned over a national disaster so wide in its extent or so fearful in its character."—Sir J. Stephen, *Lects. on the Hist. of France*, lect. 7.

ALBION.—"The most ancient name known to have been given to this island [Britain] is that of Albion. . . . There is, however, another allusion to Britain which seems to carry us much further back, though it has usually been ill understood. It occurs in the story of the labours of Hercules, who, after securing the cows of Geryon, comes from Spain to Liguria, where he is attacked by two giants, whom he kills before making his way to Italy. Now, according to Pomponius Mela, the names of the giants were Albiona and Bergyon, which one may, without much hesitation, restore to the forms of Albion and Iberion, representing, undoubtedly, Britain and Ireland, the position of which in the sea is most appropriately symbolized by the story making them sons of Neptune or the sea-god. . . . Even in the time of Pliny, Albion, as the name of the island, had fallen out of use with Latin authors; but not so with the Greeks, or with the Celts themselves, at any rate those of the Goidelic branch; for they are probably right who suppose that we have but the same word in the Irish and Scotch Gaelic Alba, genitive Alban, the kingdom of Alban or Scotland beyond the Forth. Albion would be a form of the name according to the Brythonic pronunciation of it. . . . It would thus appear that the name Albion is one that has retreated to a corner of the island, to the whole of which it once applied."—J. Rhys, *Celtic Britain*, ch. 6.

ALBIS, The.—The ancient name of the river Elbe.

ALBOIN, King of the Lombards, A. D. 569-573.

ALCALDE.—ALGUAZIL.—CORREGIDOR.—"The word *alcalde* is from the Arabic 'al cadi,' the judge or governor. . . . *Alcalde* mayor signifies a judge, learned in the law, who exercises [in Spain] ordinary jurisdiction, civil and criminal, in a town or district." In the Spanish colonies the *Alcalde* mayor was the chief judge. "Irving (Columbus, ii. 331) writes erroneously *alguazil* mayor, evidently confounding the two offices. . . . An *alguacil* mayor, was a chief constable or high sheriff." "Corregidor, a magistrate having civil and criminal jurisdiction in the first instance ('*nisi prius*') and gubernatorial inspection in the political and economical government in all the towns of the district assigned to him."—H. H. Bancroft, *Hist. of the Pacific States*, v. 1, pp. 297 and 250, foot-notes.

ALCANTARA, Knights of.—"Towards the close of Alfonso's reign [Alfonso VIII. of Castile and Leon, who called himself 'the Em-

peror,' A. D. 1126-1157], may be assigned the origin of the military order of Alcantara. Two cavaliers of Salamanca, don Suero and don Gomez, left that city with the design of choosing and fortifying some strong natural frontier, whence they could not only arrest the continual incursions of the Moors, but make hostile irruptions themselves into the territories of the misbelievers. Proceeding along the banks of the Coales, they fell in with a hermit, Amando by name, who encouraged them in their patriotic design and recommended the neighbouring hermitage of St. Julian as an excellent site for a fortress. Having examined and approved the situation, they applied to the bishop of Salamanca for permission to occupy the place: that permission was readily granted: with his assistance, and that of the hermit Amando, the two cavaliers erected a castle around the hermitage. They were now joined by other nobles and by more adventurers, all eager to acquire fame and wealth in this life, glory in the next. Hence the foundation of an order which, under the name, first, of St. Julian, and subsequently of Alcantara, rendered good service alike to king and church."—S. A. Dunham, *Hist. of Spain and Portugal*, bk. 3, sect. 2, ch. 1, div. 2.

ALEMANNIA: The Mediæval Duchy. See GERMANY: A. D. 843-962.

ALEMANNI, OR ALAMANNI: A. D. 213.—Origin and first appearance.—"Under Antoninus, the Son of Severus, a new and more severe war once more (A. D. 213) broke out in Raetia. This also was waged against the Chatti; but by their side a second people is named, which we here meet for the first time—the Alamanni. Whence they came, we known not. According to a Roman writing a little later, they were a confux of mixed elements; the appellation also seems to point to a league of communities, as well as the fact that, afterwards, the different tribes comprehended under this name stand forth—more than is the case among the other great Germanic peoples—in their separate character, and the Juthungi, the Lentienses, and other Alamannic peoples not seldom act inde-

pendently. But that it is not the Germans of this region who here emerge, allied under the new name and strengthened by the alliance, is shown as well by the naming of the Alamanni along side of the Chatti, as by the mention of the unwonted skilfulness of the Alamanni in equestrian combat. On the contrary, it was certainly, in the main, hordes coming on from the East that lent new strength to the almost extinguished German resistance on the Rhine; it is not improbable that the powerful Semnones, in earlier times dwelling on the middle Elbe, of whom there is no further mention after the end of the second century, furnished a strong contingent to the Alamanni."—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 4.—"The standard quotation respecting the derivation of the name from 'al'='all' and m-n='man', so that the word (somewhat exceptionably) denotes 'men of all sorts,' is from Agathias, who quotes Asinius Quadratus. . . . Notwithstanding this, I think it is an open question, whether the name may not have been applied by the truer and more unequivocal Germans of Suabia and Franconia, to certain less definitely Germanic allies from Wurtemberg and Baden, —parts of the Decumates Agri—parts which may have supplied a Gallic, a Gallo-Roman, or even a Slavonic element to the confederacy; in which case, a name so German as to have given the present French and Italian name for Germany, may, originally, have applied to a population other than Germanic. I know the apparently paradoxical elements in this view; but I also know that, in the way of etymology, it is quite as safe to translate 'all' by 'alii' as by 'omnes'; and I cannot help thinking that the 'al-' in Ale-manni is the 'al-' in 'alir-arto' (a foreigner or man of another sort), 'eli-benzo' (an alien), and 'ali-land' (captivity in foreign land).—Grimm, ii. 628.—Rechtsalterth, p. 359. And still more satisfied am I that the 'al-' in Ale-manni is the 'al-' in Al-satia='el-sass'='ali-satz'='foreign settlement.' In other words, the prefix in question is more probably the 'al-' in 'el-se', than the 'al-' in 'all.' Little, however, of importance turns on this. The locality of the Alemanni was the parts about the Limes Romanus, a boundary which, in the time of Alexander Severus, Niebuhr thinks they first broke through. Hence they were the Marchmen of the frontier, whoever those Marchmen were. Other such Marchmen were the Suevi; unless, indeed, we consider the two names as synonymous. Zeuss admits that, between the Suevi of Suabia, and the Alemanni, no tangible difference can be found."—R. G. Lathan, *The Germania of Tacitus; Epilegomena*, sect. 11.

ALSO IN T. Smith, *Arminius*, pt. 2, ch. 1.—See, also, SUEVI, and BAVARIANS.

A. D. 259.—Invasion of Gaul and Italy.—The Alemanni, "hovering on the frontiers of the Empire . . . increased the general disorder that ensued after the death of Decius. They inflicted severe wounds on the rich provinces of Gaul; they were the first who removed the veil that covered the feeble majesty of Italy. A numerous body of the Alemanni penetrated across the Danube and through the Rhetian Alps into the plains of Lombardy, advanced as far as Ravenna and displayed the victorious banners of barbarians almost in sight of Rome [A. D. 259]. The insult and the danger

rekindled in the senate some sparks of their ancient virtue. Both the Emperors were engaged in far distant wars—Valerian in the East and Galienus on the Rhine." The senators, however, succeeded in confronting the audacious invaders with a force which checked their advance, and they "retired into Germany laden with spoil."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 10.

A. D. 270.—Invasion of Italy.—Italy was invaded by the Alemanni, for the second time, in the reign of Aurelian, A. D. 270. They ravaged the provinces from the Danube to the Po, and were retreating, laden with spoils, when the vigorous Emperor intercepted them, on the banks of the former river. Half the host was permitted to cross the Danube; the other half was surprised and surrounded. But these last, unable to regain their own country, broke through the Roman lines at their rear and sped into Italy again, spreading havoc as they went. It was only after three great battles,—one near Placentia, in which the Romans were almost beaten, another on the Metaurus (where Hasdrubal was defeated), and a third near Pavia,—that the Germanic invaders were destroyed.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 11.

A. D. 355-361.—Repulse by Julian. See GAUL: A. D. 355-361.

A. D. 365-367.—Invasion of Gaul.—The Alemanni invaded Gaul in 365, committing widespread ravages and carrying away into the forests of Germany great spoil and many captives. The next winter they crossed the Rhine, again, in still greater numbers, defeated the Roman forces and captured the standards of the Herulian and Batavian auxiliaries. But Valentinian was now Emperor, and he adopted energetic measures. His lieutenant Jovinus overcame the invaders in a great battle fought near Chalons and drove them back to their own side of the river boundary. Two years later, the Emperor, himself, passed the Rhine and inflicted a memorable chastisement on the Alemanni. At the same time he strengthened the frontier defences, and, by diplomatic arts, fomented quarrels between the Alemanni and their neighbors, the Burgundians, which weakened both.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 25.

A. D. 378.—Defeat by Gratian.—On learning that the young Emperor Gratian was preparing to lead the military force of Gaul and the West to the help of his uncle and colleague, Valens, against the Goths, the Alemanni swarmed across the Rhine into Gaul. Gratian instantly recalled the legions that were marching to Pannonia and encountered the German invaders in a great battle fought near Argentaria (modern Colmar) in the month of May, A. D. 378. The Alemanni were routed with such slaughter that no more than 5,000 out of 40,000 to 70,000, are said to have escaped. Gratian afterwards crossed the Rhine and humbled his troublesome neighbors in their own country.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 26.

A. D. 496-504.—Overthrow by the Franks.—"In the year 496 A. D. the Salians [Salian Franks] began that career of conquest which they followed up with scarcely any intermission until the death of their warrior king. The Alemanni, extending themselves from their origi-

nal seats on the right bank of the Rhine, between the Main and the Danube, had pushed forward into Germanica Prima, where they came into collision with the Frankish subjects of King Sigebert of Cologne. Clovis flew to the assistance of his kinsman and defeated the Alemanni in a great battle in the neighbourhood of Zül-pich [called, commonly, the battle of Tolbiac]. He then established a considerable number of his Franks in the territory of the Alemanni, the traces of whose residence are found in the names of Franconia and Frankfurt."—W. C. Perry, *The Franks*, ch. 2.—"Clovis had been intending to cross the Rhine, but the hosts of the Alamanni came upon him, as it seems, unexpectedly and forced a battle on the left bank of the river. He seemed to be overmatched, and the horror of an impending defeat overshadowed the Frankish king. Then, in his despair, he bethought himself of the God of Clotilda [his queen, a Burgundian Christian princess, of the orthodox or Catholic faith]. Raising his eyes to heaven, he said: 'Oh Jesus Christ, whom Clotilda declares to be the Son of the living God, who art said to give help to those who are in trouble and who trust in Thee, I humbly beseech Thy succour! I have called on my gods and they are far from my help. If Thou wilt deliver me from mine enemies, I will believe in Thee, and be baptised in Thy name.' At this moment, a sudden change was seen in the fortunes of the Franks. The Alamanni began to waver, they turned, they fled. Their king, according to one account was slain; and the nation seems to have accepted Clovis as its over-lord." The following Christmas day Clovis was baptised at Reims and 3,000 of his warriors followed the royal example. "In the early years of the new century, probably about 503 or 504, Clovis was again at war with his old enemies, the Alamanni. . . . Clovis moved his army into their territories and won a victory much more decisive, though less famous than that of 496. This time the angry king would make no such easy terms as he had done before. From their pleasant dwellings by the Main and the Neckar, from all the valley of the Middle Rhine, the terrified Alamanni were forced to flee. Their place was taken by Frankish settlers, from whom all this district received in the Middle Ages the name of the Duchy of Francia, or, at a rather later date, that of the Circle of Franconia. The Alamanni, with their wives and children, a broken and dispirited host, moved southward to the shores of the Lake of Constance and entered the old Roman province of Rætia. Here they were on what was held to be, in a sense, Italian ground; and the arm of Theodoric, as ruler of Italy, as successor to the Emperors of the West, was stretched forth to protect them. . . . Eastern Switzerland, Western Tyrol, Southern Baden and Würtemberg and Southwestern Bavaria probably formed this new Alamannis, which will figure in later history as the 'Ducatus Alamanniae,' or the Circle of Swabia.—T. Hodgkin, *Italy and Her Invaders*, bk. 4, ch. 9. Also in P. Godwin, *Hist. of France: Ancient Gaul*, bk. 3, ch. 11.—See, also, SUEVI: A. D. 460-500; and FRANKS: A. D. 481-511.

A. D. 1260.—**Destruction by the Mongols.**—The Mongols, under Khulagu, or Houlagou, brother of Mangu Khan, having overrun Mesopotamia and extinguished the Caliphate at Bagdad, crossed the Euphrates in the spring of 1260 and advanced to Aleppo. The city was taken after a siege of seven days and given up for five days to pillage and slaughter. "When the carnage ceased, the streets were cumbered with corpses. . . . It is said that 100,000 women and children were sold as slaves. The walls of Aleppo were razed, its mosques destroyed, and its gardens ravaged." Damascus submitted and was spared. Khulagu was meditating, it is said, the conquest of Jerusalem, when news of the death of the Great Khan called him to the East.—H. H. Howorth, *Hist. of the Mongols*, pp. 209-211.

ALEXANDRIA: B. C. 332.—**The Founding of the City.**—"When Alexander reached the Egyptian military station at the little town or village of Rhakotis, he saw with the quick eye of a great commander how to turn this petty settlement into a great city, and to make its roadstead, out of which ships could be blown by a change of wind, into a double harbour roomy enough to shelter the navies of the world. All that was needed was to join the island by a mole to the continent. The site was admirably secure and convenient, a narrow strip of land between the Mediterranean and the great inland Lake Marcotis. The whole northern side faced the two harbours, which were bounded east and west by the mole, and beyond by the long, narrow rocky island of Pharos, stretching parallel with the coast. On the south was the inland port of Lake Marcotis. The length of the city was more than three miles, the breadth more than three-quarters of a mile; the mole was above three-quarters of

a mile long and six hundred feet broad; its breadth is now doubled, owing to the silting up of the sand. Modern Alexandria until lately only occupied the mole, and was a great town in a corner of the space which Alexander, with large provision for the future, measured out. The form of the new city was ruled by that of the site, but the fancy of Alexander designed it in the shape of a Macedonian cloak or chlamys, such as a national hero wears on the coins of the kings of Macedon, his ancestors. The situation is excellent for commerce. Alexandria, with the best Egyptian harbour on the Mediterranean, and the inland port connected with the Nile streams and canals, was the natural emporium of the Indian trade. Port Said is superior now, because of its grand artificial port and the advantage for steamships of an unbroken sea-route."—R. S. Poole, *Cities of Egypt*, ch. 12.—See, also, *MACEDONIA, &c.: B. C. 334-330; and EGYPT: B. C. 332*.

Reign of Ptolemy Philadelphus, B. C. 282-246.—**Greatness and splendor of the City.—Its Commerce.—Its Libraries.—Its Museum.—Its Schools.**—Ptolemy Philadelphus, son of Ptolemy Soter, succeeded to the throne of Egypt in 282 B. C. when his father retired from it in his favor, and reigned until 246 B. C. "Alexandria, founded by the great conqueror, increased and beautified by Ptolemy Soter, was now far the greatest city of Alexander's Empire. It was the first of those new foundations which are a marked feature in Hellenism; there were many others of great size and importance—above all, Antioch, then Seleucia on the Tigris, then Nicomedia, Nicæa, Apamea, which lasted; besides such as Lysimacheia, Antigoneia, and others, which early disappeared. . . . Alexandria was the model for all the rest. The intersection of two great principal thoroughfares, adorned with colonnades for the footways, formed the centre point, the omphalos of the city. The other streets were at right angles with these thoroughfares, so that the whole place was quite regular. Counting its old part, Rhakotis, which was still the habitation of native Egyptians, Alexandria had five quarters, one at least devoted to Jews who had originally settled there in great numbers. The mixed population there of Macedonians, Greeks, Jews, and Egyptians gave a peculiarly complex and variable character to the population. Let us not forget the vast number of strangers from all parts of the world whom trade and politics brought there. It was the great mart where the wealth of Europe and of Asia changed hands. Alexander had opened the sea-way by exploring the coasts of Media and Persia. Caravans from the head of the Persian Gulf, and ships on the Red Sea, brought all the wonders of Ceylon and China, as well as of Further India, to Alexandria. There, too, the wealth of Spain and Gaul, the produce of Italy and Macedonia, the amber of the Baltic and the salt fish of Pontus, the silver of Spain and the copper of Cyprus, the timber of Macedonia and Crete, the pottery and oil of Greece—a thousand imports from all the Mediterranean—came to be exchanged for the spices of Arabia, the splendid birds and embroideries of India and Ceylon, the gold and ivory of Africa, the antelopes, the apes, the leopards, the elephants of tropical climes. Hence the enormous wealth of the Lagidæ, for in addition to the marvellous fertility and great population—it is said

to have been seven millions — of Egypt, they made all the profits of this enormous carrying trade. We gain a good idea of what the splendours of the capital were by the very full account preserved to us by Athenæus of the great feast which inaugurated the reign of Philadelphus. . . . All this seems idle pomp, and the doing of an idle sybarite. Philadelphus was anything but that. . . . It was he who opened up the Egyptian trade with Italy, and made Puteoli the great port for ships from Alexandria, which it remained for centuries. It was he who explored Ethiopia and the southern parts of Africa, and brought back not only the curious fauna to his zoological gardens, but the first knowledge of the Troglodytes for men of science. The cultivation of science and of letters too was so remarkably one of his pursuits that the progress of the Alexandria of his day forms an epoch in the world's history, and we must separate his University and its professors from this summary, and devote to them a separate section. . . . The history of the organization of the University and its staff is covered with almost impenetrable mist. For the Museum and Library were in the strictest sense what we should now call a University, and one, too, of the Oxford type, where learned men were invited to take Fellowships, and spend their learned leisure close to observatories in science, and a great library of books. Like the mediæval universities, this endowment of research naturally turned into an engine for teaching, as all who desired knowledge flocked to such a centre, and persuaded the Fellow to become a Tutor. The model came from Athens. There the schools, beginning with the Academy of Plato, had a fixed property — a home with its surrounding garden, and in order to make this foundation sure, it was made a shrine where the Muses were worshipped, and where the head of the school, or a priest appointed, performed stated sacrifices. This, then, being held in trust by the successors of the donor, who bequeathed it to them, was a property which it would have been sacrilegious to invade, and so the title Museum arose for a school of learning. Demetrius the Phalerean, the friend and protector of Theophrastus, brought this idea with him to Alexandria, when his namesake drove him into exile [see GREECE: B. C. 307-197] and it was no doubt his advice to the first Ptolemy which originated the great foundation, though Philadelphus, who again exiled Demetrius, gets the credit of it. The pupil of Aristotle moreover impressed on the king the necessity of storing up in one central repository all that the world knew or could produce, in order to ascertain the laws of things from a proper analysis of detail. Hence was founded not only the great library, which in those days had a thousand times the value a great library has now, but also observatories, zoological gardens, collections of exotic plants, and of other new and strange things brought by exploring expeditions from the furthest regions of Arabia and Africa. This library and museum proved indeed a home for the Muses, and about it a most brilliant group of students in literature and science was formed. The successive librarians were Zenodotus, the grammarian or critic; Callimachus, to whose poems we shall presently return; Eratosthenes, the astronomer, who originated the process by which the size of the earth is determined to-day; Apollonius the Rhodian, disciple and enemy of

Callimachus; Aristophanes of Byzantium, founder of a school of philological criticism; and Aristarchus of Samos, reputed to have been the greatest critic of ancient times. The study of the text of Homer was the chief labour of Zenodotus, Aristophanes, and Aristarchus, and it was Aristarchus who mainly fixed the form in which the Iliad and Odyssey remain to this day. . . . The vast collections of the library and museum actually determined the whole character of the literature of Alexandria. One word sums it all up — erudition, whether in philosophy, in criticism, in science, even in poetry. Strange to say, they neglected not only oratory, for which there was no scope, but history, and this we may attribute to the fact that history before Alexander had no charms for Hellenism. Mythical lore, on the other hand, strange uses and curious words, were departments of research dear to them. In science they did great things, so did they in geography. . . . But were they original in nothing? Did they add nothing of their own to the splendid record of Greek literature? In the next generation came the art of criticism, which Aristarchus developed into a real science, and of that we may speak in its place; but even in this generation we may claim for them the credit of three original, or nearly original, developments in literature — the pastoral idyll, as we have it in Theocritus; the elegy, as we have it in the Roman imitators of Philetas and Callimachus; and the romance, or love story, the parent of our modern novels. All these had early prototypes in the folk songs of Sicily, in the love songs of Mimnermus and of Antimachus, in the tales of Miletus, but still the revival was fairly to be called original. Of these the pastoral idyll was far the most remarkable, and laid hold upon the world for ever." — J. P. Mahaffy, *The Story of Alexander's Empire*, ch. 13-14. — "There were two Libraries of Alexandria under the Ptolemies, the larger one in the quarter called the Bruchium, and the smaller one, named 'the daughter,' in the Serapeum, which was situated in the quarter called Rhacotis. The former was totally destroyed in the conflagration of the Bruchium during Cæsar's Alexandrian War [see below: B. C. 48-47]; but the latter, which was of great value, remained uninjured (see Matter, *Histoire de l'École d'Alexandrie*, vol. 1, p. 133 seq., 237 seq.) It is not stated by any ancient writer where the collection of Pergamus [see PERGAMUM] was placed, which Antony gave to Cleopatra (Plutarch, Anton., c. 58); but it is most probable that it was deposited in the Bruchium, as that quarter of the city was now without a library, and the queen was anxious to repair the ravages occasioned by the civil war. If this supposition is correct, two Alexandrian libraries continued to exist after the time of Cæsar, and this is rendered still more probable by the fact that during the first three centuries of the Christian era the Bruchium was still the literary quarter of Alexandria. But a great change took place in the time of Aurelian. This Emperor, in suppressing the revolt of Firmus in Egypt, A. D. 273 [see below: A. D. 273] is said to have destroyed the Bruchium; and though this statement is hardly to be taken literally, the Bruchium ceased from this time to be included within the walls of Alexandria, and was regarded only as a suburb of the city. Whether the great library in the Bruchium with the museum and its other

literary establishments, perished at this time, we do not know; but the Serapeum for the next century takes its place as the literary quarter of Alexandria, and becomes the chief library in the city. Hence later writers erroneously speak of the Serapeum as if it had been from the beginning the great Alexandrian library. . . . Gibbon seems to think that the whole of the Serapeum was destroyed [A. D. 389, by order of the Emperor Theodosius—see below]; but this was not the case. It would appear that it was only the sanctuary of the god that was levelled with the ground, and that the library, the halls and other buildings in the consecrated ground remained standing long afterwards.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 28. *Notes by Dr. William Smith*.—Concerning the reputed final destruction of the Library by the Moslems, see below: A. D. 641-646.

B. C. 48-47.—Cæsar and Cleopatra.—The Rising against the Romans.—The Siege.—Destruction of the great Library.—Roman victory.—From the battle field of Pharsalia (see **ROME**: B. C. 48) Pompeius fled to Alexandria in Egypt, and was treacherously murdered as he stepped on shore. Cæsar arrived a few days afterwards, in close pursuit, and shed tears, it is said, on being shown his rival's mangled head. He had brought scarcely more than 3,000 of his soldiers with him, and he found Egypt in a turbulent state of civil war. The throne was in dispute between children of the late king, Ptolemæus Auletes. Cleopatra, the elder daughter, and Ptolemæus, a son, were at war with one another, and Arsinoë, a younger daughter, was ready to put forward claims (see **EGYPT**: B. C. 80-48). Notwithstanding the insignificance of his force, Cæsar did not hesitate to assume to occupy Alexandria and to adjudicate the dispute. But the fascinations of Cleopatra (then twenty years of age) soon made him her partisan, and her scarcely disguised lover. This aggravated the irritation which was caused in Alexandria by the presence of Cæsar's troops, and a furious rising of the city was provoked. He fortified himself in the great palace, which he had taken possession of, and which commanded the causeway to the island, Pharos, thereby commanding the port. Destroying a large part of the city in that neighborhood, he made his position exceedingly strong. At the same time he seized and burned the royal fleet, and thus caused a conflagration in which the greater of the two priceless libraries of Alexandria—the library of the Museum—was, much of it, consumed. [See above: B. C. 282-246.] By such measures Cæsar withstood, for several months, a siege conducted on the part of the Alexandrians with great determination and animosity. It was not until March, B. C. 47, that he was relieved from his dangerous situation, by the arrival of a faithful ally, in the person of Mithridates, of Pergamus, who led an army into Egypt, reduced Pelusium, and crossed the Nile at the head of the Delta. Ptolemæus advanced with his troops to meet this new invader and was followed and overtaken by Cæsar. In the battle which then occurred the Egyptian army was utterly routed and Ptolemæus perished in the Nile. Cleopatra was then

married, after the Egyptian fashion, to a younger brother, and established on the throne, while Arsinoë was sent a prisoner to Rome.—A. Hirtius, *The Alexandrian War*.

A. D. 100-312.—The Early Christian Church.—Its Influence. See **CHRISTIANITY**: A. D. 100-312.

A. D. 116.—Destruction of the Jews. See **Jews**: A. D. 116.

A. D. 215.—Massacre by Caracalla.—“Caracalla was the common enemy of mankind. He left the capital (and he never returned to it) about a year after the murder of Geta [A. D. 213]. The rest of his reign [four years] was spent in the several provinces of the Empire, particularly those of the East, and every province was, by turns, the scene of his rapine and cruelty. . . . In the midst of peace, and upon the slightest provocation, he issued his commands at Alexandria, Egypt [A. D. 215], for a general massacre. From a secure post in the temple of Serapis, he viewed and directed the slaughter of many thousand citizens, as well as strangers, without distinguishing either the number or the crime of the sufferers.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 6.

A. D. 260-272.—Tumults of the Third Century.—“The people of Alexandria, a various mixture of nations, united the vanity and inconstancy of the Greeks with the superstition and obstinacy of the Egyptians. The most trifling occasion, a transient scarcity of flesh or lentils, the neglect of an accustomed salutation, a mistake of precedence in the public baths, or even a religious dispute, were at any time sufficient to kindle a sedition among that vast multitude, whose resentments were furious and implacable. After the captivity of Valerian [the Roman Emperor, made prisoner by Sapor, king of Persia, A. D. 260] and the insolence of his son had relaxed the authority of the laws, the Alexandrians abandoned themselves to the ungoverned rage of their passions, and their unhappy country was the theatre of a civil war, which continued (with a few short and suspicious truces) above twelve years. All intercourse was cut off between the several quarters of the afflicted city, every street was polluted with blood, every building of strength converted into a citadel; nor did the tumult subside till a considerable part of Alexandria was irretrievably ruined. The spacious and magnificent district of Bruchion, with its palaces and museum, the residence of the kings and philosophers of Egypt, is described, above a century afterwards, as already reduced to its present state of dreary solitude.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 10.

A. D. 273.—Destruction of the Bruchium by Aurelian.—After subduing Palmyra and its Queen Zenobia, A. D. 272, the Emperor Aurelian was called into Egypt to put down a rebellion there, headed by one Firmus, a friend and ally of the Palmyrene queen. Firmus had great wealth, derived from trade, and from the paper-manufacture of Egypt, which was mostly in his hands. He was defeated and put to death. “To Aurelian's war against Firmus, or to that of Probus a little before in Egypt, may be referred the destruction of Bruchium, a great quarter of Alexandria, which according to Ammianus Marcellinus, was ruined under Aurelian and remained deserted ever after.”—J. B. L. Crevier, *Hist. of the Roman Emperors*, bk. 27.

A. D. 296.—Siege by Diocletian.—A general revolt of the African provinces of the Roman Empire occurred A. D. 296. The barbarous tribes of Ethiopia and the desert were brought into alliance with the provincials of Egypt, Cyrenaica, Carthage and Mauritania, and the flame of war was universal. Both the emperors of the time, Diocletian and Maximian, were called to the African field. "Diocletian, on his side, opened the campaign in Egypt by the siege of Alexandria, cut off the aqueducts which conveyed the waters of the Nile into every quarter of that immense city, and, rendering his camp impregnable to the sallies of the besieged multitude, he pushed his reiterated attacks with caution and vigor. After a siege of eight months, Alexandria, wasted by the sword and by fire, implored the clemency of the conqueror, but it experienced the full extent of his severity. Many thousands of the citizens perished in a promiscuous slaughter, and there were few obnoxious persons in Egypt who escaped a sentence either of death or at least of exile. The fate of Busris and of Coptos was still more melancholy than that of Alexandria; those proud cities . . . were utterly destroyed."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 13.

A. D. 365.—Great Earthquake. See EARTHQUAKE IN THE ROMAN WORLD: A. D. 365.

A. D. 389.—Destruction of the Serapeum.—"After the edicts of Theodosius had severely prohibited the sacrifices of the pagans, they were still tolerated in the city and temple of Serapis. . . . The archiepiscopal throne of Alexandria was filled by Theophilus, the perpetual enemy of peace and virtue; a bold, bad man, whose hands were alternately polluted with gold and with blood. His pious indignation was excited by the honours of Serapis. . . . The votaries of Serapis, whose strength and numbers were much inferior to those of their antagonists, rose in arms [A. D. 389] at the instigation of the philosopher Olympius, who exhorted them to die in the defence of the altars of the gods. These pagan fanatics fortified themselves in the temple, or rather fortress, of Serapis; repelled the besiegers by daring sallies and a resolute defence; and, by the inhuman cruelties which they exercised on their Christian prisoners, obtained the last consolation of despair. The efforts of the prudent magistrate were usefully exerted for the establishment of a truce till the answer of Theodosius should determine the fate of Serapis." The judgment of the emperor condemned the great temple to destruction and it was reduced to a heap of ruins. "The valuable library of Alexandria was pillaged or destroyed; and, near twenty years afterwards, the appearance of the empty shelves excited the regret and indignation of every spectator whose mind was not totally darkened by religious prejudice."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 28.—Gibbon's statement as to the destruction of the great library in the Serapeum is called in question by his learned annotator, Dr. Smith. See above: B. C. 282-246.

A. D. 413-415.—The Patriarch Cyril and his Mobs.—"His voice [that of Cyril, Patriarch of Alexandria, A. D. 412-444] inflamed or appeased the passions of the multitude: his commands were blindly obeyed by his numerous and fanatic parabolani, familiarized in their daily office with scenes of death; and the præfects of

Egypt were awed or provoked by the temporal power of these Christian pontiffs. Ardent in the prosecution of heresy, Cyril auspiciously opened his reign by oppressing the Novatians, the most innocent and harmless of the sectaries. . . . The toleration, and even the privileges of the Jews, who had multiplied to the number of 40,000, were secured by the laws of the Cæsars and Ptolemies, and a long prescription of 700 years since the foundation of Alexandria. Without any legal sentence, without any royal mandate, the patriarch, at the dawn of day, led a seditious multitude to the attack of the synagogues. Unarmed and unprepared, the Jews were incapable of resistance; their houses of prayer were levelled with the ground, and the episcopal warrior, after rewarding his troops with the plunder of their goods, expelled from the city the remnant of the misbelieving nation. Perhaps he might plead the insolence of their prosperity, and their deadly hatred of the Christians, whose blood they had recently shed in a malicious or accidental tumult. Such crimes would have deserved the animadversions of the magistrate; but in this promiscuous outrage the innocent were confounded with the guilty."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 47.—"Before long the adherents of the archbishop were guilty of a more atrocious and unprovoked crime, of the guilt of which a deep suspicion attached to Cyril. All Alexandria respected, honoured, took pride in the celebrated Hypatia. She was a woman of extraordinary learning; in her was centred the lingering knowledge of that Alexandrian Platonism cultivated by Plotinus and his school. Her beauty was equal to her learning; her modesty commended both. . . . Hypatia lived in great intimacy with the præfect Orestes; the only charge whispered against her was that she encouraged him in his hostility to the patriarch. . . . Some of Cyril's ferocious partisans seized this woman, dragged her from her chariot, and with the most revolting indecency tore her clothes off and then rent her limb from limb."—H. H. Milman, *Hist. of Latin Christianity*, bk. 2, ch. 3.

ALSO IN C. Kingsley, *Hypatia*.

A. D. 616.—Taken by Chosroes. See EGYPT: A. D. 616-628.

A. D. 641-646.—The Moslem Conquest.—The precise date of events in the Moslem conquest of Egypt, by Amru, lieutenant of the Caliph Omar, is uncertain. Sir Wm. Muir fixes the first surrender of Alexandria to Amru in A. D. 641. After that it was reoccupied by the Byzantines either once or twice, on occasions of neglect by the Arabs, as they pursued their conquests elsewhere. The probability seems to be that this occurred only once, in 646. It seems also probable, as remarked by Sir W. Muir, that the two sieges on the taking and retaking of the city—641 and 646—have been much confused in the scanty accounts which have come down to us. On the first occasion Alexandria would appear to have been generously treated; while, on the second, it suffered pillage and its fortifications were destroyed. How far there is truth in the commonly accepted story of the deliberate burning of the great Alexandrian Library—or so much of it as had escaped destruction at the hands of Roman generals and Christian patriarchs—is a question still in dispute. Gibbon discredited the story, and Sir William Muir, the latest of

students in Mahometan history, declines even the mention of it in his narrative of the conquest of Egypt. But other historians of repute maintain the probable accuracy of the tale told by Abulpharagus—that Caliph Omar ordered the destruction of the Library, on the ground that, if the books in it agreed with the Koran they were useless, if they disagreed with it they were pernicious.—See MAHOMETAN CONQUEST: A. D. 640-646.

ALLOBROGES, Conquest of the.—The Allobroges (see EDUI; also GAULS) having sheltered the chiefs of the Salves, when the lat-

ter succumbed to the Romans, and having refused to deliver them up, the proconsul Cn. Domitius marched his army toward their country, B. C. 121. The Allobroges advanced to meet him and were defeated at Vindalium, near the junction of the Sorgues with the Rhone, and not far from Avignon, having 20,000 men slain and 3,000 taken prisoners. The Arverni, who were the allies of the Allobroges, then took the field, crossing the Cevennes mountains and the river Rhone with a vast host, to attack the small Roman army of 30,000 men, which had passed under the command of Q. Fabius Maximus Æmilianus. On the 8th of August, B. C. 121, the Gaulish horde encountered the legions of Rome, at a point near the junction of the Isere and the Rhone, and were routed with such enormous slaughter that 150,000 are said to have been slain or drowned. This battle settled the fate of the Allobroges, who surrendered to Rome without further struggle; but the Arverni were not pursued. The final conquest of that people was reserved for Cæsar.—G. Long, *Decline of the Roman Republic*, v. 1, ch. 21.

ALMOHADES, The.—The empire of the Almoravides, in Morocco and Spain, which originated in a Moslem missionary movement, was overturned in the middle of the twelfth century by a movement of somewhat similar nature. The agitating cause of the revolution was a religious teacher named Mahomet ben Abdallah, who rose in the reign of Ali (successor to the great Almoravide prince, Joseph), who gained the odor of sanctity at Morocco and who took the title of Al Mehdi, or El Mahdi, the Leader, "giving himself out for the person whom many Mahometans expect under that title. As bef re, the sect grew into an army, and the army grew into an empire. The new dynasty were called Almohades from Al Mehdi, and by his appointment a certain Abdelmumen was elected Caliph and Commander of the Faithful. Under his vigorous guidance the new kingdom rapidly grew, till the Almohades obtained quite the upper hand in Africa, and in 1146 they too passed into Spain. Under Abdelmumen and his successors, Joseph and Jacob Almansor, the Almohades entirely supplanted the Almoravides, and became more formidable foes than they had been to the rising Christian powers. Jacob Almansor won in 1195 the terrible battle of Alarcos against Alfonso of Castile, and carried his conquests deep into that kingdom. His fame spread through the whole Moslem world. . . . With Jacob Almansor perished the glory of the Almohades. His successor, Mahomet, lost in 1211 [June 16] the great battle of Alacab or Tolosa against Alfonso, and that day may be said to have decided the fate of Mahometanism in Spain. The Almohade dynasty gradually declined. . . . The Almohades, like the Ommiads and the Almoravides, vanish from history amidst a scene of confusion the details of which it was hopeless to attempt to remember."—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 5.

ALMORAVIDES, The.—During the confusions of the 11th century in the Moslem world, a missionary from Kairwan—one Abdallah—preaching the faith of Islam to a wild tribe in Western North Africa, created a religious movement which "naturally led to a political one." "The tribe now called themselves Almoravides, or more properly Morabethah, which appears to mean followers of the Marabout or religious teacher Abdallah does not appear to have himself claimed more than a religious authority, but their princes Zachariah and Abu Bekr were completely guided by his counsels. After his death Abu Bekr founded in 1070 the city of Morocco. There he left as his lieutenant his cousin Joseph, who grew so powerful that Abu Bekr, by a wonderful exercise of moderation, abdicated in his favour, to avoid a probable civil war. This Joseph, when he had become lord of most part of Western Africa, was requested, or caused himself to be requested, to assume the title of Emir al Momenin, Commander of the Faithful. As a loyal subject of the Caliph of Bagdad, he shrunk from such sacrilegious usurpation, but he did not scruple to style himself Emir Al Muslemin, Commander of the Moslems. . . . The Almoravide Joseph passed over into Spain, like another Tarik; he vanquished Alfonso [the Christian prince of the rising kingdom of Castile] at Zalacca [Oct. 23, A. D. 1086] and then converted the greater portion of Mahometan Spain into an appendage to his own kingdom of Morocco. The chief portion to escape was the kingdom of Zaragossa, the great out-post of the Saracens in north-eastern Spain. . . . The great cities of Andalusia were all brought under a degrading submission to the Almoravides. Their dynasty however was not of long duration, and it fell in turn [A. D. 1147] before one whose origin was strikingly similar to their own" [the Almohades].—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 5.

ALOD.—ALODIAL.—"It may be questioned whether any etymological connexion exists between the words odal and alod, but their signification applied to land is the same; the alod is the hereditary estate derived from primitive occupation; for which the owner owes no service except the personal obligation to appear in the host and in the council. . . . The land held in full ownership might be either an ethel, an inherited or otherwise acquired portion of original allotment; or an estate created by legal process out of public land. Both these are included in the more common term alod; but the former looks for its evidence in the pedigree of its owner or in the witness of the community, while the latter can produce the charter or book by which it is created, and is called bocland. As the primitive allotments gradually lost their historical character, as the primitive modes of transfer became obsolete, and the use of written records took their place, the ethel is lost sight of in the bocland. All the land that is not so ac-

counted for is folcland, or public land."—W. Stubbs, *Const. Hist. of Eng.*, ch. 3, sect. 24, and ch. 5, sect. 36.—"Alodial lands are commonly opposed to beneficiary or feudal; the former being strictly proprietary, while the latter depended upon a superior. In this sense the word is of continual recurrence in ancient histories, laws and instruments. It sometimes, however, bears the sense of inheritance. . . . Hence, in the charters of the eleventh century, hereditary fiefs are frequently termed alodia."—H. Hallam, *Middle Ages*, ch. 2, pt. 1, note.

AMALEKITES, The.—"The Amalekites were usually regarded as a branch of the Edomites or 'Red-skins'. Amalek, like Kenaz, the father of the Kenizzites or 'Hunters,' was the grandson of Esau (Gen. 36: 12, 16). He thus belonged to the group of nations,—Edomites, Ammonites, and Moabites,—who stood in a relation of close kinship to Israel. But they had preceded the Israelites in dispossessing the older inhabitants of the land, and establishing themselves in their place. The Edomites had partly destroyed, partly amalgamated the Horites of Mount Seir (Deut. 2: 12); the Moabites had done the same to the Emim, 'a people great and many, and tall as the Anakim' (Deut. 2: 10), while the Ammonites had extirpated and succeeded to the Rephaim or 'Giants,' who in that part of the country were termed Zamzummim (Deut. 2: 20; Gen. 14: 5). Edom however stood in a closer relation to Israel than its two more northerly neighbours. . . . Separate from the Edomites or Amalekites were the Kenites or wandering 'smiths.' They formed an important Guild in an age when the art of metallurgy was confined to a few. In the time of Saul we hear of them, as camping among the Amalekites (I. Sam. 15: 6.) . . . The Kenites . . . did not constitute a race, or even a tribe. They were, at most, a caste. But they had originally come, like the Israelites or the Edomites, from those barren regions of Northern Arabia which were peopled by the Menti of the Egyptian inscriptions. Racially, therefore, we may regard them as allied to the descendants of Abraham. While the Kenites and Amalekites were thus Semitic in their origin, the Hivites or 'Villagers' are specially associated with Amorites."—A. H. Sayce, *Races of the Old Test.*, ch. 6.

ALSO IN H. Ewald, *Hist. of Israel*, bk. 1, sect.

4.—See, also, **ARABIA**.

AMALFI.—"It was the singular fate of this city to have filled up the interval between two periods of civilization, in neither of which she was destined to be distinguished. Scarcely known before the end of the sixth century, Amalfi ran a brilliant career, as a free and trading republic [see **ROME**: A. D. 554-800], which was checked by the arms of a conqueror in the middle of the twelfth. . . . There must be, I suspect, some exaggeration about the commerce and opulence of Amalfi, in the only age when she possessed any at all."—H. Hallam, *The Middle Ages*, ch. 9, pt. 1, with note.—"Amalfi and Atrani lie close together in two . . . ravines, the mountains almost arching over them, and the sea washing their very house-walls. . . . It is not easy to imagine the time when Amalfi and Atrani were one town, with docks and arsenals and harbourage for their associated fleets, and when these little communities were second in importance to no naval power of

Christian Europe. The Byzantine Empire lost its hold on Italy during the eighth century; and after this time the history of Calabria is mainly concerned with the republics of Naples and Amalfi, their conflict with the Lombard dukes of Benevento, their opposition to the Saracens, and their final subjugation by the Norman conquerors of Sicily. Between the year 839 A. D., when Amalfi freed itself from the control of Naples and the yoke of Benevento, and the year 1131, when Roger of Hauteville incorporated the republic in his kingdom of the Two Sicilies, this city was the foremost naval and commercial port of Italy. The burghers of Amalfi elected their own doge; founded the Hospital of Jerusalem, whence sprang the knightly order of S. John; gave their name to the richest quarter in Palermo; and owned trading establishments or factories in all the chief cities of the Levant. Their gold coinage of 'tari' formed the standard of currency before the Florentines had stamped the lily and S. John upon the Tuscan florin. Their shipping regulations supplied Europe with a code of maritime laws. Their scholars, in the darkest depths of the dark ages, prized and conned a famous copy of the Pandects of Justinian, and their seamen deserved the fame of having first used, if they did not actually invent, the compass. . . . The republic had grown and flourished on the decay of the Greek Empire. When the hard-handed race of Hauteville absorbed the heritage of Greeks and Lombards and Saracens in Southern Italy [see ITALY (Southern): A. D. 1000-1090], these adventurers succeeded in annexing Amalfi. But it was not their interest to extinguish the state. On the contrary, they relied for assistance upon the navies and the armies of the little commonwealth. New powers had meanwhile arisen in the North of Italy, who were jealous of rivalry upon the open seas; and when the Neapolitans resisted King Roger in 1135, they called Pisa to their aid, and sent her fleet to destroy Amalfi. The ships of Amalfi were on guard with Roger's navy in the Bay of Naples. The armed citizens were, under Roger's orders, at Aversa. Meanwhile the home of the republic lay defenceless on its mountain-girdled seaboard. The Pisans sailed into the harbour, sacked the city and carried off the famous Pandects of Justinian as a trophy. Two years later they returned, to complete the work of devastation. Amalfi never recovered from the injuries and the humiliation."—J. A. Symonds, *Sketches and Studies in Italy*, pp. 2-4.

AMALINGS, OR AMALS.—The royal race of the ancient Ostrogoths, as the Balthei or Balthings were of the Visigoths, both claiming a descent from the gods.

AMATONGALAND, or Tongaland.—On the east coast of S. Africa, north of Zululand, under British protection since 1888.

AMAZIGH, The. See LIBYANS.

AMAZONS.—"The Amazons, daughters of Arès and Harmonia, are both early creations, and frequent reproductions, of the ancient epic. . . . A nation of courageous, hardy and indefatigable women, dwelling apart from men, permitting only a short temporary intercourse for the purpose of renovating their numbers, and burning out their right breast with a view of enabling themselves to draw the bow freely, — this was at once a general type stimulating to the fancy of the poet, and a theme eminently popular with

his hearers. Nor was it at all repugnant to the faith of the latter—who had no recorded facts to guide them, and no other standard of credibility as to the past except such poetical narratives themselves—to conceive communities of Amazons as having actually existed in anterior time. Accordingly we find these warlike females constantly reappearing in the ancient poems, and universally accepted as past realities. In the *Iliad*, when Priam wishes to illustrate emphatically the most numerous host in which he ever found himself included, he tells us that it was assembled in Phrygia, on the banks of the Sangarius, for the purpose of resisting the formidable Amazons. When Bellerophon is to be employed on a deadly and perilous undertaking, by those who indirectly wish to procure his death, he is despatched against the Amazons. . . . The Argonautic heroes find the Amazons on the river Thermôdon in their expedition along the southern coast of the Euxine. To the same spot Hérakles goes to attack them, in the performance of the ninth labour imposed upon him by Eurystheus, for the purpose of procuring the girdle of the Amazonian queen, Hippolyte; and we are told that they had not yet recovered from the losses sustained in this severe aggression when Theseus also assaulted and defeated them, carrying off their queen Antiopé. This injury they avenged by invading Attica . . . and penetrated even into Athens itself: where the final battle, hard-fought and at one time doubtful, by which Theseus crushed them, was fought—in the very heart of the city. Attic antiquaries confidently pointed out the exact position of the two contending armies. . . . No portion of the ante-historical epic appears to have been more deeply worked into the national mind of Greece than this invasion and defeat of the Amazons. . . . Their proper territory was asserted to be the town and plain of Themiskyra, near the Grecian colony of Amisus, on the river Thermôdon [northern Asia Minor], a region called after their name by Roman historians and geographers. . . . Some authors placed them in Libya or Ethiopia."—G. Grote, *Hist. of Greece*, pt. 1, ch. 11.

AMAZONS RIVER, Discovery and Naming of the.—The mouth of the great river of South America was discovered in 1500 by Pinzon, or Pinçon (see AMERICA: A. D. 1499-1500), who called it 'Santa Maria de la Mar Dulce' (Saint Mary of the Fresh-Water Sea). "This was the first name given to the river, except that older and better one of the Indians, 'Parana,' the Sea; afterwards it was Marañon and Rio das Amazonas, from the female warriors that were supposed to live near its banks. . . . After Pinçon's time, there were others who saw the fresh-water sea, but no one was hardy enough to venture into it. The honor of its real discovery was reserved for Francisco de Orellana; and he explored it, not from the east, but from the west, in one of the most daring voyages that was ever recorded. It was accident rather than design that led him to it. After . . . Pizarro had conquered Peru, he sent his brother Gonzalo, with 340 Spanish soldiers, and 4,000 Indians, to explore the great forest east of Quito, 'where there were cinnamon trees.' The expedition started late in 1539, and it was two years before the starved and ragged survivors returned to Quito. In the course of their wanderings they had struck the river Coco; building here a brig-

Antine, they followed down the current, a part of them in the vessel, a part on shore. After a while they met some Indians, who told them of a rich country ten days' journey beyond—a country of gold, and with plenty of provisions. Gonzalo placed Orellana in command of the brigantine, and ordered him, with 50 soldiers, to go on to this gold-land, and return with a load of provisions. Orellana arrived at the mouth of the Coco in three days, but found no provisions; and he considered that if he should return with this news to Pizarro, he would not reach him in a year, on account of the strong current, and that if he remained where he was, he would be of no use to the one or to the other. Not knowing how long Gonzalo Pizarro would take to reach the place, without consulting any one he set sail and prosecuted his voyage onward, intending to ignore Gonzalo, to reach Spain, and obtain that government for himself. Down the Napo and the Amazons, for seven months, these Spaniards floated to the Atlantic. At times they suffered terribly from hunger: 'There was nothing to eat but the skins which formed their girdles, and the leather of their shoes, boiled with a few herbs.' When they did get food they were often obliged to fight hard for it; and again they were attacked by thousands of naked Indians, who came in canoes against the Spanish vessel. At some Indian villages, however, they were kindly received and well fed, so they could rest while building a new and stronger vessel. . . . On the 26th of August, 1541, Orellana and his men sailed out to the blue water 'without either pilot, compass, or anything useful for navigation; nor did they know what direction they should take.' Following the coast, they passed inside of the island of Trinidad, and so at length reached Cubagua in September. From the king of Spain Orellana received a grant of the land he had discovered; but he died while returning to it, and his company was dispersed. It was not a very reliable account of the river that was given by Orellana and his chronicler, Padre Carbajal. So Herrera tells their story of the warrior females, and very properly adds: 'Every reader may believe as much as he likes.'—H. H. Smith, *Brazil, the Amazons, and the Coast*, ch. 1. —In ch. 18 of this same work "The Amazon Myth" is discussed at length, with the reports and opinions of numerous travellers, both early and recent, concerning it.—Mr. Southey had so much respect for the memory of Orellana that he made an effort to restore that bold but unprincipled discoverer's name to the great river. "He discarded Marañon, as having too much resemblance to Maranhão, and Amazon, as being founded upon fiction and at the same time inconvenient. Accordingly, in his map, and in all his references to the great river he denominates it Orellana. This decision of the poet-laureate of Great Britain has not proved authoritative in Brazil. O Amazonas is the universal appellation of the great river among those who float upon its waters and who live upon its banks. . . . Pará, the aboriginal name of this river, was more appropriate than any other. It signifies 'the father of waters.' . . . The origin of the name and mystery concerning the female warriors, I think, has been solved within the last few years by the intrepid Mr. Wallace. . . . Mr. Wallace, I think, shows conclusively that Friar Gaspar [Carbajal] and his companions saw Indian male

warriors who were attired in habiliments such as Europeans would attribute to women. . . . I am strongly of the opinion that the story of the Amazons has arisen from these feminine-looking warriors encountered by the early voyagers."—J. C. Fletcher and D. P. Kidder, *Brazil and the Brazilians*, ch. 27.

AMBACTI.—"The Celtic aristocracy [of Gaul] . . . developed the system of retainers, that is, the privilege of the nobility to surround themselves with a number of hired mounted servants—the ambacti as they were called—and thereby to form a state within a state; and, resting on the support of these troops of their own, they defied the legal authorities and the common levy and practically broke up the commonwealth. . . . This remarkable word [ambacti] must have been in use as early as the sixth century of Rome among the Celts in the valley of the Po. . . . It is not merely Celtic, however, but also German, the root of our 'Amt,' as indeed the retainer-system itself is common to the Celts and the Germans. It would be of great historical importance to ascertain whether the word—and therefore the thing—came to the Celts from the Germans or to the Germans from the Celts. If, as is usually supposed, the word is originally German and primarily signified the servant standing in battle 'against the back' ('and'—against, 'bak'—back) of his master, this is not wholly irreconcilable with the singularly early occurrence of the word among the Celts. . . . It is . . . probable that the Celts, in Italy as in Gaul, employed Germans chiefly as those hired servants-at-arms. The 'Swiss guard' would therefore in that case be some thousands of years older than people suppose."—T. Mommsen, *Hist. of Rome*, bk. 5, ch. 7, and foot-note.

Prehistoric.—“Widely scattered throughout the United States, from sea to sea, artificial mounds are discovered, which may be enumerated by the thousands or hundreds of thousands. They vary greatly in size; some are so small that a half-dozen laborers with shovels might construct one of them in a day, while others cover acres and are scores of feet in height. These mounds were observed by the earliest explorers and pioneers of the country. They did not attract great attention, however, until the science of archæology demanded their investigation. Then they were assumed to furnish evidence of a race of people older than the Indian tribes. Pseud-archæologists descanted on the Mound-builders that once inhabited the land, and they told of swarming populations who had reached a high condition of culture, erecting temples, practicing arts in the metals, and using hieroglyphs. So the Mound-builders formed the theme of many an essay on the wonders of ancient civilization. The research of the past ten or fifteen years has put this subject in a proper light. First, the annals of the Columbian epoch have been carefully studied, and it is found that some of the mounds have been constructed in historical time, while early explorers and settlers found many actually used by tribes of North American Indians; so we know that many of them were builders of mounds. Again, hundreds and thousands of these mounds have been carefully examined, and the works of art found therein have been collected and assembled in museums. At the same time, the works of art of the Indian tribes, as they were produced before modification by European culture, have been assembled in the same museums, and the two classes of collections have been carefully compared. All this has been done with the greatest painstaking, and the Mound-builder's arts and the Indian's arts are found to be substantially identical. No fragment of evidence remains to support the figment of theory that there was an ancient race of Mound-builders superior in culture to the North American Indians. . . . That some of these mounds were built and used in modern times is proved in another way. They often contain articles manifestly made by white men, such as glass beads and copper ornaments. . . . So it chanced that to-day unskilled archæologists are collecting many beautiful things in copper, stone, and shell which were made by white men and traded to the Indians. Now, some of these things are found in the mounds; and bird pipes, elephant pipes, banner stones, copper spear heads and knives, and machine-made wampum are collected in quantities and sold at high prices to wealthy amateurs. . . . The study of these mounds, historically and archæologically, proves that they were used for a variety of purposes. Some were for sepulture, and such are the most common and widely scattered. Others were used as artificial hills on which to build communal houses. . . . Some of the very large mounds were sites of large communal houses in which entire tribes dwelt. There is still a third class . . . constructed as places for public assembly. . . . But to explain the mounds and their uses would expand this article into a book.

It is enough to say that the Mound-builders were the Indian tribes discovered by white men. It may well be that some of the mounds were erected by tribes extinct when Columbus first saw these shores, but they were kindred in culture to the peoples that still existed. In the southwestern portion of the United States, conditions of aridity prevail. Forests are few and are found only at great heights. . . . The tribes lived in the plains and valleys below, while the highlands were their hunting grounds. The arid lands below were often naked of vegetation; and the ledges and cliffs that stand athwart the lands, and the canyon walls that inclose the streams, were everywhere quarries of loose rock, lying in blocks ready to the builder's hand. Hence these people learned to build their dwellings of stone; and they had large communal houses, even larger than the structures of wood made by the tribes of the east and north. Many of these stone pueblos are still occupied, but the ruins are scattered wide over a region of country embracing a little of California and Nevada, much of Utah, most of Colorado, the whole of New Mexico and Arizona, and far southward toward the Isthmus. . . . No ruin has been discovered where evidences of a higher culture are found than exists in modern times at Zuñi, Oraibi, or Laguna. The earliest may have been built thousands of years ago, but they were built by the ancestors of existing tribes and their congeners. A careful study of these ruins, made during the last twenty years, abundantly demonstrates that the pueblo culture began with rude structures of stone and brush, and gradually developed, until at the time of the exploration of the country by the Spaniards, beginning about 1540, it had reached its highest phase. Zuñi [in New Mexico] has been built since, and it is among the largest and best villages ever established within the territory of the United States without the aid of ideas derived from civilized men.” With regard to the ruins of dwellings found sheltered in the craters of extinct volcanoes, or on the shelves of cliffs, or otherwise contrived, the conclusion to which all recent archæological study tends is the same. “All the stone pueblo ruins, all the clay ruins, all the cliff dwellings, all the crater villages, all the cavate chambers, and all the tufa-block houses are fully accounted for without resort to hypothetical peoples inhabiting the country anterior to the Indian tribes. . . . Pre-Columbian culture was indigenous; it began at the lowest stage of savagery and developed to the highest, and was in many places passing into barbarism when the good queen sold her jewels.”—Major J. W. Powell, *Prehistoric Man in America*; in “*The Forum*,” January, 1890.—“The writer believes . . . that the majority of American archæologists now sees no sufficient reason for supposing that any mysterious superior race has ever lived in any portion of our continent. They find no archæological evidence proving that at the time of its discovery any tribe had reached a stage of culture that can properly be called civilization. Even if we accept the exaggerated statements of the Spanish conquerors, the most intelligent and advanced peoples found here were only semi-barbarians, in the stage of transition from the stone to the bronze age, possessing no

written language, or what can properly be styled an alphabet, and not yet having even learned the use of beasts of burden."—H. W. Haynes, *Prehistoric Archaeology of N. Am.* (v. 1, ch. 6, of "*Narrative and Critical Hist. of Am.*").—"It may be premised . . . that the Spanish adventurers who thronged to the New World after its discovery found the same race of Red Indians in the West India Islands, in Central and South America, in Florida and in Mexico. In their mode of life and means of subsistence, in their weapons, arts, usages and customs, in their institutions, and in their mental and physical characteristics, they were the same people in different stages of advancement. . . . There was neither a political society, nor a state, nor any civilization in America when it was discovered; and, excluding the Eskimos, but one race of Indians, the Red Race."—L. H. Morgan, *Houses and House-life of the American Aborigines: (Contributions to N. A. Ethnology, v. 5.), ch. 10.*—"We have in this country the conclusive evidence of the existence of man before the time of the glaciers, and from the primitive conditions of that time, he has lived here and developed, through stages which correspond in many particulars to the Homeric age of Greece."—F. W. Putnam, *Rept. Peabody Museum of Archaeology, 1886.*

10th-11th Centuries.—**Supposed Discoveries by the Northmen.**—The fact that the Northmen knew of the existence of the Western Continent prior to the age of Columbus, was prominently brought before the people of this country in the year 1837, when the Royal Society of Northern Antiquaries at Copenhagen published their work on the Antiquities of North America, under the editorial supervision of the great Icelandic scholar, Professor Rafn. But we are not to suppose that the first general account of these voyages was then given, for it has always been known that the history of certain early voyages to America by the Northmen were preserved in the libraries of Denmark and Iceland. . . . Yet, owing to the fact that the Icelandic language, though simple in construction and easy of acquisition, was a tongue not understood by scholars, the subject has until recent years been suffered to lie in the background, and permitted, through a want of interest, to share in a measure the treatment meted out to vague and uncertain reports. . . . It now remains to give the reader some general account of the contents of the narratives which relate more or less to the discovery of the western continent. . . . The first extracts given are very brief. They are taken from the 'Landnæma Book,' and relate to the report in general circulation, which indicated one Gunniborn as the discoverer of Greenland, an event which has been fixed at the year 876. . . . The next narrative relates to the rediscovery of Greenland by the outlaw, Eric the Red, in 983, who there passed three years in exile, and afterwards returned to Iceland. About the year 986, he brought out to Greenland a considerable colony

of settlers, who fixed their abode at Brattahlid, in Ericsfjord. Then follow two versions of the voyage of Biarne Heriulfson, who, in the same year, 986, when sailing for Greenland, was driven away during a storm, and saw a new land at the southward, which he did not visit. Next is given three accounts of the voyage of Leif, son of Eric the Red, who in the year 1000 sailed from Brattahlid to find the land which Biarne saw. Two of these accounts are hardly more than notices of the voyage, but the third is of considerable length, and details the successes of Leif, who found and explored this new land, where he spent the winter, returning to Greenland the following spring [having named different regions which he visited Helluland, Markland and Vinland, the latter name indicative of the finding of grapes]. After this follows the voyage of Thorvald Ericson, brother of Leif, who sailed to Vinland from Greenland, which was the point of departure in all these voyages. This expedition was begun in 1002, and it cost him his life, as an arrow from one of the natives pierced his side, causing death. Thorstein, his brother, went to seek Vinland, with the intention of bringing home his body, but failed in the attempt. The most distinguished explorer was Thorfinn Karlsefne, the Hopeful, an Iclander whose genealogy runs back in the old Northern annals, through Danish, Swedish, and even Scotch and Irish ancestors, some of whom were of royal blood. In the year 1006 he went to Greenland, where he met Gudrid, widow of Thorstein, whom he married. Accompanied by his wife, who urged him to the undertaking, he sailed to Vinland in the spring of 1007, with three vessels and 160 men, where he remained three years. Here his son Snorre was born. He afterwards became the founder of a great family in Iceland, which gave the island several of its first bishops. Thorfinn finally left Vinland because he found it difficult to sustain himself against the attacks of the natives. The next to undertake a voyage was a wicked woman named Freydis, a sister to Leif Ericson, who went to Vinland in 1011, where she lived for a time with her two ships, in the same places occupied by Leif and Thorfinn. Before she returned, she caused the crew of one ship to be cruelly murdered, assisting in the butchery with her own hands. After this we have what are called the Minor Narratives, which are not essential."—B. F. De Costa, *Pre-Columbian Discovery of Am., General Introd.*—By those who accept fully the claims made for the Northmen, as discoverers of the American continent in the voyages believed to be authentically narrated in these sagas, the Helluland of Leif is commonly identified with Newfoundland, Markland with Nova Scotia, and Vinland with various parts of New England, Massachusetts Bay, Cape Cod, Nantucket Island, Martha's Vineyard, Buzzard's Bay, Narragansett Bay, Mount Hope Bay, Long Island Sound, and New York Bay are among the localities supposed to be recognized in the Norse narratives, or marked by some traces of the presence of the Viking explorers. Prof. Gustav Storm, the most recent of the Scandinavian investigators of this subject, finds the Helluland of the sagas in Labrador or Northern Newfoundland, Markland in Newfoundland, and Vinland in Nova Scotia and Cape Breton Island.—G. Storm, *Studies of the Vineland Voyages.*—"The only dis-

credit which has been thrown upon the story of the Vinland voyages, in the eyes either of scholars or of the general public, has arisen from the eager credulity with which ingenious antiquarians have now and then tried to prove more than facts will warrant. . . . Archæological remains of the Northmen abound in Greenland, all the way from Inmarteinek to near Cape Farewell; the existence of one such relic on the North American continent has never yet been proved. Not a single vestige of the Northmen's presence here, at all worthy of credence, has ever been found. . . . The most convincing proof that the Northmen never founded a colony in America, south of Davis Strait, is furnished by the total absence of horses, cattle and other domestic animals from the soil of North America until they were brought hither by the Spanish, French and English settlers."—J. Fiske, *The Discovery of America*, ch. 2.—"What Leif and Karlsefne knew they experienced," writes Prof. Justin Winsor, "and what the sagas tell us they underwent, must have just the difference between a crisp narrative of personal adventure and the oft-repeated and embellished story of a fireside narrator, since the traditions of the Norse voyages were not put in the shape of records till about two centuries had elapsed, and we have no earlier manuscript of such a record than one made nearly two hundred years later still. . . . A blending of history and myth prompts Horn to say that 'some of the sagas were doubtless originally based on facts, but the telling and retelling have changed them into pure myths.' The unsympathetic stranger sees this in stories that the patriotic Scandinavians are over-anxious to make appear as genuine chronicles. . . . The weight of probability is in favor of a Northman descent upon the coast of the American mainland at some point, or at several, somewhere to the south of Greenland; but the evidence is hardly that which attaches to well established historical records. . . . There is not a single item of all the evidence thus advanced from time to time which can be said to connect by archæological traces the presence of the Northmen on the soil of North America south of Davis' Straits." Of other imagined pre-Columban discoveries of America, by the Welsh, by the Arabs, by the Basques, &c., the possibilities and probabilities are critically discussed by Prof. Winsor in the same connection.—J. Winsor, *Narrative and Critical Hist. of Am.*, v. 1, ch. 2, and *Critical Notes to the same*.

A. D. 1484-1492.—The great project of Columbus, and the sources of its inspiration.—His seven years' suit at the Spanish Court.—His departure from Palos.—"All attempts to diminish the glory of Columbus' achievement by proving a previous discovery whose results were known to him have signally failed. . . . Columbus originated no new theory respecting the earth's form or size, though a popular idea has always prevailed, notwithstanding the statements of the best writers to the contrary, that he is entitled to the glory of the theory as well

as to that of the execution of the project. He was not in advance of his age, entertained no new theories, believed no more than did Prince Henry, his predecessor, or Toscanelli, his contemporary; nor was he the first to conceive the possibility of reaching the east by sailing west. He was however the first to act in accordance with existing beliefs. The Northmen in their voyages had entertained no ideas of a New World, or of an Asia to the West. To knowledge of theoretical geography, Columbus added the skill of a practical navigator, and the iron will to overcome obstacles. He sailed west, reached Asia as he believed, and proved old theories correct. There seem to be two undecided points in that matter, neither of which can ever be settled. First, did his experience in the Portuguese voyages, the perusal of some old author, or a hint from one of the few men acquainted with old traditions, first suggest to Columbus his project? . . . Second, to what extent did his voyage to the north [made in 1477, probably with an English merchantman from Bristol, in which voyage he is believed to have visited Iceland] influence his plan? There is no evidence, but a strong probability, that he heard in that voyage of the existence of land in the west. . . . Still, his visit to the north was in 1477, several years after the first formation of his plan, and any information gained at the time could only have been confirmatory rather than suggestive."—H. H. Bancroft, *Hist. of the Pacific States*, v. 1, summary app. to ch. 1.—"Of the works of learned men, that which, according to Ferdinand Columbus, had most weight with his father, was the 'Cosmographia' of Cardinal Aliaco. Columbus was also confirmed in his views of the existence of a western passage to the Indies by Paulo Toscanelli, the Florentine philosopher, to whom much credit is due for the encouragement he afforded to the enterprise. That the notices, however, of western lands were not such as to have much weight with other men, is sufficiently proved by the difficulty which Columbus had in contending with adverse geographers and men of science in general, of whom he says he never was able to convince any one. After a new world had been discovered, many scattered indications were then found to have foreshown it. One thing which cannot be denied to Columbus is that he worked out his own idea himself. . . . He first applied himself to his countrymen, the Genoese, who would have nothing to say to his scheme. He then tried the Portuguese, who listened to what he had to say, but with bad faith sought to anticipate him by sending out a caravel with instructions founded upon his plan. . . . Columbus, disgusted at the treatment he had received from the Portuguese Court, quitted Lisbon, and, after visiting Genoa, as it appears, went to see what favour he could meet with in Spain, arriving at Palos in the year 1485." The story of the long suit of Columbus at the Court of Ferdinand and Isabella; of his discouragement and departure, with intent to go to France; of his recall by command of Queen Isabella; of the tedious hearings and negotiations that now took place; of the lofty demands adhered to by the confident Genoese, who required "to be made an admiral at once, to be appointed viceroy of the countries he should discover, and to have an eighth of the profits of the expedition;" of his second rebuff,

his second departure for France, and second recall by Isabella, who finally put her heart into the enterprise and persuaded her more skeptical consort to assent to it—the story of those seven years of the struggle of Columbus to obtain means for his voyage is familiar to all readers. “The agreement between Columbus and their Catholic highnesses was signed at Santa Fé on the 17th of April, 1492; and Columbus went to Palos to make preparation for his voyage, bearing with him an order that the two vessels which that city furnished annually to the crown for three months should be placed at his disposal. . . . The Pinzons, rich men and skilful mariners of Palos, joined in the undertaking, subscribing an eighth of the expenses; and thus, by these united exertions, three vessels were manned with 90 mariners, and provisioned for a year. At length all the preparations were complete, and on a Friday (not inauspicious in this case), the 3d of August, 1492, after they had all confessed and received the sacrament, they set sail from the bar of Saltes, making for the Canary Islands.”—Sir A. Helps, *The Spanish Conquest in America*, bk. 2, ch. 1.

ALSO IN J. Winsor, *Christopher Columbus*, ch. 5-9, and 20.

A. D. 1492.—The First Voyage of Columbus.—Discovery of the Bahamas, Cuba and Hayti.—The three vessels of Columbus were called the *Santa Maria*, the *Pinta* and the *Niña*. “All had forecastles and high poops, but the ‘*Santa Maria*’ was the only one that was decked amidships, and she was called a ‘*nao*’ or ship. The other two were *caravelas*, a class of small vessels built for speed. The ‘*Santa Maria*,’ as I gather from scattered notices in the letters of Columbus, was of 120 to 130 tons, like a modern coasting schooner, and she carried 70 men, much crowded. Her sails were a foresail and a foretop-sail, a sprit-sail, a mainsail with two bunnets, and maintop sail, a mizzen, and a boat’s sail were occasionally hoisted on the poop. The ‘*Pinta*’ and ‘*Niña*’ only had square sails on the foremast and lateen sails on the main and mizzen. The former was 50 tons, the latter 40 tons, with crews of 20 men each. On Friday, the 3d of August, the three little vessels left the haven of Palos, and this memorable voyage was commenced. . . . The expedition proceeded to the Canary Islands, where the rig of the ‘*Pinta*’ was altered. Her lateen sails were not adapted for running before the wind, and she was therefore fitted with square sails, like the ‘*Santa Maria*.’ Repairs were completed, the vessels were filled up with wood and water at Gomera, and the expedition took its final departure from the island of Gomera, one of the Canaries, on September 6th, 1492. . . . Columbus had chosen his route most happily, and with that fortunate prevision which often waits upon genius. From Gomera, by a course a little south of west, he would run down the trades to the Bahama Islands. From the parallel of about 30° N. nearly to the equator there is a zone of perpetual winds—namely, the north-east trade winds—always moving in the same direction, as steadily as the current of a river, except where they are turned aside by local causes, so that the ships of Columbus were steadily carried to their destination by a law of nature which, in due time, revealed itself to that close observer of her secrets. The

constancy of the wind was one cause of alarm among the crews, for they began to murmur that the provisions would all be exhausted if they had to beat against these unceasing winds on the return voyage. The next event which excited alarm among the pilots was the discovery that the compasses had more than a point of easterly variation. . . . This was observed on the 17th of September, and about 300 miles westward of the meridian of the Azores, when the ships had been eleven days at sea. Soon afterwards the voyagers found themselves surrounded by masses of seaweed, in what is called the Sargasso Sea, and this again aroused their fears. They thought that the ships would get entangled in the beds of weed and become immovable, and that the beds marked the limit of navigation. The cause of this accumulation is well known now. If bits of cork are put into a basin of water, and a circular motion given to it, all the corks will be found crowding together towards the centre of the pool where there is the least motion. The Atlantic Ocean is just such a basin, the Gulf Stream is the whirl, and the Sargasso Sea is in the centre. There Columbus found it, and there it has remained to this day, moving up and down and changing its position according to seasons, storms and winds, but never altering its mean position. . . . As day after day passed, and there was no sign of land, the crews became turbulent and mutinous. Columbus encouraged them with hopes of reward, while he told them plainly that he had come to discover India, and that, with the help of God, he would persevere until he found it. At length, on the 11th of October, towards ten at night, Columbus was on the poop and saw a light. . . . At two next morning, land was distinctly seen. . . . The island, called by the natives Guanahani, and by Columbus San Salvador, has now been ascertained to be Watling Island, one of the Bahamas, 14 miles long by 6 broad, with a brackish lake in the centre, in 24° 10' 30" north latitude. . . . The difference of latitude between Gomera and Watling Island is 235 miles. Course, W. 5° S.; distance 3,114 miles; average distance made good daily, 85'; voyage 35 days. . . . After discovering several smaller islands the fleet came in sight of Cuba on the 27th October, and explored part of the northern coast. Columbus believed it to be Cipango, the island placed on the chart of Toscanelli, between Europe and Asia. . . . Crossing the channel between Cuba and St. Domingo [or Hayti], they anchored in the harbour of St. Nicholas Mole on December 4th. The natives came with presents and the country was enchanting. Columbus . . . named the island ‘*Española*’ [or *Hispaniola*]. But with all this peaceful beauty around him he was on the eve of disaster.” The *Santa Maria* was drifted by a strong current upon a sand bank and hopelessly wrecked. “It was now necessary to leave a small colony on the island. . . . A fort was built and named ‘*La Navidad*,’ 39 men remaining behind supplied with stores and provisions,” and on Friday, Jan. 4, 1493, Columbus began his homeward voyage. Weathering a dangerous gale, which lasted several days, his little vessels reached the Azores Feb. 17, and arrived at Palos March 15, bearing their marvellous news.—C. R. Markham, *The Sea Fathers*, ch. 2.—The same, *Life of Columbus*, ch. 5.—The statement above that the island of the Bahamas on which

Columbus first landed, and which he called San Salvador, "has now been ascertained to be Watling Island" seems hardly justified. The question between Watling Island, San Salvador or Cat Island, Samana, or Attwood's Cay, Mariguana, the Grand Turk, and others is still in dispute. Professor Justin Winsor says "the weight of modern testimony seems to favor Watling's Island;" but at the same time he thinks it "probable that men will never quite agree which of the Bahamas it was upon which these startled and exultant Europeans first stepped."—J. Winsor, *Christopher Columbus*, ch. 9.—The same, *Narrative and Critical Hist. of Am.*, v. 2, ch. 1, note B.—Professor John Fiske, says: "All that can be positively asserted of Guanahani is that it was one of the Bahamas; there has been endless discussion as to which one, and the question is not easy to settle. Perhaps the theory of Captain Gustavus Fox, of the United States Navy, is on the whole best supported. Captain Fox maintains that the true Guanahani was the little Island now known as Samana or Attwood's Cay."—J. Fiske, *The Discovery of America*, ch. 5 (v. 1).

ALSO IN *U. S. Coast and Geodetic Survey, Rept.*, 1880, app. 18.

A. D. 1493.—Papal grant of the New World to Spain.—"Spain was at this time connected with the Pope about a most momentous matter. The Genoese, Cristoforo Colombo, arrived at the Spanish court in March, 1493, with the astounding news of the discovery of a new continent. . . . Ferdinand and Isabella thought it wise to secure a title to all that might ensue from their new discovery. The Pope, as Vicar of Christ, was held to have authority to dispose of lands inhabited by the heathen; and by papal Bulls the discoveries of Portugal along the African coast had been secured. The Portuguese showed signs of urging claims to the New World, as being already conveyed to them by the papal grants previously issued in their favour. To remove all cause of dispute, the Spanish monarchs at once had recourse to Alexander VI., who issued two Bulls on May 4 and 5 [1493] to determine the respective rights of Spain and Portugal. In the first, the Pope granted to the Spanish monarchs and their heirs all lands discovered or hereafter to be discovered in the western ocean. In the second, he defined his grant to mean all lands that might be discovered west and south of an imaginary line, drawn from the North to the South Pole, at the distance of a hundred leagues westward of the Azores and Cape de Verd Islands. In the light of our present knowledge we are amazed at this simple means of disposing of a vast extent of the earth's surface." Under the Pope's stupendous patent, Spain was able to claim every part of the American Continent except the Brazilian coast.—M. Creighton, *Hist. of the Papacy during the Reformation*, bk. 5, ch. 6 (v. 3).

A. D. 1493-1496.—The Second Voyage of Columbus.—Discovery of Jamaica and the Caribbees.—Subjugation of Hispaniola.—"The departure of Columbus on his second voyage of discovery presented a brilliant contrast to his gloomy embarkation at Palos. On

the 25th of September [1493], at the dawn of day, the bay of Cadiz was whitened by his fleet. There were three large ships of heavy burden and fourteen caravels. . . . Before sunrise the whole fleet was under way." Arrived at the Canaries on the 1st of October, Columbus purchased there calves, goats, sheep, hogs, and fowls, with which to stock the island of Hispaniola; also "seeds of oranges, lemons, bergamots, melons, and various orchard fruits, which were thus first introduced into the islands of the west from the Hesperides or Fortunate Islands of the Old World." It was not until the 13th of October that the fleet left the Canaries, and it arrived among the islands since called the Lesser Antilles or Caribbees, on the evening of Nov. 2. Sailing through this archipelago, discovering the larger island of Porto Rico on the way, Columbus reached the eastern extremity of Hispaniola or Hayti on the 22d of November, and arrived on the 27th at La Navidad, where he had left a garrison ten months before. He found nothing but ruin, silence and the marks of death, and learned, after much inquiry, that his unfortunate men, losing all discipline after his departure, had provoked the natives by rapacity and licentiousness until the latter rose against them and destroyed them. Abandoning the scene of this disaster, Columbus found an excellent harbor ten leagues east of Monte Christi and there he began the founding of a city which he named Isabella. "Isabella at the present day is quite overgrown with forests, in the midst of which are still to be seen, partly standing, the pillars of the church, some remains of the king's storehouses, and part of the residence of Columbus, all built of hewn stone." While the foundations of the new city were being laid, Columbus sent back part of his ships to Spain, and undertook an exploration of the interior of the island—the mountains of Cibac—where abundance of gold was promised. Some gold washings were found—far too scanty to satisfy the expectations of the Spaniards; and, as want and sickness soon made their appearance at Isabella, discontent was rife and mutiny afoot before the year had ended. In April, 1494, Columbus set sail with three caravels to revisit the coast of Cuba, for a more extended exploration than he had attempted on the first discovery. "He supposed it to be a continent, and the extreme end of Asia, and if so, by following its shores in the proposed direction he must eventually arrive at Cathay and those other rich and commercial, though semi-barbarous countries, described by Mandeville and Marco Polo." Reports of gold led him southward from Cuba until he discovered the island which he called Santiago, but which has kept its native name, Jamaica, signifying the Island of Springs. Disappointed in the search for gold, he soon returned from Jamaica to Cuba and sailed along its southern coast to very near the western extremity, confirming himself and his followers in the belief that they skirted the shores of Asia and might follow them to the Red Sea, if their ships and stores were equal to so long a voyage. "Two or three days' further sail would have carried Columbus round the extremity of Cuba; would have dispelled his illusion, and might have given an entirely different course to his subsequent discoveries. In his present conviction he lived and died; believing to his last hour that Cuba was the extremity of

the Asiatic continent." Returning eastward, he visited Jamaica again and purposed some further exploration of the Caribbee Islands, when his toils and anxieties overcame him. "He fell into a deep lethargy, resembling death itself. His crew, alarmed at this profound torpor, feared that death was really at hand. They abandoned, therefore, all further prosecution of the voyage; and spreading their sails to the east wind so prevalent in those seas, bore Columbus back, in a state of complete insensibility, to the harbor of Isabella,"—Sept. 4. Recovering consciousness, the admiral was rejoiced to find his brother Bartholomew, from whom he had been separated for years, and who had been sent out to him from Spain, in command of three ships. Otherwise there was little to give pleasure to Columbus when he returned to Isabella. His followers were again disorganized, again at war with the natives, whom they plundered and licentiously abused, and a mischief-making priest had gone back to Spain, along with certain intriguing officers, to make complaints and set enmities astir at the court. Involved in war, Columbus prosecuted it relentlessly, reduced the island to submission and the natives to servitude and misery by heavy exactions. In March 1496 he returned to Spain, to defend himself against the machinations of his enemies, transferring the government of Hispaniola to his brother Bartholomew.—W. Irving, *Life and Voyages of Columbus*, bk. 6-8 (v. 1-2).

A. D. 1494.—The Treaty of Tordesillas.—Amended Partition of the New World between Spain and Portugal.—"When speaking or writing of the conquest of America, it is generally believed that the only title upon which were based the conquests of Spain and Portugal was the famous Papal Bull of partition of the Ocean, of 1493. Few modern authors take into consideration that this Bull was amended, upon the petition of the King of Portugal, by the [Treaty of Tordesillas], signed by both powers in 1494, augmenting the portion assigned to the Portuguese in the partition made between them of the Continent of America. The arc of meridian fixed by this treaty as a dividing line, which gave rise, owing to the ignorance of the age, to so many diplomatic congresses and interminable controversies, may now be traced by any student of elementary mathematics. This line . . . runs along the meridian of 47° 32' 56" west of Greenwich. . . . The name Brazil, or 'terra del Brazil,' at that time [the middle of the 16th century] referred only to the part of the continent producing the dye wood so-called. Nearly two centuries later the Portuguese advanced toward the South, and the name Brazil then covered the new possessions they were acquiring."—L. L. Dominguez, *Intro. to "The Conquest of the River Plate"* (*Hakluyt Soc. Pubs.* No. 81).

A. D. 1497.—Discovery of the North American Continent by John Cabot.—"The achievement of Columbus, revealing the wonderful truth of which the germ may have existed in the imagination of every thoughtful mariner, won [in England] the admiration which belonged to genius that seemed more divine than human; and 'there was great talk of it in all the court of

Henry VII.' A feeling of disappointment remained, that a series of disasters had defeated the wish of the illustrious Genoese to make his voyage of essay under the flag of England. It was, therefore, not difficult for John Cabot, a denizen of Venice, residing at Bristol, to interest that politic king in plans for discovery. On the 5th of March, 1496, he obtained under the great seal a commission empowering himself and his three sons, or either of them, their heirs, or their deputies, to sail into the eastern, western, or northern sea with a fleet of five ships, at their own expense, in search of islands, provinces, or regions hitherto unseen by Christian people; to affix the banners of England on city, island, or continent; and, as vassals of the English crown, to possess and occupy the territories that might be found. It was further stipulated in this 'most ancient American State paper of England,' that the patentees should be strictly bound, on every return, to land at the port of Bristol, and to pay to the king one-fifth part of their gains; while the exclusive right of frequenting all the countries that might be found was reserved to them and to their assigns, without limit of time. Under this patent, which, at the first direction of English enterprise toward America, embodied the worst features of monopoly and commercial restriction, John Cabot, taking with him his son Sebastian, embarked in quest of new islands and a passage to Asia by the north-west. After sailing prosperously, as he reported, for 700 leagues, on the 24th day of June [1497] in the morning, almost fourteen months before Columbus on his third voyage came in sight of the main, and more than two years before Amerigo Vespucci sailed west of the Canaries, he discovered the western continent, probably in the latitude of about 56° degrees, among the dismal cliffs of Labrador. He ran along the coast for many leagues, it is said even for 300, and landed on what he considered to be the territory of the Grand Cham. But he encountered no human being, although there were marks that the region was inhabited. He planted on the land a large cross with the flag of England, and, from affection for the republic of Venice, he added the banner of St. Mark, which had never been borne so far before. On his homeward voyage he saw on his right hand two islands, which for want of provisions he could not stop to explore. After an absence of three months the great discoverer re-entered Bristol harbor, where due honors awaited him. The king gave him money, and encouraged him to continue his career. The people called him the great admiral; he dressed in silk; and the English, and even Venetians who chanced to be at Bristol, ran after him with such zeal that he could enlist for a new voyage as many as he pleased. . . . On the third day of the month of February next after his return, 'John Kaboto, Venecian,' accordingly obtained a power to take up ships for another voyage, at the rates fixed for those employed in the service of the king, and once more to set sail with as many companions as would go with him of their own will. With this license every trace of John Cabot disappears. He may have died before the summer; but no one knows certainly the time or the place of his end, and it has not even been ascertained in what country this finder of a continent first saw the light."—G. Bancroft, *Hist. of the U. S. of Am.* (Author's last Revision),

pt. 1, ch. 1. — In his critical work on the discovery of America, published in 1892, Mr. Henry Harrisse states his conclusions as to the Cabot voyages, and on the question whether the American discoveries were made by John Cabot or his son Sebastian, as follows: "1. — The discovery of the continent of North America and the first landing on its east coast were accomplished not by Sebastian Cabot, but by his father John, in 1497, under the auspices of King Henry VII. 2. — The first landfall was not Cape Breton Island, as is stated in the planisphere made by Sebastian Cabot in 1544, but eight or ten degrees further north, on the coast of Labrador; which was then ranged by John Cabot, probably as far as Cape Chudley. 3. — This fact was tacitly acknowledged by all pilots and cosmographers throughout the first half of the 16th century; and the knowledge of it originated with Sebastian Cabot himself, whatever may have been afterwards his contrary statements in that respect. 4. — The voyage of 1498, also accomplished under the British flag, was likewise carried out by John Cabot personally. The landfall on that occasion must be placed south of the first; and the exploration embraced the north-east coast of the present United States, as far as Florida. 5. — In the vicinity of the Floridian east coast, John Cabot, or one of his lieutenants, was detected by some Spanish vessel, in 1498 or 1499. 6. — The English continued in 1501, 1502, 1504, and afterwards, to send ships to Newfoundland, chiefly for the purpose of fisheries."—H. Harrisse, *The Discovery of North America*, pt. 1, bk. 8, ch. 5.

A. D. 1497-1498.—The first Voyage of Americus Vespucius. — Misunderstandings and disputes concerning it.—Vindication of the Florentine navigator.—His exploration of 4,000 miles of continental coast.—"Our information concerning Americus Vespucius, from the early part of the year 1496 until after his return from the Portuguese to the Spanish service in the latter part of 1504, rests primarily upon his two famous letters; the one addressed to his old patron Lorenzo di Pier Francesco de' Medici (a cousin of Lorenzo the Magnificent) and written in March or April, 1503, giving an account of his third voyage; the other addressed to his old school-fellow Piero Soderini [then Gonfaloniere of Florence] and dated from Lisbon, September 4, 1504, giving a brief account of four voyages which he had made under various commanders in the capacity of astronomer or pilot. These letters . . . became speedily popular, and many editions were published, more especially in France, Germany, and Italy. . . . The letter to Soderini gives an account of four voyages in which the writer took part, the first two in the service of Spain, the other two in the service of Portugal. The first expedition sailed from Cadiz May 10, 1497, and returned October 15, 1498, after having explored a coast so long as to seem unquestionably that of a continent. This voyage, as we shall see, was concerned with parts of America not visited again until 1513 and 1517. It discovered nothing that was calculated to invest it with much importance in Spain, though it by no means passed without

notice there, as has often been wrongly asserted. Outside of Spain it came to attract more attention, but in an unfortunate way, for a slight but very serious error in proof-reading or editing, in the most important of the Latin versions, caused it after a while to be practically identified with the second voyage, made two years later. This confusion eventually led to most outrageous imputations upon the good name of Americus, which it has been left for the present century to remove. The second voyage of Vespucius was that in which he accompanied Alonso de Ojeda and Juan de la Costa, from May 20, 1499, to June, 1500. They explored the northern coast of South America from some point on what we would now call the north coast of Brazil, as far as the Pearl Coast visited by Columbus in the preceding year; and they went beyond, as far as the Gulf of Maracaibo. Here the squadron seems to have become divided, Ojeda going over to Hispaniola in September, while Vespucius remained cruising till February. . . . It is certainly much to be regretted that in the narrative of his first expedition, Vespucius did not happen to mention the name of the chief commander. . . . However . . . he was writing not for us, but for his friend, and he told Soderini only what he thought would interest him. . . . Of the letter to Soderini the version which has played the most important part in history is the Latin one first published at the press of the little college at Saint-Dié in Lorraine, April 25 (vij Kl' Maij), 1507. . . . It was translated, not from an original text, but from an intermediate French version, which is lost. Of late years, however, we have detected, in an excessively rare Italian text, the original from which the famous Lorraine version was ultimately derived. . . . If now we compare this primitive text with the Latin of the Lorraine version of 1507, we observe that, in the latter, one proper name—the Indian name of a place visited by Americus on his first voyage—has been altered. In the original it is 'Lariab;' in the Latin it has become 'Parias.' This looks like an instance of injudicious editing on the part of the Latin translator, although, of course, it may be a case of careless proof-reading. Lariab is a queer-looking word. It is no wonder that a scholar in his study among the mountains of Lorraine could make nothing of it. If he had happened to be acquainted with the language of the Huastecas, who dwelt at that time about the river Panuco—fierce and dreaded enemies of their southern neighbours the Aztecs—he would have known that names of places in that region were apt to end in ab. . . . But as such facts were quite beyond our worthy translator's ken, we cannot much blame him if he felt that such a word as Lariab needed doctoring. Parias (Paria) was known to be the native name of a region on the western shores of the Atlantic, and so Lariab became Parias. As the distance from the one place to the other is more than two thousand miles, this little emendation shifted the scene of the first voyage beyond all recognition, and cast the whole subject into an outer darkness where there has been much groaning and gnashing of teeth. Another curious circumstance came in to confirm this error. On his first voyage, shortly before arriving at Lariab, Vespucius saw an Indian town built over the water, 'like Venice.' He counted 44 large wooden houses, 'like barracks,' supported on huge tree-

trunks and communicating with each other by bridges that could be drawn up in case of danger. This may well have been a village of communal houses of the Chontals on the coast of Tabasco; but such villages were afterwards seen on the Gulf of Maracaibo, and one of them was called Venezuela, or 'Little Venice,' a name since spread over a territory nearly twice as large as France. So the amphibious town described by Vesputius was incontinently moved to Maracaibo, as if there could be only one such place, as if that style of defensive building had not been common enough in many ages and in many parts of the earth, from ancient Switzerland to modern Siam. . . . Thus in spite of the latitudes and longitudes distinctly stated by Vesputius in his letter, did Lariab and the little wooden Venice get shifted from the Gulf of Mexico to the northern coast of South America. . . . We are told that he falsely pretended to have visited Paria and Maracaibo in 1497, in order to claim priority over Columbus in the discovery of 'the continent.' What continent? When Vesputius wrote that letter to Soderini, neither he nor anybody else suspected that what we now call America had been discovered. The only continent of which there could be any question, so far as supplanting Columbus was concerned, was Asia. But in 1504 Columbus was generally supposed to have discovered the continent of Asia, by his new route, in 1492. . . . It was M. Varnhagen who first turned inquiry on this subject in the right direction. . . . Having taken a correct start by simply following the words of Vesputius himself, from a primitive text, without reference to any preconceived theories or traditions, M. Varnhagen finds that Americus in his first voyage made land on the northern coast of Honduras; "that he sailed around Yucatan, and found his aquatic village of communal houses, his little wooden Venice, on the shore of Tabasco. Thence, after a fight with the natives in which a few tawny prisoners were captured and carried on board the caravels, Vesputius seems to have taken a straight course to the Huasteca country by Tampico, without touching at points in the region subject or tributary to the Aztec confederacy. This Tampico country was what Vesputius understood to be called Lariab. He again gives the latitude definitely and correctly as 23° N., and he mentions a few interesting circumstances. He saw the natives roasting a dreadfully ugly animal," of which he gives what seems to be "an excellent description of the iguana, the flesh of which is to this day an important article of food in tropical America. . . . After leaving this country of Lariab the ships kept still to the northwest for a short distance, and then followed the windings of the coast for 870 leagues. . . . After traversing the 870 leagues of crooked coast, the ships found themselves 'in the finest harbour in the world' [which M. Varnhagen supposed, at first, to have been in Chesapeake Bay, but afterwards reached conclusions pointing to the neighbourhood of Cape Canaveral, on the Florida coast]. It was in June, 1498, thirteen months since they had started from Spain. . . . They spent seven-and-thirty days in this unrivalled harbour, preparing for the home voyage, and found the natives very hospitable. These red men courted the aid of the white strangers," in an attack which they wished to make upon a fierce race of cannibals, who inhab-

ited certain islands some distance out to sea. The Spaniards agreed to the expedition, and sailed late in August, taking seven of the friendly Indians for guides. "After a week's voyage they fell in with the islands, some peopled, others uninhabited, evidently the Bermudas, 600 miles from Cape Hatteras as the crow flies. The Spaniards landed on an island called Iti, and had a brisk fight," resulting in the capture of more than 200 prisoners. Seven of these were given to the Indian guides, who paddled home with them. "We also [wrote Vesputius] set sail for Spain, with 222 prisoners, slaves; and arrived in the port of Cadiz on the 15th day of October, 1498, where we were well received and sold our slaves." . . . The obscurity in which this voyage has so long been enveloped is due chiefly to the fact that it was not followed up till many years had elapsed, and the reason for this neglect impresses upon us forcibly the impossibility of understanding the history of the Discovery of America unless we bear in mind all the attendant circumstances. One might at first suppose that a voyage which revealed some 4,000 miles of the coast of North America would have attracted much attention in Spain and have become altogether too famous to be soon forgotten. Such an argument, however, loses sight of the fact that these early voyagers were not trying to 'discover America.' There was nothing to astonish them in the existence of 4,000 miles of coast line on this side of the Atlantic. To their minds it was simply the coast of Asia, about which they knew nothing except from Marco Polo, and the natural effect of such a voyage as this would be simply to throw discredit upon that traveller." — J. Fiske, *The Discovery of America*, ch. 7 (v. 2).

The arguments against this view are set forth by Mr. Clements R. Markham, in a paper read before the Royal Geographical Society, in 1892, as follows: "Vesputius was at Seville or San Lucar, as a provision merchant, from the middle of April, 1497, to the end of May, 1498, as is shown by the official records, examined by Muñoz, of expenses incurred in fitting out the ships for western expeditions. Moreover, no expedition for discovery was despatched by order of King Ferdinand in 1497; and there is no allusion to any such expedition in any contemporary record. The internal evidence against the truth of the story is even stronger. Vesputius says that he sailed W. S. W. for nearly 1000 leagues from Grand Canary. This would have taken him to the Gulf of Paria, which is rather more than 900 leagues W. S. W. from Grand Canary. . . . No actual navigator would have made such a blunder. He evidently quoted the dead reckoning from Ojeda's voyage, and invented the latitude at random. . . . His statement that he went N. W. for 870 leagues (2,610 miles) from a position in latitude 23° N. is still more preposterous. Such a course and distance would have taken him right across the continent to somewhere in British Columbia. The chief incidents in the voyage are those of the Ojeda voyage in 1499. There is the village built on piles called Little Venice. . . . There was the encounter with natives, in which one Spaniard was killed and 22 were wounded. These numbers are convincing evidence" — C. R. Markham, *Columbus* (*Royal Geog. Soc. Proceedings*, Sept., 1892).

A. D. 1498.—Second Voyage of John Cabot, sometimes ascribed to his son Sebastian.—“Very soon after his return, John Cabot petitioned Henry VII. for new letters patent, authorizing him to visit again the country which he had just discovered. The King granted his request on the 3rd of February, 1498. There is no ground whatever for the assertion, frequently repeated, that John Cabot did not command this second expedition, or that it was undertaken after his death. On the contrary, Pasqualigo and Soncino mention him by name exclusively as the party to whom Henry VII. intended to entrust the fleet. Besides, this time, John Cabot is the only grantee, and the new letters patent omit altogether the names of Sebastian and of his brothers. Moreover, John explained in person to Soncino his plans for the second voyage; and July 25, 1498, Puebla and Ayala announced officially to the Spanish Sovereigns that the vessels had actually sailed out ‘con otro ginoves como Colon,’ which description does not apply certainly to Sebastian, but to John Cabot, as we know from corroborative evidence already stated. The fact is that the name of Sebastian Cabot appears in connection with those voyages, for the first time, in Peter Martyr’s account, printed twenty years after the event, and taken from Sebastian’s own lips; which . . . is not a recommendation. In England, his name reveals itself as regards the discovery of the New World at a still later period, in John Stow’s Chronicle, published in 1580. And, although both that historian and Hakluyt quote as their authority for the statement a manuscript copy of Robert Fabian’s Chronicle, everything tends to show that the name of Sebastian Cabot is a sheer interpolation. . . . The expedition was composed of five vessels, fitted out at the expense of John Cabot or of his friends: ‘payng for theym and every of theym.’ We have not the exact date when the fleet sailed. It was after April 1, 1498, as on that day Henry VII. loaned £30 to Thomas Bradley and Louncelot Thirkill, ‘going to the New Isle.’ On the other hand, Pedro de Ayala already states, July 25, 1498, that news had been received of the expedition, which was obliged to leave behind, in Ireland, one of the ships, owing to a severe storm. The vessels therefore set out (from Bristol?) in May or June. Puebla states that they were expected back in the month of September following: ‘Dizen que seran venydos para el Septiembre;’ yet the vessels had taken supplies for one year: ‘fueron proueydas por hun año.’ We possess no direct information concerning this voyage, nor do we know when Cabot returned to England. It is important to note, however, that the expeditions of 1497 and 1498 are the only ones which in the fifteenth century sailed to the New World under the British flag, and comprise, therefore, all the transatlantic discoveries made by Cabot before the year 1500. Our only data concerning the north-west coast, which the Venetian navigator may have visited in the course of his second voyage, are to be found in the map drawn by Juan de la Cosa in the year 1500. . . . In that celebrated chart, there is, in the proximity and west of Cuba, an unbroken coast line, delineated like a continent, and extending northward to the extremity of the map. On the northern portion of that seaboard La Cosa has placed a continuous

line of British flags, commencing at the south with the inscription; ‘Mar descubierta por ingleses;’ and terminating at the north with ‘Cape of England:—Cauo de ynglaterra.’ Unfortunately, those cartographical data are not sufficiently precise to enable us to locate the landfalls with adequate exactness. Nor is the kind of projection adopted, without explicit degrees of latitude, of such a character as to aid us much in determining positions. We are compelled, therefore, to resort to inferences. . . . Taking the distance from the equator to the extreme north in La Cosa’s map as a criterion for measuring distances, and comparing relatively the points named therein with points corresponding for the same latitude on modern planispheres, the last English flagstaff in the southern direction seems to indicate a vicinity south of the Carolinas. . . . This hypothetical estimate finds a sort of corollary in Sebastian Cabot’s account, as reported by Peter Martyr. In describing his alleged north-western discoveries, Sebastian said that icebergs having compelled him to alter his course, he steered southwardly, and followed the coast until he reached about the latitude of Gibraltar. . . . Several years afterwards, Sebastian Cabot again mentioned the matter in his conversation with the Mantua gentleman; but this time he extended the exploration of the north-west coast five degrees further south, naming Florida as his terminus. . . . Twenty years after . . . Sebastian . . . declared, under oath before the Council of the Indies, December 31, 1535, that he did not know whether the mainland continued northward or not from Florida to the Bacallaos region.”—H. HARRISSE, *Discovery of America*, pt. 1, bk. 2.

A. D. 1498-1505.—The Third and Fourth Voyages of Columbus.—Discovery of Trinidad, the northern coast of S. America, the shores of Central America and Panama.—When Columbus reached Spain in June, 1496, “Ferdinand and Isabella received him kindly, gave him new honors and promised him other outfits. Enthusiasm, however, had died out and delays took place. The reports of the returning ships did not correspond with the pictures of Marco Polo, and the new-found world was thought to be a very poor India after all. Most people were of this mind; though Columbus was not disheartened, and the public treasury was readily opened for a third voyage. Coronel sailed early in 1498 with two ships, and Columbus followed with six, embarking at San Lucas on the 30th of May. He now discovered Trinidad (July 31), which he named either from its three peaks, or from the Holy Trinity; struck the northern coast of South America, and skirted what was later known as the Pearl coast, going as far as the Island of Margarita. He wondered at the roaring fresh waters which the Orinoco pours into the Gulf of Pearls, as he called it, and he half believed that its exuberant tide came from the terrestrial paradise. He touched the southern coast of Hayti on the 30th of August. Here already his colonists had established a fortified post, and founded the town of Santo Domingo. His brother Bartholomew had ruled energetically during the Admiral’s absence, but he had not prevented a revolt, which was headed by Roldan. Columbus on his arrival found the insurgents still defiant, but he was able after a while to reconcile them, and he even succeeded

in attaching Roldan warmly to his interests. Columbus' absence from Spain, however, left his good name without sponsors; and to satisfy detractors, a new commissioner was sent over with enlarged powers, even with authority to supersede Columbus in general command, if necessary. This emissary was Francisco de Bobadilla, who arrived at Santo Domingo with two caravels on the 23d of August, 1500, finding Diego in command, his brother, the Admiral, being absent. An issue was at once made. Diego refused to accede to the commissioner's orders till Columbus returned to judge the case himself; so Bobadilla assumed charge of the crown property violently, took possession of the Admiral's house, and when Columbus returned, he with his brother was arrested and put in irons. In this condition the prisoners were placed on shipboard, and sailed for Spain. The captain of the ship offered to remove the manacles: but Columbus would not permit it, being determined to land in Spain bound as he was; and so he did. The effect of his degradation was to his advantage; sovereigns and people were shocked at the sight; and Ferdinand and Isabella hastened to make amends by receiving him with renewed favor. It was soon apparent that everything reasonable would be granted him by the monarchs, and that he could have all he might wish short of receiving a new lease of power in the islands, which the sovereigns were determined to see pacified at least before Columbus should again assume government of them. The Admiral had not forgotten his vow to wrest the Holy Sepulchre from the Infidel; but the monarchs did not accede to his wish to undertake it. Disappointed in this, he proposed a new voyage; and getting the royal countenance for this scheme, he was supplied with four vessels of from fifty to seventy tons each. . . . He sailed from Cadiz, May 9, 1502, accompanied by his brother Bartholomew and his son Fernando. The vessels reached San Domingo June 29. Bobadilla, whose rule of a year and a half had been an unhappy one, had given place to Nicholas de Ovando; and the fleet which brought the new governor—with Maldonado, Las Casas and others—now lay in the harbor waiting to receive Bobadilla for the return voyage. Columbus had been instructed to avoid Hispaniola; but now that one of his vessels leaked, and he needed to make repairs, he sent a boat ashore, asking permission to enter the harbor. He was refused, though a storm was impending. He sheltered his vessels as best he could, and rode out the gale. The fleet which had on board Bobadilla and Roldan, with their ill-gotten gains, was wrecked, and these enemies of Columbus were drowned. The Admiral found a small harbor where he could make his repairs; and then, July 14, sailed westward to find, as he supposed, the richer portions of India. . . . A landing was made on the coast of Honduras, August 14. Three days later the explorers landed again fifteen leagues farther east, and took possession of the country for Spain. Still east they went; and, in gratitude for safety after a long storm, they named a cape which they rounded, *Gracias à Dios*—a name still preserved at the point where the coast of Honduras begins to trend southward. Columbus was now lying ill on his bed, placed on deck, and was half the time in revery. Still the vessels coasted south,"

along and beyond the shores of Costa Rica; then turned with the bend of the coast to the north-east, until they reached Porto Bello, as we call it, where they found houses and orchards, and passed on "to the farthest spot of Bastidas' exploring, who had, in 1501, sailed westward along the northern coast of South America." There turning back, Columbus attempted to found a colony at Veragua, on the Costa Rica coast, where signs of gold were tempting. But the gold proved scanty, the natives hostile, and, the Admiral, withdrawing his colony, sailed away. "He abandoned one worm-eaten caravel at Porto Bello, and, reaching Jamaica, beached two others. A year of disappointment, grief, and want followed. Columbus clung to his wrecked vessels. His crew alternately mutinied at his side, and roved about the island. Ovando, at Hispaniola, heard of his straits, but only tardily and scantily relieved him. The discontented were finally humbled; and some ships, despatched by the Admiral's agent in Santo Domingo, at last reached him and brought him and his companions to that place, where Ovando received him with ostentatious kindness, lodging him in his house till Columbus departed for Spain, Sept. 12, 1504." Arriving in Spain in November, disheartened, broken with disease, neglected, it was not until the following May that he had strength enough to go to the court at Segovia, and then only to be coldly received by King Ferdinand—Isabella being dead. "While still hope was deferred, the infirmities of age and a life of hardships brought Columbus to his end; and on Ascension Day, the 20th of May, 1506, he died, with his son Diego and a few devoted friends by his bedside."—J. Winsor, *Narrative and Critical Hist. of Am.*, v. 2, ch. 1.

A. D. 1499-1500.—The Voyages and Discoveries of Ojeda and Pinzon.—The Second Voyage of Amerigo Vespucci.—One of the most daring and resolute of the adventurers who accompanied Columbus on his second voyage (in 1493) was Alonzo de Ojeda. Ojeda quarrelled with the Admiral and returned to Spain in 1498. Soon afterwards, "he was provided by the Bishop Fonseca, Columbus' enemy, with a fragment of the map which the Admiral had sent to Ferdinand and Isabella, showing the discoveries which he had made in his last voyage. With this assistance Ojeda set sail for South America, accompanied by the pilot, Juan de la Cosa, who had accompanied Columbus in his first great voyage in 1492, and of whom Columbus complained that, 'being a clever man, he went about saying that he knew more than he did,' and also by Amerigo Vespucci. They set sail on the 20th of May, 1499, with four vessels, and after a passage of 27 days came in sight of the continent, 200 leagues east of the Orinoco. At the end of June, they landed on the shores of Surinam, in six degrees of north latitude, and proceeding west saw the mouths of the Essequibo and Orinoco. Passing the Boca del Drago of Trinidad, they coasted westward till they reached the Capo de la Vela in Granada. It was in this voyage that was discovered the Gulf to which Ojeda gave the name of Venezuela, or Little Venice, on account of the cabins built on piles over the water, a mode of life which brought to

his mind the water-city of the Adriatic. From the American coast Ojeda went to the Caribbee Islands, and on the 5th of September reached Yaguimo, in Hispaniola, where he raised a revolt against the authority of Columbus. His plans, however, were frustrated by Roldan and Escobar, the delegates of Columbus, and he was compelled to withdraw from the island. On the 5th of February, 1500, he returned, carrying with him to Cadiz an extraordinary number of slaves, from which he realized an enormous sum of money. At the beginning of December, 1499, the same year in which Ojeda set sail on his last voyage, another companion of Columbus, in his first voyage, Vicente Yañez Pinzon, sailed from Palos, was the first to cross the line on the American side of the Atlantic, and on the 20th of January, 1500, discovered Cape St. Augustine, to which he gave the name of Cabo Santa Maria de la Consolacion, whence returning northward he followed the westerly trending coast, and so discovered the mouth of the Amazon, which he named Paricura. Within a month after his departure from Palos, he was followed from the same port and on the same route by Diego de Lepe, who was the first to discover, at the mouth of the Orinoco, by means of a closed vessel, which only opened when it reached the bottom of the water, that, at a depth of eight fathoms and a half, the two lowest fathoms were salt water, but all above was fresh. Lepe also made the observation that beyond Cape St. Augustine, which he doubled, as well as Pinzon, the coast of Brazil trended south-west."—R. H. Major, *Life of Prince Henry of Portugal*, ch. 19.

ALSO IN: W. Irving, *Life and Voyages of Columbus*, v. 3, ch. 1-3.

A. D. 1500.—Voyages of the Cortereals to the far North, and of Bastidas to the Isthmus of Darien.—"The Portuguese did not overlook the north while making their important discoveries to the south. Two vessels, probably in the spring of 1500, were sent out under Gaspar Cortereal. No journal or chart of the voyage is now in existence, hence little is known of its object or results. Still more dim is a previous voyage ascribed by Cordeiro to João Vaz Cortereal, father of Gaspar. . . . Touching at the Azores, Gaspar Cortereal, possibly following Cabot's charts, struck the coast of Newfoundland north of Cape Race, and sailing north discovered a land which he called Terra Verde, perhaps Greenland, but was stopped by ice at a river which he named Rio Nevado, whose location is unknown. Cortereal returned to Lisbon before the end of 1500. . . . In October of this same year Rodrigo de Bastidas sailed from Cadiz with two vessels. Touching the shores of South America near Isla Verde, which lies between Guadalupe and the main land, he followed the coast westward to El Retrete, or perhaps Nombre de Dios, on the Isthmus of Darien, in about 9° 30' north latitude. Returning he was wrecked on Española toward the end of 1501, and reached Cadiz in September, 1502. This being the first authentic voyage by Europeans to the territory herein defined as the Pacific States, such incidents as are known will be given hereafter."—H. H. Bancroft, *Hist. of the Pacific States*, v. 1, p. 113.—"We have Las Casas's authority for saying that Bastidas was a humane man toward the Indians. Indeed, he afterwards lost his life by this humanity; for, when governor of Santa

Martha, not consenting to harass the Indians, he so alienated his men that a conspiracy was formed against him, and he was murdered in his bed. The renowned Vasco Nuñez [de Balboa] was in this expedition, and the knowledge he gained there had the greatest influence on the fortunes of his varied and eventful life."—Sir A. Helps, *Spanish Conquest in Am.*, bk. 5, ch. 1.

A. D. 1500-1514.—Voyage of Cabral.—The Third Voyage of Americus Vesputius.—Exploration of the Brazilian coast for the King of Portugal.—Curious evolution of the continental name "America."—"Affairs now became curiously complicated. King Emanuel of Portugal intrusted to Pedro Alvarez de Cabral the command of a fleet for Hindustan, to follow up the work of Gama and establish a Portuguese centre of trade on the Malabar coast. This fleet of 13 vessels, carrying about 1,200 men, sailed from Lisbon March 9, 1500. After passing the Cape Verde Islands, March 22, for some reason not clearly known, whether driven by stormy weather or seeking to avoid the calms that were apt to be troublesome on the Guinea coast, Cabral took a somewhat more westerly course than he realized, and on April 22, after a weary progress averging less than 60 miles per day, he found himself on the coast of Brazil not far beyond the limit reached by Lepe. . . . Approaching it in such a way Cabral felt sure that this coast must fall to the east of the papal meridian. Accordingly on May day, at Porto Seguro in latitude 16° 30' S., he took formal possession of the country for Portugal, and sent Gaspar de Lemos in one of his ships back to Lisbon with the news. On May 22 Cabral weighed anchor and stood for the Cape of Good Hope. . . . Cabral called the land he had found Vera Cruz, a name which presently became Santa Cruz; but when Lemos arrived in Lisbon with the news he had with him some gorgeous paroquets, and among the earliest names on old maps of the Brazilian coast we find 'Land of Paroquets' and 'Land of the Holy Cross.' The land lay obviously so far to the east that Spain could not deny that at last there was something for Portugal out in the 'ocean sea.' Much interest was felt at Lisbon. King Emanuel began to prepare an expedition for exploring this new coast, and wished to secure the services of some eminent pilot and cosmographer familiar with the western waters. Overtures were made to Americus, a fact which proves that he had already won a high reputation. The overtures were accepted, for what reason we do not know, and soon after his return from the voyage with Ojeda, probably in the autumn of 1500, Americus passed from the service of Spain into that of Portugal. . . . On May 14, 1501, Vesputius, who was evidently principal pilot and guiding spirit in this voyage under unknown skies, set sail from Lisbon with three caravels. It is not quite clear who was chief captain, but M. Varnhagen has found reasons for believing that it was a certain Don Nuno Manuel. The first halt was made on the African coast at Cape Verde, the first week in June. . . . After 67 days of 'the vilest weather ever seen by man' they reached the coast of Brazil in latitude about 5° S., on the evening

of the 16th of August, the festival-day of San Roque, whose name was accordingly given to the cape before which they dropped anchor. From this point they slowly followed the coast to the southward, stopping now and then to examine the country. . . . It was not until All Saints day, the first of November, that they reached the bay in latitude 13° S., which is still known by the name which they gave it, Bahia de Todos Santos. On New Year's day, 1502, they arrived at the noble bay where 54 years later the chief city of Brazil was founded. They would seem to have mistaken it for the mouth of another huge river, like some that had already been seen in this strange world; for they called it Rio de Janeiro (River of January). Thence by February 15 they had passed Cape Santa Maria, when they left the coast and took a southeasterly course out into the ocean. Americus gives no satisfactory reason for this change of direction. . . . Perhaps he may have looked into the mouth of the river La Plata, which is a bay more than a hundred miles wide; and the sudden westward trend of the shore may have led him to suppose that he had reached the end of the continent. At any rate, he was now in longitude more than twenty degrees west of the meridian of Cape San Roque, and therefore unquestionably out of Portuguese waters. Clearly there was no use in going on and discovering lands which could belong only to Spain. This may account, I think, for the change of direction." The voyage southeastwardly was pursued until the little fleet had reached the icy and rocky coast of the island of South Georgia, in latitude 54° S. It was then decided to turn homeward. "Vespucius . . . headed straight N. N. E. through the huge ocean, for Sierra Leone, and the distance of more than 4,000 miles was made—with wonderful accuracy, though Vespucius says nothing about that—in 33 days. . . . Thence, after some further delay, to Lisbon, where they arrived on the 7th of September, 1502. Among all the voyages made during that eventful period there was none that as a feat of navigation surpassed this third of Vespucius, and there was none, except the first of Columbus, that outranked it in historical importance. For it was not only a voyage into the remotest stretches of the Sea of Darkness, but it was preëminently an incursion into the antipodal world of the Southern hemisphere. . . . A coast of continental extent, beginning so near the meridian of the Cape Verde islands and running southwesterly to latitude 35° S. and perhaps beyond, did not fit into anybody's scheme of things. . . . It was land unknown to the ancients, and Vespucius was right in saying that he had beheld there things by the thousand which Pliny had never mentioned. It was not strange that he should call it a 'New World,' and in meeting with this phrase, on this first occasion in which it appears in any document with reference to any part of what we now call America, the reader must be careful not to clothe it with the meaning which it wears in our modern eyes. In using the expression 'New World' Vespucius was not thinking of the Florida coast which he had visited on a former voyage, nor of the 'islands of India' discovered by Columbus, nor even of the Pearl Coast which he had followed after the Admiral in exploring. The expression occurs in his letter to Lorenzo

de' Medici, written from Lisbon in March or April, 1503, relating solely to this third voyage. The letter begins as follows: 'I have formerly written to you at sufficient length about my return from those new countries which in the ships and at the expense and command of the most gracious King of Portugal we have sought and found. It is proper to call them a new world.' Observe that it is only the new countries visited on this third voyage, the countries from Cape San Roque southward, that Vespucius thinks it proper to call a new world, and here is his reason for so calling them: 'Since among our ancestors there was no knowledge of them, and to all who hear of the affair it is most novel. For it transcends the ideas of the ancients, since most of them say that beyond the equator to the south there is no continent, but only the sea which they call the Atlantic, and if any of them asserted the existence of a continent there, they found many reasons for refusing to consider it a habitable country. But this last voyage of mine has proved that this opinion of theirs was erroneous and in every way contrary to the facts.' . . . This expression 'Novus Mundus' [New World], thus occurring in a private letter, had a remarkable career. Early in June, 1503, about the time when Americus was starting on his fourth voyage, Lorenzo died. By the beginning of 1504, a Latin version of the letter [translated by Giovanni Giocondo] was printed and published, with the title 'Mundus Novus.' . . . The little four-leaved tract, 'Mundus Novus,' turned out to be the great literary success of the day. M. Harisse has described at least eleven Latin editions probably published in the course of 1504, and by 1506 not less than eight editions of German versions had been issued. Intense curiosity was aroused by this announcement of the existence of a populous land beyond the equator and unknown (could such a thing be possible) to the ancients,"—who did know something, at least, about the eastern parts of the Asiatic continent which Columbus was supposed to have reached. The "Novus Mundus," so named, began soon to be represented on maps and globes, generally as a great island or quasi-continent lying on and below the equator. "Europe, Asia and Africa were the three parts of the earth [previously known], and so this opposite region, hitherto unknown, but mentioned by Mela and indicated by Ptolemy, was the Fourth Part. We can now begin to understand the intense and wildly absorbing interest with which people read the brief story of the third voyage of Vespucius, and we can see that in the nature of that interest there was nothing calculated to bring it into comparison with the work of Columbus. The two navigators were not regarded as rivals in doing the same thing, but as men who had done two very different things; and to give credit to one was by no means equivalent to withholding credit from the other." In 1507, Martin Waldseemüller, professor of geography at Saint-Dié, published a small treatise entitled "Cosmographie Introductio," with that second of the two known letters of Vespucius—the one addressed to Soderini, of which an account is given above (A. D. 1497-1498)—appended to it. "In this rare book occurs the first suggestion of the name America. After having treated of the division of the earth's inhabited surface into three parts—Europe, Asia, and Africa—Waldseemüller

speaks of the discovery of a Fourth Part," and says: "Wherefore I do not see what is rightly to hinder us from calling it Amerige or America, i. e., the land of Americus, after its discoverer Americus, a man of sagacious mind, since both Europe and Asia have got their names from women." . . . Such were the winged words but for which, as M. Harisse reminds us, the western hemisphere might have come to be known as Atlantis, or Hesperides, or Santa Cruz, or New India, or perhaps Columbia. . . . In about a quarter of a century the first stage in the development of the naming of America had been completed. That stage consisted of five distinct steps: 1. Americus called the regions visited by him beyond the equator 'a new world' because they were unknown to the ancients; 2. Giocondo made this striking phrase 'Mundus Novus' into a title for his translation of the letter. . . ; 3. the name *Mundus Novus* got placed upon several maps as an equivalent for *Terra Sanctæ Crucis*, or what we call Brazil; 4. the suggestion was made that *Mundus Novus* was the Fourth Part of the earth, and might properly be named America after its discoverer; 5. the name America thus got placed upon several maps [the first, so far as known, being a map ascribed to Leonardo da Vinci and published about 1514, and the second a globe made in 1515 by Johann Schöner, at Nuremberg] as an equivalent for what we call Brazil, and sometimes came to stand alone as an equivalent for what we call South America, but still signified only a part of the dry land beyond the Atlantic to which Columbus had led the way. . . . This wider meaning [of South America] became all the more firmly established as its narrower meaning was usurped by the name Brazil. Three centuries before the time of Columbus the red dye-wood called brazil-wood was an article of commerce, under that same name, in Italy and Spain. It was one of the valuable things brought from the East, and when the Portuguese found the same dye-wood abundant in those tropical forests that had seemed so beautiful to Vespucci, the name Brazil soon became fastened upon the country and helped to set free the name America from its local associations." When, in time, and by slow degrees, the great fact was learned, that all the lands found beyond the Atlantic by Columbus and his successors, formed part of one continental system, and were all to be embraced in the conception of a New World, the name which had become synonymous with New World was then naturally extended to the whole. The evolutionary process of the naming of the western hemisphere as a whole was thus made complete in 1541, by Mercator, who spread the name America in large letters upon a globe which he constructed that year, so that part of it appeared upon the northern and part upon the southern continent.—J. Fiske, *The Discovery of America*, ch. 7 (v. 2).

A. D. 1502.—The Second Voyage of Ojeda.—The first voyage of Alonso de Ojeda, from which he returned to Spain in June 1500, was profitable to nothing but his reputation as a bold and enterprising explorer. By way of reward, he was given "a grant of land in Hispaniola, and likewise the government of Coquibacoo, which place he had discovered [and which he had called Venezuela]. He was authorized to fit out a number of ships at his own expense and to prosecute discoveries on the coast of Terra Firma. . . . With four vessels, Ojeda set sail for the Canaries, in 1502, and thence proceeded to the Gulf of Paria, from which locality he found his way to Coquibacoo. Not liking this poor country, he sailed on to the Bay of Honda, where he determined to found his settlement, which was, however, destined to be of short duration. Provisions very soon became scarce; and one of his partners, who had been sent to procure supplies from Jamaica, failed to return until Ojeda's followers were almost in a state of mutiny. The result was that the whole colony set sail for Hispaniola, taking the governor with them in chains. All that Ojeda gained by his expedition was that he at length came off winner in a lawsuit, the costs of which, however, left him a ruined man."—R. G. Watson, *Spanish and Portuguese S. Am.*, bk. 1, ch. 1.

A. D. 1503-1504.—The Fourth Voyage of Americus Vespucci.—First Settlement in Brazil.—In June, 1503, "Amerigo sailed again from Lisbon, with six ships. The object of this voyage was to discover a certain island called Melcha, which was supposed to lie west of Calicut, and to be as famous a mart in the commerce of the Indian world as Cadiz was in Europe. They made the Cape de Verds, and then, contrary to the judgment of Vespucci and of all the fleet, the Commander persisted in standing for Serra Leoa." The Commander's ship was lost, and Vespucci, with one vessel, only, reached the coast of the New World, finding a port which is thought to have been Bahia. Here "they waited above two months in vain expectation of being joined by the rest of the squadron. Having lost all hope of this they coasted on for 260 leagues to the Southward, and there took port again in 18° S. 35° W. of the meridian of Lisbon. Here they remained five months, upon good terms with the natives, with whom some of the party penetrated forty leagues into the interior; and here they erected a fort, in which they left 24 men who had been saved from the Commander's ship. They gave them 12 guns, besides other arms, and provisions for six months; then loaded with brazil [wood], sailed homeward and returned in safety. . . . The honour, therefore, of having formed the first settlement in this country is due to Amerigo Vespucci. It does not appear that any further attention was as this time paid to it. . . . But the cargo of brazil which Vespucci had brought home tempted private adventurers, who were content with peaceful gains, to trade thither for that valuable wood; and this trade became so well known, that in consequence the coast and the whole country obtained the name of Brazil, notwithstanding the holier appellation [*Santa Cruz*] which Cabral had given it."—R. Southey, *Hist. of Brazil*, v. 1, ch. 1.

A. D. 1509-1511.—The Expeditions of Ojeda and Nicuesa to the Isthmus.—The Set-

tlement at Darien. — "For several years after his ruinous, though successful lawsuit, we lose all traces of Alonzo de Ojeda, excepting that we are told he made another voyage to Coquibacoa [Venezuela], in 1505. No record remains of this expedition, which seems to have been equally unprofitable with the preceding, for we find him, in 1508, in the island of Hispaniola as poor in purse, though as proud in spirit, as ever. . . . About this time the cupidity of King Ferdinand was greatly excited by the accounts by Columbus of the gold mines of Veragua, in which the admiral fancied he had discovered the Aurea Chersonesus of the ancients, whence King Solomon procured the gold used in building the temple of Jerusalem. Subsequent voyagers had corroborated the opinion of Columbus as to the general riches of the coast of Terra Firma; King Ferdinand resolved, therefore, to found regular colonies along that coast, and to place the whole under some capable commander." Ojeda was recommended for this post, but found a competitor in one of the gentlemen of the Spanish court, Diego de Nicuesa. "King Ferdinand avoided the dilemma by favoring both; not indeed by furnishing them with ships and money, but by granting patents and dignities, which cost nothing, and might bring rich returns. He divided that part of the continent which lies along the Isthmus of Darien into two provinces, the boundary line running through the Gulf of Uraba. The eastern part, extending to Cape de la Vela, was called New Andalusia, and the government of it given to Ojeda. The other to the west [called Castilla del Oro], including Veragua, and reaching to Cape Gracias à Dios, was assigned to Nicuesa. The island of Jamaica was given to the two governors in common, as a place whence to draw supplies of provisions." Slender means for the equipment of Ojeda's expedition were supplied by the veteran pilot, Juan de la Cosa, who accompanied him as his lieutenant. Nicuesa was more amply provided. The rival armaments arrived at San Domingo about the same time (in 1509), and much quarreling between the two commanders ensued. Ojeda found a notary in San Domingo, Martin Fernandez de Enciso, who had money which he consented to invest in the enterprise, and who promised to follow him with an additional ship-load of recruits and supplies. Under this arrangement Ojeda made ready to sail in advance of his competitor, embarking Nov. 10, 1509. Among those who sailed with him was Francisco Pizarro, the future conqueror of Peru. Ojeda, by his energy, gained time enough to nearly ruin his expedition before Nicuesa reached the scene; for, having landed at Carthagena, he made war upon the natives, pursued them recklessly into the interior of the country, with 70 men, and was overwhelmed by the desperate savages, escaping with only one companion from their poisoned arrows. His faithful friend, the pilot, Juan de la Cosa, was among the slain, and Ojeda himself, hiding in the forest, was nearly dead of hunger and exposure when found and rescued by a searching party from his ships. At this juncture the fleet of Nicuesa made its appearance. Jealousies were forgotten in a common rage against the natives and the two expeditions were joined in an attack on the Indian villages which spared nothing. Nicuesa then proceeded to Veragua, while Ojeda founded a town, which he called San Sebastian,

at the east end of the Gulf of Uraba. Incessantly harassed by the natives, terrified by the effects of the poison which these used in their warfare, and threatened with starvation by the rapid exhaustion of its supplies, the settlement lost courage and hope. Enciso and his promised ship were waited for in vain. At length there came a vessel which certain piratical adventurers at Hispaniola had stolen, and which brought some welcome provisions, eagerly bought at an exorbitant price. Ojeda, half recovered from a poisoned wound, which he had treated heroically with red-hot plates of iron, engaged the pirates to convey him to Hispaniola, for the procuring of supplies. The voyage was a disastrous one, resulting in shipwreck on the coast of Cuba and a month of desperate wandering in the morasses of the island. Ojeda survived all these perils and sufferings, made his way to Jamaica, and from Jamaica to San Domingo, found that his partner Enciso had sailed for the colony long before, with abundant supplies, but could learn nothing more. Nor could he obtain for himself any means of returning to San Sebastian, or of dispatching relief to the place. Sick, penniless and disheartened, he went into a convent and died. Meantime the despairing colonists at San Sebastian waited until death had made them few enough to be all taker on board of the two little brigantines which were left to them; then they sailed away, Pizarro in command. One of the brigantines soon went down in a squall; the other made its way to the harbor of Carthagena, where it found the tardy Enciso, searching for his colony. Enciso, under his commission, now took command, and insisted upon going to San Sebastian. There the old experiences were soon renewed, and even Enciso was ready to abandon the deadly place. The latter had brought with him a needy cavalier, Vasco Nuñez de Balboa—so needy that he smuggled himself on board Enciso's ship in a cask to escape his creditors. Vasco Nuñez, who had coasted this region with Bastidas, in 1500, now advised a removal of the colony to Darien, on the opposite coast of the Gulf of Uraba. His advice, which was followed, proved good, and the hopes of the settlers were raised; but Enciso's modes of government proved irksome to them. Then Balboa called attention to the fact that, when they crossed the Gulf of Uraba, they passed out of the territory covered by the patent to Ojeda, under which Enciso was commissioned, and into that granted to Nicuesa. On this suggestion Enciso was promptly deposed and two alcaldes were elected, Balboa being one. While events in one corner of Nicuesa's domain were thus establishing a colony for that ambitious governor, he himself, at the other extremity of it, was faring badly. He had suffered hardships, separation from most of his command and long abandonment on a desolate coast; had rejoined his followers after great suffering, only to suffer yet more in their company, until less than one hundred remained of the 700 who sailed with him a few months before. The settlement at Veragua had been deserted, and another, named Nombre de Dios undertaken, with no improvement of circumstances. In this situation he was rejoiced, at last, by the arrival of one of his lieutenants, Rodrigo de Colmenares, who came with supplies. Colmenares brought tidings, moreover, of the prosperous colony at Darien, which he had discovered on his way, with an invitation to

Nicuesa to come and assume the government of it. He accepted the invitation with delight; but, alas! the community at Darien had repented of it before he reached them, and they refused to receive him when he arrived. Permitted finally to land, he was seized by a treacherous party among the colonists — to whom Balboa is said to have opposed all the resistance in his power — was put on board of an old and crazy brigantine, with seventeen of his friends, and compelled to take an oath that he would sail straight to Spain. "The frail bark set sail on the first of March, 1511, and steered across the Caribbean Sea for the island of Hispaniola, but was never seen or heard of more." — W. Irving, *Life and Voyages of Columbus and his Companions*, v. 3.

A. D. 1512.—The Voyage of Ponce de Leon in quest of the Fountain of Youth, and his Discovery of Florida.—"Whatever may have been the Southernmost point reached by Cabot in coasting America on his return, it is certain that he did not land in Florida, and that the honour of first exploring that country is due to Juan Ponce de Leon. This cavalier, who was governor of Puerto Rico, induced by the vague traditions circulated by the natives of the West Indies, that there was a country in the north possessing a fountain whose waters restored the aged to youth, made it an object of his ambition to be the first to discover this marvellous region. With this view, he resigned the governorship, and set sail with three caravels on the 3d of March 1512. Steering N. $\frac{1}{2}$ N., he came upon a country covered with flowers and verdure; and as the day of his discovery happened to be Palm Sunday, called by the Spaniards 'Pasqua Florida,' he gave it the name of Florida from this circumstance. He landed on the 2d of April, and took possession of the country in the name of the king of Castile. The warlike people of the coast of Cautio (a name given by the Indians to all the country lying between Cape Cañaveral and the southern point of Florida) soon, however, compelled him to retreat, and he pursued his exploration of the coast as far as 30° 8' north latitude, and on the 8th of May doubled Cape Cañaveral. Then retracing his course to Puerto Rico, in the hope of finding the island of Bimini, which he believed to be the Land of Youth, and described by the Indians as opposite to Florida, he discovered the Bahamas, and some other islands, previously unknown. Bad weather compelling him to put into the isle of Guanima to repair damages, he despatched one of his caravels, under the orders of Jaun Perez de Ortubia and of the pilot Anton de Alaminos, to gain information respecting the desired land, which he had as yet been totally unable to discover. He returned to Puerto Rico on the 21st of September; a few days afterwards, Ortubia arrived also with news of Bimini. He reported that he had explored the island, — which he described as large, well wooded, and watered by numerous streams, — but he had failed in discovering the fountain. Oviedo places Bimini at 40 leagues west of the island of Bahama. Thus all the advantages which Ponce de Leon promised himself from this voyage turned to the profit of geography: the title of 'Adelantado of Bimini and

Florida,' which was conferred upon him, was purely honorary; but the route taken by him in order to return to Puerto Rico, showed the advantage of making the homeward voyage to Spain by the Bahama Channel." — W. B. Rye, *Introd. to "Discovery and Conquest of Terra Florida, by a gentleman of Elvas"* (*Hakluyt Soc.*, 1851).

A. D. 1513-1517.—The discovery of the Pacific by Vasco Nuñez de Balboa.—Pedrarias Davila on the Isthmus.—With Enciso deposed from authority and Nicuesa sent adrift, Vasco Nuñez de Balboa seems to have easily held the lead in affairs at Darien, though not without much opposition; for faction and turbulence were rife. Enciso was permitted to carry his grievances and complaints to Spain, but Balboa's colleague, Zamudio, went with him, and another comrade proceeded to Hispaniola, both of them well-furnished with gold. For the quest of gold had succeeded at last. The Darien adventurers had found considerable quantities in the possession of the surrounding natives, and were gathering it with greedy hands. Balboa had the prudence to establish friendly relations with one of the most important of the neighboring caciques, whose comely daughter he wedded—according to the easy customs of the country — and whose ally he became in wars with the other caciques. By gift and tribute, therefore as well as by plunder, he harvested more gold than any before him had found since the ransacking of the New World began. But what they obtained seemed little compared with the treasures reported to them as existing beyond the near mountains and toward the south. One Indian youth, son of a friendly cacique, particularly excited their imaginations by the tale which he told of another great sea, not far to the west, on the southward-stretching shores of which were countries that teemed with every kind of wealth. He told them, however, that they would need a thousand men to fight their way to this Sea. Balboa gave such credence to the story that he sent envoys to Spain to solicit forces from the king for an adequate expedition across the mountains. They sailed in October, 1512, but did not arrive in Spain until the following May. They found Balboa in much disfavor at the court. Enciso and the friends of the unfortunate Nicuesa had unitedly ruined him by their complaints, and the king had caused criminal proceedings against him to be commenced. Meantime, some inkling of these hostilities had reached Balboa, himself, conveyed by a vessel which bore to him, at the same time, a commission as captain-general from the authorities in Hispaniola. He now resolved to become the discoverer of the ocean which his Indian friends described, and of the rich lands bordering it, before his enemies could interfere with him. "Accordingly, early in September, 1513, he set out on his renowned expedition for finding 'the other sea,' accompanied by 190 men well armed, and by dogs, which were of more avail than men, and by Indian slaves to carry the burdens. He went by sea to the territory of his father-in-law, King Careta, by whom he was well received, and accompanied by whose Indians he moved on into Poncha's territory." Quieting the fears of this cacique, he passed his country without fighting. The next chief encountered, named Quarequa, attempted resistance, but was routed, with a great slaughter of his

people, and Balboa pushed on. "On the 25th of September, 1513, he came near to the top of a mountain from whence the South Sea was visible. The distance from Poncha's chief town to this point was forty leagues, reckoned then six days' journey; but Vasco Nuñez and his men took twenty-five days to accomplish it, as they suffered much from the roughness of the ways and from the want of provisions. A little before Vasco Nuñez reached the height, Quarequa's Indians informed him of his near approach to the sea. It was a sight in beholding which, for the first time, any man would wish to be alone. Vasco Nuñez bade his men sit down while he ascended, and then, in solitude, looked down upon the vast Pacific—the first man of the Old World, so far as we know, who had done so. Falling on his knees, he gave thanks to God for the favour shown to him in his being permitted to discover the Sea of the South. Then with his hand he beckoned to his men to come up. When they had come, both he and they knelt down and poured forth their thanks to God. He then addressed them. . . . Having . . . addressed his men, Vasco Nuñez proceeded to take formal possession, on behalf of the kings of Castile, of the sea and of all that was in it; and in order to make memorials of the event, he cut down trees, formed crosses, and heaped up stones. He also inscribed the names of the monarchs of Castile upon great trees in the vicinity." Afterwards, when he had descended the western slope and found the shore, "he entered the sea up to his thighs, having his sword on, and with his shield in his hand; then he called the by-standers to witness how he touched with his person and took possession of this sea for the kings of Castile, and declared that he would defend the possession of it against all comers. After this, Vasco Nuñez made friends in the usual manner, first conquering and then negotiating with" the several chiefs or caciques whose territories came in his way. He explored the Gulf of San Miguel, finding much wealth of pearls in the region, and returned to Darien by a route which crossed the isthmus considerably farther to the north, reaching his colony on the 29th of January, 1514, having been absent nearly five months. "His men at Darien received him with exultation, and he lost no time in sending his news, 'such signal and new news,' . . . to the King of Spain, accompanying it with rich presents. His letter, which gave a detailed account of his journey, and which, for its length, was compared by Peter Martyr to the celebrated letter that came to the senate from Tiberius, contained in every page thanks to God that he had escaped from such great dangers and labours. Both the letter and the presents were intrusted to a man named Arbolanche, who departed from Darien about the beginning of March, 1514. . . . Vasco Nuñez's messenger, Arbolanche, reached the court of Spain too late for his master's interests." The latter had already been superseded in the Governorship, and his successor was on the way to take his authority from him. The new governor was one Pedrarias De Ayala, or Davila, as the name is sometimes written;—an envious and malignant old man, under whose rule on the isthmus the destructive energy of Spanish conquest rose to its meanest and most heartless and brainless development. Conspicuously exposed as he was to the jealousy and hatred of Pedra-

rias, Vasco Nuñez was probably doomed to ruin, in some form, from the first. At one time, in 1516, there seemed to be a promise for him of alliance with his all-powerful enemy, by a marriage with one of the governor's daughters, and he received the command of an expedition which again crossed the isthmus, carrying ships, and began the exploration of the Pacific. But circumstances soon arose which gave Pedrarias an opportunity to accuse the explorer of treasonable designs and to accomplish his arrest—Francisco Pizarro being the officer fitly charged with the execution of the governor's warrant. Brought in chains to Acla, Vasco Nuñez was summarily tried, found guilty and led forth to swift death, laying his head upon the block (A. D. 1517). "Thus perished Vasco Nuñez de Balboa, in the forty-second year of his age, the man who, since the time of Columbus, had shown the most statesmanlike and warriorlike powers in that part of the world, but whose career only too much resembles that of Ojeda, Nicuesa, and the other unfortunate commanders who devastated those beautiful regions of the earth."—Sir A. Helps, *Spanish Conquest in Am.*, bk. 6 (v. 1).—"If I have applied strong terms of denunciation to Pedrarias Dávila, it is because he unquestionably deserves it. He is by far the worst man who came officially to the New World during its early government. In this all authorities agree. And all agree that Vasco Nuñez was not deserving of death."—H. H. Bancroft, *Hist. of the Pacific States*, v. 1, ch. 8-12 (foot-note, p. 458).

A. D. 1517-1518.—The Spaniards find Mexico.—"An hidalgo of Cuba, named Hernandez de Cordova, sailed with three vessels on an expedition to one of the neighbouring Bahama Islands, in quest of Indian slaves (Feb. 8, 1517). He encountered a succession of heavy gales which drove him far out of his course, and at the end of three weeks he found himself on a strange and unknown coast. On landing and asking the name of the country, he was answered by the natives 'Tectelan,' meaning 'I do not understand you,' but which the Spaniards, misinterpreting into the name of the place, easily corrupted into Yucatan. Some writers give a different etymology. . . . Bernal Diaz says the word came from the vegetable 'yuca' and 'tale,' the name for a hillock in which it is planted. . . . M. Waldeck finds a much more plausible derivation in the Indian word 'Ouyouckatan,' 'listen to what they say.' . . . Cordova had landed on the north-eastern end of the peninsula, at Cape Catoche. He was astonished at the size and solid materials of the buildings constructed of stone and lime, so different from the frail tenements of reeds and rushes which formed the habitations of the islanders. He was struck, also, with the higher cultivation of the soil, and with the delicate texture of the cotton garments and gold ornaments of the natives. Everything indicated a civilization far superior to anything he had before witnessed in the New World. He saw the evidence of a different race, moreover, in the warlike spirit of the people. . . . Wherever they landed they were met with the most deadly hostility. Cordova himself, in one of his

skirmishes with the Indians, received more than a dozen wounds, and one only of his party escaped unhurt. At length, when he had coasted the peninsula as far as Campeachy, he returned to Cuba, which he reached after an absence of several months. . . . The reports he had brought back of the country, and, still more, the specimens of curiously wrought gold, convinced Velasquez [governor of Cuba] of the importance of this discovery, and he prepared with all despatch to avail himself of it. He accordingly fitted out a little squadron of four vessels for the newly discovered lands, and placed it under the command of his nephew, Juan de Grijalva, a man on whose probity, prudence, and attachment to himself he knew he could rely. The fleet left the port of St. Jago de Cuba, May 1, 1518. . . . Grijalva soon passed over to the continent and coasted the peninsula, touching at the same places as his predecessor. Everywhere he was struck, like him, with the evidences of a higher civilization, especially in the architecture; as he well might be, since this was the region of those extraordinary remains which have become recently the subject of so much speculation. He was astonished, also, at the sight of large stone crosses, evidently objects of worship, which he met with in various places. Reminded by these circumstances of his own country, he gave the peninsula the name New Spain, a name since appropriated to a much wider extent of territory. Wherever Grijalva landed, he experienced the same unfriendly reception as Cordova, though he suffered less, being better prepared to meet it." He succeeded, however, at last, in opening a friendly conference and traffic with one of the chiefs, on the Rio de Tabasco, and "had the satisfaction of receiving, for a few worthless toys and trinkets, a rich treasure of jewels, gold ornaments and vessels, of the most fantastic forms and workmanship. Grijalva now thought that in this successful traffic—successful beyond his most sanguine expectations—he had accomplished the chief object of his mission." He therefore dispatched Alvarado, one of his captains, to Velasquez, with the treasure acquired, and continued his voyage along the coast, as far as the province of Panuco, returning to Cuba at the end of about six months from his departure. "On reaching the Island, he was surprised to learn that another and more formidable armament had been fitted out to follow up his own discoveries, and to find orders at the same time from the governor, couched in no very courteous language, to repair at once to St. Jago. He was received by that personage, not merely with coldness, but with reproaches, for having neglected so fair an opportunity of establishing a colony in the country he had visited."—W. H. Prescott, *Conquest of Mexico*, bk. 2, ch. 1.

A. D. 1519-1524.—The Voyage of Magellan and Sebastian del Cano.—The New World passed and the Earth circumnavigated.—The Congress at Badajos.—Fernando Magellan, or Magalhaes, was "a disaffected Portuguese gentleman who had served his country for five years in the Indies under Albuquerque, and understood

well the secrets of the Eastern trade. In 1517, conjointly with his geographical and astronomical friend, Ruy Falerio, another unrequited Portuguese, he offered his services to the Spanish court. At the same time these two friends proposed, not only to prove that the Moluccas were within the Spanish lines of demarkation, but to discover a passage thither different from that used by the Portuguese. Their schemes were listened to, adopted and carried out. The Straits of Magellan were discovered, the broad South Sea was crossed, the Ladrões and the Philippines were inspected, the Moluccas were passed through, the Cape of Good Hope was doubled on the homeward voyage, and the globe was circumnavigated, all in less than three years, from 1519 to 1522. Magellan lost his life, and only one of his five ships returned [under Sebastian del Cano] to tell the marvelous story. The magnitude of the enterprise was equalled only by the magnitude of the results. The globe for the first time began to assume its true character and size in the minds of men, and the minds of men began soon to grasp and utilize the results of this circumnavigation for the enlargement of trade and commerce, and for the benefit of geography, astronomy, mathematics, and the other sciences. This wonderful story, is it not told in a thousand books? . . . The Portuguese in India and the Spiceries, as well as at home, now seeing the inevitable conflict approaching, were thoroughly aroused to the importance of maintaining their rights. They openly asserted them, and pronounced this trade with the Moluccas by the Spanish an encroachment on their prior discoveries and possession, as well as a violation of the Papal Compact of 1494, and prepared themselves energetically for defense and offense. On the other hand, the Spaniards as openly declared that Magellan's fleet carried the first Christians to the Moluccas and by friendly intercourse with the kings of those islands, reduced them to Christian subjection and brought back letters and tribute to Cæsar. Hence these kings and their people came under the protection of Charles V. Besides this, the Spaniards claimed that the Moluccas were within the Spanish half, and were therefore doubly theirs. . . . Matters thus waxing hot, King John of Portugal begged Charles V. to delay dispatching his new fleet until the disputed points could be discussed and settled. Charles, who boasted that he had rather be right than rich, consented, and the ships were staid. These two Christian princes, who owned all the newly discovered and to be discovered parts of the whole world between them by deed of gift of the Pope, agreed to meet in Congress at Badajos by their representatives, to discuss and settle all matters in dispute about the division of their patrimony, and to define and stake out their lands and waters, both parties agreeing to abide by the decision of the Congress. Accordingly, in the early spring of 1524, up went to this little border town four-and-twenty wise men, or thereabouts, chosen by each prince. They comprised the first judges, lawyers, mathematicians, astronomers, cosmographers, navigators and pilots of the land, among whose names were many honored now as then—such as Fernando Columbus, Sebastian Cabot, Estevan Gomez, Diego Ribero, etc. . . . The debates and proceedings of this Congress, as reported by Peter Martyr, Oviedo, and Gomara, are very amusing,

but no regular joint decision could be reached, the Portuguese declining to subscribe to the verdict of the Spaniards, inasmuch as it deprived them of the Moluccas. So each party published and proclaimed its own decision after the Congress broke up in confusion on the last day of May, 1524. It was, however, tacitly understood that the Moluccas fell to Spain, while Brazil, to the extent of two hundred leagues from Cape St. Augustine, fell to the Portuguese. . . . However, much good resulted from this first geographical Congress. The extent and breadth of the Pacific were appreciated, and the influence of the Congress was soon after seen in the greatly improved maps, globes, and charts."—H. Stevens, *Hist. and Geog. Notes*, 1453-1530.—"For three months and twenty days he [Magellan] sailed on the Pacific and never saw inhabited land. He was compelled by famine to strip off the pieces of skin and leather wherewith his rigging was here and there bound, to soak them in the sea and then soften them with warm water, so as to make a wretched food; to eat the sweepings of the ship and other loathsome matter; to drink water gone putrid by keeping; and yet he resolutely held on his course, though his men were dying daily. . . . In the whole history of human undertakings there is nothing that exceeds, if indeed there is anything that equals, this voyage of Magellan's. That of Columbus dwindles away in comparison. It is a display of superhuman courage, superhuman perseverance."—J. W. Draper, *Hist. of the Intellectual Development of Europe*, ch. 19.—"The voyage [of Magellan] . . . was doubtless the greatest feat of navigation that has ever been performed, and nothing can be imagined that would surpass it except a journey to some other planet. It has not the unique historic position of the first voyage of Columbus, which brought together two streams of human life that had been disjoined since the Glacial Period. But as an achievement in ocean navigation that voyage of Columbus sinks into insignificance by the side of it, and when the earth was a second time encompassed by the greatest English sailor of his age, the advance in knowledge, as well as the different route chosen, had much reduced the difficulty of the performance. When we consider the frailness of the ships, the immeasurable extent of the unknown, the mutinies that were prevented or quelled, and the hardships that were endured, we can have no hesitation in speaking of Magellan as the prince of navigators."—J. Fiske, *The Discovery of America*, ch. 7 (v. 2).

A. D. 1519-1525.—The Voyages of Garay and Ayllon.—Discovery of the mouth of the Mississippi.—Exploration of the Carolina Coast.—In 1519, Francisco de Garay, governor of Jamaica, who had been one of the companions of Columbus on his second voyage, having heard of the richness and beauty of Yucatan, "at his own charge sent out four ships well equipped, and with good pilots, under the command of Alvarez Alonso de Pineda. His professed object was to search for some strait, west of Florida, which was not yet certainly known to form a part of the continent. The strait having been sought for in vain, his ships turned

toward the west, attentively examining the ports, rivers, inhabitants, and everything else that seemed worthy of remark; and especially noticing the vast volume of water brought down by one very large stream. At last they came upon the track of Cortes near Vera Cruz. . . . The carefully drawn map of the pilots showed distinctly the Mississippi, which, in this earliest authentic trace of its outlet, bears the name of the Espiritu Santo. . . . But Garay thought not of the Mississippi and its valley; he coveted access to the wealth of Mexico; and, in 1523, lost fortune and life ingloriously in a dispute with Cortes for the government of the country on the river Panuco. A voyage for slaves brought the Spaniards in 1520 still farther to the north. A company of seven, of whom the most distinguished was Lucas Vasquez de Ayllon, fitted out two slave ships from St. Domingo, in quest of laborers for their plantations and mines. From the Bahama Islands they passed to the coast of South Carolina, which was called Chicora. The Combahee river received the name of Jordan; the name of St. Helena, whose day is the 18th of August, was given to a cape, but now belongs to the sound." Luring a large number of the confiding natives on board their ships the adventurers treacherously set sail with them; but one of the vessels foundered at sea, and most of the captives on the other sickened and died. Vasquez de Ayllon was rewarded for his treacherous exploit by being authorized and appointed to make the conquest of Chicora. "For this bolder enterprise the undertaker wasted his fortune in preparations; in 1525 his largest ship was stranded in the river Jordan; many of his men were killed by the natives; and he himself escaped only to suffer from the consciousness of having done nothing worthy of honor. Yet it may be that ships, sailing under his authority, made the discovery of the Chesapeake and named it the bay of St. Mary; and perhaps even entered the bay of Delaware, which, in Spanish geography, was called St. Christopher's."—G. Bancroft, *Hist. of the U. S.*, pt. 1, ch. 2.

Also in H. H. Bancroft, *Hist. of the Pacific States*, v. 4, ch. 11, and v. 5, ch. 6-7.—W. G. Simms, *Hist. of S. Carolina*, bk. 1, ch. 1.

A. D. 1523-1524.—The Voyages of Verrazano.—First undertakings of France in the New World.—"It is constantly admitted in our history that our kings paid no attention to America before the year 1523. Then Francis I., wishing to excite the emulation of his subjects in regard to navigation and commerce, as he had already so successfully in regard to the sciences and fine arts, ordered John Verazani, who was in his service, to go and explore the New Lands, which began to be much talked of in France. . . . Verazani was accordingly sent, in 1523, with four ships to discover North America; but our historians have not spoken of his first expedition, and we should be in ignorance of it now, had not Ramusio preserved in his great collection a letter of Verazani himself, addressed to Francis I. and dated Dieppe, July 8, 1524. In it he supposes the king already informed of the success and details of the voyage, so that he contents himself with stating that he sailed from Dieppe in four vessels, which he had safely brought back to that port. In January, 1524, he sailed with two ships, the Dauphine and the Normande, to

cruise against the Spaniards. Towards the close of the same year, or early in the next, he again fitted out the Dauphine, on which, embarking with 50 men and provisions for eight months, he first sailed to the island of Madeira."—Father Charlevoix, *Hist. of New France* (trans. by J. G. Shea), bk. 1.—"On the 17th of January, 1524, he [Verrazano] parted from the 'Islas desiertas,' a well-known little group of islands near Madeira, and sailed at first westward, running in 25 days 500 leagues, with a light and pleasant easterly breeze, along the northern border of the trade winds, in about 30° N. His track was consequently nearly like that of Columbus on his first voyage. On the 14th of February he met 'with as violent a hurricane as any ship ever encountered.' But he weathered it, and pursued his voyage to the west, 'with a little deviation to the north,' when, after having sailed 24 days and 400 leagues, he descried a new country which, as he supposed, had never before been seen either by modern or ancient navigators. The country was very low. From the above description it is evident that Verrazano came in sight of the east coast of the United States about the 10th of March, 1524. He places his land-fall in 34° N., which is the latitude of Cape Fear." He first sailed southward, for about 50 leagues, he states, looking for a harbor and finding none. He then turned northward. "I infer that Verrazano saw little of the coast of South Carolina and nothing of that of Georgia, and that in these regions he can, at most, be called the discoverer only of the coast of North Carolina. . . . He rounded Cape Hatteras, and at a distance of about 50 leagues came to another shore, where he anchored and spent several days. . . . This was the second principal landing-place of Verrazano. If we reckon 50 leagues from Cape Hatteras, it would fall somewhere upon the east coast of Delaware, in latitude 38° N., where, by some authors, it is thought to have been. But if, as appears most likely, Verrazano reckoned his distance here, as he did in other cases, from his last anchoring, and not from Cape Hatteras, we must look for his second landing somewhere south of the entrance to Chesapeake Bay, and near the entrance to Albemarle Sound. And this better agrees with the 'sail of 100 leagues' which Verrazano says he made from his second to his third landing-place, in New York Bay. . . . He found at this third landing station an excellent berth, where he came to anchor, well-protected from the winds, . . . and from which he ascended the river in his boat into the interior. He found the shores very thickly settled, and as he passed up half a league further, he discovered a most beautiful lake . . . of three leagues in circumference. Here, more than 30 canoes came to him with a multitude of people, who seemed very friendly. . . . This description contains several accounts which make it still more clear that the Bay of New York was the scene of these occurrences."—Verrazano's anchorage having been at Gravesend Bay, the river which he entered being the Narrows, and the lake he found being the Inner Harbor. From New York Bay Verrazano sailed eastward, along the southern shore of Long Island, and following the New England coast, touching at or describing points which are identified with Narragansett Bay and Newport, Block Island or Martha's Vineyard, and Portsmouth. His coasting voyage was pursued as far

as 50° N., from which point he sailed homeward. "He entered the port of Dieppe early in July, 1524. His whole exploring expedition, from Madeira and back, had accordingly lasted but five and a half months."—J. G. Kohl, *Hist. of the Discovery of Maine* (Me. Hist. Soc. Coll., 2d Series, v. 1), ch. 8.

A. D. 1524-1528.—The Explorations of Pizarro and Discovery of Peru.—"The South Sea having been discovered, and the inhabitants of Tierra Firme having been conquered and pacified, the Governor Pedrarias de Avila founded and settled the cities of Panama and of Nata, and the town of Nombre de Dios. At this time the Captain Francisco Pizarro, son of the Captain Gonzalo Pizarro, a knight of the city of Truxillo, was living in the city of Panama; possessing his house, his farm and his Indians, as one of the principal people of the land, which indeed he always was, having distinguished himself in the conquest and settling, and in the service of his Majesty. Being at rest and in repose, but full of zeal to continue his labours and to perform other more distinguished services for the royal crown, he sought permission from Pedrarias to discover that coast of the South Sea to the eastward. He spent a large part of his fortune on a good ship which he built, and on necessary supplies for the voyage, and he set out from the city of Panama on the 14th day of the month of November, in the year 1524. He had 112 Spaniards in his company, besides some Indian servants. He commenced a voyage in which they suffered many hardships, the season being winter and unpropitious." From this unsuccessful voyage, during which many of his men died of hunger and disease, and in the course of which he found no country that tempted his cupidity or his ambition, Pizarro returned after some months to "the land of Panama, landing at an Indian village near the island of Pearls, called Chuchama. Thence he sent the ship to Panama, for she had become unseaworthy by reason of the teredo; and all that had befallen was reported to Pedrarias, while the Captain remained behind to refresh himself and his companions. When the ship arrived at Panama it was found that, a few days before, the Captain Diego de Almagro had sailed in search of the Captain Pizarro, his companion, with another ship and 70 men." Almagro and his party followed the coast until they came to a great river, which they called San Juan [a few miles north of the port of Buenaventura, in New Granada]. . . . They there found signs of gold, but there being no traces of the Captain Pizarro, the Captain Almagro returned to Chuchama, where he found his comrade. They agreed that the Captain Almagro should go to Panama, repair the ships, collect more men to continue the enterprise, and defray the expenses, which amounted to more than 10,000 castellanos. At Panama much obstruction was caused by Pedrarias and others, who said that the voyage should not be persisted in, and that his Majesty would not be served by it. The Captain Almagro, with the authority given him by his comrade, was very constant in prosecuting the work

he had commenced, and . . . Pedrarias was forced to allow him to engage men. He set out from Panama with 110 men; and went to the place where Pizarro waited with another 50 of the first 110 who sailed with him, and of the 70 who accompanied Almagro when he went in search. The other 130 were dead. The two captains, in their two ships, sailed with 160 men, and coasted along the land. When they thought they saw signs of habitations, they went on shore in three canoes they had with them, rowed by 60 men, and so they sought for provisions. They continued to sail in this way for three years, suffering great hardships from hunger and cold. The greater part of the crews died of hunger, inasmuch that there were not 50 surviving, and during all those three years they discovered no good land. All was swamp and inundated country, without inhabitants. The good country they discovered was as far as the river San Juan, where the Captain Pizarro remained with the few survivors, sending a captain with the smaller ship to discover some good land further along the coast. He sent the other ship, with the Captain Diego de Almagro to Panama to get more men." At the end of 70 days, the exploring ship came back with good reports, and with specimens of gold, silver and cloths, found in a country further south. "As soon as the Captain Almagro arrived from Panama with a ship laden with men and horses, the two ships, with their commanders and all their people, set out from the river San Juan, to go to that newly-discovered land. But the navigation was difficult; they were detained so long that the provisions were exhausted, and the people were obliged to go on shore in search of supplies. The ships reached the bay of San Mateo, and some villages to which the Spaniards gave the name of Santiago. Next they came to the villages of Tacamez [Atacames, on the coast of modern Ecuador], on the sea coast further on. These villages were seen by the Christians to be large and well peopled: and when 90 Spaniards had advanced a league beyond the villages of Tacamez, more than 10,000 Indian warriors encountered them; but seeing that the Christians intended no evil, and did not wish to take their goods, but rather to treat them peacefully, with much love, the Indians desisted from war. In this land there were abundant supplies, and the people led well-ordered lives, the villages having their streets and squares. One village had more than 3,000 houses, and others were smaller. It seemed to the captains and to the other Spaniards that nothing could be done in that land by reason of the smallness of their numbers, which rendered them unable to cope with the Indians. So they agreed to load the ships with the supplies to be found in the villages, and to return to an island called Gallo, where they would be safe until the ships arrived at Panama with the news of what had been discovered, and to apply to the Governor for more men, in order that the Captains might be able to continue their undertaking, and conquer the land. Captain Almagro went in the ships. Many persons had written to the Governor entreating him to order the crews to return to Panama, saying that it was impossible to endure more hardships than they had suffered during the last three years. The Governor ordered that all those who wished to go to Panama might do

so, while those who desired to continue the discoveries were at liberty to remain. Sixteen men stayed with Pizarro, and all the rest went back in the ships to Panama. The Captain Pizarro was on that island for five months, when one of the ships returned, in which he continued the discoveries for a hundred leagues further down the coast. They found many villages and great riches; and they brought away more specimens of gold, silver, and cloths than had been found before, which were presented by the natives. The Captain returned because the time granted by the governor had expired, and the last day of the period had been reached when he entered the port of Panama. The two Captains were so ruined that they could no longer prosecute their undertaking. . . . The Captain Francisco Pizarro was only able to borrow a little more than 1,000 castellanos among his friends, with which sum he went to Castile, and gave an account to his Majesty of the great and signal services he had performed."—F. de Xeres (Sec. of Pizarro), *Account of the Province of Cuzco*; tr. and ed. by C. R. Markham (Hakluyt Soc., 1872).

A. D. 1534-1535.—Exploration of the St. Lawrence to Montreal by Jacques Cartier.—"At last, ten years after [the voyages of Verrazano], Philip Chabot, Admiral of France, induced the king [Francis I.] to resume the project of founding a French colony in the New World whence the Spaniards daily drew such great wealth; and he presented to him a Captain of St. Malo, by name Jacques Cartier, whose merit he knew, and whom that prince accepted. Cartier having received his instructions, left St. Malo the 2d of April, 1534, with two ships of 60 tons and 122 men. He steered west, inclining slightly north, and had such fair winds that, on the 10th of May, he made Cape Bonavista, in Newfoundland, at 46° north. Cartier found the land there still covered with snow, and the shore fringed with ice, so that he could not or dared not stop. He ran down six degrees south-southeast, and entered a port to which he gave the name of St. Catharine. Thence he turned back north. . . . After making almost the circuit of Newfoundland, though without being able to satisfy himself that it was an island, he took a southerly course, crossed the gulf, approached the continent, and entered a very deep bay, where he suffered greatly from heat, whence he called it Chaleurs Bay. He was charmed with the beauty of the country, and well pleased with the Indians that he met and with whom he exchanged some goods for furs. . . . On leaving this bay, Cartier visited a good part of the coasts around the gulf, and took possession of the coun-

try in the name of the most Christian king, as Verazani had done in all the places where he landed. He set sail again on the 15th of August to return to France, and reached St. Malo safely on the 5th of September. . . . On the report which he made of his voyage, the court concluded that it would be useful to France to have a settlement in that part of America; but no one took this affair more to heart than the Vice-Admiral Charles de Mony, Sieur de la Mailleraye. This noble obtained a new commission for Cartier, more ample than the first, and gave him three ships well equipped. This fleet was ready about the middle of May, and Cartier . . . embarked on Wednesday the 19th." His three vessels were separated by violent storms, but found one another, near the close of July, in the gulf which was their appointed place of rendezvous. "On the 1st of August bad weather drove him to take refuge in the port of St. Nicholas, at the mouth of the river on the north. Here Cartier planted a cross, with the arms of France, and remained until the 7th. This port is almost the only spot in Canada that has kept the name given by Cartier. . . . On the 10th the three vessels re-entered the gulf, and in honor of the saint whose feast is celebrated on that day, Cartier gave the gulf the name of St. Lawrence; or rather he gave it to a bay lying between Anticosti Island and the north shore, whence it extended to the whole gulf of which this bay is part; and because the river, before that called River of Canada, empties into the same gulf, it insensibly acquired the name of St. Lawrence, which it still bears. . . . The three vessels . . . ascended the river, and on the 1st of September they entered the river Saguenay. Cartier merely reconnoitered the mouth of this river, and . . . hastened to seek a port where his vessels might winter in safety. Eight leagues above Isle aux Coudres he found another much larger and handsomer island, all covered with trees and vines. He called it Bacchus Island, but the name has been changed to Isle d'Orleans. The author of the relation to this voyage, printed under the name of Cartier, pretends that only here the country begins to be called Canada. But he is surely mistaken; for it is certain that from the earliest times the Indians gave this name to the whole country along the river on both sides, from its mouth to the Saguenay. From Bacchus Island, Cartier proceeded to a little river which is ten leagues off, and comes from the north; he called it Rivière de Ste Croix, because he entered it on the 14th of September (Feast of the Exaltation of the Holy Cross); but it is now commonly called Rivière de Jacques Cartier. The day after his arrival he received a visit from an Indian chief named Donnacona, whom the author of the relation of that voyage styles Lord of Canada. Cartier treated with this chief by means of two Indians whom he had taken to France the year before, and who knew a little French. They informed Donnacona that the strangers wished to go to Hochelaga, which seemed to trouble him. Hochelaga was a pretty large town, situated on an island now known under the name of Island of Montreal. Cartier had heard much of it, and was loth to return to France without seeing it. The reason why this voyage troubled Donnacona was that the people of Hochelaga were of a different nation from his, and that he wished to profit exclusively by the advantages which he

hoped to derive from the stay of the French in his country." Proceeding with one vessel to Lake St. Pierre, and thence in two boats, Cartier reached Hochelaga Oct. 2. "The shape of the town was round, and three rows of palisades inclosed in it about 50 tunnel shaped cabins, each over 50 paces long and 14 or 15 wide. It was entered by a single gate, above which, as well as along the first palisade, ran a kind of gallery, reached by ladders, and well provided with pieces of rock and pebbles for the defence of the place. The inhabitants of the town spoke the Huron language. They received the French very well. . . . Cartier visited the mountain at the foot of which the town lay, and gave it the name of Mont Royal, which has become that of the whole Island [Montreal]. From it he discovered a great extent of country, the sight of which charmed him. . . . He left Hochelaga on the 5th of October, and on the 11th arrived at Sainte Croix." Wintering at this place, where his crews suffered terribly from the cold and from scurvy, he returned to France the following spring. "Some authors . . . pretend that Cartier, disgusted with Canada, dissuaded the king, his master, from further thoughts of it; and Champlain seems to have been of that opinion. But this does not agree with what Cartier himself says in his memoirs. . . . Cartier in vain extolled the country which he had discovered. His small returns, and the wretched condition to which his men had been reduced by cold and scurvy, persuaded most that it would never be of any use to France. Great stress was laid on the fact that he nowhere saw any appearance of mines; and then, even more than now, a strange land which produced neither gold nor silver was reckoned as nothing."—Father Charlevoix, *Hist. of New France* (trans. by J. G. Shea), bk. 1.

A. D. 1541-1603.—Jacques Cartier's last Voyage.—Abortive attempts at French Colonization in Canada.—"Jean François de la Roque, lord of Roberval, a gentleman of Picardy, was the most earnest and energetic of those who desired to colonize the lands discovered by Jacques Cartier. . . . The title and authority of lieutenant-general was conferred upon him; his rule to extend over Canada, Hochelaga, Saguenay, Newfoundland, Belle Isle, Carpon, Labrador, La Grand Baye, and Baccalaos, with the delegated rights and powers of the Crown. This patent was dated the 15th of January, 1540. Jacques Cartier was named second in command. . . . Jacques Cartier sailed on the 23d of May, 1541, having provisioned his fleet for two years." He remained on the St. Lawrence until the following June, seeking vainly for the fabled wealth of the land of Saguenay, finding the Indians strongly inclined to a treacherous hostility, and suffering severe hardships during the winter. Entirely discouraged and disgusted, he abandoned his under-

taking early in the summer of 1542, and sailed for home. In the road of St. John's, Newfoundland, Cartier met his tardy chief, Roberval, just coming to join him; but no persuasion could induce the disappointed explorer to turn back. "To avoid the chance of an open rupture with Roberval, the lieutenant silently weighed anchor during the night, and made all sail for France. This inglorious withdrawal from the enterprise paralyzed Roberval's power, and deferred the permanent settlement of Canada for generations then unborn. Jacques Cartier died soon after his return to Europe." Roberval proceeded to Canada, built a fort at Ste Croix, four leagues west of Orleans, sent back two of his three ships to France, and remained through the winter with his colony, having a troubled time. There is no certain account of the ending of the enterprise, but it ended in failure. For half a century afterwards there was little attempt made by the French to colonize any part of New France, though the French fisheries on the Newfoundland Bank and in the Gulf of St. Lawrence were steadily growing in activity and importance. "When, after fifty years of civil strife, the strong and wise sway of Henry IV. restored rest to troubled France, the spirit of discovery again arose. The Marquis de la Roche, a Breton gentleman, obtained from the king, in 1598, a patent granting the same powers that Roberval had possessed." But La Roche's undertaking proved more disastrous than Roberval's had been. Yet, there had been enough of successful fur-trading opened to stimulate enterprise, despite these misfortunes. "Private adventurers, unprotected by any special privilege, began to barter for the rich peltries of the Canadian hunters. A wealthy merchant of St. Malo, named Pontgravé, was the boldest and most successful of these traders; he made several voyages to Tadoussac, at the mouth of the Saguenay, bringing back each time a rich cargo of rare and valuable furs." In 1600, Pontgravé effected a partnership with one Chauvin, a naval captain, who obtained a patent from the king giving him a monopoly of the trade; but Chauvin died in 1602 without having succeeded in establishing even a trading post at Tadoussac. De Chatte, or De Chastes, governor of Dieppe, succeeded to the privileges of Chauvin, and founded a company of merchants at Rouen [1603] to undertake the development of the resources of Canada. It was under the auspices of this company that Samuel Champlain, the founder of New France, came upon the scene.—E. Warburton, *The Conquest of Canada*, v. 1, ch. 2-3.

A. D. 1562-1567.—The slave trading Voyages of John Hawkins.—Beginnings of English Enterprise in the New World.—"The history of English America begins with the three slave-trading voyages of John Hawkins, made in the years 1562, 1564, and 1567. Nothing that Englishmen had done in connection with America, previously to those voyages, had any result worth recording. England had known the New World nearly seventy years, for John Cabot reached it shortly after its discovery by Columbus; and, as the tidings of the discovery spread, many English adventurers had crossed the Atlantic to the American coast. But as years passed, and the excitement of novelty

subsided, the English voyages to America had become fewer and fewer, and at length ceased altogether. It is easy to account for this. There was no opening for conquest or plunder, for the Tudors were at peace with the Spanish sovereigns: and there could be no territorial occupation, for the Papal title of Spain and Portugal to the whole of the new continent could not be disputed by Catholic England. No trade worth having existed with the natives: and Spain and Portugal kept the trade with their own settlers in their own hands. . . . As the plantations in America grew and multiplied, the demand for negroes rapidly increased. The Spaniards had no African settlements, but the Portuguese had many, and, with the aid of French and English adventurers, they procured from these settlements slaves enough to supply both themselves and the Spaniards. But the Brazilian plantations grew so fast, about the middle of the century, that they absorbed the entire supply, and the Spanish colonists knew not where to look for negroes. This penury of slaves in the Spanish Indies became known to the English and French captains who frequented the Guinea coast; and John Hawkins, who had been engaged from boyhood in the trade with Spain and the Canaries, resolved in 1562 to take a cargo of negro slaves to Hispaniola. The little squadron with which he executed this project was the first English squadron which navigated the West Indian seas. This voyage opened those seas to the English. England had not yet broken with Spain, and the law excluding English vessels from trading with the Spanish colonists was not strictly enforced. The trade was profitable, and Hawkins found no difficulty in disposing of his cargo to great advantage. A meagre note . . . from the pen of Hakluyt contains all that is known of the first American voyage of Hawkins. In its details it must have closely resembled the second voyage. In the first voyage, however, Hawkins had no occasion to carry his wares further than three ports on the northern side of Hispaniola. These ports, far away from San Domingo, the capital, were already well known to the French smugglers. He did not venture into the Caribbean Sea; and having loaded his ships with their return cargo, he made the best of his way back. In his second voyage . . . he entered the Caribbean Sea, still keeping, however, at a safe distance from San Domingo, and sold his slaves on the mainland. This voyage was on a much larger scale. . . . Having sold his slaves in the continental ports [South American], and loaded his vessels with hides and other goods bought with the produce, Hawkins determined to strike out a new path and sail home with the Gulf-stream, which would carry him northwards past the shores of Florida. Sparke's narrative . . . proves that at every point in these expeditions the Englishman was following in the track of the French. He had French pilots and seamen on board, and there is little doubt that one at least of these had already been with Laudonnière in Florida. The French seamen guided him to Laudonnière's settlement, where his arrival was most opportune. They then pointed him the way by the coast of North America, then universally known in the mass as New France, to Newfoundland, and thence, with the prevailing westerly winds, to Europe. This was the

pioneer voyage made by Englishmen along coasts afterwards famous in history through English colonization. . . . The extremely interesting narrative . . . given . . . from the pen of John Sparke, one of Hawkins' gentlemen companions . . . contains the first information concerning America and its natives which was published in England by an English eye-witness." Hawkins planned a third voyage in 1566, but the remonstrances of the Spanish king caused him to be stopped by the English court. He sent out his ships, however, and they came home in due time richly freighted,—from what source is not known. "In another year's time the aspect of things had changed." England was venturing into war with Spain, "and Hawkins was now able to execute his plans without restraint. He founded a permanent fortified factory on the Guinea coast, where negroes might be collected all the year round. Thence he sailed for the West Indies a third time. Young Francis Drake sailed with him in command of the 'Judith,' a small vessel of fifty tons." The voyage had a prosperous beginning and a disastrous ending. After disposing of most of their slaves, they were driven by storms to take refuge in the Mexican port of Vera Cruz, and there they were attacked by a Spanish fleet. Drake in the "Judith" and Hawkins in another small vessel escaped. But the latter was overcrowded with men and obliged to put half of them ashore on the Mexican coast. The majority of those left on board, as well as a majority of Drake's crew, died on the voyage home, and it was a miserable remnant that landed in England, in January, 1569.—E. J. Payne, *Voyages of the Elizabethan Seamen to Am.*, ch. 1.

A. D. 1572-1580.—The Piratical Adventures of Drake and his Encompassing of the World.—"Francis Drake, the first of the English Buccaneers, was one of the twelve children of Edward Drake of Tavistock, in Devonshire, a staunch Protestant, who had fled his native place to avoid persecution, and had then become a ship's chaplain. Drake, like Columbus, had been a seaman by profession from boyhood; and . . . had served as a young man, in command of the Judith, under Hawkins. . . . Hawkins had confined himself to smuggling; Drake advanced from this to piracy. This practice was authorized by law in the middle ages for the purpose of recovering debts or damages from the subjects of another nation. The English, especially those of the west country, were the most formidable pirates in the world; and the whole nation was by this time roused against Spain, in consequence of the ruthless war waged against Protestantism in the Netherlands by Philip II. Drake had accounts of his own to settle with the Spaniards. Though Elizabeth had not declared for the revolted States, and pursued a shifting policy, her interests and theirs were identical; and it was with a view of cutting off those supplies of gold and silver from America which enabled Philip to bribe politicians and pay soldiers, in pursuit of his policy of aggression, that the famous voyage was authorized by English statesmen. Drake had recently made more than one successful

voyage of plunder to the American coast." In July, 1572, he surprised the Spanish town of Nombre de Dios, which was the shipping port on the northern side of the Isthmus for the treasures of Peru. His men made their way into the royal treasure-house, where they laid hands on a heap of bar-silver, 70 feet long, 10 wide, and 10 high; but Drake himself had received a wound which compelled the pirates to retreat with no very large part of the splendid booty. In the winter of 1573, with the help of the runaway slaves on the Isthmus, known as Cimarrones, he crossed the Isthmus, looked on the Pacific ocean, approached within sight of the city of Panama, and waylaid a transportation party conveying gold to Nombre de Dios; but was disappointed of his prey by the excited conduct of some of his men. When he saw, on this occasion, the great ocean beyond the Isthmus, "Drake then and there resolved to be the pioneer of England in the Pacific; and on this resolution he solemnly besought the blessing of God. Nearly four years elapsed before it was executed; for it was not until November, 1577, that Drake embarked on his famous voyage, in the course of which he proposed to plunder Peru itself. The Peruvian ports were unfortified. The Spaniards knew them to be by nature absolutely secured from attack on the north; and they never dreamed that the English pirates would be daring enough to pass the terrible straits of Magellan and attack them from the south. Such was the plan of Drake; and it was executed with complete success." He sailed from Plymouth, Dec. 13, 1577, with a fleet of four vessels, and a pinnace, but lost one of the ships after he had entered the Pacific, in a storm which drove him southward, and which made him the discoverer of Cape Horn. Another of his ships, separated from the squadron, returned home, and a third, while attempting to do the same, was lost in the river Plate. Drake, in his own vessel, the Golden Hind, proceeded to the Peruvian coasts, where he cruised until he had taken and plundered a score of Spanish ships. "Laden with a rich booty of Peruvian treasure he deemed it unsafe to return by the way that he came. He therefore resolved to strike across the Pacific, and for this purpose made the latitude in which this voyage was usually performed by the Spanish government vessels which sailed annually from Acapulco to the Philippines. Drake thus reached the coast of California, where the Indians, delighted beyond measure by presents of clothing and trinkets, invited him to remain and rule over them. Drake took possession of the country in the name of the Queen, and refitted his vessel in preparation for the unknown perils of the Pacific. The place where he landed must have been either the great bay of San Francisco [per contra., see CALIFORNIA: A. D. 1846-1847] or the small bay of Bodega, which lies a few leagues further north. The great seaman had already coasted five degrees more to the northward before finding a suitable harbour. He believed himself to be the first European who had coasted these shores; but it is now well known that Spanish explorers had preceded him. Drake's circumnavigation of the globe was thus no deliberate feat of seamanship, but the necessary result of circumstances. The voyage made in more than one way a great epoch in English nautical history." Drake

reached Plymouth on his return Sept. 26, 1580.

A. D. 1580.—The final founding of the City of Buenos Ayres. See ARGENTINE REPUBLIC: A. D. 1580-1777.

A. D. 1583.—The Expedition of Sir Humphrey Gilbert.—Formal possession taken of Newfoundland.—In 1578, Sir Humphrey Gilbert, an English gentleman, of Devonshire, whose younger half-brother was the more famous Sir Walter Raleigh, obtained from Queen Elizabeth a charter empowering him, for the next six years, to discover "such remote heathen and barbarous lands, not actually possessed by any Christian prince or people," as he might be shrewd or fortunate enough to find, and to occupy the same as their proprietor. Gilbert's first expedition was attempted the next year, with Sir Walter Raleigh associated in it; but misfortunes drove back the adventurers to port, and Spanish intrigue prevented their sailing again. "In June, 1583, Gilbert sailed from Cawsand Bay with five vessels, with the general intention of discovering and colonizing the northern parts of America. It was the first colonizing expedition which left the shores of Great Britain; and the narrative of the expedition by Hayes, who commanded one of Gilbert's vessels, forms the first page in the history of English colonization. Gilbert did no more than go through the empty form of taking possession of the island of Newfoundland, to which the English name formerly applied to the continent in general . . . was now restricted. . . . Gilbert dallied here too long. When he set sail to cross the Gulf of St. Lawrence and take possession of Cape Breton and Nova Scotia the season was too far advanced; one of his largest ships went down with all on board, including the Hungarian scholar Parmenius, who had come out as the historian of the expedition; the stores were exhausted and the crews dispirited; and Gilbert resolved on sailing home, intending to return and prosecute his discoveries the next spring. On the home voyage the little vessel in which he was sailing foundered; and the pioneer of English colonization found a watery grave. . . . Gilbert was a man of courage, piety, and learning. He was, however, an indifferent seaman, and quite incompetent for the task of colonization to which he had set his hand. The misfortunes of his expedition induced Amadas and Barlow, who followed in his steps, to abandon the northward voyage and sail to the shores intended to be occupied by the easier but more circuitous route of the Canaries and the West Indies."—E. J. Payne, *Voyages of the Elizabethan Seamen*, pp. 173-174.—"On Monday, the 9th of September, in the afternoon, the frigate [the 'Squirrel'] was near cast away, oppressed by waves, yet at that time recovered; and giving forth signs of joy, the general, sitting abaft with a book in his hand, cried out to us in the 'Hind' (so oft as we did approach within hearing), 'We are as near to heaven by sea as by land,' reiterating the same speech, well beseeching a soldier resolute in Jesus Christ, as I can testify he was. On the same Monday night, about twelve o'clock, or not

long after, the frigate being ahead of us in the 'Golden Hind,' suddenly her lights were out, whereof as it were in a moment we lost the sight, and withal our watch cried the General was cast away, which was too true; for in that moment the frigate was devoured and swallowed up by the sea. Yet still we looked out all that night and ever after, until we arrived upon the coast of England. . . . In great torment of weather and peril of drowning it pleased God to send safe home the 'Golden Hind,' which arrived in Falmouth on the 22d of September, being Sunday."—E. Hayes, *A Report of the Voyage by Sir Humphrey Gilbert* (reprinted in Payne's *Voyages*).

ALSO IN E. Edwards, *Life of Raleigh*, v. 1, ch. 5.—R. Hakluyt, *Principal Navigations*; ed. by E. Goldsmid, v. 12.

A. D. 1584-1586.—Raleigh's First Colonizing attempts and failures.—"The task in which Gilbert had failed was to be undertaken by one better qualified to carry it out. If any Englishman in that age seemed to be marked out as the founder of a colonial empire, it was Raleigh. Like Gilbert, he had studied books; like Drake he could rule men. . . . The associations of his youth, and the training of his early manhood, fitted him to sympathize with the aims of his half-brother Gilbert, and there is little reason to doubt that Raleigh had a share in his undertaking and his failure. In 1584 he obtained a patent precisely similar to Gilbert's. His first step showed the thoughtful and well-planned system on which he began his task. Two ships were sent out, not with any idea of settlement, but to examine and report upon the country. Their commanders were Arthur Barlow and Philip Amidas. To the former we owe the extant record of the voyage: the name of the latter would suggest that he was a foreigner. Whether by chance or design, they took a more southerly course than any of their predecessors. On the 2d of July the presence of shallow water, and a smell of sweet flowers, warned them that land was near. The promise thus given was amply fulfilled upon their approach. The sight before them was far different from that which had met the eyes of Hore and Gilbert. Instead of the bleak coast of Newfoundland, Barlow and Amidas looked upon a scene which might recall the softness of the Mediterranean. . . . Coasting along for about 120 miles, the voyagers reached an inlet and with some difficulty entered. They then solemnly took possession of the land in the Queen's name, and then delivered it over to Raleigh according to his patent. They soon discovered that the land upon which they had touched was an island about 20 miles long, and not above six broad, named, as they afterwards learnt, Roanoke. Beyond, separating them from the mainland, lay an enclosed sea, studded with more than a hundred fertile and well-wooded islets." The Indians proved friendly, and were described by Barlow as being "most gentle, loving and faithful, void of all guile and treason, and such as live after the manner of the golden age." "The report which the voyagers took home spoke as favourably of the land itself as of its inhabitants. . . . With them they brought two of the savages, named Wanchese and Manteo. A probable tradition tells us that the queen herself named the country Virginia, and that Raleigh's knighthood was the reward and ac-

knowledge of his success. On the strength of this report Raleigh at once made preparations for a settlement. A fleet of seven ships was provided for the conveyance of 108 settlers. The fleet was under the command of Sir Richard Grenville, who was to establish the settlement and leave it under the charge of Ralph Lane. . . . On the 9th of April [1585] the emigrants set sail." For some reason not well explained, the fleet made a circuit to the West Indies, and loitered for five weeks at the island of St. John's and at Hispaniola, reaching Virginia in the last days of June. Quarrels between the two commanders, Grenville and Lane, had already begun, and both seemed equally ready to provoke the enmity of the natives. In August, after exploring some sixty miles of the coast, Grenville returned to England, promising to come back the next spring with new colonists and stores. The settlement, thus left to the care of Lane, was established "at the north-east corner of the island of Roanoke, whence the settlers could command the strait. There, even now, choked by vines and underwood, and here and there broken by the crumbling remains of an earthen bastion, may be traced the outlines of the ditch which enclosed the camp, some forty yards square, the home of the first English settlers in the New World. Of the doings of the settlers during the winter nothing is recorded, but by the next spring their prospects looked gloomy. The Indians were no longer friends. . . . The settlers, unable to make fishing weirs, and without seed corn, were entirely dependent on the Indians for their daily food. Under these circumstances, one would have supposed that Lane would have best employed himself in guarding the settlement and improving its condition. He, however, thought otherwise, and applied himself to the task of exploring the neighbouring territory." But a wide combination of hostile Indian tribes had been formed against the English, and their situation became from day to day more imperilled. At the beginning of June, 1586, Lane fought a bold battle with the savages and routed them; but no sign of Grenville appeared and the prospect looked hopeless. Just at this juncture, a great English fleet, sailing homewards from a piratical expedition to the Spanish Main, under the famous Captain Drake, came to anchor at Roanoke and offered succor to the disheartened colonists. With one voice they petitioned to be taken to England, and Drake received the whole party on board his ships. "The help of which the colonists had despaired was in reality close at hand. Scarcely had Drake's fleet left the coast when a ship well furnished by Raleigh with needful supplies, reached Virginia, and after searching for the departed settlers returned to England. About a fortnight later Grenville himself arrived with three ships. He spent some time in the country exploring, searching for the settlers, and at last, unwilling to lose possession of the country, landed fifteen men at Roanoke well supplied for two years, and then set sail for England, plundering the Azores, and doing much damage to the Spaniards."—J. A. Doyle, *The English in America: Virginia, &c., ch. 4.*—"It seems to be generally admitted that, when Lane and his company went back to England, they carried with them tobacco as one of the products of the country, which they presented to Raleigh, as the planter of the colony, and by him it was brought

into use in England, and gradually in other European countries. The authorities are not entirely agreed upon this point. Josselyn says: 'Tobacco first brought into England by Sir John Hawkins, but first brought into use by Sir Walter Rawleigh many years after.' Again he says: 'Now (say some) Tobacco was first brought into England by Mr. Ralph Lane, out of Virginia. Others will have Tobacco to be first brought into England from Peru, by Sir Francis Drake's Mariners.' Camden fixes its introduction into England by Ralph Lane and the men brought back with him in the ships of Drake. He says: 'And these men which were brought back were the first that I know of, which brought into England that Indian plant which they call Tobacco and Nicotia, and use it against crudities, being taught it by the Indians.' Certainly from that time it began to be in great request, and to be sold at a high rate. . . . Among the 108 men left in the colony with Ralph Lane in 1585 was Mr. Thomas Hariot, a man of a strongly mathematical and scientific turn, whose services in this connection were greatly valued. He remained there an entire year, and went back to England in 1586. He wrote out a full account of his observations in the New World."—I. N. A. D. 1587-1590.—The Lost Colony of Roanoke.—End of the Virginia Undertakings of Sir Walter Raleigh.—"Raleigh, undismayed by losses, determined to plant an agricultural state; to send emigrants with their wives and families, who should make their homes in the New World; and, that life and property might be secured, in January, 1587, he granted a charter for the settlement, and a municipal government for the city of 'Raleigh.' John White was appointed its governor; and to him, with eleven assistants, the administration of the colony was intrusted. Transport ships were prepared at the expense of the proprietary; 'Queen Elizabeth, the godmother of Virginia,' declined contributing 'to its education.' Embarking in April, in July they arrived on the coast of North Carolina; they were saved from the dangers of Cape Fear; and, passing Cape Hatteras, they hastened to the isle of Roanoke, to search for the handful of men whom Grenville had left there as a garrison. They found the tenements deserted and overgrown with weeds; human bones lay scattered on the field where wild deer were reposing. The fort was in ruins. No vestige of surviving life appeared. The instructions of Raleigh had designated the place for the new settlement on the bay of Chesapeake. But Fernando, the naval officer, eager to renew a profitable traffic in the West Indies, refused his assistance in exploring the coast, and White was compelled to remain on Roanoke. . . . It was there that in July the foundations of the city of Raleigh were laid.' But the colony was doomed to disaster from the beginning, being quickly involved in warfare with the surrounding natives. "With the returning ship White embarked for England, un-

der the excuse of interceding for re-enforcements and supplies. Yet, on the 18th of August, nine days previous to his departure, his daughter Eleanor Dare, the wife of one of the assistants, gave birth to a female child, the first offspring of English parents on the soil of the United States. The infant was named from the place of its birth. The colony, now composed of 89 men, 17 women, and two children, whose names are all preserved, might reasonably hope for the speedy return of the governor, as he left with them his daughter and his grandchild, Virginia Dare. The farther history of this plantation is involved in gloomy uncertainty. The inhabitants of 'the city of Raleigh,' the emigrants from England and the first-born of America, awaited death in the land of their adoption. For, when White reached England, he found its attention absorbed by the threats of an invasion from Spain. . . . Yet Raleigh, whose patriotism did not diminish his generosity, round means, in April 1588, to despatch White with supplies in two vessels. But the company, desiring a gainful voyage rather than a safe one, ran in chase of prizes, till one of them fell in with men of war from Rochelle, and, after a bloody fight, was boarded and rifled. Both ships were compelled to return to England. The delay was fatal: the English kingdom and the Protestant reformation were in danger; nor could the poor colonists of Roanoke be again remembered till after the discomfiture of the Invincible Armada. Even then Sir Walter Raleigh, who had already incurred a fruitless expense of £40,000, found his impaired fortune insufficient for further attempts at colonizing Virginia. He therefore used the privilege of his patent to endow a company of merchants and adventurers with large concessions. Among the men who thus obtained an assignment of the proprietary's rights in Virginia is found the name of Richard Hakluyt; it connects the first efforts of England in North Carolina with the final colonization of Virginia. The colonists at Roanoke had emigrated with a charter; the instrument of March, 1589, was not an assignment of Raleigh's patent, but the extension of a grant, already held under its sanction by increasing the number to whom the rights of that charter belonged. More than another year elapsed before White could return to search for his colony and his daughter; and then the island of Roanoke was a desert. An inscription on the bark of a tree pointed to Croatan; but the season of the year and the dangers from storms were pleaded as an excuse for an immediate return. The conjecture has been hazarded that the deserted colony, neglected by their own countrymen, were hospitably adopted into the tribe [the Croatans] of Hatteras Indians. Raleigh long cherished the hope of discovering some vestiges of their existence, and sent at his own charge, and, it is said, at five several times, to search for his liege men. But imagination received no help in its attempts to trace the fate of the colony of Roanoke."—G. Bancroft, *Hist. of the U. S.*, pt. 1, ch. 5 (v. 1).—"The Croatans of to-day claim descent from the lost colony. Their habits, disposition and mental characteristics show traces both of savage and civilized ancestors. Their language is the English of 300 years ago, and their names are in many cases the same as those borne by the original colonists. No other theory of their origin has been advanced."—S. B. Weeks, *The Lost Colony of*

Roanoke (Am. Hist. Ass'n Papers, v. 5, pt. 4).—"This last expedition [of White, searching for his lost colony] was not despatched by Raleigh, but by his successors in the American patent. And our history is now to take leave of that illustrious man, with whose schemes and enterprises it ceases to have any further connexion. The ardour of his mind was not exhausted, but diverted by a multiplicity of new and not less arduous undertakings. . . . Desirous, at the same time, that a project which he had carried so far should not be entirely abandoned, and hoping that the spirit of commerce would preserve an intercourse with Virginia that might terminate in a colonial establishment, he consented to assign his patent to Sir Thomas Smith, and a company of merchants in London, who undertook to establish and maintain a traffic between England and Virginia. . . . It appeared very soon that Raleigh had transferred his patent to hands very different from his own. . . . Satisfied with a paltry traffic carried on by a few small vessels, they made no attempt to take possession of the country: and at the period of Elizabeth's death, not a single Englishman was settled in America."—J. Grahame, *Hist. of the Rise and Progress of the U. S. of N. Am.* till 1688, ch. 1.

A. D. 1602-1605. — The Voyages of Gosnold, Pring, and Weymouth. — The First Englishmen in New England. — Bartholomew Gosnold was a West-of-England mariner who had served in the expeditions of Sir Walter Raleigh to the Virginia coast. Under his command, in the spring of 1602, "with the consent of Sir Walter Raleigh, and at the cost, among others, of Henry Wriothesley, Earl of Southampton, the accomplished patron of Shakespeare, a small vessel, called the Concord, was equipped for exploration in 'the north part of Virginia,' with a view to the establishment of a colony. At this time, in the last year of the Tudor dynasty, and nineteen years after the fatal termination of Gilbert's enterprise, there was no European inhabitant of North America, except those of Spanish birth in Florida, and some twenty or thirty French, the miserable relics of two frustrated attempts to settle what they called New France. Gosnold sailed from Falmouth with a company of thirty-two persons, of whom eight were seamen, and twenty were to become planters. Taking a straight course across the Atlantic, instead of the indirect course by the Canaries and the West Indies which had been hitherto pursued in voyages to Virginia, at the end of seven weeks he saw land in Massachusetts Bay, probably near what is now Salem Harbor. Here a boat came off, of Basque build, manned by eight natives, of whom two or three were dressed in European clothes, indicating the presence of earlier foreign voyagers in these waters. Next he stood to the southward, and his crew took great quantities of codfish by a head land, called by him for that reason Cape Cod, the name which it retains. Gosnold, Brereton, and three others, went on shore, the first Englishmen who are known to have set foot upon the soil of Massachusetts. . . . Sounding his way cautiously along, first in a southerly, and then in a westerly direction, and probably passing to the south of Nantucket, Gosnold next landed on a small island, now

called No Man's Land. To this he gave the name of Martha's Vineyard, since transferred to the larger island further north. . . . South of Buzzard's Bay, and separated on the south by the Vineyard Sound from Martha's Vineyard, is scattered the group denoted on modern maps as the Elizabeth Islands. The southwesternmost of these, now known by the Indian name of Cuttyhunk, was denominated by Gosnold Elizabeth Island. . . . Here Gosnold found a pond two miles in circumference, separated from the sea on one side by a beach thirty yards wide, and enclosing 'a rocky islet, containing near an acre of ground, full of wood and rubbish.' This islet was fixed upon for a settlement. In three weeks, while a part of the company were absent on a trading expedition to the mainland, the rest dug and stoned a cellar, prepared timber and built a house, which they fortified with palisades, and thatched with sedge. Proceeding to make an inventory of their provisions, they found that, after supplying the vessel, which was to take twelve men on the return voyage, there would be a sufficiency for only six weeks for the twenty men who would remain. A dispute arose upon the question whether the party to be left behind would receive a share in the proceeds of the cargo of cedar, sassafras, furs, and other commodities which had been collected. A small party, going out in quest of shell-fish, was attacked by some Indians. With men having already, it is likely, little stomach for such cheerless work, these circumstances easily led to the decision to abandon for the present the scheme of a settlement, and in the following month the adventurers sailed for England, and, after a voyage of five weeks, arrived at Exmouth. . . . The expedition of Gosnold was pregnant with consequences, though their development was slow. The accounts of the hitherto unknown country, which were circulated by his company on their return, excited an earnest interest." The next year (April, 1603), Martin Pring or Pryne was sent out, by several merchants of Bristol, with two small vessels, seeking cargoes of sassafras, which had acquired a high value on account of supposed medicinal virtues. Pring coasted from Maine to Martha's Vineyard, secured his desired cargoes, and gave a good account of the country. Two years later (March, 1605), Lord Southampton and Lord Wardour sent a vessel commanded by George Weymouth to reconnoitre the same coast with an eye to settlements. Weymouth ascended either the Kennebec or the Penobscot river some 50 or 60 miles and kidnapped five natives. "Except for this, and for some addition to the knowledge of the local geography, the voyage was fruitless."

A. D. 1607-1608.—The First Voyages of Henry Hudson.—"The first recorded voyage made by Henry Hudson was undertaken . . . for the Muscovy or Russia Company [of Eng-

land]. Departing from Gravesend the first of May, 1607, with the intention of sailing straight across the north pole, by the north of what is now called Greenland, Hudson found that this land stretched further to the eastward than he had anticipated, and that a wall of ice, along which he coasted, extended from Greenland to Spitzbergen. Forced to relinquish the hope of finding a passage in the latter vicinity, he once more attempted the entrance of Davis' Straits by the north of Greenland. This design was also frustrated and he apparently renewed the attempt in a lower latitude and nearer Greenland on his homeward voyage. In this cruise Hudson attained a higher degree of latitude than any previous navigator. . . . He reached England on his return on the 15th September of that year [1607]. . . . On the 22d of April, 1608, Henry Hudson commenced his second recorded voyage for the Muscovy or Russia Company, with the design of 'finding a passage to the East Indies by the north-east.' . . . On the 3d of June, 1608, Hudson had reached the most northern point of Norway, and on the 11th was in latitude 75° 24', between Spitzbergen and Nova Zembla." Failing to pass to the north-east beyond Nova Zembla, he returned to England in August.—J. M. Read, Jr., *Hist. Inquiry Concerning Henry Hudson*, pp. 133-138.

A. D. 1609.—Hudson's Voyage of Discovery for the Dutch.—"The failure of two expeditions daunted the enterprise of Hudson's employers [the Muscovy Company, in England]; they could not daunt the courage of the great navigator, who was destined to become the rival of Smith and of Champlain. He longed to tempt once more the dangers of the northern seas; and, repairing to Holland, he offered, in the service of the Dutch East India Company, to explore the icy wastes in search of the coveted passage. The voyage of Smith to Virginia stimulated desire; the Zealanders, fearing the loss of treasure, objected; but, by the influence of Balthazar Moucheron, the directors for Amsterdam resolved on equipping a small vessel of discovery; and, on the 4th day of April, 1609, the 'Crescent' [or 'Half-Moon,' as the name of the little ship is more commonly translated], commanded by Hudson, and manned by a mixed crew of Englishmen and Hollanders, his son being of the number, set sail for the north-western passage. Masses of ice impeded the navigation towards Nova Zembla; Hudson, who had examined the maps of John Smith of Virginia, turned to the west; and passing beyond Greenland and Newfoundland, and running down the coast of Acadia, he anchored, probably, in the mouth of the Penobscot. Then, following the track of Gosnold, he came upon the promontory of Cape Cod, and, believing himself its first discoverer, gave it the name of New Holland. Long afterwards, it was claimed as the north-eastern boundary of New Netherlands. From the sands of Cape Cod, he steered a southerly course till he was opposite the entrance into the bay of Virginia, where Hudson remembered that his countrymen were planted. Then turning again to

the north, he discovered the Delaware Bay, examined its currents and its soundings, and, without going on shore, took note of the aspect of the country. On the 3d day of September, almost at the time when Champlain was invading New York from the north, less than five months after the truce with Spain, which gave the Netherlands a diplomatic existence as a state, the 'Crescent' anchored within Sandy Hook, and from the neighboring shores, that were crowned with 'goodly oakes,' attracted frequent visits from the natives. After a week's delay, Hudson sailed through the Narrows, and at the mouth of the river anchored in a harbor which was pronounced to be very good for all winds. . . . Ten days were employed in exploring the river; the first of Europeans, Hudson went sounding his way above the Highlands, till at last the 'Crescent' had sailed some miles beyond the city of Hudson, and a boat had advanced a little beyond Albany. Frequent intercourse was held with the astonished natives [and two battles fought with them]. . . . Having completed his discovery, Hudson descended the stream to which time has given his name, and on the 4th day of October, about the season of the return of John Smith to England, he set sail for Europe. . . . A happy return voyage brought the 'Crescent' into Dartmouth. Hudson forwarded to his Dutch employers a brilliant account of his discoveries; but he never revisited the lands which he eulogized: and the Dutch East-India Company refused to search further for the north-western passage."—G. Bancroft, *Hist. of the U. S.*, ch. 15 (or pt. 2, ch. 12 of "Author's Last Revision").

A. D. 1614-1615.—The Voyages of Capt. John Smith to North Virginia.—The Naming of the country New England.—"From the time of Capt. Smith's departure from Virginia [see VIRGINIA: A. D. 1607-1610], till the year 1614, there is a chasm in his biography. . . . In 1614, probably by his advice and at his suggestion, an expedition was fitted out by some London merchants, in the expense of which he also shared, for the purposes of trade and discovery in New England, or, as it was then called, North Virginia. . . . In March, 1614, he set sail from London with two ships, one commanded by himself, and the other by Captain Thomas Hunt. They arrived, April 30th, at the island of Manhegin, on the coast of Maine, where they built seven boats. The purposes for which they were sent were to capture whales and to search for mines of gold or copper, which were said to be there, and, if these failed, to make up a cargo of fish and furs. Of mines, they found no indications, and they found whale-fishing a 'costly conclusion;' for, although they saw many, and chased them too, they succeeded in taking none. They thus lost the best part of the fishing season; but, after giving up their gigantic game, they diligently employed the months of July and

August in taking and curing codfish, an humble, but more certain prey. While the crew were thus employed, Captain Smith, with eight men in a small boat, surveyed and examined the whole coast, from Penobscot to Cape Cod, trafficking with the Indians for furs, and twice fighting with them, and taking such observations of the prominent points as enabled him to construct a map of the country. He then sailed for England, where he arrived in August, within six months after his departure. He left Captain Hunt behind him, with orders to dispose of his cargo of fish in Spain. Unfortunately, Hunt was a sordid and unprincipled miscreant, who resolved to make his countrymen odious to the Indians, and thus prevent the establishment of a permanent colony, which would diminish the large gains he and a few others derived by monopolizing a lucrative traffic. For this purpose, having decoyed 24 of the natives on board his ship, he carried them off and sold them as slaves in the port of Malaga. . . . Captain Smith, upon his return, presented his map of the country between Penobscot and Cape Cod to Prince Charles (afterwards Charles I.), with a request that he would substitute others, instead of the 'barbarous names' which had been given to particular places. Smith himself gave to the country the name of New England, as he expressly states, and not Prince Charles, as is commonly supposed. . . . The first port into which Captain Smith put on his return to England was Plymouth. There he related his adventures to some of his friends, 'who,' he says, 'as I supposed, were interested in the dead patent of this unregarded country.' The Plymouth Company of adventurers to North Virginia, by flattering hopes and large promises, induced him to engage his services to them." Accordingly in March, 1615, he sailed from Plymouth, with two vessels under his command, bearing 16 settlers, besides their crew. A storm dismasted Smith's ship and drove her back to Plymouth. "His consort, commanded by Thomas Dermer, meanwhile proceeded on her voyage, and returned with a profitable cargo in August; but the object, which was to effect a permanent settlement, was frustrated. Captain Smith's vessel was probably found to be so much shattered as to render it inexpedient to repair her; for we find that he set sail a second time from Plymouth, on the 24th of June, in a small bark of 60 tons, manned by 30 men, and carrying with him the same 16 settlers he had taken before. But an evil destiny seemed to hang over this enterprise, and to make the voyage a succession of disasters and disappointments." It ended in Smith's capture by a piratical French fleet and his detention for some months, until he made a daring escape in a small boat. "While he had been detained on board the French pirate, in order, as he says, 'to keep my perplexed thoughts from too much meditation of my miserable estate,' he employed himself in writing a narrative of his two voyages to New England, and an account of the country. This was published in a quarto form in June, 1616. . . . Captain Smith's work on New England was the first to recommend that country as a place of settlement."—G. S. Hillard, *Life of Capt. John Smith* (ch. 14-15).

A. D. 1629.—The Carolina grant to Sir Robert Heath.—“Sir Robert Heath, attorney-general to Charles I., obtained a grant of the lands between the 38th [36th ?] degree of north latitude to the river St. Matheo. His charter bears date of October 5, 1629. . . . The tenure is declared to be as ample as any bishop of Durham [Palatine], in the kingdom of England, ever held and enjoyed, or ought or could of right have held and enjoyed. Sir Robert, his heirs and assigns, are constituted the true and absolute lords and proprietors, and the country is erected into a province by the name of Carolina [or Carolana], and the islands are to be called the Carolana islands. Sir Robert conveyed his right some time after to the earl of Arundel. This nobleman, it is said, planted several parts of his acquisition, but his attempt to colonize was checked by the war with Scotland, and afterwards the civil war. Lord Maltravers, who soon after, on his father's death, became earl of Arundel and Sussex . . . made no attempt to avail himself of the grant. . . . Sir Robert Heath's grant of land, to the southward of Virginia, perhaps the most extensive possession ever owned by an individual, remained for a long time almost absolutely waste and uncultivated. This vast extent of territory occupied all the country between the 30th and 36th degrees of northern latitude, which embraces the present states of North and South Carolina, Georgia, [Alabama], Tennessee, Mississippi; and, with very little exceptions, the whole state of Louisiana, and the territory of East and West Florida, a considerable part of the state of Missouri, the Mexican provinces of Texas, Chihuahua, &c. The grantee had taken possession of the country, soon after he had obtained his title, which he afterwards had conveyed to the earl of Arundel. Henry lord Maltravers appears to have obtained some aid from the province of Virginia in 1639, at the desire of Charles I., for the settlement of Carolana, and the country had since become the property of a Dr. Cox; yet, at this time, there were two points only in which incipient English settlements could be discerned; the one on the northern shore of Albemarle Sound and the streams that flow into it. The population of it was very thin, and the greatest portion of it was on the north-east bank of Chowan river. The settlers had come from that part of Virginia now known as the County of Nansemond. . . . They had been joined by a number of Quakers and other sectaries, whom the spirit of intolerance had driven from New England, and some emigrants from Bermudas. . . . The other settlement of the English was at the mouth of Cape Fear river; . . . those who composed it had come thither from New England

in 1659. Their attention was confined to rearing cattle. It cannot now be ascertained whether the assignees of Carolana ever surrendered the charter under which it was held, nor whether it was considered as having become vacated or obsolete by non-user, or by any other means.”—F. X. Martin, *Hist. of N. Carolina*, v. 1, ch. 5 and 7.

A. D. 1639-1700.—The Buccaneers and their piratical warfare with Spain.—“The 17th century gave birth to a class of rovers wholly distinct from any of their predecessors in the annals of the world, differing as widely in their plans, organization and exploits as in the principles that governed their actions. . . . After the native inhabitants of Haiti had been exterminated, and the Spaniards had sailed farther west, a few adventurous men from Normandy settled on the shores of the island, for the purpose of hunting the wild bulls and hogs which roamed at will through the forests. The small island of Tortugas was their market; thither they repaired with their salted and smoked meat, their hides, &c., and disposed of them in exchange for powder, lead, and other necessities. The places where these semi-wild hunters prepared the slaughtered carcasses were called ‘boucans,’ and they themselves became known as Buccaneers. Probably the world has never before or since witnessed such an extraordinary association as theirs. Unburdened by women-folk or children, these men lived in couples, reciprocally rendering each other services, and having entire community of property—a condition termed by them *matelotage*, from the word ‘*matelot*,’ by which they addressed one another. . . . A man on joining the fraternity completely merged his identity. Each member received a nickname, and no attempt was ever made to inquire into his antecedents. When one of their number married, he ceased to be a buccaneer, having forfeited his membership by so civilized a proceeding. He might continue to dwell on the coast, and to hunt cattle, but he was no longer a ‘*matelot*’—as a Benedict he had degenerated to a ‘colonist.’ . . . Uncouth and lawless though the buccaneers were, the sinister signification now attaching to their name would never have been merited had it not been for the unreasoning jealousy of the Spaniards. The hunters were actually a source of profit to that nation, yet from an insane antipathy to strangers the dominant race resolved on exterminating the settlers. Attacked whilst dispersed in pursuance of their avocations, the latter fell easy victims; many of them were wantonly massacred, others dragged into slavery. . . . Breathing hatred and vengeance, ‘the

brethren of the coast' united their scattered forces, and a war of horrible reprisals commenced. Fresh troops arrived from Spain, whilst the ranks of the buccaneers were filled by adventurers of all nations, allured by love of plunder, and fired with indignation at the cruelties of the aggressors. . . . The Spaniards, utterly failing to oust their opponents, hit upon a new expedient, so short-sighted that it reflects but little credit on their statesmanship. This was the extermination of the horned cattle, by which the buccaneers derived their means of subsistence; a general slaughter took place, and the breed was almost extirpated. . . . The puffed up arrogance of the Spaniard was curbed by no prudential consideration; calling upon every saint in his calendar, and raining curses on the heretical buccaneers, he deprived them of their legitimate occupation, and created wilfully a set of desperate enemies, who harassed the colonial trade of an empire already betraying signs of feebleness with the pertinacity of wolves, and who only desisted when her commerce had been reduced to insignificance. . . . Devoured by an undying hatred of their assailants, the buccaneers developed into a new association—the freebooters.” —C. H. Eden, *The West Indies*, ch. 3.—“The monarchs both of England and France, but especially the former, connived at and even encouraged the freebooters [a name which the pronunciation of French sailors transformed into ‘flibustiers,’ while that corruption became Anglicized in its turn and produced the word filibusters], whose services could be obtained in time of war, and whose actions could be disavowed in time of peace. Thus buccaneer, filibuster, and sea-rover, were for the most part at leisure to hunt wild cattle, and to pillage and massacre the Spaniards wherever they found an opportunity. When not on some marauding expedition, they followed the chase.” The piratical buccaneers were first organized under a leader in 1639, the islet of Tortuga being their favorite rendezvous. “So rapid was the growth of their settlements that in 1641 we find governors appointed, and at San Christobal a governor-general named De Poincy, in charge of the French filibusters in the Indies. During that year Tortuga was garrisoned by French troops, and the English were driven out, both from that islet and from Santo Domingo, securing harborage elsewhere in the islands. Nevertheless corsairs of both nations often made common cause. . . . In [1654] Tortuga was again recaptured by the Spaniards, but in 1660 fell once more into the hands of the French; and in their conquest of Jamaica in 1655 the British troops were reinforced by a large party of buccaneers.” The first of the more famous buccaneers, and apparently the most ferocious among them all, was a Frenchman called François L’Olonnois, who harried the coast of Central America between 1660-1665 with six ships and 700 men. At the same time another buccaneer named Mansvelt, was rising in fame, and with him, as second in command, a Welshman, Henry Morgan, who became the most notorious of all. In 1668, Morgan attacked and captured the strong town of Portobello, on the Isthmus, committing indescribable atrocities. In 1671 he crossed the Isthmus, defeated the Spaniards in battle and gained possession of the great and wealthy city of Panama—the largest and richest in the New

World, containing at the time 30,000 inhabitants. The city was pillaged, fired and totally destroyed. The exploits of this ruffian and the stolen riches which he carried home to England soon afterward, gained the honors of knighthood for him, from the worthy hands of Charles II. In 1680, the buccaneers under one Coxon again crossed the Isthmus, seized Panama, which had been considerably rebuilt, and captured there a Spanish fleet of four ships, in which they launched themselves upon the Pacific. From that time their plundering operations were chiefly directed against the Pacific coast. Towards the close of the 17th century, the war between England and France, and the Bourbon alliance of Spain with France, brought about the discouragement, the decline and finally the extinction of the buccaneer organization.—H. H. Bancroft, *Hist. of the Pacific States: Central Am.*, v. 2, ch. 26-30.

AMERICAN ABORIGINES.

Linguistic Classification.—In the Seventh Annual Report of the Bureau of Ethnology (for 1885-86, published in 1891), Major J. W. Powell, the Director of the Bureau, has given a classification of the languages of the North American aborigines based upon the most recent investigations. The following is a list of families of speech, or linguistic stocks, which are defined and named: "Adaizan [identified since the publication of this list as being but part of the Caddoan stock].—Algonquian.—Athapascan.—Attacapan.—Beothukan.—Caddoan.—Chimakuan.—Chimarian.—Chimmesyan.—Chinookan.—Chitimachan.—Chumashan.—Coahuiltecan.—Copehan.—Costanoan.—Eskimaun.—Esselenian.—Iroquoian.—Kalapooian.—Karankawan.—Keresan.—Kiowan.—Kituanahan.—Koluschan.—Kulanapan.—Kusan.—Lutuamian.—Mariposan.—Moquelumnan.—Muskogean.—Natchesan.—Palaihnian.—Piman.—Pujunan.—Quoratean.—Salinan.—Salishan.—Sastean.—Shahaptian.—Shoshonean.—Siouan.—Skittagetan.—Takilman.—Tañoan.—Timuquanan.—Tonikan.—Tonkawan.—Uchian.—Wailatpuan.—Wakashan.—Washoan.—Weitspekan.—Wishoskan.—Yokonan.—Yanan.—Yukian.—Yuman.—Zuñian."—These families are severally defined in the summary of information given below, and the relations to them of all tribes having any historical importance are shown by cross-references and otherwise; but many other groupings and associations, and many tribal names not scientifically recognized, are likewise exhibited here, for the reason that they have a significance in history and are the subjects of frequent allusion in literature.

Abipones. See below: PAMPAS TRIBES.

Abnakis, or Abenagues, or Taranteens.—"The Abnakis were called Taranteens by the English, and Owenagungas by the New Yorkers. . . . We must admit that a large portion of the North American Indians were called Abnakis, if not by themselves, at least by others. This word Abnaki is found spelt Abenagues, Abenaki, Wapanachki, and Wabenakies by different writers of various nations, each adopting the manner of spelling according to the rules of pronunciation of their respective native languages. . . . The word generally received is spelled thus, Abnaki, but it should be 'Wānbānaghi,' from the Indian word 'wanbanban,' designating the people of the Aurora Borealis, or in general, of the place where the sky commences to appear white at the breaking of the day. . . . It has been difficult for different writers to determine the number of nations or tribes comprehended under this word Abnaki. It being a general word, by itself designates the people of the east or northeast. . . . We find that the word Abnaki was applied in general, more or less, to all the Indians of the East, by persons who were not much acquainted with the aborigines of the country. On the contrary, the early writers and others well acquainted with the natives of New France and Acadia, and the Indians themselves, by Abnakis always pointed out a particular nation existing north-west and south of the Kennebec river, and they never designated any other people of the Atlantic shore, from Cape Hatteras to Newfoundland. . . . The Abnakis had five great villages, two amongst the French colonies, which must be the village of St. Joseph or Sillery, and that of St. Francis de Sales, both in Canada, three on the head waters,

or along three rivers, between Acadia and New England. These three rivers are the Kennebec, the Androscoggin, and the Saco. . . . The nation of the Abnakis bear evident marks of having been an original people in their name, manners, and language. They show a kind of civilization which must be the effect of antiquity, and of a past flourishing age."—E. Vetromile, *The Abnaki Indians* (Maine Hist. Soc. Coll., v. 6).—See, also, below: ALGONQUIAN FAMILY.—For some account of the wars of the Abnakis, with the New England colonies, see CANADA (NEW FRANCE): A. D. 1689-1690, and 1692-1697; NEW ENGLAND: A. D. 1675 (JULY-SEPT.); 1702-1710, 1711-1713; and NOVA SCOTIA: A. D. 1713-1730.

Absarokas, Upsarokas, or Crows. See below: SIOUAN FAMILY.

Acawois. See below: CARIBS AND THEIR KINDRED.

Acolhuas. See MEXICO, A. D. 1325-1502.

Adais.*—These Indians were a "tribe who, according to Dr. Sibley, lived about the year 1800 near the old Spanish fort or mission of Adaize, 'about 40 miles from Natchitoches, below the Yattassees, on a lake called Lac Macdon, which communicates with the division of Red River that passes by Bayou Pierre' [Lewis and Clarke]. A vocabulary of about 250 words is all that remains to us of their language, which according to the collector, Dr. Sibley, 'differs from all others, and is so difficult to speak or understand that no nation can speak ten words of it. . . . A recent comparison of this vocabulary by Mr. Gatschet, with several Caddoan dialects, has led to the discovery that a considerable percentage of the Adai words have a more or less remote affinity with Caddoan, and he regards it as a Caddoan dialect."—J. W. Powell, *Seventh An. Report, Bureau of Ethnology*, pp. 45-46.—See preceding page.

Adirondacks.—"This is a term bestowed by the Iroquois, in derision, on the tribes who appear, at an early day, to have descended the Utawas river, and occupied the left banks of the St. Lawrence, above the present site of Quebec, about the close of the 15th century. It is said to signify men who eat trees, in allusion to their using the bark of certain trees for food, when reduced to straits, in their war excursions. The French, who entered the St. Lawrence from the gulf, called the same people Algonquins—a generic appellation, which has been long employed and come into universal use, among historians and philologists. According to early accounts, the Adirondacks had preceded the Iroquois in arts and attainments."—H. R. Schoolcraft, *Notes on the Iroquois*, ch. 5.—See, also, below: IROQUOIS CONFEDERACY: THEIR CONQUESTS, &c.

Æsopus Indians. See below: ALGONQUIAN FAMILY.

Agniers.—Among several names which the Mohawks (see below: IROQUOIS) bore in early colonial history was that of the Agniers.—F. Parkman, *The Conspiracy of Pontiac*, v. 1, p. 9, *foot-note*.

Albais. See below: PAMPAS TRIBES.

Aleuts. See below: ESKIMAUAN FAMILY.

Algonquian (Algonkin) Family.—"About the period 1500-1600, those related tribes whom we now know by the name of Algonkins were at the height of their prosperity. They occupied the

Atlantic coast from the Savannah river on the south to the strait of Belle Isle on the north. . . . The dialects of all these were related, and evidently at some distant day had been derived from the same primitive tongue. Which of them had preserved the ancient forms most closely, it may be premature to decide positively, but the tendency of modern studies has been to assign that place to the Cree—the northernmost of all. We cannot erect a genealogical tree of these dialects. . . .

We may, however, group them in such a manner as roughly to indicate their relationship. This I do"—in the following list: "Cree.—Old Algonkin.—Montagnais.—Chipeway, Ottawa, Pottawattomie, Miami, Peoria, Pea, Piankishaw. Kaskaskia, Menominee, Sac, Fox, Kikapoo.—Sheshatapoosh, Secoffee, Micmac, Melisceet, Etchemin, Abnaki.—Mohegan, Massachusetts, Shawnee, Minsi, Unami, Unalachtigo [the last three named forming, together, the nation of the Lenape or Delawares], Nanticoke, Powhatan, Pampticoke.—Blackfoot, Gros Ventre, Sheyenne. . . . All the Algonkin nations who dwelt north of the Potomac, on the east shore of Chesapeake Bay, and in the basins of the Delaware and Hudson rivers, claimed near kinship and an identical origin, and were at times united into a loose, defensive confederacy. By the western and southern tribes they were collectively known as Wapanachkik—"those of the eastern region"—which in the form Abnaki is now confined to the remnant of a tribe in Maine. . . .

The members of the confederacy were the Mohegans (Mahicanni) of the Hudson, who occupied the valley of that river to the falls above the site of Albany, the various New Jersey tribes, the Delawares proper on the Delaware river and its branches, including the Minsi or Monseys, among the mountains, the Nanticokes, between Chesapeake Bay and the Atlantic, and the small tribe called Canai, Kanawhas or Ganawese, whose towns were on tributaries of the Potomac and Patuxent. . . . Linguistically, the Mohegans were more closely allied to the tribes of New England than to those of the Delaware Valley. Evidently, most of the tribes of Massachusetts and Connecticut were comparatively recent offshoots of the parent stem on the Hudson, supposing the course of migration had been eastward. . . . The Nanticokes occupied the territory between Chesapeake Bay and the ocean, except its southern extremity, which appears to have been under the control of the Powhatan tribe of Virginia."—D. G. Brinton, *The Lenape and their Legends*, ch. 1-2.—"Mohegans, Munsees, Manhattans, Metoacs, and other affiliated tribes and bands of Algonquin lineage, inhabited the banks of the Hudson and the islands, bay and seaboard of New York, including Long Island, during the early periods of the rise of the Iroquois Confederacy. . . . The Mohegans finally retired over the Highlands east of them into the valley of the Housatonic. The Munsees and Nanticokes retired to the Delaware river and reunited with their kindred, the Lenapees, or modern Delawares. The Manhattans, and numerous other bands and sub-tribes, melted away under the influence of liquor and died in their tracks."—H. R. Schoolcraft, *Notes on the Iroquois*, ch. 5.—"On the basis of a difference in dialect, that portion of the Algonquin Indians which dwelt in New England has been classed in two divisions, one consisting of those who in

* See Note, Appendix E, vol. 5.

habited what is now the State of Maine, nearly up to its western border, the other consisting of the rest of the native population. The Maine Indians may have been some 15,000 in number, or somewhat less than a third of the native population of New England. That portion of them who dwelt furthest towards the east were known by the name of Etchemins. The Abenakis, including the Tarratines, hunted on both sides of the Penobscot, and westward as far as the Saco, if not quite to the Piscataqua. The tribes found in the rest of New England were designated by a greater variety of names. The home of the Penacook or Pawtucket Indians was in the southeast corner of what is now New Hampshire and the contiguous region of Massachusetts. Next dwelt the Massachusetts tribe, along the bay of that name. Then were found successively the Pokanokets, or Wampanoags, in the southeasterly region of Massachusetts, and by Buzzard's and Narragansett Bays; the Narragansetts, with a tributary race called Nyantics in what is now the western part of the State of Rhode Island; the Pequots, between the Narragansetts and the river formerly called the Pequot River, now the Thames; and the Mohegans, spreading themselves beyond the River Connecticut. In the central region of Massachusetts were the Nipmucks, or Nipnets; and along Cape Cod were the Nausets, who appeared to have owed some fealty to the Pokanokets. The New England Indians exhibited an inferior type of humanity. . . . Though fleet and agile when excited to some occasional effort, they were found to be incapable of continuous labor. Heavy and phlegmatic, they scarcely wept or smiled."—J. G. Palfrey, *Compendious Hist. of N. Eng.*, bk. 1, ch. 3 (v. 1).—"The valley of the 'Cahohatalea,' or Mauritius River [i. e., the Hudson River, as now named] at the time Hudson first ascended its waters, was inhabited, chiefly, by two aboriginal races of Algonquin lineage, afterwards known among the English colonists by the generic names of Mohegans and Mincees. The Dutch generally called the Mohegans, Mahicans; and the Mincees, Sanhikans. These two tribes were subdivided into numerous minor bands, each of which had a distinctive name. The tribes on the east side of the river were generally Mohegans; those on the west side, Mincees. They were hereditary enemies. . . . Long Island, or 'Sewan-hacky,' was occupied by the savage tribe of Metowacks, which was subdivided into various clans. . . . Staten Island, on the opposite side of the bay, was inhabited by the Monatons. . . . Inland, to the west, lived the Raritans and the Hackinsacks; while the regions in the vicinity of the well-known 'Highlands,' south of Sandy Hook, were inhabited by a band or sub-tribe called the Nevesincks or Navisinks. . . . To the south and west, covering the centre of New Jersey, were the Aquamachukes and the Stankekans; while the valley of the Delaware, northward from the Schuylkill, was inhabited by various tribes of the Lenape race. . . . The island of the Mannhattans was occupied by the tribe which received that name (see MANHATTAN). On the shores of the river, above, dwelt the Tappans, the Weckquaesgeeks, the Sint Sings, "whose chief village was named Ossin-Sing, or 'the Place of Stones,'" the Pachami, the Waorinacks, the Wappingers, and the Waronawankongs.

"Further north, and occupying the present counties of Ulster and Greene, were the Minqua clans of Minnesincks, Nanticokes, Mincees, and Delawares. These clans had pressed onward from the upper valley of the Delaware. . . . They were generally known among the Dutch as the *Æsopus* Indians."—J. R. Brodhead, *Hist. of the State of N. Y.*, v. 1, ch. 3—"The area formerly occupied by the Algonquian family was more extensive than that of any other linguistic stock in North America, their territory reaching from Labrador to the Rocky Mountains, and from Churchill River of Hudson Bay as far south at least as Pamlico Sound of North Carolina. In the eastern part of this territory was an area occupied by Iroquoian tribes, surrounded on almost all sides by their Algonquian neighbors. On the south the Algonquian tribes were bordered by those of Iroquoian and Siouan (Catawba) stock, on the southwest and west by the Muskogean and Siouan tribes, and on the northwest by the Kitunahan and the great Athapaskan families, while along the coast of Labrador and the eastern shore of Hudson Bay they came in contact with the Eskimo, who were gradually retreating before them to the north. In Newfoundland they encountered the Beothukan family, consisting of but a single tribe. A portion of the Shawnee at some early period had separated from the main body of the tribe in central Tennessee and pushed their way down to the Savannah River in South Carolina, where, known as Savannahs, they carried on destructive wars with the surrounding tribes until about the beginning of the 18th century they were finally driven out and joined the Delaware in the north. Soon afterwards the rest of the tribe was expelled by the Cherokee and Chicasa, who thenceforward claimed all the country stretching north to the Ohio River. The Cheyenne and Arapaho, two allied tribes of this stock, had become separated from their kindred on the north and had forced their way through hostile tribes across the Missouri to the Black Hills country of South Dakota, and more recently into Wyoming and Colorado, thus forming the advance guard of the Algonquian stock in that direction, having the Siouan tribes behind them and those of the Shoshonean family in front. [The following are the] principal tribes: Abnaki, Algonquin, Arapaho, Cheyenne, Conoy, Cree, Delaware, Fox, Illinois, Kickapoo, Mahican, Massachusetts, Menominee, Miami, Micmac, Mohegan, Montagnais, Montauk, Munsee, Nanticoke, Narraganset, Nauset, Nipmuc, Ojibwa, Ottawa, Pamlico, Penacook, Pequot, Piankishaw, Pottawotomi, Powhatan, Sac, Shawnee, Siksika, Wampanoag, Wappinger. The present number of the Algonquian stock is about 95,600, of whom about 60,000 are in Canada and the remainder in the United States."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, pp. 47-48.

Alibamus, or Alabamas. See below: MUSK HOGGAN FAMILY.

Alleghans, or Allegewi, or Talligewi.—"The oldest tribe of the United States, of which there is a distinct tradition, were the Alleghans. The term is perpetuated in the principal chain of mountains traversing the country. This tribe, at an antique period, had the seat of their power in the Ohio Valley and its confluent streams, which were the sites of their numerous towns and villages. They appear originally to have borne the name of Allí, or Alleg, and hence the names of Talligewi and Allegewi. (Trans. Am. Phi. Soc., vol. 1.) By adding to the radical of this word the particle 'hany' or 'ghany,' meaning river, they described the principal scene of their residence—namely, the Alleghany, or River of the Alleghans, now called Ohio. The word Ohio is of Iroquois origin, and of a far later period; having been bestowed by them after their conquest of the country, in alliance with the Lenapees, or ancient Delawares. (Phi. Trans.) The term was applied to the entire river, from its confluence with the Mississippi, to its origin in the broad spurs of the Alleghanies, in New York and Pennsylvania. . . . There are evidences of antique labors in the alluvial plains and valleys of the Scioto, Miami, and Muskingum, the Wabash, Kaskaskia, Cahokia, and Illinois, denoting that the ancient Alleghans, and their allies and confederates, cultivated the soil, and were semi-agriculturists. These evidences have been traced, at late periods, to the fertile table-lands of Indiana and Michigan. The tribes lived in fixed towns, cultivating extensive fields of the zea-maize; and also, as denoted by recent discoveries, . . . of some species of beans, vines, and esculents. They were, in truth, the mound builders."—H. R. Schoolcraft, *Information respecting the Indian Tribes*, pt. 5, p. 133.—This conclusion, to which Mr. Schoolcraft had arrived, that the ancient Alleghans or Talligewi were the mound builders of the Ohio Valley is being sustained by later investigators, and seems to have become an accepted opinion among those of highest authority. The Alleghans, moreover, are being identified with the Cherokees of later times, in whom their race, once supposed to be extinct, has apparently survived; while the fact, long suspected, that the Cherokee language is of the Iroquois family is being proved by the latest studies. According to Indian tradition, the Alleghans were driven from their ancient seats, long ago, by a combination against them of the Lenape (Delawares) and the Mengwe (Iroquois). The route of their migrations is being traced by the character of the mounds which they built, and of the remains gathered from the mounds. "The general movement [of retreat before the Iroquois and Lenape] . . . must have been southward, . . . and the exit of the Ohio mound-builders was, in all probability, up the Kanawah Valley on the same line that the Cherokees appear to have followed in reaching their historical locality. . . . If the hypothesis here advanced be correct, it is apparent that the Cherokees entered the immediate valley of the Mississippi from the northwest, striking it in the region of Iowa."—C. Thomas, *The Problem of the Ohio Mounds* (Bureau of Ethnology, 1889).

Also in The same, *Burial Mounds of the Northern Sections of the U. S.* (Fifth An. Rept.

of the Bureau of Ethnology, 1883-84).—J. Heckewelder, *Acct. of the Indian Nations*, ch. 1.—See, below: CHEROKEES, and IROQUOIS CONFEDERACY; also AMERICA, PREHISTORIC.

Amahuacas. See below: ANDESANS.

Andastés. See below: SUSQUEHANNAS.

Andesians.—"The term Andesians or Antesians, is used with geographical rather than ethnological limits, and embraces a number of tribes. First of these are the Cofan in Equador, east of Chimborazo. They fought valiantly against the Spaniards, and in times past killed many of the missionaries sent among them. Now they are greatly reduced and have become more gentle. The Huamaboya are their near neighbors. The Jivara, west of the river Pastaca, are a warlike tribe, who, possibly through a mixture of Spanish blood, have a European cast of countenance and a beard. The half Christian Napo or Quijo and their peaceful neighbors, the Zaporo, live on the Rio Napo. The Yamco, living on the lower Chambira and crossing the Marañon, wandering as far as Saryacu, have a clearer complexion. The Pacamora and the Yuguarzongo live on the Marañon, where it leaves its northerly course and bends toward the east. The Cochiquima live on the lower Yavari; the Mayoruna, or Barbudo, on the middle Ucayali beside the Campo and Cochibo, the most terrible of South American Indians; they dwell in the woods between the Tapiche and the Marañon, and like the Jivaro have a beard. The Pano, who formerly dwelt in the territory of Lalaguna, but who now live in villages on the upper Ucayali, are Christians. . . . Their language is the principal one on the river, and it is shared by seven other tribes called collectively by the missionaries Manioto or Mayno. . . . Within the woods on the right bank live the Amahuaca and Shacaya. On the north they join the Remo, a powerful tribe who are distinguished from all the others by the custom of tattooing. Outside this Pano linguistic group stand the Campa, Campo, or Antis on the east slope of the Peruvian Cordillera at the source of the Rio Beni and its tributaries. The Chontaquiros, or Piru, now occupy almost entirely the bank of the Ucayali below the Pachilia. The Mojos or Moxos live in the Bolivian province of Moxos with the small tribes of the Baure, Itonama, Pacaguara. A number of smaller tribes belonging to the Antesian group need not be enumerated. The late Professor James Orton described the Indian tribes of the territory between Quito and the river Amazon. The Napo approach the type of the Quichua. . . . Among all the Indians of the Provincia del Oriente, the tribe of Jivaro is one of the largest. These people are divided into a great number of sub-tribes. All of these speak the clear musical Jivaro language. They are muscular, active men. . . . The Morona are cannibals in the full sense of the word. . . . The Campo, still very little known, is perhaps the largest Indian tribe in Eastern Peru, and, according to some, is related to the Inca race, or at least with their successors. They are said to be cannibals, though James Orton does not think this possible. . . . The nearest neighbors of the Campo are the Chontakiro, or Chontaqui, or Chonquiro, called also Piru, who, according to Paul Marcoy, are said to be of the same origin with the Campo; but the language is wholly different. . . . Among the Pano people are the wild Conibo; they are

the most interesting, but are passing into extinction."—*The Standard Natural History* (J. S. Kingsley, ed.), v. 6, pp. 227-231.

Apache Group.*—Under the general name of the Apaches "I include all the savage tribes roaming through New Mexico, the north-western portion of Texas, a small part of northern Mexico, and Arizona. . . . Owing to their roving proclivities and incessant raids they are led first in one direction and then in another. In general terms they may be said to range about as follows: The Comanches, Jetans, or Nauni, consisting of three tribes, the Comanches proper, the Yamparacks, and Tenawas, inhabiting northern Texas, eastern Chihuahua, Nuevo Leon, Coahuila, Durango, and portions of south-western New Mexico, by language allied to the Shoshone family; the Apaches, who call themselves Shis Inday, or 'men of the woods,' and whose tribal divisions are the Chiricaguas, Coyoteros, Faraones, Gileños, Lipanes, Llaneros, Mescaleros, Mimbrenos, Natages, Pelones, Pinalenos, Tejuas, Tontos, and Vaqueros, roaming over New Mexico, Arizona, North-western Texas, Chihuahua and Sonora, and who are allied by language to the great Tinneh family; the Navajos, or Tenuai, 'men,' as they designate themselves, having linguistic affinities with the Apache nation, with which they are sometimes classed, living in and around the Sierra de los Mimbres; the Mojaves, occupying both banks of the Colorado in Mojave Valley; the Hualapais, near the head-waters of Bill Williams Fork; the Yumas, on the east bank of the Colorado, near its junction with the Rio Gila; the Cosninos, who, like the Hualapais, are sometimes included in the Apache nation, ranging through the Mogollon Mountains; and the Yampais, between Bill Williams Fork and the Rio Hassayampa. . . . The Apache country is probably the most desert of all. . . . In both mountain and desert the fierce, rapacious Apache, inured from childhood to hunger and thirst, and heat and cold, finds safe retreat. . . . The Pueblos . . . are nothing but partially reclaimed Apaches or Comanches."—H. H. Bancroft, *Native Races of the Pacific States*, v. 1, ch. 5 — Dr. Brinton prefers the name Yuma for the whole of the Apache Group, confining the name Apache (that being the Yuma word for "fighting men") to the one tribe so called. "It has also been called the Katchan or Cuchan stock." —D. G. Brinton, *The American Race*, p. 109.—See, also, below: ATHAPASCAN FAMILY.

Apalaches.—"Among the aboriginal tribes of the United States perhaps none is more enigmatical than the Apalaches. They are mentioned as an important nation by many of the early French and Spanish travellers and historians, their name is preserved by a bay and river on the shores of the Gulf of Mexico, and by the great eastern coast range of mountains, and has been applied by ethnologists to a family of cognate nations that found their hunting grounds from the Mississippi to the Atlantic and from the Ohio river to the Florida Keys; yet, strange to say, their own race and place have been but guessed at." The derivation of the name of the Apalaches "has been a 'questio vexata' among Indianologists." We must "consider it an indication of ancient connections with the southern continent, and in itself a pure Carib word. 'Apáliché' in the Tamanaca dialect of the

Guaranay stem on the Orinoco signifies 'man,' and the earliest application of the name in the northern continent was as the title of the chief of a country, 'l'homme par excellence,' and hence, like very many other Indian tribes (Apaches, Lenni Lenape, Illinois), his subjects assumed by eminence the proud appellation of 'The Men.' . . . We have . . . found that though no general migration took place from the continent southward, nor from the islands northward, yet there was a considerable intercourse in both directions; that not only the natives of the greater and lesser Antilles and Yucatan, but also numbers of the Guaranay stem of the southern continent, the Caribs proper, crossed the Straits of Florida and founded colonies on the shores of the Gulf of Mexico; that their customs and language became to a certain extent grafted upon those of the early possessors of the soil; and to this foreign language the name Apalache belongs. As previously stated, it was used as a generic title, applied to a confederation of many nations at one time under the domination of one chief, whose power probably extended from the Alleghany mountains on the north to the shore of the Gulf; that it included tribes speaking a tongue closely akin to the Choktah is evident from the fragments we have remaining. . . . The location of the tribe in after years is very uncertain. Dumont placed them in the northern part of what is now Alabama and Georgia, near the mountains that bear their name. That a portion of them did live in this vicinity is corroborated by the historians of South Carolina, who say that Colonel Moore, in 1703, found them 'between the head-waters of the Savannah and Altamaha.' . . . According to all the Spanish authorities, on the other hand, they dwelt in the region of country between the Suwannee and Appalachicola rivers—yet must not be confounded with the Apalachicolas. . . . They certainly had a large and prosperous town in this vicinity, said to contain 1,000 warriors.

. . . I am inclined to believe that these were different branches of the same confederacy. . . . In the beginning of the 18th century they suffered much from the devastations of the English, French and Creeks. . . . About the time Spain regained possession of the soil, they migrated to the West and settled on the Bayou Rapide of Red River. Here they had a village numbering about 50 souls."—D. G. Athapascan Family.—**Chippewyans.**—**Tinneh.**—**Sarcees***—"This name [Athapascans or Athabascans] has been applied to a class of tribes who are situated north of the great Churchill river, and north of the source of the fork of the Saskatchewan, extending westward

* See Note, Appendix E, vol. 5.

till within about 150 miles of the Pacific Ocean. . . . The name is derived, arbitrarily, from Lake Athabasca, which is now more generally called the Lake of the Hills. Surrounding this lake extends the tribe of the Chippewyans, a people so-called by the Kenistenos and Chippewas, because they were found to be clothed, in some primary encounter, in the scanty garb of the fisher's skin. . . . We are informed by Mackenzie that the territory occupied by the Chippewyans extends between the parallels of 60° and 65° north and longitudes from 100° to 110° west."—H. R. Schoolcraft, *Information Respecting the Indian Tribes*, pt. 5, p. 172.—"The Tinnéh may be divided into four great families of nations; namely, the Chippewyans, or Athabascas, living between Hudson Bay and the Rocky Mountains; the Tacullies, or Carriers, of New Caledonia or North-western British America; the Kutchins, occupying both banks of the Upper Yukon and its tributaries, from near its mouth to the Mackenzie River, and the Kenai, inhabiting the interior from the lower Yukon to Copper River."—H. H. Bancroft, *The Native Races of the Pacific States*, ch. 2.—"The Indian tribes of Alaska and the adjacent region may be divided into two groups. . . . 1. Tinnéh—Chippewyans of authors. . . . Father Petitot discusses the terms Athabaskans, Chippewyans, Montagnais, and Tinnéh as applied to this group of Indians. . . . This great family includes a large number of American tribes extending from near the mouth of the Mackenzie south to the borders of Mexico. The Apaches and Navajos belong to it, and the family seems to intersect the continent of North America in a northerly and southerly direction, principally along the flanks of the Rocky Mountains. . . . The designation [Tinnéh] proposed by Messrs. Ross and Gibbs has been accepted by most modern ethnologists. . . . 2. T'linkets," which family includes the Yakutats and other groups.—W. H. Dall, *Tribes of the Extreme Northwest (Contributions to N. Am. Ethnology, v. 1)*.—"Wherever found, the members of this group present a certain family resemblance. In appearance they are tall and strong, the forehead low with prominent superciliary ridges, the eyes slightly oblique, the nose prominent but wide toward the base, the mouth large, the hands and feet small. Their strength and endurance are often phenomenal, but in the North, at least, their longevity is slight, few living beyond fifty. Intellectually they rank below most of their neighbors, and nowhere do they appear as fosterers of the germs of civilization. Where, as among the Navajos, we find them having some repute for the mechanical arts, it turns out that this is owing to having captured and adopted the members of more gifted tribes. . . . Agriculture was not practised either in the north or south, the only exception being the Navajos, and with them the inspiration came from other stocks. . . . The most cultured of their bands were the Navajos, whose name is said to signify 'large cornfields,' from their extensive agriculture. When the Spaniards first met them in 1541 they were tillers of the soil, erected large granaries for their crops, irrigated their fields by artificial water courses or acequias, and lived in substantial dwellings, partly underground; but they had not then learned the art of weaving the celebrated 'Navajo blankets,' that being a later

acquisition of their artisans."—D. G. Brinton, *The American Race*, pp. 69-72.—See, above, APACHE GROUP, and BLACKFEET.

Atsinas (Caddoes).* See below: BLACKFEET.

Attacapan Family—"Derivation: From a Choctaw word meaning 'man-eater.' Little is known of the tribe, the language of which forms the basis of the present family. The sole knowledge possessed by Gallatin was derived from a vocabulary and some scanty information furnished by Dr. John Sibley, who collected his material in the year 1805. Gallatin states that the tribe was reduced to 50 men. . . . Mr. Gatschet collected some 2,000 words and a considerable body of text. His vocabulary differs considerably from the one furnished by Dr. Sibley and published by Gallatin. . . . The above material seems to show that the Attacapa language is distinct from all others, except possibly the Chitimachan."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, p. 57.

Beothukan Family.—The Beothuk were a tribe, now extinct, which is believed to have occupied the whole of Newfoundland at the time of its discovery. What is known of the language of the Beothuk indicates no relationship to any other American tongue.—J. W. Powell, *Seventh Annual Rept. of the Bureau of Ethnology*, p. 57.

Biloxis. See below: SIOUAN FAMILY.

Blackfeet, or Siksikas.*—The tribe that wandered the furthest from the primitive home of the stock [the Algonquian] were the Blackfeet, or Siksika, which word has this signification. It is derived from their earlier habitat in the valley of the Red river of the north, where the soil was dark and blackened their moccasins. Their bands include the Blood or Kenai and the Piegan Indians. Half a century ago they were at the head of a confederacy which embraced these and also the Sarcee (Tinné) and the Atsina (Caddo) nations, and numbered about 30,000 souls. They have an interesting mythology and an unusual knowledge of the constellations"—D. G. Brinton, *The American Race*, p. 79.—See above: ALGONQUIAN FAMILY; and, below: FLATHEADS.

Caribs. See below: GUCK OR COCO GROUP. **Caribs and their Kindred.**—"The warlike and unyielding character of these people, so different from that of the pusillanimous nations around them, and the wide scope of their enterprises and wanderings, like those of the nomad tribes of the Old World, entitle them to distinguished attention. . . . The traditional accounts of their origin, though of course extremely vague, are yet capable of being verified to a great degree by geographical facts, and open one of the rich veins of curious inquiry and speculation which abound in the New World. They are said to have migrated from the remote valleys embosomed in the Apalachian mountains. The earliest accounts we have of them represent them with weapons in their hands, continually engaged in wars, winning their way and shifting their abode, until, in the course of time, they found themselves at the extremity of Florida. Here, abandoning the northern continent, they passed over to the Lucayos [Bahamas], and thence gradually, in the process of years, from island to island of that vast verdant chain, which links, as it were, the end of Florida to the coast of Paria, on the southern continent. The archipelago extending from Porto Rico to Tobago was their stronghold, and the island of Guadeloupe in a manner their citadel. Hence they made their expeditions, and spread the terror of their name through all the surrounding countries. Swarms of them landed upon the southern continent, and overran some parts of terra firma. Traces of them have been discovered far in the interior of that vast country through which flows the Oronoko. The Dutch found colonies of them on the banks of the Ikouteka, which empties into the Surinam; along the Esquibi, the Maroni, and other rivers of Guayana; and in the country watered by the windings of the Cayenne"—W Irving, *Life and Voyages of Columbus*, bk. 6, ch. 3 (v. 1).—"To this account [substantially as given above] of the origin of the Insular Charaibes, the generality of historians have given their assent; but there are doubts attending it that are not easily solved. If they migrated from Florida, the imperfect state and natural course of their navigation induce a belief that traces of them would have been found on those islands which are near to the Florida shore; yet the natives of the Bahamas, when discovered by Columbus, were evidently a similar people to those of Hispaniola. Besides, it is sufficiently known that there existed anciently many numerous and powerful tribes of Charaibes on the southern peninsula, extending from the river Oronoko to Essequibe, and throughout the whole province of Surinam, even to Brazil, some of which still maintain their independency. . . . I incline therefore to the opinion of Martyr, and conclude that the islanders were rather a colony from the Charaibes of South America, than from any nation of the North. Rochefort admits that their own traditions referred constantly to Guiana."—B. Edwards, *Hist. of Brit. Colonies in the W. Indies*, bk. 1, ch. 2.—"The Carabisce, Carabeesi, Charaibes, Caribs, or Galibis, originally occupied [in Guiana] the principal rivers, but as the Dutch encroached upon their possessions they retired inland, and are now daily dwindling away. According to Mr. Hillhouse, they

could formerly muster nearly 1,000 fighting men, but are now [1855] scarcely able to raise a tenth part of that number. . . . The smaller islands of the Caribbean Sea were formerly thickly populated by this tribe, but now not a trace of them remains."—H. G. Dalton, *Hist. of British Guiana*, v. 1, ch. 1.—E. F. im Thurn, *Among the Indians of Guiana*, ch. 6.—"Recent researches have shown that the original home of the stock was south of the Amazon, and probably in the highlands at the head of the Tapajoz river. A tribe, the Bakairi, is still resident there, whose language is a pure and archaic form of the Carib tongue."—D. G. Brinton, *Races and Peoples*, p. 268.—"Related to the Caribs stand a long list of small tribes . . . all inhabitants of the great primeval forest in and near Guiana. They may have characteristic differences, but none worthy of mention are known. In bodily appearance, according to all accounts, these relatives of the Caribs are beautiful. In Georgetown the Arauacas [or Arawaks] are celebrated for their beauty. They are slender and graceful, and their features handsome and regular, the face having a Grecian profile, and the skin being of a reddish cast. A little farther inland we find the Macushi [or Macusis], with a lighter complexion and a Roman nose. These two types are repeated in other tribes, except in the Tarumi, who are decidedly ugly. In mental characteristics great similarity prevails."—*The Standard Natural History* (J. S. Kingsley, ed.), p. 237.—"The Arawaks occupied on the continent the area of the modern Guiana, between the Corentyn and the Pomeroon rivers, and at one time all the West Indian Islands. From some of them they were early driven by the Caribs, and within 40 years of the date of Columbus' first voyage the Spanish had exterminated nearly all on the islands. Their course of migration had been from the interior of Brazil northward; their distant relations are still to be found between the headwaters of the Paraguay and Schingu rivers."—D. G. Brinton, *Races and Peoples*, p. 268-269.—"The Kâpohn (Acawoios, Waikas, &c.) claim kindred with the Caribs. . . . The Acawoios, though resolute and determined, are less hasty and impetuous than the Caribs. . . . According to their tradition, one of their hordes removed [to the Upper Demerera] . . . from the Masaruni. The Parawianas, who originally dwelt on the Demerera, having been exterminated by the continual incursions of the Caribs, the Waika-Acawoios occupied their vacant territory. . . . The Macusis . . . are supposed by some to have formerly inhabited the banks of the Orinoco. . . . As they are industrious and unwarlike, they have been the prey of every savage tribe around them. The Wapisianas are supposed to have driven them northward and taken possession of their country. The Brazilians, as well as the Caribs, Acawoios, &c., have long been in the habit of enslaving them. . . . The Arecunas have been accustomed to descend from the higher lands and attack the Macusis. . . . This tribe is said to have formerly dwelt on the banks of the Uaupes or Ucayari, a tributary of the Rio Negro. . . . The Waraus appear to have been the most ancient inhabitants of the land. Very little, however, can be gleaned from them respecting their early history. . . . The Tivitivas, mentioned by Raleigh, were probably a branch of the Waraus, whom he calls Quarawetes."—

Cherokees.—"The Cherokee tribe has long been a puzzling factor to students of ethnology and North American languages. Whether to be considered an abnormal offshoot from one of the well-known Indian stocks or families of North America, or the remnant of some undetermined or almost extinct family which has merged into another, appear to be questions yet unsettled."

—C. Thomas, *Burial Mounds of the Northern Sections of the U. S. (Fifth Annual Rept. of the Bureau of Ethnology, 1883-4)*.—Facts which tend to identify the Cherokees with the ancient "mound-builders" of the Ohio Valley—the Alleghans or Talligewi of Indian tradition—are set forth by Prof. Thomas in a later paper, on the Problem of the Ohio Mounds, published by the Bureau of Ethnology in 1889 [see above: ALLEGHANS] and in a little book published in 1890, entitled "The Cherokees in Pre-Columbian Times." "The Cherokee nation has probably occupied a more prominent place in the affairs and history of what is now the United States of America, since the date of the early European settlements, than any other tribe, nation, or confederacy of Indians, unless it be possible to except the powerful and warlike league of the Iroquois or Six Nations of New York. It is almost certain that they were visited at a very early period [1540] following the discovery of the American continent by that daring and enthusiastic Spaniard, Fernando de Soto. . . . At the time of the English settlement of the Carolinas the Cherokees occupied a diversified and well-watered region of country of large extent upon the waters of the Catawba, Broad, Saluda, Keowee, Tugaloo, Savannah, and Coosa rivers on the east and south, and several tributaries of the Tennessee on the north and west. . . . In subsequent years, through frequent and long continued conflicts with the ever advancing white settlements, and the successive treaties whereby the Cherokees gradually yielded portions of their domain, the location and names of their towns were continually changing until the final removal of the nation [1836-1839] west of the Mississippi. . . . This removal turned the Cherokees back in the calendar of progress and civilization at least a quarter of a century. The hardships and exposures of the journey, coupled with the fevers and malaria of a radically different climate, cost the lives of perhaps 10 per cent. of their total population. The animosities and turbulence born of the treaty of 1835 not only occasioned the loss of many lives, but rendered property insecure, and in consequence diminished the zeal and industry of the entire community in its accumulation. A brief period of comparative quiet, however, was again characterized by an advance toward a higher civilization. Five years after their removal we find from the re-

port of their agent that they are again on the increase in population. . . . With the exception of occasional drawbacks—the result of civil feuds—the progress of the nation in education, industry and civilization continued until the outbreak of the rebellion. At this period, from the best attainable information, the Cherokees numbered 21,000 souls. The events of the war brought to them more of desolation and ruin than perhaps to any other community. Raided and sacked alternately, not only by the Confederates and Union forces, but by the vindictive ferocity and hate of their own factional divisions, their country became a blackened and desolate waste. . . . The war over, and the work of reconstruction commenced, found them numbering 14,000 impoverished, heart-broken, and revengeful people. . . . To-day their country is more prosperous than ever. They number 22,000, a greater population than they have had at any previous period, except perhaps just prior to the date of the treaty of 1835, when those east added to those west of the Mississippi are stated to have aggregated nearly 25,000 people. To-day they have 2,300 scholars attending 75 schools, established and supported by themselves at an annual expense to the nation of nearly \$100,000. To-day, 13,000 of their people can read and 18,000 can speak the English language. To-day, 5,000 brick, frame and log-houses are occupied by them, and they have 64 churches with a membership of several thousand. They cultivate 100,000 acres of land and have an additional 150,000 fenced. . . . They have a constitutional form of government predicated upon that of the United States. As a rule their laws are wise and beneficent and are enforced with strictness and justice. . . . The present Cherokee population is of a composite character. Remnants of other nations or tribes [Delawares, Shawnees, Creeks, Natchez] have from time to time been absorbed and admitted to full participation in the benefits of Cherokee citizenship."—C. C. Royce, *The Cherokee Nation of Indians (Fifth Annual Rept. of the Bureau of Ethnology, 1883-84)*.—This elaborate paper by Mr. Royce is a narrative in detail of the official relations of the Cherokees with the colonial and federal governments, from their first treaty with South Carolina, in 1721, down to the treaty of April 27, 1868.—"As early as 1798 Barton compared the Cherokee language with that of the Iroquois and stated his belief that there was a connection between them. . . . Mr. Hale was the first to give formal expression to his belief in the affinity of the Cherokee to Iroquois. Recently extensive Cherokee vocabularies have come into possession of the Bureau of Ethnology, and a careful comparison of them with ample Iroquois material has been made by Mr. Hewitt. The result is convincing proof of the relationship of the two languages."—J. W. Powell, *Seventh Annual Rept. of the Bureau of Ethnology*, p. 77.*

Cheyennes, or Sheyennes. See above: ALGONQUIAN FAMILY.

Chibchas.—The most northerly group of the tribes of the Andes "are the Cundinamarca of

* See Note, Appendix E, vol. 5.

the table lands of Bogota. At the time of the conquest the watershed of the Magdalena was occupied by the Chibcha, or, as they were called by the Spaniards, Muyscas. At that time the Chibcha were the most powerful of all the autochthonous tribes, had a long history behind them, were well advanced toward civilization, to which numerous antiquities bear witness. The Chibcha of to-day no longer speak the well-developed and musical language of their forefathers. It became extinct about 1730, and it can now only be inferred from existing dialects of it; these are the languages of the Turiero, a tribe dwelling north of Bogota, and of the Itoco Indians who live in the neighborhood of the celebrated Emerald mines of Muzo."—*The Standard Natural History* (J. S. Kingsley, ed.) v. 6, p. 215.—"As potters and goldsmiths they [the Chibcha] ranked among the finest on the continent."—D. G. Brinton, *Races and Peoples*, p. 272.—See, also, COLOMBIAN STATES: A. D. 1536–1731.

Chicasas. See below: MUSKHOGEAN FAMILY; also, LOUISIANA: A. D. 1719–1750.

Chichimecs. See MEXICO: A. D. 1325–1502.

Chimakuan Family.—"The Chimakum are said to have been formerly one of the largest and most powerful tribes of Puget Sound. Their warlike habits early tended to diminish their numbers, and when visited by Gibbs in 1854 they counted only about 70 individuals. This small remnant occupied some 15 small lodges on Port Townsend Bay."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, p. 62.

Chimarikan Family.—"According to Powers, this family was represented, so far as known, by two tribes in California, one the Chi-mál-a-kwe, living on New River, a branch of the Trinity, the other the Chimariko, residing upon the Trinity itself from Burnt Ranch up to the mouth of North Fork, California. The two tribes are said to have been as numerous formerly as the Hupa, by whom they were overcome and nearly exterminated. Upon the arrival of the Americans only 25 of the Chimalakwe were left."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, p. 63.

Chinantecs. See below: ZAPOTEC, ETC.

Chinookan Family.—"The banks of the Columbia, from the Grand Dalles to its mouth, belong to the two branches of the Tsinük [or Chinook] nation, which meet in the neighborhood of the Kowlitz River, and of which an almost nominal remnant is left. . . . The position of the Tsinük previous to their depopulation was, as at once appears, most important, occupying both sides of the great artery of Oregon for a distance of 200 miles, they possessed the principal thoroughfare between the interior and the ocean, boundless resources of provisions of various kinds, and facilities for trade almost unequalled on the Pacific."—G. Gibbs, *Tribes of West Washington and N. W. Oregon* (Contrib. to N. A. Ethnology, v. 1), p. 164.—See, also, below: FLATHEADS.

Chippewas. See below: OJIBWAS; and above: ALGONQUIAN FAMILY.

Chippewyans. See below: ATHAPASCAN FAMILY.

Choctaws. See below: MUSKHOGEAN FAMILY.

Chontals and Popolocas.—"According to the census of 1880 there were 31,000 Indians in Mexico belonging to the Familia Chontal. No such family exists. The word 'chontalli' in the

Nahuatl language means simply 'stranger,' and was applied by the Nahuas to any people other than their own. According to the Mexican statistics, the Chontals are found in the states of Mexico, Puebla, Oaxaca, Guerrero, Tabasco, Guatemala and Nicaragua. A similar term is 'popoloca,' which in Nahuatl means a coarse fellow, one speaking badly, that is, broken Nahuatl. The Popolocas have also been erected into an ethnic entity by some ethnographers, with as little justice as the Chontallis. They are stated to have lived in the provinces of Puebla, Oaxaca, Vera Cruz, Mechoacan and Guatemala."—D. G. Brinton, *The American Race*, pp. 146–153.

Chontaquiros. See above: ANDESIANS.

Chumashan Family.—"Derivation: From Chumash, the name of the Santa Rosa Islanders. The several dialects of this family have long been known under the group or family name, 'Santa Barbara,' which seems first to have been used in a comprehensive sense by Latham in 1856, who included under it three languages, viz.: Santa Barbara, Santa Inez, and San Luis Obispo. The term has no special pertinence as a family designation, except from the fact that the Santa Barbara Mission, around which one of the dialects of the family was spoken, is perhaps more widely known than any of the others."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, p. 67.

Cliff-dwellers. See AMERICA: PREHISTORIC.

Coahuiltecan Family.—"Derivation: From the name of the Mexican State Coahuila. This family appears to have included numerous tribes in southwestern Texas and in Mexico. . . . A few Indians still survive who speak one of the dialects of this family, and in 1886 Mr. Gatschet collected vocabularies of two tribes, the Comecrudo and Cotoname, who live on the Rio Grande, at Las Prietas, State of Tamaulipas."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 68.

Coajiro, or Guajira.—"An exceptional position is taken, in many respects, by the Coajiro, or Guajira, who live on the peninsula of the same name on the northwestern boundary of Venezuela. Bounded on all sides by so-called civilized peoples, this Indian tribe is known to have maintained its independence, and acquired the well-deserved reputation for cruelty, a tribe which, in many respects, can be classed with the Apaches and Comanches of New Mexico, the Araucanians of Chili, and the Guaycara and Guarani on the Parana. The Coajiro are mostly large, with chestnut-brown complexion and black, sleek hair. While all the other coast tribes have adopted the Spanish language, the Coajiro have preserved their own speech. They are the especial foes of the other peoples. No one is given entrance into their land, and they live with their neighbors, the Venezuelans, in constant hostilities. They have fine horses, which they know how to ride excellently. . . . They have numerous herds of cattle. . . . They follow agriculture a little."—*The Standard Natural History* (J. S. Kingsley, ed.), v. 6, p. 243.

Copehan Family.—"The territory of the Copehan family is bounded on the north by Mount Shasta and the territory of the Sastean and Lutuanian families, on the east by the territory of the Palaihnihan, Yanan, and Punjunan families, and on the south by the bays of San Pablo and Suisun and the lower waters of the Sacramento."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 69.

Costanoan Family.—"Derivation: From the Spanish costano, 'coast-men.' Under this group name Latham included five tribes . . . which were under the supervision of the Mission Dolores. . . . The territory of the Costanoan family extends from the Golden Gate to a point near the southern end of Monterey Bay. . . . The surviving Indians of the once populous tribes of this family are now scattered over several counties and probably do not number, all told, over 30 individuals, as was ascertained by Mr. Henshaw in 1888. Most of these are to be found near the towns of Santa Cruz and Monterey."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 71.

Delawares, or Lenape.—"The proper name of the Delaware Indians was and is Lenāpé (ā as in father, é as a in mate). . . . The Lenape were divided into three sub-tribes:—1. The Minsi, Monseys, Montheys, Munsees, or Minisinks. 2. The Unami or Wonaimeys. 3. The Unalachtigo. No explanation of these designations will be found in Heckewelder or the older writers. From investigations among living Delawares, carried out at my request by Mr. Horatio Hale, it is evident that they are wholly geographical, and refer to the location of these sub-tribes on the Delaware river. . . . The Minsi lived in the mountainous region at the head waters of the Delaware, above the Forks or junction of the Lehigh river. . . . The Unamis' territory on the right bank of the Delaware river extended from the Lehigh Valley southward. It was with them and their southern neighbors, the Unalachtigos, that Penn dealt for the land ceded to him in the Indian deed of 1682. The Minsis did not take part in the transaction, and it was not until 1737 that the Colonial authorities treated directly with the latter for the cession of their territory. The Unalachtigo or Turkey totem had its principal seat on the affluents of the Delaware

near where Wilmington now stands."—D. G. Brinton, *The Lenape and Their Legends*, ch. 3. —"At the . . . time when William Penn landed in Pennsylvania, the Delawares had been subjugated and made women by the Five Nations. It is well known that, according to that Indian mode of expression, the Delawares were henceforth prohibited from making war, and placed under the sovereignty of the conquerors, who did not even allow sales of land, in the actual possession of the Delawares, to be valid without their approbation. William Penn, his descendants, and the State of Pennsylvania, accordingly, always purchased the right of possession from the Delawares, and that of Sovereignty from the Five Nations. . . . The use of arms, though from very different causes, was equally prohibited to the Delawares and to the Quakers. Thus the colonization of Pennsylvania and of West New Jersey by the British, commenced under the most favorable auspices. Peace and the utmost harmony prevailed for more than sixty years between the whites and the Indians; for these were for the first time treated, not only justly, but kindly, by the colonists. But, however gradually and peaceably their lands might have been purchased, the Delawares found themselves at last in the same situation as all the other Indians, without lands of their own, and therefore without means of subsistence. They were compelled to seek refuge on the waters of the Susquehanna, as tenants at will, on lands belonging to their hated conquerors, the Five Nations. Even there and on the Juniata they were encroached upon. . . . Under those circumstances, many of the Delawares determined to remove west of the Alleghany Mountains, and, about the year 1740-50, obtained from their ancient allies and uncles, the Wyandots, the grant of a derelict tract of land lying principally on the Muskingum. The great body of the nation was still attached to Pennsylvania. But the grounds of complaint increased. The Delawares were encouraged by the western tribes, and by the French, to shake off the yoke of the Six Nations, and to join in the war against their allies, the British. The frontier settlements of Pennsylvania were accordingly attacked both by the Delawares and the Shawnoes. And, although peace was made with them at Easton in 1758, and the conquest of Canada put an end to the general war, both the Shawnoes and Delawares removed altogether in 1768 beyond the Alleghany Mountains. . . . The years 1765-1795 are the true period of the power and importance of the Delawares. United with the Shawnoes, who were settled on the Scioto, they sustained during the Seven Years' War the declining power of France, and arrested for some years the progress of the British and American arms. Although a portion of the nation adhered to the Americans during the War of Independence, the main body, together with all the western nations made common cause with the British. And, after the short truce which followed the treaty of 1783, they were again at the head of the western confederacy in their last struggle for independence. Placed by their geographical situation in the front of battle, they were, during those three wars, the aggressors, and, to the last moment, the most active and formidable enemies of America. The decisive victory of General Wayne (1794), dissolved the confederacy; and the Delawares were the greatest sufferers by the

treaty of Greenville of 1795." After this, the greater part of the Delawares were settled on White River, Indiana, "till the year 1819, when they finally ceded their claim to the United States. Those residing there were then reduced to about 800 souls. A number . . . had previously removed to Canada; and it is difficult to ascertain the situation or numbers of the residue at this time [1836]. Those who have lately removed west of the Mississippi are, in an estimate of the War Department, computed at 400 souls. Former emigrations to that quarter had however taken place, and several small dispersed bands are, it is believed, united with the Senecas and some other tribes."—A. Gallatin, *Synopsis of the Indian Tribes (Archæologia Americana, v. 2), introd., sect. 2.*—See, above: ALGONQUIAN FAMILY; below: SEAWANESE, and PAWNEE (CADDON) FAMILY.—Also, PONTIAC'S WAR: UNITED STATES OF AM.: A. Eries. See below: HURONS, &c., and IROQUOIS CONFEDERACY: THEIR CONQUESTS, &c.

Eskimaun Family.—"Save a slight intermixture of European settlers, the Eskimo are the only inhabitants of the shores of Arctic America, and of both sides of Davis Strait and Baffin Bay, including Greenland, as well as a tract of about 400 miles on the Behring Strait coast of Asia. Southward they extend as far as about 50° N. L. on the eastern side, 60° on the western side of America, and from 55° to 60° on the shores of Hudson Bay. Only on the west the Eskimo near their frontier are interrupted on two small spots of the coast by the Indians, named Kennayans and Ugalezes, who have there advanced to the sea-shore for the sake of fishing. These coasts of Arctic America, of course, also comprise all the surrounding islands. Of these, the Aleutian Islands form an exceptional group; the inhabitants of these on the one hand distinctly differing from the coast people here mentioned, while on the other they show a closer relationship to the Eskimo than any other nation. The Aleutians, therefore, may be considered as only an abnormal branch of the Eskimo nation. . . . As regards their northern limits, the Eskimo people, or at least remains of their habitations, have been found nearly as far north as any Arctic explorers have hitherto advanced; and very possibly bands of them may live still farther to the north, as yet quite unknown to us. . . . On comparing the Eskimo with the neighbouring nations, their physical complexion certainly seems to point at an Asiatic origin; but, as far as we know, the latest investigations have also shown a transitional link to exist between the Eskimo and the other American nations, which would sufficiently indicate the possibility of a common origin from the same continent. As to their mode of life, the Eskimo decidedly resemble their American neighbours. . . . With regard to their language, the Eskimo also appear akin to the American nations in regard to its decidedly polysynthetic structure. Here, however, on the other hand, we meet with some very remarkable similarities between the Eskimo idiom and the language of Siberia, belonging to the Altaic or Finnish group. . . . According to the Sagas of the Icelanders, they were already met with on the east coast of Greenland about the year 1000,

and almost at the same time on the east coast of the American continent. . . . Between the years 1000 and 1300 they do not seem to have occupied the land south of 65° N. L. on the west coast of Greenland, where the Scandinavian colonies were then situated. But the colonists seem to have been aware of their existence in higher latitudes, and to have lived in fear of an attack by them, since, in the year 1266, an expedition was sent out for the purpose of exploring the abodes of the Skrælings, as they were called by the colonists. . . . About the year 1450, the last accounts were received from the colonies, and the way to Greenland was entirely forgotten in the mother country. . . . The features of the natives in the Southern part of Greenland indicate a mixed descent, from the Scandinavians and Eskimo, the former, however, not having left the slightest sign of any influence on the nationality or culture of the present natives. In the year 1585, Greenland was discovered anew by John Davis, and found inhabited exclusively by Eskimo."—H. Rink, *Tales and Traditions of the Eskimo, introd. and ch. 6.*—The same, *The Eskimo tribes.*—"In 1869, I proposed for the Aleuts and people of Inuit stock collectively the term Orarians, as indicative of their coastwise distribution, and as supplying the need of a general term to designate a very well-defined race. . . . The Orarians are divided into two well-marked groups, namely the Innuits, comprising all the so-called Eskimo and Tuskis, and the Aleuts."—W. H. Dall, *Tribes of the Extreme Northwest (Contrib. to N. A. Ethnology, v. 1), pt. 1.*

Esseleian Family.—"The present family was included by Latham in the heterogeneous group called by him Salinas. . . . The term Salinan [is now] restricted to the San Antonio and San Miguel languages, leaving the present family . . . [to be] called Esseleian, from the name of the single tribe Esselen, of which it is composed. . . . The tribe or tribes composing this family occupied a narrow strip of the California coast from Monterey Bay south to the vicinity of the Santa Lucia Mountain, a distance of about 50 miles."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology, pp. 75–76.*

Flatheads (Salishan Family).*—"The name Flathead was commonly given to the Choctaws, though, says Du Pratz, he saw no reason why they should be so distinguished, when the practice of flattening the head was so general. And in the enumeration just cited [Documentary Hist. of N. Y., v. 1, p. 24] the next paragraph . . . is: 'The Flatheads, Cherakis, Chicachas, and Totiris are included under the name of Flatheads by the Iroquois.'—M. F. Force, *Some Early Notices of the Indians of Ohio, p. 32.*—"The Salish . . . are distinctively known as Flatheads, though the custom of deforming the cranium is not confined to them."—D. G. Brinton, *The American Race, p. 107.*—"In . . . early times the hunters and trappers could not discover why the Blackfeet and Flatheads [of Montana] received their respective designations, for the feet of the former are no more inclined to sable than any other part of the body, while the heads of the latter possess their fair proportion of

* See Note, Appendix E, vol. 5.

rotundity. Indeed it is only below the falls and rapids that real Flatheads appear, and at the mouth of the Columbia that they flourish most supernaturally. The tribes who practice the custom of flattening the head, and who lived at the mouth of the Columbia, differed little from each other in laws, manners or customs, and were composed of the Cathlamahs, Killmucks, Clatsops, Chinooks and Chilts. The abominable custom of flattening their heads prevails among them all."—P. Ronan, *Hist. Sketch of the Flathead Indian Nation*, p. 17.—In Major Powell's linguistic classification, the "Salishan Family" (Flathead) is given a distinct place.—J. W. Powell, *Seventh Annual Rept. of the Bureau of Ethnology*, p. 102.

Guck or Coco Group.—An extensive linguistic group of tribes in Brazil, on and north of the Amazon, extending as far as the Orinoco, has been called the Guck, or Coco group. "There is no common name for the group, that here used meaning a father's brother, a very important personage in these tribes. The Guck group embraces a large number of tribes. . . . We need enumerate but few. The Cuyriri or Kiriri (also known as Sabaja, Pimenteiros, etc.), number about 3,000. Some of them are half civilized, some are wild, and, without restraint, wander about, especially in the mountains in the Province of Pernambuco. The Araicu live on the lower Amazon and the Tocantins. Next come the Manaos, who have a prospect of maintaining themselves longer than most tribes. With them is connected the legend of the golden lord who washed the gold dust from his limbs in a lake [see EL DORADO]. . . . The Uirina, Baré, and Cariay live on the Rio Negro, the Cunimaré on the Jurua, the Maranha on the Jutay. Whether the Chamico on the right bank of the Paraguay, belong to the Guck is uncertain. Among the tribes which, though very much mixed, are still to be enumerated with the Guck, are the Tecuna and the Passé. In language the Tecunas show many similarities to the Gês; they live on the western borders of Brazil, and extend in Equador to the Pastaga. Among them occur peculiar masques which strongly recall those found on the northwest coast of North America. . . . In the same district belong the Uaupe, who are noticeable from the fact that they live in barracks, indeed the only tribe in South America in which this custom appears. The communistic houses of the Uaupe are called 'malloca'; they are buildings of about 120 feet long, 75 feet wide, and 30

high, in which live a band of about 100 persons in 12 families, each of the latter, however, in its own room. . . . Finally, complex tribes of the most different nationality are comprehended under names which indicate only a common way of life, but are also incorrectly used as ethnographic names. These are Caripuna, Mura, and Miranha, all of whom live in the neighborhood of the Madeira River. Of the Caripuna or Jaûn-Avô (both terms signify 'watermen'), who are mixed with Quichua blood, it is related that they not only ate human flesh, but even cured it for preservation. . . . Formerly the Mura . . . were greatly feared; this once powerful and populous tribe, however, was almost entirely destroyed at the end of the last century by the Mundruco; the remnant is scattered. . . . The Mura are the gypsies among the Indians on the Amazon; and by all the other tribes they are regarded with a certain degree of contempt as pariahs. . . . Much to be feared, even among the Indians, are also the Miranha (i. e., rovers, vagabonds), a still populous tribe on the right bank of the Japura, who seem to know nothing but war, robbery, murder, and man-hunting."—*The Standard Natural History* (J. S. Kingsley, ed.), v. 6, pp. 245–248.

Hidatsa, or Minnetaree, or Grosventres*—

"The Hidatsa, Minnetaree, or Grosventre Indians, are one of the three tribes which at present inhabit the permanent village at Fort Berthold, Dakota Territory, and hunt on the waters of the Upper Missouri and Yellowstone Rivers, in Northwestern Dakota and Eastern Montana. The history of this tribe is . . . intimately connected with that of the politically allied tribes of the Aricaires and Mandans." The name, Grosventres, was given to the people of this tribe "by the early French and Canadian adventurers. The same name was applied also to a tribe, totally distinct from these in language and origin, which lives some hundreds of miles west of Fort Berthold; and the two nations are now distinguished from one another as Grosventres of the Missouri and Grosventres of the Prairie. . . . Edward Umfreville, who traded on the Saskatchewan River from 1784 to 1787, . . . remarks: . . . 'They [the Canadian French] call them Grosventres, or Big-Bellies; and without any reason, as they are as comely and as well made as any tribe whatever.' . . . In the works of many travellers they are called Minnetarees, a name which is spelled in various ways. . . . This, although a Hidatsa word, is the name applied to them, not by themselves, but by the Mandans; it signifies 'to cross the water,' or 'they crossed the water.' . . . Hidatsa was the name of the village on Knife River farthest from the Missouri, the village of those whom Lewis and Clarke considered the Minnetarees proper." It is the name "now generally used by this people to designate themselves."—W. Matthews, *Ethnography and Philology of the Hidatsa Indians*, pt. 1–2 (*U. S. Geolog. and Geog. Survey*, F. V. Hayden, *Mis. Pub.*, No. 7).—See also, below: SIOUAN FAMILY.

Hurons, or Wyandots.—Neutral Nation.—Eries.—"The peninsula between the Lakes Huron, Erie, and Ontario was occupied by two distinct peoples, speaking dialects of the Iroquois tongue. The Hurons or Wyandots, including the tribe called by the French the Dionondadies, or Tobacco Nation, dwelt among the forests which bordered the eastern shores of the fresh water sea to which they have left their name; while the Neutral Nation, so called from their neutrality in the war between the Hurons and the Five Nations, inhabited the northern shores of Lake Erie, and even extended their eastern flank across the strait of Niagara. The population of the Hurons has been variously stated at from 10,000 to 30,000 souls, but probably did not exceed the former estimate. The Franciscans and the Jesuits were early among them, and from their descriptions it is apparent that, in legends, and superstitions, manners and habits, religious observances and social customs, they were closely assimilated to their brethren of the Five Nations. . . . Like the Five Nations, the Wyandots were in some measure an agricultural people; they bartered the surplus products of their maize fields to surrounding tribes, usually receiving fish in exchange; and this traffic was so considerable that the Jesuits styled their country the Granary of the Algonquins. Their prosperity was rudely broken by the hostilities of the Five Nations; for though the conflicting parties were not ill matched in point of numbers, yet the united counsels and ferocious energies of the confederacy swept all before them. In the year 1649, in the depth of winter, their warriors invaded the country of the Wyandots, stormed their largest villages, and involved all within in indiscriminate slaughter. The survivors fled in panic terror, and the whole nation was broken and dispersed. Some found refuge among the French of Canada, where, at the village of Lorette, near Quebec, their descendants still remain; others were incorporated with their conquerors, while others again fled northward, beyond Lake Superior, and sought an asylum among the wastes which bordered on the north-eastern lands of the Dahcotah. Driven back by those fierce bison-hunters, they next established themselves about the outlet of Lake Superior, and the shores and islands in the northern parts of Lake Huron. Thence, about the year 1680, they descended to Detroit, where they formed a per-

manent settlement, and where, by their superior valor, capacity and address, they soon acquired an ascendancy over the surrounding Algonquins. The ruin of the Neutral Nation followed close on that of the Wyandots, to whom, according to Jesuit authority, they bore an exact resemblance in character and manners. The Senecas soon found means to pick a quarrel with them; they were assailed by all the strength of the insatiable confederacy, and within a few years their destruction as a nation was complete."—F. Parkman, *The Conspiracy of Pontiac*, ch. 1.—The same, *The Jesuits in North America*, ch. 1.—"The first in this locality [namely, the western extremity of the State of New York, on and around the site of the city of Buffalo], of whom history makes mention, were the Attiouandar-onk, or Neutral Nation, called Kah-kwas by the Senecas. They had their council-fires along the Niagara, but principally on its western side. Their hunting grounds extended from the Genesee nearly to the eastern shores of Lake Huron, embracing a wide and important territory. . . . They are first mentioned by Champlain during his winter visit to the Hurons in 1615 . . . but he was unable to visit their territory. . . . The peace which this peculiar people had so long maintained with the Iroquois was destined to be broken. Some jealousies and collisions occurred in 1647, which culminated in open war in 1650. One of the villages of the Neutral Nation, nearest the Senecas and not far from the site of our city [Buffalo], was captured in the autumn of the latter year, and another the ensuing spring. So well-directed and energetic were the blows of the Iroquois, that the total destruction of the Neutral Nation was speedily accomplished. . . . The survivors were adopted by their conquerors. . . . A long period intervened between the destruction of the Neutral Nation and the permanent occupation of their country by the Senecas,"—which latter event occurred after the expulsion of the Senecas from the Genesee Valley, by the expedition under General Sullivan, in 1779, during the Revolutionary War. "They never, as a nation, resumed their ancient seats along the Genesee, but sought and found a new home on the secluded banks and among the basswood forests of the Dó-syo-wă, or Buffalo Creek, whence they had driven the Neutral Nation 130 years before. . . . It has been assumed by many writers that the Kah-kwas and Eries were identical. This is not so. The latter, according to the most reliable authorities, lived south of the western extremity of Lake Erie until they were destroyed by the Iroquois in 1655. The Kah-kwas were exterminated by them as early as 1651. On Coronelli's map, published in 1688, one of the villages of the latter, called 'Kahouagoga, a destroyed nation,' is located at or near the site of Buffalo."—O. H. Marshall, *The Niagara Frontier*, pp. 5-8, and foot-note.—"Westward of the Neutrals, along the Southeastern shores of Lake Erie, and stretching as far east as the Genesee river, lay the country of the Eries, or, as they were denominated by the Jesuits, 'La Nation Chat,' or Cat Nation, who were also a member of the Huron-Iroquois family. The name of the beautiful lake on whose margin our city [Buffalo] was cradled is their most enduring monument, as Lake Huron is that of the generic stock. They were called the Cat Nation either because that

* See Note, Appendix E, vol. 5.

interesting but mischievous animal, the raccoon, which the holy fathers erroneously classed in the feline gens, was the totem of their leading clan, or sept, or in consequence of the abundance of that mammal within their territory."—W. C. Bryant, *Interesting Archaeological Studies in and about Buffalo*, p. 12.—Mr. Schoolcraft either identifies or confuses the Eries and the Neutral Nation.—H. R. Schoolcraft, *Sketch of the Hist. of the Ancient Eries (Information Respecting the Indian Tribes, pt. 4, p. 197)*.

Illinois and Miamis.—"Passing the country of the Lenape and the Shawanoes, and descending the Ohio, the traveller would have found its valley chiefly occupied by two nations, the Miamis or Twightwees, on the Wabash and its branches, and the Illinois, who dwelt in the neighborhood of the river to which they have given their name, while portions of them extended beyond the Mississippi. Though never subjugated, as were the Lenape, both the Miamis and the Illinois were reduced to the last extremity by the repeated attacks of the Five Nations; and the Illinois, in particular, suffered so much by these and other wars, that the population of ten or twelve thousand, ascribed to them by the early French writers, had dwindled, during the first quarter of the eighteenth century, to a few small villages."—F. Parkman, *Conspiracy of Pontiac*, ch. 1.—See, also, above: ALGONQUIAN FAMILY; and below: SACS, &C.; also CANADA (NEW FRANCE): A. D. 1669-1687.

Iroquois Confederacy.—Iroquoian Family.—"At the outset of the 16th Century, when the five tribes or nations of the Iroquois confederacy first became known to European explorers, they were found occupying the valleys and uplands of northern New York, in that picturesque and fruitful region which stretches westward from the head-waters of the Hudson to the Genesee. The Mohawks, or Caniengas—as they should properly be called—possessed the Mohawk River, and covered Lake George and Lake Champlain with their flotillas of large canoes, managed with the boldness and skill which, hereditary in their descendants, make them still the best boatmen of the North American rivers. West of the Caniengas the Oneidas held the small river and lake which bear their name. . . . West of the Oneidas, the imperious Onondagas, the central and, in some respects, the ruling nation of the League, possessed the two lakes of Onondaga and Skaneateles, together with the common outlet of this inland lake system, the Oswego River to its issue into Lake Ontario. Still proceeding westward, the lines of trail and river led to the long and winding stretch of Lake Cayuga, about which were clustered the

towns of the people who gave their name to the lake; and beyond them, over the wide expanse of hills and dales surrounding Lakes Seneca and Canandaigua, were scattered the populous villages of the Senecas, more correctly called Sonontwanas, or Mountaineers. Such were the names and abodes of the allied nations, members of the far-famed Kanonsionni, or League of United Households, who were destined to become for a time the most notable and powerful community among the native tribes of North America. The region which has been described was not, however, the original seat of those nations. They belonged to that linguistic family which is known to ethnologists as the Huron-Iroquois stock. This stock comprised the Hurons or Wyandots, the Atti-wandarons or Neutral Nation, the Iroquois, the Eries, the Andastes or Conestogas, the Tuscaroras and some smaller bands. The tribes of this family occupied a long irregular area of inland territory, stretching from Canada to North Carolina. The northern nations were all clustered about the great lakes; the southern bands held the fertile valleys bordering the head-waters of the rivers which flowed from the Allegheny mountains. The languages of all these tribes showed a close affinity. . . . The evidence of language, so far as it has yet been examined, seems to show that the Huron clans were the older members of the group; and the clear and positive traditions of all the surviving tribes, Hurons, Iroquois, and Tuscarora, point to the lower St. Lawrence as the earliest known abode of their stock. Here the first explorer, Cartier, found Indians of this stock at Hochelaga and Stadaconé, now the sites of Montreal and Quebec. . . . As their numbers increased, dissensions arose. The hive swarmed, and band after band moved off to the west and south. As they spread they encountered people of other stocks, with whom they had frequent wars. Their most constant and most dreaded enemies were the tribes of the Aigonkin family, a fierce and restless people, of northern origin, who everywhere surrounded them. At one period, however, if the concurrent traditions of both Iroquois and Algonkins can be believed, these contending races for a time stayed their strife, and united their forces in an alliance against a common and formidable foe. This foe was the nation, or perhaps the confederacy, of the Alligewi or Talligewi, the semi-civilized 'Mound-builders' of the Ohio Valley, who have left their name to the Allegheny river and mountains, and whose vast earthworks are still, after half-a-century of study, the perplexity of archaeologists. A desperate warfare ensued, which lasted about a hundred years, and ended in the complete overthrow and destruction, or expulsion, of the Alligewi. The survivors of the conquered people fled southward. . . . The time which has elapsed since the overthrow of the Alligewi is variously estimated. The most probable conjecture places it at a period about a thousand years before the present day. It was apparently soon after their expulsion that the tribes of the Huron-Iroquois and the Algonkin stocks scattered themselves over the wide region south of the Great Lakes, thus left open to their occupancy."—H. Hale, *Introd. to Iroquois Book of Rites*.—After the coming of the Europeans into the New World, the French were the first to be involved in hostilities with the Iroquois, and their early wars with them produced a hatred

which could never be extinguished. Hence the English were able to win the alliance of the Five Nations, when they struggled with France for the mastery of the North American continent, and they owed their victory to that alliance, probably, more than to any other single cause. England still retained the faithful friendship and alliance of the Iroquois when she came to a struggle with her own colonies, and all the tribes except the Oneidas were in arms against the Americans in the Revolutionary War. "With the restoration of peace, the political transactions of the League were substantially closed. This was, in effect, the termination of their political existence. The jurisdiction of the United States was extended over their ancient territories, and from that time forth they became dependent nations. During the progress of the Revolution, the Mohawks abandoned their country and removed to Canada, finally establishing themselves partly upon Grand River, in the Niagara peninsula, and partly near Kingston, where they now reside upon two reservations secured to them by the British government. . . . The policy of the State of New York [toward the Iroquois nations] was ever just and humane. Although their country, with the exception of that of the Oneidas, might have been considered as forfeited by the event of the Revolution, yet the government never enforced the rights of conquest, but extinguished the Indian title to the country by purchase, and treaty stipulations. A portion of the Oneida nation [who had sold their lands to the State, from time to time, excepting one small reservation] emigrated to a reservation on the river Thames in Canada, where about 400 of them now [1851] reside. Another and a larger band removed to Green Bay, in Wisconsin, where they still make their homes to the number of 700. But a small part of the nation have remained around the seat of their ancient council-fire . . . near Oneida Castle, in the county of Oneida." The Onondagas "still retain their beautiful and secluded valley of Onondaga, with sufficient territory for their comfortable maintenance. About 150 Onondagas now reside with the Senecas; another party are established on Grand River, in Canada, and a few have removed to the west. . . . In the brief space of twelve years after the first house of the white man was erected in Cayuga county (1789) the whole nation [of the Cayugas] was uprooted and gone. In 1795, they ceded, by treaty, all their lands to the State, with the exception of one reservation, which they finally abandoned about the year 1800. A portion of them removed to Green Bay, another to Grand River, and still another, and a much larger band, settled at Sandusky, in Ohio, from whence they were removed by government, a few years since, into the Indian territory, west of the Mississippi. About 120 still reside among the Senecas, in western New York. . . . The Tuscaroras, after removing from the Oneida territory, finally located near the Niagara river, in the vicinity of Lewiston, on a tract given to them by the Senecas. . . . The residue of the Senecas are now shut up within three small reservations, the Tonawanda, the Cattaraugus and the Allegany, which, united, would not cover the area of one of the lesser counties of the State."—L. H. Morgan, *The League of the Iroquois*, bk. 1, ch. 1.—"The Indians of the State of New York number about 5,000, and occupy lands to the estimated extent

of 87,677 acres. With few exceptions, these people are the direct descendants of the native Indians, who once possessed and controlled the soil of the entire State."—*Rept. of Special Com. to Investigate the Indian Problem of the State of N. Y.*, 1889.—In 1715 the Five Nations of the Iroquois Confederacy became Six Nations, by the admission of the Tuscaroras, from N. Carolina.—See below: IROQUOIS TRIBES OF THE SOUTH.—On the relationship between the Iroquois and the Cherokees, see above: CHEROKEES.

Iroquois Confederacy.—The Legend of Hiawatha, the Founder. See IROQUOIS CONFEDERACY.

Iroquois Confederacy.—Their Name.—"The origin and proper meaning of the word Iroquois are doubtful. All that can be said with certainty is that the explanation given by Charlevoix cannot possibly be correct. The name of Iroquois, he says, is purely French, and has been formed from the term 'hiro,' 'I have spoken,' a word by which these Indians close all their speeches, and 'koué,' which, when long drawn out, is a cry of sorrow, and when briefly uttered is an exclamation of joy. . . . But . . . Champlain had learned the name from his Indian allies before he or any other Frenchman, so far as is known, had ever seen an Iroquois. It is probable that the origin of the word is to be sought in the Huron language; yet, as this is similar to the Iroquois tongue, an attempt may be made to find a solution in the latter. According to Bruyas, the word 'garokwa' meant a pipe, and also a piece of tobacco,—and, in its verbal form, to smoke. This word is found, somewhat disguised by aspirates, in the Book of Rites,—denighroghkwayen,—'let us two smoke together.' . . . In the indeterminate form the verb becomes 'ierokwa,' which is certainly very near to Iroquois. It might be rendered 'they who smoke,' or 'they who use tobacco,' or, briefly, 'the Tobacco People.' This name, the Tobacco Nation ('Nation du Petun') was given by the French, and probably also by the Algonkins, to one of the Huron tribes, the Tionontates, noted for the excellent tobacco which they raised and sold. The Iroquois were equally well known for their cultivation of this plant, of which they had a choice variety."—H. Hale, *Iroquois Book of Rites*, app., note A.

Iroquois Confederacy.—Their conquests and wide dominion.—"The project of a League [among the 'Five Nations' of the Iroquois] originated with the Onondagas, among whom it was first suggested, as a means to enable them more effectually to resist the pressure of contiguous nations. The epoch of its establishment cannot now be decisively ascertained; although the circumstances attending its formation are still preserved by tradition with great minuteness. These traditions all refer to the northern shore of the Onondaga lake, as the place where the Iroquois chiefs assembled in general congress, to agree upon the terms and principles of the compact. . . . After the formation of the League, the Iroquois rose rapidly in power and influence. . . . With the first consciousness of rising power, they turned their long-cherished resentment upon the Adirondacks, who had oppressed them in their infancy as a nation, and had expelled them from their country, in the first struggle for the ascendancy.

... At the era of French discovery (1535), the latter nation [the Adirondacks] appear to have been dispossessed of their original country, and driven down the St. Lawrence as far as Quebec. ... A new era commenced with the Iroquois upon the establishment of the Dutch trading-post at Orange, now Albany, in 1615. ... Friendly relations were established between the Iroquois and the Dutch, which continued without interruption until the latter surrendered their possessions upon the Hudson to the English in 1664. During this period a trade sprang up between them in furs, which the Iroquois exchanged for European fabrics, but more especially for fire-arms, in the use of which they were afterwards destined to become so expert. The English, in turn, cultivated the same relations of friendship. ... With the possession of fire-arms commenced not only the rapid elevation, but absolute supremacy of the Iroquois over other Indian nations. In 1643, they expelled the Neuter Nation from the Niagara peninsula and established a permanent settlement at the mouth of that river. They nearly exterminated, in 1653, the Eries, who occupied the south side of Lake Erie, and from thence east to the Genesee, and thus possessed themselves of the whole area of western New York, and the northern part of Ohio. About the year 1670, after they had finally completed the dispersion and subjugation of the Adirondacks and Hurons, they acquired possession of the whole country between lakes Huron, Erie and Ontario, and of the north bank of the St. Lawrence, to the mouth of the Ottawa river, near Montreal. ... They also made constant inroads upon the New England Indians. ... In 1680, the Senecas with 600 warriors invaded the country of the Illinois, upon the borders of the Mississippi, while La Salle was among the latter. ... At various times, both before and after this period, the Iroquois turned their warfare against the Cherokees upon the Tennessee, and the Catawbias in South Carolina. ... For about a century, from the year 1600 to the year 1700, the Iroquois were involved in an almost uninterrupted warfare. At the close of this period, they had subdued and held in nominal subjection all the principal Indian nations occupying the territories which are now embraced in the states of New York, Delaware, Maryland, New Jersey, Pennsylvania, the northern and western parts of Virginia, Ohio, Kentucky, Northern Tennessee, Illinois, Indiana, Michigan, a portion of the New England States, and the principal part of Upper Canada. Over these nations, the haughty and imperious Iroquois exercised a constant supervision. If any of them became involved in domestic difficulties, a delegation of chiefs went among them and restored tranquillity, prescribing at the same time their future conduct."—L. H. Morgan, *League of the Iroquois*, bk. 1, ch. 1.—"Their [the Iroquois's] war-parties roamed over half America, and their name was a terror from the Atlantic to the Mississippi; but when we ask the numerical strength of the dreaded confederacy, when we discover that, in the days of their greatest triumphs, their united cantons could not have mustered 4,000 warriors, we stand amazed at the folly and dissension which left so vast a region the prey of a handful of bold marauders. Of the cities and villages now so thickly scattered over the lost domain of the Iroquois, a single one might

boast a more numerous population than all the five united tribes."—F. Parkman, *The Conspiracy of Pontiac*, ch. 1.

Iroquois Tribes of the South.*—"The southern Iroquois tribes occupied Chowan River and its tributary streams. They were bounded on the east by the most southerly Lenape tribes, who were in possession of the low country along the sea shores, and those of Albemarle and Pamlico Sounds. Towards the south and the west they extended beyond the river Neuse. They appear to have been known in Virginia, in early times, under the name of Monacans, as far north as James River. ... Lawson, in his account of the North Carolina Indians, enumerates the Chowans, the Meherrins, and the Nottoways, as having together 95 warriors in the year 1708. But the Meherrins or Tuteloes and the Nottoways inhabited respectively the two rivers of that name, and were principally seated in Virginia. We have but indistinct notices of the Tuteloes. ... It appears by Beverly that the Nottoways had preserved their independence and their numbers later than the Powhatans, and that, at the end of the 17th century, they had still 130 warriors. They do not appear to have migrated from their original seats in a body. In the year 1820, they are said to have been reduced to 27 souls, and were still in possession of 7,000 acres in Southampton county, Virginia, which had been at an early date reserved for them. ... The Tuscaroras were by far the most powerful nation in North Carolina, and occupied all the residue of the territory in that colony, which has been described as inhabited by Iroquois tribes. Their principal seats in 1708 were on the Neuse and the Taw or Tar rivers, and according to Lawson they had 1,200 warriors in fifteen towns." In 1711 the Tuscaroras attacked the English colonists, massacring 130 in a single day, and a fierce war ensued. "In the autumn of 1712, all the inhabitants south and southwest of Chowan River were obliged to live in forts; and the Tuscaroras expected assistance from the Five Nations. This could not have been given without involving the confederacy in a war with Great Britain; and the Tuscaroras were left to their own resources. A force, consisting chiefly of southern Indians under the command of Colonel Moore, was again sent by the government of South Carolina to assist the northern Colonies. He besieged and took a fort of the Tuscaroras. ... Of 800 prisoners 600 were given up to the Southern Indians, who carried them to South Carolina to sell them as

* See Note, Appendix E, vol. 5.

slaves. The Eastern Tuscaroras, whose principal town was on the Taw, twenty miles above Washington, immediately made peace, and a portion was settled a few years after north of the Roanoke, near Windsor, where they continued till the year 1803. But the great body of the nation removed in 1714-15 to the Five Nations, was received as the Sixth, and has since shared their fate."—A. Gallatin, *Synopsis of the Indian Tribes* (*Archæologia Americana*, v. 2), *introd.*, sect. 2.

FAMILY.

Kiowan Family.—"Derivation: From the Kiowa word Kó-i, plural Kó-igu, meaning 'Káyowē man.' The Comanche term káyowē means 'rat.' The author who first formally separated this family appears to have been Turner. . . . Turner, upon the strength of a vocabulary furnished by Lieut. Whipple, dis-
sents from the opinion expressed by Pike and

others to the effect that the language is of the same stock as the Comanche, and, while admitting that its relationship to Comanche is greater than to any other family, thinks that the likeness is merely the result of long intercommunication. His opinion that it is entirely distinct from any other language has been indorsed by Buschmann and other authorities. The family is represented by the Kiowa tribe. So intimately associated with the Comanches have the Kiowa been since known to history that it is not easy to determine their pristine home. . . . Pope definitely locates the Kiowa in the valley of the Upper Arkansas, and of its tributary, the Purgatory (Las Animas) River. This is in substantial accord with the statements of other writers of about the same period. Schermerhorn (1812) places the Kiowa on the heads of the Arkansas and Platte. Earlier still they appear upon the headwaters of the Platte."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, p. 84.

Kiriri, Cuyriri. See above: GUCK OR

Mayas.—"In his second voyage, Columbus heard vague rumors of a mainland westward from Jamaica and Cuba, at a distance of ten days' journey in a canoe. . . . During his fourth voyage (1503-4), when he was exploring the Gulf southwest from Cuba, he picked up a canoe laden with cotton clothing variously dyed. The natives in it gave him to understand that they were merchants, and came from a land called *Maia*. This is the first mention in history of the territory now called Yucatan, and of the race of the Mayas; for although a province of similar name was found in the western extremity of the island of Cuba, the similarity was accidental, as the evidence is conclusive that no colony of the Mayas was found on the Antilles. . . . Maya was the patrilial name of the natives of Yucatan. It was the proper name of the northern portion of the peninsula. No single province bore it at the date of the Conquest, and probably it had been handed down as a generic term from the period, about a century before, when this whole district was united under one government. . . . Whatever the primitive meaning and first application of the name Maya, it is now used to signify specifically the aborigines of Yucatan. In a more extended sense, in the expression 'the Maya family,' it is understood to embrace all tribes, wherever found, who speak related dialects presumably derived from the same ancient stock as the Maya proper. . . . The total number of Indians of pure blood speaking the Maya proper may be estimated as nearly or quite 200,000, most of them in the political limits of the department of Yucatan; to these should be added nearly 100,000 of mixed blood, or of European descent, who use the tongue in daily life. For it forms one of the rare examples of American languages possessing vitality enough not only to maintain its ground, but actually to force itself on European settlers and supplant their native speech. . . . The Mayas did not claim to be autochthones. Their legends referred to their arrival by the sea from the East, in remote times, under the leadership of Itzamna, their hero-god, and also to a less numerous immigration from the West, which was connected with the history of another hero-god, Kukul Can. The first of these appears to be wholly mythical. . . . The second tradition deserves more attention from the historian. . . . It cannot be denied that the Mayas, the Kiches [or Quiches] and the Cakchiquels, in their most venerable traditions, claimed to have migrated from the north or west from some part of the present country of Mexico. These tra-

ditions receive additional importance from the presence on the shores of the Mexican Gulf, on the waters of the river Panuco, north of Vera Cruz, of a prominent branch of the Maya family, the Huastecs. The idea suggests itself that these were the rear-guard of a great migration of the Maya family from the north toward the south. Support is given to this by their dialect, which is most closely akin to that of the Tzendals of Tabasco, the nearest Maya race to the south of them, and also by very ancient traditions of the Aztecs. It is noteworthy that these two partially civilized races, the Mayas and the Aztecs, though differing radically in language, had legends which claimed a community of origin in some indefinitely remote past. We find these on the Maya side narrated in the sacred book of the Kiches, the *Popol Vuh*, in the Cakchiquel 'Records of Tecpan Atillan,' and in various pure Maya sources. . . . The annals of the Aztecs contain frequent allusions to the Huastecs."—D. G. Brinton, *The Maya Chronicles*, introd.—"Closely enveloped in the dense forests of Chiapas, Guatemala, Yucatan, and Honduras, the ruins of several ancient cities have been discovered, which are far superior in extent and magnificence to any seen in Aztec territory, and of which a detailed description may be found in the fourth volume of this work. Most of these cities were abandoned and more or less unknown at the time of the [Spanish] Conquest. They bear hieroglyphic inscriptions apparently identical in character; in other respects they resemble each other more than they resemble the Aztec ruins—or even other and apparently later works in Guatemala and Honduras. All these remains bear evident marks of great antiquity. . . . I deem the grounds sufficient . . . for accepting this Central American civilization of the past as a fact, referring it not to an extinct ancient race, but to the direct ancestors of the peoples still occupying the country with the Spaniards, and applying to it the name Maya as that of the language which has claims as strong as any to be considered the mother tongue of the linguistic family mentioned. . . . There are no data by which to fix the period of the original Maya empire, or its downfall or breaking up into rival factions by civil and foreign wars. The cities of Yucatan, as is clearly shown by Mr. Stephens, were, many of them, occupied by the descendants of the builders down to the conquest, and contain some remnants of wood-work still in good preservation, although some of the structures appear to be built on the ruins of others of a somewhat different type. Palenque and Copan, on the contrary, have no traces of wood or other perishable material, and were uninhabited and probably unknown in the 16th century. The loss of the key to what must have been an advanced system of hieroglyphics, while the spoken language survived, is also an indication of great antiquity, confirmed by the fact that the Quiché structures of Guatemala differed materially from those of the more ancient epoch. It is not likely that the Maya empire in its integrity continued later than the 3d or 4th century, although its cities may have been inhabited much later, and I should fix the epoch of its highest power at a date preceding rather than following the Christian era."—H. Modocs (Klamaths) and their California and Oregon neighbors.*—"The principal tribes occupying this region [of Northern California from Rogue River on the north to the Eel River, south] are the Klamaths, who live on the head waters of the river and on the shores of the lake of that name; the Modocs, on Lower Klamath Lake and along Lost River; the Shastas, to the south-west of the Lakes; the Pitt River Indians; the Eurocs, on the Klamath River between Weitspek and the coast; the Cahrocs, on the Klamath River from a short distance above the junction of the Trinity to the Klamath Mountains; the Hoopahs [or Hupas, a tribe of the Athapascan Family] in Hoopah Valley on the Trinity near its junction with the Klamath; numerous tribes on the coast from Eel River and Humboldt Bay north, such as the Weeyots, Wallies, Tolawahs, etc., and the Rogue River Indians, on and about the river of that name. The Northern Californians are in every way superior to the central and southern tribes."—H. H. Bancroft, *The Native Races of the Pacific States*, v. 1, ch. 4.—"On the Klamath there live three distinct tribes, called the Yú-rok, Ká-rok, and Mó-dok, which names are said to mean, respectively, 'down the river,' 'up the river,' and 'head of the river.' . . . The Karok are probably the finest tribe in California. . . . Hoopa Valley, on the Lower Trinity, is the home of [the Hú-pá]. Next after the Ká-rok they are the finest race in all that region, and they even excel them in their statecraft, and in the singular influence, or perhaps brute force, which they exercise over the vicinal tribes. They are the Romans of Northern California in their valor and their wide-reaching dominions;

they are the French in the extended diffusion of their language." The Modoks, "on the whole . . . are rather a cloddish, indolent, ordinarily good-natured race, but treacherous at bottom, sullen when angered, notorious for keeping Punic faith. But their bravery nobody can impeach or deny; their heroic and long defense of their stronghold against the appliances of modern civilized warfare, including that arm so awful to savages—the artillery—was almost the only feature that lent respectability to their wretched tragedy of the Lava Beds [1873]."—S. Powers, *Tribes of California (Contributions to N. A. Ethnology, v. 3)*, ch. 1, 7, and 27.—"The home of the Klamath tribe of southwestern Oregon lies upon the eastern slope of the southern extremity of the Cascade Range, and very nearly coincides with what we may call the head waters of the Klamath River, the main course of which lies in Northern California. . . . The main seat of the Modoc people was the valley of Lost River, the shores of Tule and of Little Klamath Lake. . . . The two main bodies forming the Klamath people are (1) the Klamath Lake Indians; (2) the Modoc Indians. The Klamath Lake Indians number more than twice as many as the Modoc Indians. They speak the northern dialect and form the northern chieftaincy. . . . The Klamath people possess no historic traditions going further back in time than a century, for the simple reason that there was a strict law prohibiting the mention of the person or acts of a deceased individual by using his name. . . . Our present knowledge does not allow us to connect the Klamath language genealogically with any of the other languages compared, but . . . it stands as a linguistic family for itself."—A. S. Gatschet, *The Klamath Indians (Contributions to N. A. Ethnology, v. 2, pt. 1)*.—In Major Powell's linguistic classification, the Klamath and Modoc dialects are embraced in a family called the Lutuamian Family, derived from a Pit River word signifying "lake;" the Yuroks in a family called the Weitspekan; and the Pit River Indian dialects are provisionally set apart in a distinct family named the Palaihnihan Family.—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, pp. 89 and 97.

Moquelumnan Family.—"Derivation: From the river and hill of the same name in Calaveras County, California. . . . It was not until 1856 that the distinctness of the linguistic family was fully set forth by Latham. Under the head of Moquelumne, this author gathers several vocabularies representing different languages and dialects of the same stock. These are the Talatui of Hale, the Tuolumne from Schoolcraft, the Sonoma dialects as represented by the Tshokoyem vocabulary, the Chocuyem and Youkiousem paternosters, and the Olamentke of Kostromitov in Bær's Beiträge. . . . The Moquelumnan family occupies the territory bounded

* See Note, Appendix E, vol. 5.

on the north by the Cosumne River, on the south by the Fresno River, on the east by the Sierra Nevada, and on the west by the San Joaquin River, with the exception of a strip on the east bank occupied by the Cholovone. A part of this family occupies also a territory bounded on the south by San Francisco Bay."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, pp. 92-93.

Muskogean, or Maskoki Family.—"Among the various nationalities of the Gulf territories the Maskoki family of tribes occupied a central and commanding position. Not only the large extent of territory held by them, but also their numbers, their prowess in war, and a certain degree of mental culture and self-esteem made of the Maskoki one of the most important groups in Indian history. From their ethnologic condition of later times, we infer that these tribes have extended for many centuries back in time from the Atlantic to the Mississippi and beyond that river, and from the Apalachian ridge to the Gulf of Mexico. With short intermissions they kept up warfare with all the circumjacent Indian communities, and also among each other. . . . The irresolute and egotistic policy of these tribes often caused serious difficulties to the government of the English and French colonies, and some of them constantly wavered in their adherence between the French and the English cause. The American government overcame their opposition easily whenever a conflict presented itself (the Seminole War forms an exception), because, like all the Indians, they never knew how to unite against a common foe. The two main branches of the stock, the Creek and the Cha'hta [or Choctaw] Indians, were constantly at war, and the remembrance of their deadly conflicts has now passed to their descendants in the form of folk lore. . . . The only characteristic by which a subdivision of the family can be attempted, is that of language. Following their ancient topographic location from east to west, we obtain the following synopsis: First branch, or Maskoki proper: The Creek, Maskokálgi or Maskoki proper, settled on Coosa, Tallapoosa, Upper and Middle Chatahuchi rivers. From these branched off by segmentation the Creek portion of the Seminoles, of the Yámassi and of the little Yamacraw community. Second, or Apalachian branch: This southeastern division, which may be called also 'a parte potiori' the Hitchiti connection, anciently comprised the tribes on the Lower Chatahuchi river, and, east from there, the extinct Apalachi, the Mikasuki, and the Hitchiti portion of the Seminoles, Yámassi and Yamacraws. Third, or Alibamu branch, comprised the Alibamu villages on the river of that name; to them belonged the Koasáti and Witumka on Coosa river, its northern affluent. Fourth, Western or Cha'hta [Choctaw] branch: From the main people, the Cha'hta, settled in the middle portions of the State of Mississippi, the Chicasa, Pascagoula, Biloxi, Huma, and other tribes once became separated through

segmentation. The strongest evidence for a community of origin of the Maskoki tribes is furnished by the fact that their dialects belong to one linguistic family. . . . Maskóki, Maskógi, isti Maskóki, designates a single person of the Creek tribe, and forms, as a collective plural, Maskokálgi, the Creek community, the Creek people, the Creek Indians. English authors write this name Muscogee, Muskogee, and its plural Muscogulgee. The first syllable, as pronounced by the Creek Indians, contains a clear short a. . . . The accent is usually laid on the middle syllable: Maskóki, Maskógi. None of the tribes are able to explain the name from their own language. . . . Why did the English colonists call them Creek Indians? Because, when the English traders entered the Maskoki country from Charleston or Savannah, they had to cross a number of streams or creeks, especially between the Chatahuchi and Savannah rivers. Gallatin thought it probable that the inhabitants of the country adjacent to Savannah river were called Creeks from an early time. . . . In the southern part of the Cha'hta territory several tribes, represented to be of Cha'hta lineage, appear as distinct from the main body, and are always mentioned separately. The French colonists, in whose annals they figure extensively, call them Mobilians, Tohomies, Pascogoulas, Biloxis, Mougoulachas, Bayogoulas and Humas (Oumas). They have all disappeared in our epoch, with the exception of the Biloxi [Major Powell, in the Seventh Annual Report of the Bureau of Ethnology, places the Biloxi in the Siouan Family]* of whom scattered remnants live in the forests of Louisiana, south of the Red River."—A. S. Gatschet, *A Migration Legend of the Creek Indians*, v. 1, pt. 1.—"The Uchees and the Natches, who are both incorporated in the [Muskogee or Creek] confederacy, speak two distinct languages altogether different from the Muskogee. The Natches, a residue of the well-known nation of that name, came from the banks of the Mississippi, and joined the Creeks less than one hundred years ago. The original seats of the Uchees were east of the Coosa and probably of the Chatahoochee; and they consider themselves as the most ancient inhabitants of the country. They may have been the same nation which is called Apalaches in the accounts of De Soto's expedition. . . . The four great Southern nations, according to the estimates of the War Department . . . consist now [1836] of 67,000 souls, viz.: The Cherokees, 15,000; the Choctaws (18,500), the Chicadas (5,500), 24,000; the Muskogees, Seminoles, and Hitchitees, 26,000; the Uchees, Alibamons, Coosadas, and Natches, 2,000. The territory west of the Mississippi, given or offered to them by the United States in exchange for their lands east of that river, contains 40,000,000 acres, exclusively of what may be allotted to the Chicadas."—A. Gallatin, *Synopsis of the Indian Tribes (Archæologia Americana, v. 2), sect. 3.*—See below: SEMINOLES.

Musquito, or Mosquito Indians.—"That portion of Honduras known as the Musquito Coast derived its name, not from the abundance of those troublesome insects, but from a native tribe who at the discovery occupied the shore near Blewfield Lagoon. They are an intelligent people, short in stature, unusually dark in color, with finely cut features, and small straight noses—not at all negroid, except where there has been an admixture of blood. They number

* See Note, Appendix E, vol. 5.

about 6,000, many of whom have been partly civilized by the efforts of missionaries, who have reduced the language to writing and published in it a number of works. The Tunglas are one of the sub-tribes of the Musquitos."—D. G. Brinton, *The American Race*, p. 162.—See, also, NICARAGUA: A. D., 1850.

Natchesan Family.—When the French first entered the lower Mississippi valley, they found the Natchez [Na'htchi] occupying a region of country that now surrounds the city which bears their name. "By the persevering curiosity of Gallatin, it is established that the Natchez were distinguished from the tribes around them less by their customs and the degree of their civilization than by their language, which, as far as comparisons have been instituted, has no etymological affinity with any other whatever. Here again the imagination too readily invents theories; and the tradition has been widely received that the dominion of the Natchez once extended even to the Wabash. History knows them only as a feeble and inconsiderable nation, who in the 18th century attached themselves to the confederacy of the Creeks."—G. Bancroft, *Hist. of the U. S. (Author's last rev.)*, v. 2, p. 97.—"Chateaubriand, in his charming romances, and some of the early French writers, who often drew upon their fancy for their facts, have thrown an interest around the Natchez, as a semi-civilized and noble race, that has passed into history. We find no traces of civilization in their architecture, or in their social life and customs. Their religion was brutal and bloody, indicating an Aztec origin. They were perfidious and cruel, and if they were at all superior to the neighboring tribes it was probably due to the district they occupied—the most beautiful, healthy and productive in the valley of the Mississippi—and the influence of its attractions in substituting permanent for temporary occupation. The residence of the grand chief was merely a spacious cabin, of one apartment, with a mat of basket work for his bed and a log for his pillow. . . . Their government was an absolute despotism. The supreme chief was master of their labor, their property, and their lives. . . . The Natchez consisted exclusively of two classes—the Blood Royal and its connexions, and the common people, the Mich-mioki-quippe, or Stinkards. The two classes understood each other, but spoke a different dialect. Their customs of war, their treatment of prisoners, their ceremonies of marriage, their feasts and fasts, their sorceries and witchcraft, differed very little from other savages. Father Charlevoix, who visited Natchez in 1721, saw no evidences of civilization. Their villages consisted of a few cabins, or rather ovens, without windows and roofed with matting. The house of the Sun was larger, plastered with mud, and a narrow bench for a seat and bed. No other furniture in the mansion of this grand dignity, who has been described

by imaginative writers as the peer of Montezuma!"—J. F. H. Claiborne, *Mississippi*, v. 1, ch. 4.—In 1729, the Natchez, maddened by insolent oppressions, planned and executed a general massacre of the French within their territory. As a consequence, the tribe was virtually exterminated within the following two years.—C. Gayarre, *Louisiana, its Colonial Hist. and Romance*, 2d series, lect. 3 and 5.—"The Na'htchi, according to Gallatin, a residue of the well-known nation of that name, came from the banks of the Mississippi, and joined the Creek less than one hundred years ago. The seashore from Mobile to the Mississippi was then inhabited by several small tribes, of which the Na'htchi was the principal. Before 1730 the tribe lived in the vicinity of Natchez, Miss., along St. Catherine Creek. After their dispersion by the French in 1730 most of the remainder joined the Chicasa and afterwards the Upper Creek. They are now in Creek and Cherokee Nations, Indian Territory. The linguistic relations of the language spoken by the Taensa tribe have long been in doubt, and it is possible they will ever remain so."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 96.—See LOUISIANA: A. D. 1719-1750.—See, also, above: MUSKHOGEAN FAMILY.

Nez Percés, or Sahaptins.—"The Sahaptins or Nez Percés [the Shahaptian Family in Major Powell's classification], with their affiliated tribes, occupied the middle and upper valley of the Columbia and its affluents, and also the passes of the mountains. They were in contiguity with the Shoshones and the Algonkin Blackfeet, thus holding an important position, intermediate between the eastern and the Pacific tribes. Having the commercial instinct of the latter, they made good use of it."—D. G. Brinton, *The American Race*, p. 107.

Ojibwas, or Chippewas.—"The Ojibways, with their kindred, the Pottawattamies, and their friends the Ottawas,—the latter of whom were fugitives from the eastward, whence they had fled from the wrath of the Iroquois,—were banded into a sort of confederacy. They were closely allied in blood, language, manners and character. The Ojibways, by far the most numerous of the three, occupied the basin of Lake Superior, and extensive adjacent regions. In their boundaries, the career of Iroquois conquest found at length a check. The fugitive Wyandots sought refuge in the Ojibway hunting grounds; and tradition relates that, at the

* See Note, Appendix E, vol. 3.

outlet of Lake Superior, an Iroquois war-party once encountered a disastrous repulse. In their mode of life, they were far more rude than the Iroquois, or even the southern Algonquin tribes."—F. Parkman, *Conspiracy of Pontiac*, ch. 1.—"The name of the tribe appears to be recent. It is not met with in the older writers. The French, who were the earliest to meet them, in their tribal seat at the falls or Sault de Ste Marie, named them Saulteur, from this circumstance. M'Kenzie uses the term 'Jibway,' as the equivalent of this term, in his voyages. They are referred to, with little difference in the orthography, in General Washington's report, in 1754, of his trip to Le Bœuf, on Lake Erie; but are first recognized, among our treaty-tribes, in the general treaty of Greenville, of 1794, in which, with the Ottawas they ceded the island of Michilimackinac, and certain dependencies, conceded by them at former periods to the French. . . . The Chippewas are conceded, by writers on American philology . . . to speak one of the purest forms of the Algonquin."—H. R. Schoolcraft, *Information respecting the Hist., Condition and Prospects of the Indian Tribes*, pt. 5, p. 142.

Pampas Tribes.—"The chief tribe of the Pampas Indians was entitled Querandis by the Spaniards, although they called themselves Pehuelches [or Puelts—that is, the Eastern]. Various segments of these, under different names, occupied the immense tract of ground, between the river Parana and the republic of Chili. The Querandis . . . were the great opponents to settlement of the Spaniards in Buenos Ayres. . . . The Ancas or Aracaunos Indians [see CHILE] resided on the west of the Pampas near Chili, and from time to time assisted the Querandis in transporting stolen cattle across the Cordilleras. The southern part of the Pampas was occupied by the Balchitas, Uhilches, Telmelches, and others, all of whom were branches of the original Quelches horde. The Guarani In-

dians were the most famous of the South American races. . . . Of the Guayanas horde there were several tribes—-independent of each other, and speaking different idioms, although having the same title of race. Their territory extended from the river Guarai, one of the affluents into the Uruguay, for many leagues northwards, and stretched over to the Parana opposite the city of Corpus Christi. They were some of the most vigorous opponents of the Spanish invaders.

. . . The Nalicurgas Indians, who lived up to near 21° S. lat. were reputed to dwell in caves, to be very limited in number, and to go entirely naked. The Gausarapos, or Guuchies dwelt in the marshy districts near where the river Gausarapo, or Guuchie, has its source. This stream enters from the east into the Paraguay at 19° 16' 30" S. lat. . . . The Cuatos lived inside of a lake to the west of the river Paraguay, and constituted a very small tribe. . . . The Orejones dwelt on the eastern brows of the mountains of Santa Lucia or San Fernando—close to the western side of Paraguay river. . . . Another tribe, the Niniquillas, had likewise the names of Potrerros, Simanos, Barcenos, and Lathanos. They occupied a forest which began at about 19° S. lat., some leagues backward from the river Paraguay, and separated the Gran Chaco from the province of Los Chiquitos in Peru. . . . The Guanas Indians were divided into eight separate segments, for each of which there was a particular and different name. They lived between 20° and 22° of S. lat. in the Gran Chaco to the west of Paraguay, and they were not known to the Spaniards till the latter crossed the last-named river in 1673. . . . The Albaías and Payaguas Indians . . . in former times, were the chief tribes of the Paraguay territory. . . . The Albaías were styled Machicuis and Eningas by other authors. At the time of the Spaniards' arrival here, the Albaías occupied the Gran Chaco side of the river Paraguay from 20° to 22° S. lat. Here they entered into a treaty offensive and defensive with the Payaguas. . . . The joined forces of Albaías and Payaguas had managed to extend their territory in 1673 down to 24° 7' S. on the eastern side of Paraguay river. . . . The Albaías were a very tall and muscular race of people. . . . The Payagua Indians, before and up to, as well as after, the period of the conquest, were sailors, and domineered over the river Paraguay. . . . The Guacarús lived on the Chaco side of Paraguay river and subsisted entirely by hunting. From the barbarous custom which their women had of inducing abortion to avoid the pain or trouble of child-bearing, they became exterminated soon after the conquest. . . . The Tobas, who have also the titles of Natecöt and Yncanabaite, were among the best fighters of the Indians. They occupy the Gran Chaco, chiefly on the banks of the river Vermejo, and between that and the Pilcomayo. Of these there are some remains in the present day. . . . The Mocovis are likewise still to be found in the Chaco. . . . The Abipones, who were also styled Ecusgina and Quiabanabaite, lived in the Chaco, so low down as 28° south. This was the tribe with whom the Jesuits incorporated, when they erected the city of San Geronimo, in the Gran Chaco, and nearly opposite Goya, in 1748."—T. J. Hutchinson, *The Parana*, ch. 6-7.—"The Abipones inhabit [in the 18th century] the province Chaco, the centre of all Paraguay; they have no

fixed abodes, nor any boundaries, except what fear of their neighbours has established. They roam extensively in every direction, whenever the opportunity of attacking their enemies, or the necessity of avoiding them renders a journey advisable. The northern shore of the Rio Grande or Bermejo, which the Indians call Iñatè, was their native land in the last century [the 17th]. Thence they removed, to avoid the war carried on against Chaco by the Spaniards . . . and, migrating towards the south, took possession of a valley formerly held by the Calchaquis. . . . From what region their ancestors came there is no room for conjecture."—M. Dobrizhoffer, *Acct. of the Abipones*, v. 2, ch. 1.—"The Abipones are in general above the middle stature, and of a robust constitution. In summer they go quite naked; but in winter cover themselves with skins. . . . They paint themselves all over with different colours."—Father Charlevoix, *Hist. of Paraguay*, bk. 7 (v. 1).

Patagonians and Fuegians.—"The Patagonians call themselves Chonek or Tzoueca, or Inaken (men, people), and by their Pampean neighbors are referred to as Tehuel-Che, southerners. They do not, however, belong to the Aucasian stock, nor do they resemble the Pampeans physically. They are celebrated for their stature, many of them reaching from six to six feet four inches in height, and built in proportion. In color they are a reddish brown, and have aquiline noses and good foreheads. They care little for a sedentary life, and roam the coast as far north as the Rio Negro. . . . On the inhospitable shores of Tierra del Fuego there dwell three nations of diverse stock, but on about the same plane of culture. One of these is the Yahgans, or Yapoos, on the Beagle Canal; the second is the Onas or Aonik, to the north and east of these; and the third the Aliculufs, to the north and west. . . . The opinion has been advanced by Dr. Deniker of Paris, that the Fuegians represent the oldest type or variety of the American race. He believes that at one time this type occupied the whole of South America south of the Amazon, and that the Tapuyas of Brazil and the Fuegians are its surviving members. This interesting theory demands still further evidence before it can be accepted."—D. G. Brinton, *The American Race*, pp. 327–332.

Pawnee Family (named "Caddoan" by Major Powell).—"The Pawnee Family, though some of its branches have long been known, is perhaps in history and language one of the least understood of the important tribes of the West. In both respects it seems to constitute a distinct group. During recent years its extreme northern and southern branches have evinced a tendency to blend with surrounding stocks; but the central branch, constituting the

Pawnee proper, maintains still in its advanced decadence a bold line of demarcation between itself and all adjacent tribes. The members of the family are: The Pawnees, the Arikaras, the Caddos, the Huecos or Wacos, the Keechies, the Tawaconies, and the Pawnee Picts or Wichitas. The last five may be designated as the Southern or Red River branches. At the date of the Louisiana purchase the Caddos were living about 40 miles northwest of where Shreveport now stands. Five years earlier their residence was upon Clear Lake, in what is now Caddo Parish. This spot they claimed was the place of their nativity, and their residence from time immemorial. . . . They have a tradition that they are the parent stock, from which all the southern branches have sprung, and to some extent this claim has been recognized. . . . The five [southern] bands are now all gathered upon a reserve secured for them in the Indian Territory by the Government. . . . In many respects, their method of building lodges, their equestrianism, and certain social and tribal usages, they quite closely resemble the Pawnees. Their connection, however, with the Pawnee family, not till recently if ever mentioned, is mainly a matter of vague conjecture. . . . The name Pawnee is most probably derived from 'pá-rík-I,' a horn; and seems to have been once used by the Pawnees themselves to designate their peculiar scalp-lock. From the fact that this was the most noticeable feature in their costume, the name came naturally to be the denominative term of the tribe. The word in this use once probably embraced the Wichitas (i. e., Pawnee Picts) and the Arikaras. . . . The true Pawnee territory till as late as 1833 may be described as extending from the Niobrara south to the Arkansas. They frequently hunted considerably beyond the Arkansas; tradition says as far as the Canadian. . . . On the east they claimed to the Missouri, though in eastern Nebraska, by a sort of tacit permit, the Otoes, Poncas, and Omahas along that stream occupied lands extending as far west as the Elkhorn. In Kansas, also, east of the Big Blue, they had ceased to exercise any direct control, as several remnants of tribes, the Wyandots, Delawares, Kickapoos, and Iowas, had been settled there and were living under the guardianship of the United States. . . . On the west their grounds were marked by no natural boundary, but may perhaps be described by a line drawn from the mouth of Snake River on the Niobrara southwest to the North Platte, thence south to the Arkansas. . . . It is not to be supposed, however, that they held altogether undisturbed possession of this territory. On the north they were incessantly harassed by various bands of the Dakotas, while upon the south the Osages, Comanches, Cheyennes, Arapahoes and Kiowas (the last three originally northern tribes) were equally relentless in their hostility. . . . In 1833 the Pawnees surrendered to the United States their claim upon all the above described territory lying south of the Platte. In 1858 all their remaining territory was ceded, except a reserve 30 miles long and 15 wide upon the Loup Fork of the Platte, its eastern limit beginning at Beaver Creek. In 1874 they sold this tract and removed to a reserve secured for them by the Government in the Indian Territory, between the Arkansas and Cimarron at their junction."—J. B. Dunbar, *The Pawnee Indians* (*Mag. of Am. Hist.*, April, 1880, v. 4).

Powhatan Confederacy.—"At the time of the first settlement by the Europeans, it has been estimated that there were not more than 20,000 Indians within the limits of the State of Virginia. Within a circuit of 60 miles from Jamestown, Captain Smith says there were about 5,000 souls, and of these scarce 1,500 were warriors. The whole territory between the mountains and the sea was occupied by more than 40 tribes, 30 of whom were united in a confederacy under Powhatan, whose dominions, hereditary and acquired by conquest, comprised the whole country between the rivers James and Potomac, and extended into the interior as far as the falls of the principal rivers. Campbell, in his History of Virginia, states the number of Powhatan's subjects to have been 8,000. Powhatan was a remarkable man; a sort of savage Napoleon, who, by the force of his character and the superiority of his talents, had raised himself from the rank of a petty chieftain to something of imperial dignity and power. He had two places of abode, one called Powhatan, where Richmond now stands, and the other at Werowocomoco, on the north side of York River, within

the present county of Gloucester. . . . Besides the large confederacy of which Powhatan was the chief, there were two others, with which that was often at war. One of these, called the Mannahoacs, consisted of eight tribes, and occupied the country between the Rappahannoc and York rivers; the other, consisting of five tribes, was called the Monacans, and was settled between York and James rivers above the Falls. There were also, in addition to these, many scattering and independent tribes."—G. S. Hillard, *Life of Capt. John Smith (Library of Am. Biog.)*, ch. 4.—"The English invested savage life with all the dignity of European courts. Powhatan was styled 'King,' or 'Emperor,' his principal warriors were lords of the kingdom, his wives were queens, his daughter was a 'princess,' and his cabins were his various seats of residence. . . . In his younger days Powhatan had been a great warrior. Hereditarily, he was the chief or werowance of eight tribes; through conquest his dominions had been extended. . . . The name of his nation and the Indian appellation of the James River was Powhatan. He himself possessed several names."—E. Eggleston and L. E. Seelye, *Pocahontas*, ch. 3.

Puans. See below: SIOUAN FAMILY.

Pueblos.—"The non-nomadic semi-civilized town and agricultural peoples of New Mexico and Arizona . . . I call the Pueblos, or Towns-people, from pueblo, town, population, people, a name given by the Spaniards to such inhabitants of this region as were found, when first discovered, permanently located in comparatively well-built towns. Strictly speaking, the term Pueblos applies only to the villagers settled along the banks of the Rio Grande del Norte and its tributaries between latitudes 34° 45' and 36° 30', and although the name is employed as a general appellation for this division, it will be used, for the most part, only in its narrower and popular sense. In this division, besides the before mentioned Pueblos proper, are embraced the Moquis, or villagers of eastern Arizona, and the non-nomadic agricultural nations of the lower Gila river,—the Pimas, Maricopas, Papagos, and cognate tribes. The country of the Towns-people, if we may credit Lieutenant Simpson, is one of 'almost universal barrenness,' yet interspersed with fertile spots; that of the agricultural nations, though dry, is more generally productive. The fame of this so-called civilization reached Mexico at an early day . . . in exaggerated rumors of great cities to the north, which prompted the expeditions of Marco de Niza in 1539, of Coronado in 1540, and of Espejo in 1586 [1583]. These adventurers visited the north in quest of the fabulous kingdoms of Quivira, Tontontecac, Marata and others, in which great riches were said to exist. The name of Quivira was afterwards applied by them to one or more of the pueblo cities. The name Cibola, from 'Cibolo,' Mexican bull, 'bos bison,' or wild ox of New Mexico, where the Spaniards first encountered buffalo, was given to seven of the towns which were afterwards known as the Seven Cities of Cibola. But most of the villages known at the present day were mentioned in the reports of the early expeditions by their present names.

... The towns of the Pueblos are essentially unique, and are the dominant feature of these aboriginals. Some of them are situated in valleys, others on mesas; sometimes they are planted on elevations almost inaccessible, reached only by artificial grades, or by steps cut in the solid rock. Some of the towns are of an elliptical shape, while others are square, a town being frequently but a block of buildings. Thus a Pueblo consists of one or more squares, each enclosed by three or four buildings of from 300 to 400 feet in length, and about 150 feet in width at the base, and from two to seven stories of from eight to nine feet each in height. . . . The stories are built in a series of gradations or retreating surfaces, decreasing in size as they rise, thus forming a succession of terraces. In some of the towns these terraces are on both sides of the building; in others they face only towards the outside; while again in others they are on the inside. These terraces are about six feet wide, and extend around the three or four sides of the square, forming a walk for the occupants of the story resting upon it, and a roof for the story beneath; so with the stories above. As there is no inner communication with one another, the only means of mounting to them is by ladders which stand at convenient distances along the several rows of terraces, and they may be drawn up at pleasure, thus cutting off all unwelcome intrusion. The outside walls of one or more of the lower stories are entirely solid, having no openings of any kind, with the exception of, in some towns, a few loopholes. . . . To enter the rooms on the ground floor from the outside, one must mount the ladder to the first balcony or terrace, then descend through a trap door in the floor by another ladder on the inside. . . . The several stories of these huge structures are divided into multitudinous compartments of greater or less size, which are apportioned to the several families of the tribe."—H. H. Bancroft, *Native Races of the Pacific States*, v. 1, ch. 5.—"There can be no doubt that Cibola is to be looked for in New Mexico. . . . We cannot . . . refuse to adopt the views of General Simpson and of Mr. W. W. H. Davis, and to look at the pueblo of Zuñi as occupying, if not the actual site, at least one of the sites within the tribal area of the Seven Cities of Cibola. Nor can we refuse to identify Tusayan with the Moqui district, and Acuco with Acoma."—A. F. Bandelier, *Hist. Introd. to Studies among the Sedentary Indians of N. Mexico (Papers of the Archaeolog. Inst. of Am.: Am. Series, v. 1)*.

Blackmar, *Spanish Institutions of the Southwest, ch. 10*.—See, also, AMERICA, PREHISTORIC, and above: PIMAN FAMILY, and KERESAN FAMILY.

Pujunan Family.—"The following tribes were placed in this group by Latham: Pujuni, Secumne, Tsamak of Hale, and the Cushna of Schoolcraft. The name adopted for the family is the name of a tribe given by Hale. This was one of the two races into which, upon the information of Captain Sutter as derived by Mr. Dana, all the Sacramento tribes were believed to

be divided. 'These races resembled one another in every respect but language.' . . . The tribes of this family have been carefully studied by Powers, to whom we are indebted for most all we know of their distribution. They occupied the eastern bank of the Sacramento in California, beginning some 80 or 100 miles from its mouth, and extended northward to within a short distance of Pit River."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology, pp. 99-100*.

Quiches.—Cakchiquels.—"Of the ancient races of America, those which approached the nearest to a civilized condition spoke related dialects of a tongue, which from its principal members has been called the Maya-Quiche linguistic stock. Even to-day, it is estimated that half a million persons use these dialects. They are scattered over Yucatan, Guatemala, and the adjacent territory, and one branch formerly occupied the hot lowlands on the Gulf of Mexico, north of Vera Cruz. The so-called 'metropolitan' dialects are those spoken relatively near the city of Guatemala, and include the Cakchiquel, the Quiche, the Pokonchi and the Tzutuhill. They are quite closely allied, and are mutually intelligible, resembling each other about as much as did in ancient Greece the Attic, Ionic and Doric dialects. . . . The civilization of these people was such that they used various mnemonic signs, approaching our alphabet, to record and recall their mythology and history. Fragments, more or less complete, of these traditions have been preserved. The most notable of them is the national legend of the Quiches of Guatemala, the so-called Popol Vuh. It was written at an unknown date in the Quiche dialect, by a native who was familiar with the ancient records."—D. G. Brinton, *Essays of an Americanist, p. 104*.

Sacs (Sauks), Foxes, etc.—"The Sauks or Saukies (White Clay), and Foxes or Outagamies, so called by the Europeans and Algonkins, but whose true name is Musquakkiuk (Red Clay), are in fact but one nation. The French missionaries

* See Note, Appendix E, vol. 5.

on coming first in contact with them, in the year 1665, at once found that they spoke the same language, and that it differed from the Algonkin, though belonging to the same stock; and also that this language was common to the Kickapoos, and to those Indians they called Maskontens. This last nation, if it ever had an existence as a distinct tribe, has entirely disappeared. But we are informed by Charlevoix, and Mr. Schoolcraft corroborates the fact, that the word 'Mascontenck' means a country without woods, a prairie. The name Mascontens was therefore used to designate 'prairie Indians.' And it appears that they consisted principally of Sauks and Kickapoos, with an occasional mixture of Potowotamies and Miamis, who probably came there to hunt the Buffalo. The country assigned to those Mascontens lay south of the Fox River of Lake Michigan and west of Illinois River. . . . When first discovered, the Sauks and Foxes had their seats toward the southern extremity of Green Bay, on Fox River, and generally farther east than the country which they lately occupied. . . . By the treaty of 1804, the Sauks and Foxes ceded to the United States all their lands east of . . . the Mississippi. . . . The Kickapoos by various treaties, 1809 to 1819, have also ceded all their lands to the United States. They claimed all the country between the Illinois River and the Wabash, north of the parallel of latitude passing by the mouth of the Illinois and south of the Kankakee River. . . . The territory claimed by the Miamis and Piankishaws may be generally stated as having been bounded eastwardly by the Maumee River of Lake Erie, and to have included all the country drained by the Wabash. The Piankishaws occupied the country bordering on the Ohio."—A. Gallatin, *Synopsis of the Indian Tribes* (*Archæologia Americana*, v. 2), *introd.*, sect. 2.—The Mascontens, or Mascoutins, "seldom appear alone, but almost always in connection with their kindred, the Ottagamies or Foxes and the Kickapoos, and like them bear a character for treachery and deceit. The three tribes may have in earlier days formed the Fire-Nation [of the early French writers], but, as Gallatin observes in the *Archæologia Americana*, it is very doubtful whether the Mascoutins were ever a distinct tribe. If this be so, and there is no reason to reject it, the disappearance of the name will not be strange."—J. G. Shea, *Brief Researches Respecting the Mascoutins* (*Schoolcraft's Information Respecting Indian Tribes*, pt. 4, p. 245).—See above, ALGONQUIAN FAMILY.—For an account of the Black Hawk War see Illinois, A. D. 1832.

Sahaptins. See above: NEZ PERCÉS.

Salinan Family.—This name is given by Major Powell to the San Antonio and San Miguel dialects spoken by two tribes on the Salinas River, Monterey County, California.—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, p. 101.—See ESSELENIAN FAMILY.

Sastean Family.—"The single tribe upon the language of which Hale based his name was located by him to the southwest of the Lutuami or Klamath tribes. . . . The former territory of

the Sastean family is the region drained by the Klamath River and its tributaries from the western base of the Cascade range to the point where the Klamath flows through the ridge of hills east of Happy Camp, which forms the boundary between the Sastean and the Quoratean families. In addition to this region of the Klamath, the Shasta extended over the Siskiyou range northward as far as Ashland, Oregon."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 106.

Savannahs. See above: ALGONQUIAN FAMILY.

Seminoles.—"The term 'semanóle,' or 'isti Simanóle,' signifies 'separatish' or 'runaway,' and as a tribal name points to the Indians who left the Creek, especially the Lower Creek settlements, for Florida, to live, hunt, and fish there in independence. The term does not mean 'wild,' 'savage,' as frequently stated; if applied now in this sense to animals, it is because of its original meaning, 'what has become a runaway.' . . . The Seminoles of modern times are a people compounded of the following elements: separatists from the Lower Creek and Hitchiti towns; remnants of tribes partly civilized by the Spaniards; Yamassi Indians, and some negroes. . . . The Seminoles were always regarded as a sort of outcasts by the Creek tribes from which they had seceded, and no doubt there were reasons for this. . . . These Indians showed, like the Creeks, hostile intentions towards the thirteen states during and after the Revolution, and conjointly with the Upper Creeks on Tallapoosa river concluded a treaty of friendship with the Spaniards at Pensacola in May, 1784. Although under Spanish control, the Seminoles entered into hostilities with the Americans in 1793 and 1812. In the latter year Payne miko ['King Payne'] was killed in a battle at Alachua, and his brother, the influential Bowlegs, died soon after. These unruly tribes surprised and massacred American settlers on the Satilla river, Georgia, in 1817, and another conflict began, which terminated in the destruction of the Mikasuki and Suwanee river towns of the Seminoles by General Jackson, in April, 1818. [See FLORIDA: A. D. 1816-1818.] After the cession of Florida, and its incorporation into the American Union (1819), the Seminoles gave up all their territory by the treaty of Fort Moultrie, Sept. 18th, 1823, receiving in exchange goods and annuities. When the government concluded to move these Indians west of the Mississippi river, a treaty of a conditional character was concluded with them at Payne's landing, in 1832. The larger portion were removed, but the more stubborn part dissented, and thus gave origin to one of the gravest conflicts which ever occurred between Indians and whites. The Seminole war began with the massacre of Major Dade's command near Wahoo swamp, December 28th, 1835, and continued with unabated fury for five years, entailing an immense expenditure of money and lives. [See FLORIDA: A. D. 1835-1843.] A number of Creek warriors joined the hostile Seminoles in 1836. A census of the Seminoles taken in 1822 gave a population of 3,899, with 800 negroes belonging to them. The population of the Seminoles in the Indian Territory amounted to 2,667 in 1881. . . . There are some Seminoles now in Mexico, who went there with their negro slaves."—A. S. Gatschet, *A Migration Legend of the Creek Indians*, v. 1, pt. 1, sect. 2.—"Ever since the first settlement of these Indians in Florida

* See Note, Appendix E, vol. 5.

they have been engaged in a strife with the whites. . . . In the unanimous judgment of unprejudiced writers, the whites have ever been in the wrong."—D. G. Brinton, *Notes on the Floridian Peninsula*, p. 148.—"There were in Florida, October 1, 1880, of the Indians commonly known as Seminole, 208. They constituted 37 families, living in 23 camps, which were gathered into five widely separated groups or settlements. . . . This people our Government has never been able to conciliate or to conquer. . . . The Seminole have always lived within our borders as aliens. It is only of late years, and through natural necessities, that any friendly intercourse of white man and Indian has been secured. . . . The Indians have appropriated for their service some of the products of European civilization, such as weapons, implements, domestic utensils, fabrics for clothing, &c. Mentally, excepting a few religious ideas which they received long ago from the teaching of Spanish missionaries, and, in the southern settlements, excepting some few Spanish words, the Seminole have accepted and appropriated practically nothing from the white man."—C. MacCauley, *The Seminole Indians of Florida* (Fifth An. Rept. of the Bureau of Ethnology, 1883-84), introd. and ch. 4.

ALSO IN J. T. Sprague, *The Florida War*.—S. G. Drake, *The Aboriginal Races of N. Am.*, bk. 4, ch. 6-21.—See, also, above: MUSKHOGEAN FAMILY.

Senecas; their name.—"How this name originated is a 'vexata quæstio' among Indo-antiquarians and etymologists. The least plausible supposition is, that the name has any reference to the moralist Seneca. Some have supposed it to be a corruption of the Dutch term for vermilion, cinebar, or cinnabar, under the assumption that the Senecas, being the most warlike of the Five Nations, used that pigment more than the others, and thus gave origin to the name. This hypothesis is supported by no authority. . . . The name 'Sennecas' first appears on a Dutch map of 1616, and again on Jean de Laet's map of 1633. . . . It is claimed by some that the word may be derived from 'Sinnekox,' the Algonquin name of a tribe of Indians spoken of in Wassenar's History of Europe, on the authority of Peter Barentz, who traded with them about the year 1626. . . . Without assuming to solve the mystery, the writer contents himself with giving some data which may possibly aid others in arriving at a reliable conclusion. [Here follows a discussion of the various forms of name by which the Senecas designated themselves and were known to the Hurons, from whom the Jesuits first heard of them.] By dropping the neuter prefix O, the national title became 'Nan-do-wah-gaah,' or 'The great hill people,' as now used by the Senecas. . . . If the name Seneca can legitimately be derived from the Seneca word 'Nan-do-wah-gaah' . . . it can only be done by prefixing 'Son,' as was the custom of the Jesuits, and dropping all unnecessary letters. It would then form the word 'Son-non-do-wa-ga,' the first two and last syllables of which, if the French sounds of the letters are given, are almost identical in pronunciation with Seneca. The chief difficulty, however, would be in the disposal of the two superfluous syllables. They may have been dropped in the process of contraction so common

in the composition of Indian words—a result which would be quite likely to occur to a Seneca name, in its transmission through two other languages, the Mohawk and the Dutch. The foregoing queries and suggestions are thrown out for what they are worth, in the absence of any more reliable theory."—O. H. Marshall, *Historical Writings*, p. 231.—See above: IROQUOIS CONFEDERACY, and HURONS, &c.—See, also, PONTIAC'S WAR, and for an account of Sullivan's expedition against the Senecas, see UNITED STATES OF AM.: A. D. 1779 (AUGUST—SEPTEMBER).

Shacaya. See above: ANDESANS.

Shahaptian Family. See above: NEZ PERCÉS.

Shastas. See above: SASTEAN FAMILY.

Shawanese, Shawnees, or Shawanoes.—"Adjacent to the Lenape [or Delawares—see above], and associated with them in some of the most notable passages of their history, dwelt the Shawanoes, the Chaouanons of the French, a tribe of bold, roving, and adventurous spirit. Their eccentric wanderings, their sudden appearances and disappearances, perplex the antiquary, and defy research; but from various scattered notices, we may gather that at an early period they occupied the valley of the Ohio; that, becoming embroiled with the Five Nations, they shared the defeat of the Andastes, and about the year 1672 fled to escape destruction. Some found an asylum in the country of the Lenape, where they lived tenants at will of the Five Nations; others sought refuge in the Carolinas and Florida, where, true to their native instincts, they soon came to blows with the owners of the soil. Again, turning northwards, they formed new settlements in the valley of the Ohio, where they were now suffered to dwell in peace, and where, at a later period, they were joined by such of their brethren as had found refuge among the Lenape."—F. Parkman, *The Conspiracy of Pontiac*, ch. 1.—"The Shawnees were not found originally in Ohio, but migrated there after 1750. They were called Chaouanons by the French and Shawanoes by the English. The English name Shawano changed to Shawanee, and recently to Shawnee. Chaouanon and Shawano are obviously attempts to represent the same sound by the orthography of the two respective languages. . . . Much industry has been used by recent writers, especially by Dr. Brinton, to trace this nomadic tribe to its original home; but I think without success. . . . We first find the Shawano in actual history about the year 1660, and living along the Cumberland river, or the Cumberland and Tennessee. Among the conjectures as to their earlier history, the greatest probability lies for the present with the earliest account—the account given by Perrot, and apparently obtained by him from the Shawanoes themselves, about the year 1680—that they formerly lived by the lower lakes, and were driven thence by the Five Nations."—M. F. Force, *Some Early Notices of the Indians of Ohio*.—"Their [the Shawnee's] dialect is more akin to the Mohegan than to the Delaware, and when, in 1692, they first appeared in the area of the Eastern Algonkin Confederacy, they came as the friends and relatives of the former. They were divided into four bands"—Piqua, properly Pikoweu, Mequachake, Kiscapokoke, Chilicothe. "Of these, that which settled in Pennsylvania was the Pikoweu, who occupied

and gave their name to the Pequa valley in Lancaster county. According to ancient Mohegan tradition, the New England Pequods were members of this band."—D. G. Brinton, *The Lenape and their Legends*, ch. 2.—The same, *The Shawnees and their Migrations* (*Hist. Mag.*, v. 10, 1866).—"The Shawanese, whose villages were on the western bank [of the Susquehanna] came into the valley [of Wyoming] from their former localities, at the 'forks of the Delaware' (the junction of the Delaware and Lehigh, at Easton), to which point they had been induced at some remote period to emigrate from their earlier home, near the mouth of the river Wabash, in the 'Ohio region,' upon the invitation of the Delawares. This was Indian diplomacy, for the Delawares were desirous (not being upon the most friendly terms with the Mingos, or Six Nations) to accumulate a force against those powerful neighbors. But, as might be expected, they did not long live in peace with their new allies. . . . The Shawanese [about 1755, or soon after] were driven out of the valley by their more powerful neighbors, the Delawares, and the conflict which resulted in their leaving it grew out of, or was precipitated by, a very trifling incident. While the warriors of the Delawares were engaged upon the mountains in a hunting expedition, a number of squaws or female Indians from Maughwauwame were gathering wild fruits along the margin of the river below the town, where they found a number of Shawanese squaws and their children, who had crossed the river in their canoes upon the same business. A child belonging to the Shawanese having taken a large grasshopper, a quarrel arose among the children for the possession of it, in which their mothers soon took part. . . . The quarrel became general. . . . Upon the return of the warriors both tribes prepared for battle. . . . The Shawanese . . . were not able to sustain the conflict, and, after the loss of about half their tribe, the remainder were forced to flee to their own side of the river, shortly after which they abandoned their town and removed to the Ohio." This war between the Delawares and Shawanese has been called the Grasshopper War.—L. H. Miner, *The Valley of Wyoming*, p. 32.—See, also, above, ALGONQUIAN FAMILY, and DELAWARES.—See, also, PONTIAC'S WAR; UNITED STATES OF AM.: A. D. 1765-1768; and (for an account of "Lord Dunmore's War") see OHIO (VALLEY): A. D. 1774.

Sheepeaters (Tukuarika). See below: SHOSHONEAN FAMILY.

Shenyennes. See above: ALGONQUIAN FAMILY.

Shoshonean Family.—"This important family occupied a large part of the great interior basin of the United States. Upon the north Shoshonean tribes extended far into Oregon, meeting Shahapian territory on about the 44th parallel or along the Blue Mountains. Upon the northeast the eastern limits of the pristine habitat of the Shoshonean tribes are unknown. The narrative of Lewis and Clarke contains the explicit statement that the Shoshoni bands encountered upon the Jefferson River, whose summer home was upon the head waters of the Columbia, formerly lived within their own recollection in the plains to the east of the Rocky Mountains, whence they were driven to their mountain retreats by the Minnetaree (Atsina), who had obtained firearms. . . . Later a divi-

sion of the Bannock held the finest portion of Southwestern Montana, whence apparently they were being pushed westward across the mountains by Blackfeet. Upon the east the Tukuarika or Sheepeaters held the Yellowstone Park country, where they were bordered by the Siouan territory, while the Washaki occupied southwestern Wyoming. Nearly the entire mountainous part of Colorado was held by the several bands of the Ute, the eastern and southeastern parts of the State being held respectively by the Arapaho and Cheyenne (Algonquian), and the Kaiowe (Kiowan). To the southeast the Ute country included the northern drainage of the San Juan, extending farther east a short distance into New Mexico. The Comanche division of the family extended farther east than any other. . . . Bourgemont found a Comanche tribe on the upper Kansas River in 1724. According to Pike the Comanche territory bordered the Kaiowe on the north, the former occupying the head waters of the Upper Red River, Arkansas and Rio Grande. How far to the southward Shoshonean tribes extended at this early period is not known, though the evidence tends to show that they raided far down into Texas, to the territory they have occupied in more recent years, viz., the extensive plains from the Rocky Mountains eastward into Indian Territory and Texas to about 97°. Upon the south Shoshonean territory was limited generally by the Colorado River . . . while the Tusayan (Moki) had established their seven pueblos . . . to the east of the Colorado Chiquito. In the southwest Shoshonean tribes had pushed across California, occupying a wide band of country to the Pacific."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, pp. 109-110.—"The Pah Utes occupy the greater part of Nevada, and extend southward. . . . The Pi Utes or Piutes inhabit Western Utah, from Oregon to New Mexico. . . . The Gosh Utes [Gosuites] inhabit the country west of Great Salt Lake, and extend to the Pah Utes."—H. H. Bancroft, *Native Races of the Pacific States*, v. 1, ch. 4.

Siksikas, or Sisikas. See above: BLACKFEET.

Siouan Family.—Sioux.*—"The nations which speak the Sioux language may be considered, in reference both to their respective dialects and to their geographical position, as consisting of four subdivisions, viz., the Winnebagoes; the Sioux proper and the Assiniboinis; the Minetare group; and the Osages and other southern kindred tribes. The Winnebagoes, so called by the Algonkins, but called Puans and also Otchagras by the French, and Horoje ('fish-eaters') by the Omahaws and other southern tribes, call themselves Hochungorah, or the 'Trout' nation. The Green Bay of Lake Michigan derives its French name from theirs (Baye des Puans). . . . According to the War Department they amount [1836] to 4,600 souls, and appear to cultivate the soil to a considerable degree. Their principal seats are on the Fox River of Lake Michigan, and towards the heads of the Rock River of the Mississippi. . . . The Sioux proper, or Naudowessies, names given to them by the Algonkins and the French, call themselves Dahcotas, and sometimes 'Ochente Shakoans,' or the Seven Fires, and are divided into seven bands or tribes, closely connected together, but apparently independent of each other. They do not appear to have been known to the French

* See Note, Appendix E, vol. 5.

before the year 1660. . . . The four most eastern tribes of the Dakotas are known by the name of the Mendewahkantoan, or 'Gens du Lac,' Wahkpatoan and Wahkpakotoan, or 'People of the Leaves,' and Sisitoans. . . . The three westerly tribes, the Yanktons, the Yanktonans, and the Tetons, wander between the Mississippi and the Missouri. . . . The Assiniboin (Stone Indians), as they are called by the Algonkins, are a Dakota tribe separated from the rest of the nation, and on that account called Hoha or 'Rebels,' by the other Sioux. They are said to have made part originally of the Yanktons. . . . Another tribe, called Sheyennes or Cheyennes, were at no very remote period seated on the left bank of the Red River of Lake Winnipeg. . . . Carver reckons them as one of the Sioux tribes; and Mackenzie informs us that they were driven away by the Sioux. They now [1836] live on the headwaters of the river Sheyenne, a southwestern tributary of the Missouri. . . . I have been, however, assured by a well-informed person who trades with them that they speak a distinct language, for which there is no European interpreter. . . . The Minetares (Minetaree and Minetaries) consist of three tribes, speaking three different languages, which belong to a common stock. Its affinities with the Dakota are but remote, but have appeared sufficient to entitle them to be considered as of the same family. Two of those tribes, the Mandanes, whose number does not exceed 1,500, and the stationary Minetares, amounting to 3,000 souls, including those called Annahawas, cultivate the soil, and live in villages situated on or near the Missouri, between 47° and 48° north latitude. . . . The third Minetare tribe, is that known by the name of the Crow or Upsaroka [or Absaroka] nation, probably the Keeheetsas of Lewis and Clarke. They are an erratic tribe, who hunt south of the Missouri, between the Little Missouri and the southeastern branches of the Yellowstone River. . . . The southern Sioux consist of eight tribes, speaking four, or at most five, kindred dialects. Their territory originally extended along the Mississippi, from below the mouth of the Arkansas to the forty-first degree of north latitude. . . . Their hunting grounds extend as far west as the Stony Mountains; but they all cultivate the soil, and the most westerly village on the Missouri is in about 100° west longitude. The three most westerly tribes are the Quappas or Arkansas, at the mouth of the river of that name, and the Osages and Kansas, who inhabited the country south of the Missouri and of the river Kansas. . . . The Osages, properly Wausashe, were more numerous and powerful than any of the neighbouring tribes, and perpetually at war with all the other Indians, without excepting the Kansas, who speak the same dialect with themselves. They were originally divided into Great and Little Osages; but about forty years ago almost one-half of the nation, known by the name of Chaneers, or Clermont's Band, separated from the rest, and removed to the river Arkansas. The villages of those several subdivisions are now [1836] on the headwaters of the river Osage, and of the Verdigris, a northern tributary stream of the Arkansas. They amount to about 5,000 souls, and have ceded a portion of their lands to the United States, reserving to themselves a territory on the Arkansas, south of 38° north latitude, extending from 95°

to 100° west longitude, on a breadth of 45 to 50 miles. The territory allotted to the Cherokees, the Creeks and the Choctaws lies south of that of the Osage. . . . The Kansas, who have always lived on the river of that name, have been at peace with the Osage for the last thirty years, and intermarry with them. They amount to 1,500 souls, and occupy a tract of about 3,000,000 acres. . . . The five other tribes of this subdivision are the Ioways, or Pahoja (Grey Snow), the Missouris or Neojehé, the Ottos, or Wah-tootah, the Omahaws, or Mahas, and the Puncas. . . . All the nations speaking languages belonging to the Great Sioux Family may . . . be computed at more than 50,000 souls."—A. Gallatin, *Synopsis of the Indian Tribes (Archæologia Americana, v. 2), sect. 4.*—"Owing to the fact that 'Sioux' is a word of reproach and means snake or enemy, the term has been discarded by many later writers as a family designation, and 'Dakota,' which signifies friend or ally, has been employed in its stead. The two words are, however, by no means properly synonymous. The term 'Sioux' was used by Gallatin in a comprehensive or family sense and was applied to all the tribes collectively known to him to speak kindred dialects of a widespread language. It is in this sense only, as applied to the linguistic family, that the term is here employed. The term 'Dakota' (Dakota) was correctly applied by Gallatin to the Dakota tribes proper as distinguished from the other members of the linguistic family who are not Dakotas in a tribal sense. The use of the term with this signification should be perpetuated. It is only recently that a definite decision has been reached respecting the relationship of the Catawba and Woccon, the latter an extinct tribe known to have been linguistically related to the Catawba. Gallatin thought that he was able to discern some affinities of the Catawban language with 'Muskogee and even with Choctaw,' though these were not sufficient to induce him to class them together. Mr. Gatschet was the first to call attention to the presence in the Catawba language of a considerable number of words having a Siouan affinity. Recently Mr. Dorsey has made a critical examination of all the Catawba linguistic material available, which has been materially increased by the labors of Mr. Gatschet, and the result seems to justify its inclusion as one of the dialects of the widespread Siouan family." The principal tribes in the Siouan Family named by Major Powell are the Dakota (including Santee, Sisseton, Wahpeton, Yankton, Yanktonnais, Teton, — the latter embracing Brulé, Sans Arcs, Blackfeet, Minneconjou, Two Kettles, Ogalala, Uncpapa), Assinaboin, Omaha, Ponca, Kaw, Osage, Quapaw, Iowa, Otoe, Missouri, Winnebago, Mandan, Gros Ventres, Crow, Tutelo, Biloxi (see MUSKHOGEAN FAMILY), Catawba and Woccon.—J. W. Powell, *Seventh Annual Rept. of the Bureau of Ethnology*, p. 112.

Six Nations. See above: IROQUOIS CONFEDERACY.

Skittagetan Family.—"A family designation . . . retained for the tribes of the Queen

Charlotte Archipelago which have usually been called Haida. From a comparison of the vocabularies of the Haida language with others of the neighboring Koluschan family, Dr. Franz Boas is inclined to consider that the two are genetically related. The two languages possess a considerable number of words in common, but a more thorough investigation is requisite for the settlement of the question."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 120.

Snakes. See above: SHOSHONEAN FAMILY.

Stockbridge Indians.—"The Stockbridge Indians were originally a part of the Housatannuck Tribe [Mohegans], to whom the Legislature of Massachusetts granted or secured a township [afterward called Stockbridge] in the year 1736. Their number was increased by Wappingers and Mohikanders, and perhaps also by Indians belonging to several other tribes, both of New England and New York. Since their removal to New Stockbridge and Brotherton, in the western parts of New York, they have been joined by Mohegans and other Indians from East Connecticut, and even from Rhode Island and Long Island."—A. Gallatin, *Synopsis of Indian Tribes (Archæologia Americana*, v. 2), p. 35.

ALSO IN A. Holmes, *Annals of Am.*, 1736 (v. 2).—S. G. Drake, *Aboriginal Races*, p. 15.

Susquehannas, or Andastes, or Conestogas.—"Dutch and Swedish writers speak of a tribe called Minquas; . . . the French in Canada . . . make frequent allusions to the Gandastogué (more briefly Andastés), a tribe friendly to their allies, the Hurons, and sturdy enemies of the Iroquois; later still Pennsylvania writers speak of the Conestogas, the tribe to which Logan belonged, and the tribe which perished at the hands of the Paxton boys. Although Gallatin in his map, followed by Bancroft, placed the Andastés near Lake Erie, my researches led me to correct this, and identify the Susquehannas, Minqua, Andastés or Gandastogué, and Conestogas as being all the same tribe, the first name being apparently an appellation given them by the Virginia tribes; the second that given them by the Algonquins on the Delaware; while Gandastogué as the French, or Conestoga as the English wrote it, was their own tribal name, meaning cabin-pole men, Natio Perticarum, from 'Andasta,' a cabin-pole. . . . Prior to 1600 the Susquehannas and the Mohawks . . . came into collision, and the Susquehannas nearly exterminated the Mohawks in a war which lasted ten years." In 1647 they offered their aid to the Hurons against the Iroquois, having 1,300 warriors trained to the use of fire-arms by three Swedish soldiers; but the proposed alliance failed. During the third quarter of the 17th century they seem to have been in almost continuous war with the Five Nations, until, in 1675, they were completely overthrown. A party of about 100 retreated into Maryland and became involved there in a war with the colonists and were destroyed. "The rest of the tribe, after making overtures to Lord Baltimore, submitted to the Five Nations, and were allowed to retain their ancient grounds. When Pennsylvania was settled, they became known as Conestogas, and were always friendly to the colonists of Penn., as they had been to the Dutch and Swedes. In 1701 Canoodagtoh, their king, made a treaty with Penn., and in the document they are styled Minquas, Conestogas, or

Susquehannas. They appear as a tribe in a treaty in 1742, but were dwindling away. In 1763 the feeble remnant of the tribe became involved in the general suspicion entertained by the colonists against the red men, arising out of massacres on the borders. To escape danger the poor creatures took refuge in Lancaster jail, and here they were all butchered by the Paxton boys, who burst into the place. Parkman, in his *Conspiracy of Pontiac*, p. 414, details the sad story. The last interest of this unfortunate tribe centres in Logan, the friend of the white man, whose speech is so familiar to all, that we must regret that it has not sustained the historical scrutiny of Brantz Mayer (*Tahquahute; or Logan and Capt. Michael Cresap, Maryland Hist. Soc., May, 1851; and 8vo. Albany, 1867*). Logan was a Conestoga, in other words a Susquehanna."—J. G. Shea, *Note 46 to George Alsop's Character of the Province of Maryland (Gowan's Bibliotheca Americana*, 5).—See, also, above: IROQUOIS CONFEDERACY.

Takilmán Family.*—"This name was proposed by Mr. Gatschet for a distinct language spoken on the coast of Oregon about the lower Rogue River."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 121.

Talligewi. See above: ALLEGHANS.

Tañón Family.—"The tribes of this family in the United States resided exclusively upon the Rio Grande and its tributary valleys from about 33° to about 36°."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 122.

Tappans. See above: ALGONQUIAN FAMILY.

Taranteens or Tarratines. See above: ABNAKIN; also, ALGONQUIAN FAMILY.

Tarascans.—"The Tarascans, so called from Taras, the name of a tribal god, had the reputation of being the tallest and handsomest people of Mexico. They were the inhabitants of the present State of Michoacan, west of the valley of Mexico. According to their oldest traditions, or perhaps those of their neighbors, they had migrated from the north in company with, or about the same time as, the Aztecs. For some 300 years before the conquest they had been a sedentary, semi-civilized people, maintaining their independence, and progressing steadily in culture. When first encountered by the Spaniards they were quite equal and in some respects ahead of the Nahuas. . . . In their costume the Tarascos differed considerably from their neighbors. The feather garments which they manufactured surpassed all others in durability and beauty. Cotton was, however, the usual material."—D. G. Brinton, *The American Race*, p. 136.

Timuquanan Family.—The Tequestas.—"Beginning at the southeast, we first meet the historic Timucua family, the tribes of which are extinct at the present time. . . . In the 16th

* See Note, Appendix E, vol. 5.

century the Timucua inhabited the northern and middle portion of the peninsula of Florida, and although their exact limits to the north are unknown, they held a portion of Florida bordering on Georgia, and some of the coast islands in the Atlantic ocean. . . . The people received its name from one of their villages called Timagoa. . . . The name means 'lord,' 'ruler,' 'master' ('atimuca,' waited upon, 'muca,' by servants, 'ati'), and the people's name is written Atimuca early in the 18th century. . . . The languages spoken by the Calusa and by the people next in order, the Tequesta, are unknown to us. . . . The Calusa held the southwestern extremity of Florida, and their tribal name is left recorded in Calusahatchi, a river south of Tampa bay. . . . Of the Tequesta people on the southeastern end of the peninsula we know still less than of the Calusa Indians. There was a tradition that they were the same people which held the Bahama or Lucayo Islands."—A. S. Gatschet, *A Migration Legend of the Creek Indians*, v. 1, pt. 1.

Tonikan Family.—"The Tonika are known to have occupied three localities: First, on the Lower Yazoo River (1700); second, east shore of Mississippi River (about 1704); third, in Avoyelles Parish, Louisiana (1817). Near Marksville, the county seat of that parish, about twenty-five are now living."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 125.

Tonkawan Family.—"The Tónkawa were a migratory people and a colluvies gentium, whose earliest habitat is unknown. Their first mention occurs in 1719; at that time and ever since they roamed in the western and southern parts of what is now Texas."—J. W. Powell, *Seventh Annual Rept., Bureau of Ethnology*, p. 126.

Tontos. See above: APACHE GROUP.

Toromonos. See BOLIVIA: ABORIGINAL INHABITANTS.

Totonacos.—"The first natives whom Cortes met on landing in Mexico were the Totonacos. They occupied the territory of Totonican, now included in the State of Vera Cruz. According to traditions of their own, they had resided there 800 years, most of which time they were independent, though a few generations before the arrival of the Spaniards they had been subjected by the arms of the Montezumas. . . . Sahagun describes them as almost white in color, their heads artificially deformed, but their features regular and handsome. Robes of cotton beautifully dyed served them for garments, and their feet were covered with sandals. . . . These people were highly civilized. Cempoalla, their capital city, was situate about five miles from the sea, at the junction of two streams. Its houses were of brick and mortar, and each was surrounded by a small garden, at the foot of which a stream of fresh water was conducted. . . . The affinities of the Totonacos are difficult to make out. . . . Their language has many words

from Maya roots, but it has also many more from the Nahuatl."—D. G. Brinton, *The American Races*, p. 139.

Tukuarika. See above: SHOSHONEAN FAMILY.

Tupi.—**Guarani.**—**Tupuyas.**—"The first Indians with whom the Portuguese came in contact, on the discovery of Brazil, called themselves Tupinama, a term derived by Barnhagen from Tupi and Mba, something like warrior or nobleman; by Martius from Tupi and Anamba (relative) with the signification 'belonging to the Tupi tribe.' These Tupi dwell on the east coast of Brazil, and with their language the Portuguese were soon familiar. It was found especially serviceable as a means of communication with other tribes, and this led the Jesuits later to develop it as much as possible, and introduce it as a universal language of intercourse with the Savages. Thus the 'lingua geral Brasilica' arose, which must be regarded as a Tupi with a Portuguese pronunciation. The result was a surprising one, for it really succeeded in forming, for the tribes of Brazil, divided in language, a universal means of communication. Without doubt the wide extent of the Tupi was very favorable, especially since on this side of the Andes, as far as the Caribbean Sea, the continent of South America was overrun with Tupi hordes. . . . Von Martius has endeavored to trace their various migrations and abodes, by which they have acquired a sort of ubiquity in tropical South America. . . . This history . . . leads to the supposition that, had the discovery been delayed a few centuries, the Tupi might have become the lords of eastern South America, and have spread a higher culture over that region. The Tupi family may be divided, according to their fixed abodes, into the southern, northern, eastern, western, and central Tupi; all these are again divided into a number of smaller tribes. The southern Tupi are usually called Guarani (warriors), a name which the Jesuits first introduced. It cannot be determined from which direction they came. The greatest number are in Paraguay and the Argentine province of Corrientes. The Jesuits brought them to a very high degree of civilization. The eastern Tupi, the real Tupinama, are scattered along the Atlantic coast from St. Catherina Island to the mouth of the Amazon. They are a very weak tribe. They say they came from the south and west. The northern Tupi are a weak and widely scattered remnant of a large tribe, and are now in the province of Para, on the island of Marajo, and along both banks of the Amazon. . . . It is somewhat doubtful if this peaceable tribe are really Tupi. . . . The central Tupi live in several free hordes between the Tocantins and Madeira. . . . Cutting off the heads of enemies is in vogue among them. . . . The Mundrucu are especially the head-hunting tribe. The western Tupi all live in Bolivia. They are the only ones who came in contact with the Inca empire, and their character and manners show the influence of this. Some are a picture of idyllic gayety and patriarchal mildness."—*The Standard Natural Hist. (J. S. Kingsley, ed.)* v. 6, pp. 248-249.—"In frequent contiguity with the Tupis was another stock, also widely dispersed through Brazil, called the Tupuyas, of whom the Boto-cudos in eastern Brazil are the most prominent tribe. To them also belong the Gês nations, south of the lower Amazon, and others. They

are on a low grade of culture, going quite naked, not cultivating the soil, ignorant of pottery, and with poorly made canoes. They are dolichocephalic, and must have inhabited the country a long time."—D. G. Brinton, *Races and Peoples*, pp. 269-270.

Zapotees, Mixtecs, Zoques, Mixes, etc.—

"The greater part of Gaxaca [Mexico] and the neighboring regions are still occupied by the Zapytees, who call themselves Didja-za. There are now about 265,000 of them, about 50,000 of whom speak nothing but their native tongue. In ancient times they constituted a powerful independent state, the citizens of which seem to have been quite as highly civilized as any member of the Aztec family. They were agricultural and sedentary, living in villages and constructing buildings of stone and mortar. The

most remarkable, but by no means the only, specimens of these still remaining are the ruins of Mitla. . . . The Mixtecs adjoined the Zapotecs to the west, extending along the coast of the Pacific to about the present port of Acapulco. In culture they were equal to the Zapotecs. . . . The mountain regions of the isthmus of Tehuantepec and the adjacent portions of the states of Chiapas and Oaxaca are the habitats of the Zoques, Mixes, and allied tribes. The early historians draw a terrible picture of their valor, savagery and cannibalism, which reads more like tales to deter the Spaniards from approaching their domains than truthful accounts. However this may be, they have been for hundreds of years a peaceful, ignorant, timid part of the population, homely, lazy and drunken. . . . The faint traditions of these peoples pointed to the South for their origin. . . . The Chinantecs inhabited Chinantla, which is a part of the state of Oaxaca. . . . The Chinantecs had been reduced by the Aztecs and severely oppressed by them. Hence they welcomed the Spaniards as deliverers. . . . Other names by which they are mentioned are Tenez and Teutecas. . . . In speaking of the province of Chiapas the historian Herrera informs us that it derived its name from the pueblo so-called, 'whose inhabitants were the most remarkable in New Spain for their traits and inclinations.' They had early acquired the art of horsemanship, they were skillful in all kinds of music, excellent painters, carried on a variety of arts, and were withal very courteous to each other. One tradition was that they had reached Chiapas from Nicaragua. . . . But the more authentic legend of the Chapas or Chapanecs, as they were properly called from their totemic bird the Chapa, the red macaw, recited that the whole stock moved down from a northern latitude, following down the Pacific coast until they came to Soconusco, where they divided, one part entering the mountains of Chiapas, the other proceeding on to Nicaragua."—D. G. Brinton, *The American Race*, pp. 140-146.

AMIDA, Sieges of.—The ancient city of Amida, now Diarbekr, on the right bank of the Upper Tigris was thrice taken by the Persians from the Romans, in the course of the long wars between the two nations. In the first instance, A. D. 359, it fell after a terrible siege of seventy-three days, conducted by the Persian king Sapor in person, and was given up to pillage and slaughter, the Roman commanders crucified and the few surviving inhabitants dragged to Persia as slaves. The town was then abandoned by the Persians, reoccupied by the Romans and recovered its prosperity and strength, only to pass through a similar experience again in 502 A. D., when it was besieged for eighty days by the Persian king Kobad, carried by storm, and most of its inhabitants slaughtered or enslaved. A century later, A. D. 605, Chosroes took Amida once more, but with less violence.—G. Rawlinson, *Seventh Great Oriental Monarchy*, ch. 9, 19 and 24.—See, also, PERSIA: A. D. 226-627.

AMIENS.—Origin of name. See BELGÆ.

A. D. 1597.—Surprise by the Spaniards.—**Recovery by Henry IV.** See FRANCE: A. D. 1593-1598.

A. D. 1870.—Taken by the Germans. See FRANCE: A. D. 1870-1871.

AMIENS, The Mise of. See OXFORD, PROVISIONS OF.

AMIENS, Treaty of (1527).—Negotiated by Cardinal Wolsey, between Henry VIII. of England and Francis I. of France, establishing an alliance against the Emperor, Charles V. The treaty was sealed and sworn to in the cathedral church at Amiens, Aug. 18, 1527.—J. S. Brewer, *Reign of Henry VIII.*, v. 2, ch. 26 and 28.

AMIENS, Treaty of (1801). See FRANCE: A. D. 1801-1802.

AMIN AL, Caliph, A. D. 809-813.

AMIR.—An Arabian title, signifying chief or ruler.

AMIRANTES. See MASCARENE ISLANDS.

AMISUS, Siege of.—The siege of Amisus by Lucullus was one of the important operations of the Third Mithridatic war. The city was on the coast of the Black Sea, between the rivers Halys and Lycus; it is represented in site by the modern town of Samsoon. Amisus, which was besieged in 73 B. C. held out until the following year. Tyrannio the grammarian was among the prisoners taken and sent to Rome.—G. Long, *Decline of the Roman Republic*, v. 3, ch. 1 and 2.

AMMANN.—This is the title of the Mayor or President of the Swiss Communal Council or Gemeinderath. See SWITZERLAND: A. D. 1848-1890.

AMMON, The Temple and Oracle of.—The Ammonium or Oasis of Ammon, in the Libyan desert, which was visited by Alexander the Great, has been identified with the oasis now known as the Oasis of Siwah. "The Oasis of Siwah was first visited and described by Browne in 1792; and its identity with that of Ammon fully established by Major Rennell ('Geog. of Herodotus,' pp. 577-591). . . . The site of the celebrated temple and oracle of Ammon was first discovered by Mr. Hamilton in 1853." "Its famous oracle was frequently visited by Greeks from Cyrene, as well as from other parts of the Hellenic world, and it vied in reputation with those of Delphi

and Dodona."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 8, sect. 1, and ch. 12, sect. 1, and note E.—An expedition of 50,000 men sent by Cambyzes to Ammon, B. C. 525, is said to have perished in the desert, to the last man. See EGYPT: B. C. 525-332.

AMMONITES, The.—According to the narrative in Genesis xix: 30-39, the Ammonites were descended from Ben-Ammi, son of Lot's second daughter, as the Moabites came from Moab, the eldest daughter's son. The two people are much associated in Biblical history. "It is hard to avoid the conclusion that, while Moab was the settled and civilized half of the nation of Lot, the Bene Ammon formed its predatory and Bedouin section."—G. Grove, *Dict. of the Bible*.—See JEWS: THE EARLY HEBREW HISTORY; also, MOABITES.

AMMONITI. See FLORENCE: A. D. 1358.
AMNESTY PROCLAMATION. See UNITED STATES OF AM: A. D. 1863 (DECEMBER).

AMMOOR, OR AMUR, The. See SIBERIA.

AMORIAN DYNASTY, The. See BYZANTINE EMPIRE: A. D. 820-1057.

AMORIAN WAR, The.—The Byzantine Emperor, Theophilus, in war with the Saracens, took and destroyed, with peculiar animosity, the town of Zapetra or Sozopetra, in Syria, which happened to be the birthplace of the reigning caliph, Motassem, son of Haroun Alraschid. The caliph had condescended to intercede for the place, and his enemy's conduct was personally insulting to him, as well as atrociously inhumane. To avenge the outrage he invaded Asia Minor, A. D. 838, at the head of an enormous army, with the special purpose of destroying the birthplace of Theophilus. The unfortunate town which suffered that distinction was Amorium in Phrygia,—whence the ensuing war was called the Amorian War. Attempting to defend Amorium in the field, the Byzantines were hopelessly defeated, and the doomed city was left to its fate. It made an heroic resistance for fifty-five days, and the siege is said to have cost the caliph 70,000 men. But he entered the place at last with a merciless sword, and left a heap of ruins for the monument of his revenge.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 52.

AMORITES, The.—"The Hittites and Amorites were . . . mingled together in the mountains of Palestine like the two races which ethnologists tell us go to form the modern Kelt. But the Egyptian monuments teach us that they were of very different origin and character. The Hittites were a people with yellow skins and 'Mongoloid' features, whose receding foreheads, oblique eyes, and protruding upper jaws, are represented as faithfully on their own monuments as they are on those of Egypt, so that we cannot accuse the Egyptian artists of caricaturing their enemies. If the Egyptians have made the Hittites ugly, it was because they were so in reality. The Amorites, on the contrary, were a tall and handsome people. They are depicted with white skins, blue eyes, and reddish hair, all the characteristics, in fact, of the white race. Mr. Petrie points out their resemblance to the Dardanians of Asia Minor, who form an intermediate link between the white-skinned tribes of the Greek seas and the fair-complexioned Libyans of Northern Africa. The latter are still found in large numbers in the mountainous regions which stretch eastward from Morocco, and are usually

known among the French under the name of Kabyles. The traveller who first meets with them in Algeria cannot fail to be struck by their likeness to a certain part of the population in the British Isles. Their clear-white freckled skins, their blue eyes, their golden-red hair and tall stature, remind him of the fair Kelts of an Irish village; and when we find that their skulls, which are of the so-called dolichocephalic or 'long-headed' type, are the same as the skulls discovered in the prehistoric cromlechs of the country they still inhabit, we may conclude that they represent the modern descendants of the white-skinned Libyans of the Egyptian monuments. In Palestine also we still come across representatives of a fair-complexioned blue-eyed race, in whom we may see the descendants of the ancient Amorites, just as we see in the Kabyles the descendants of the ancient Libyans. We know that the Amorite type continued to exist in Judah long after the Israelitish conquest of Canaan. The captives taken from the southern cities of Judah by Shishak in the time of Rehoboam, and depicted by him upon the walls of the great temple of Karnak, are people of Amorite origin. Their 'regular profile of sub-aquiline cast,' as Mr. Tomkins describes it, their high cheek-bones and martial expression, are the features of the Amorites, and not of the Jews. Tallness of stature has always been a distinguishing characteristic of the white race. Hence it was that the Anakim, the Amorite inhabitants of Hebron, seemed to the Hebrew spies to be as giants, while they themselves were but 'as grasshoppers' by the side of them (Num. xiii: 33). After the Israelitish invasion remnants of the Anakim were left in Gaza and Gath and Ashkelon (Josh. xi: 22), and in the time of David, Goliath of Gath and his gigantic family were objects of dread to their neighbors (2 Sam. xxi: 15-22). It is clear, then, that the Amorites of Canaan belonged to the same white race as the Libyans of Northern Africa, and like them preferred the mountains to the hot plains and valleys below. The Libyans themselves belonged to a race which can be traced through the peninsula of Spain and the western side of France into the British Isles. Now it is curious that wherever this particular branch of the white race has extended it has been accompanied by a particular form of cromlech, or sepulchral chamber built of large uncut stones. . . . It has been necessary to enter at this length into what has been discovered concerning the Amorites by recent research, in order to show how carefully they should be distinguished from the Hittites with whom they afterwards intermingled. They must have been in possession of Palestine long before the Hittites arrived there. They extended over a much wider area."—A. H. Sayce, *The Hittites*, ch. 1.

AMPHIKTYONIC COUNCIL.—"An Amphiktyonic, or, more correctly, an Amphiktionic, body was an assembly of the tribes who dwelt around any famous temple, gathered together to manage the affairs of that temple. There were other Amphiktyonic Assemblies in Greece [besides that of Delphi], amongst which that of the isle of Kalaureia, off the coast of Argolis, was a body of some celebrity. The Amphiktyons of Delphi obtained greater importance than any other Amphiktyons only because of the greater importance of the Delphic sanctuary, and because it incidentally hap-

pened that the greater part of the Greek nation had some kind of representation among them. But that body could not be looked upon as a perfect representation of the Greek nation which, to postpone other objections to its constitution, found no place for so large a fraction of the Hellenic body as the Arkadians. Still the Amphiktyons of Delphi undoubtedly came nearer than any other existing body to the character of a general representation of all Greece. It is therefore easy to understand how the religious functions of such a body might incidentally assume a political character. . . . Once or twice then, in the course of Grecian history, we do find the Amphiktyonic body acting with real dignity in the name of united Greece. . . . Though the list of members of the Council is given with some slight variations by different authors, all agree in making the constituent members of the union tribes and not cities. The representatives of the Ionic and Doric races sat and voted as single members, side by side with the representatives of petty peoples like the Magnésians and Phthiôtic Achaïans. When the Council was first formed, Dorians and Ionians were doubtless mere tribes of northern Greece, and the prodigious development of the Doric and Ionic races in after times made no difference in its constitution. . . . The Amphiktyonic Council was not exactly a diplomatic congress, but it was much more like a diplomatic congress than it was like the governing assembly of any commonwealth, kingdom, or federation. The Pylagoroi and Hieromnêmones were not exactly Ambassadors, but they were much more like Ambassadors than they were like members of a British Parliament or even an American Congress. . . . The nearest approach to the Amphiktyonic Council in modern times would be if the College of Cardinals were to consist of members chosen by the several Roman Catholic nations of Europe and America."—E. A. Freeman, *Hist. of Federal Govt.*, v. 1, ch. 3.

AMPHILOCHIANS, The. See **AKARNANIANS**.

AMPHIPOLIS.—This town in Macedonia, occupying an important situation on the eastern bank of the river Strymon, just below a small lake into which it widens near its mouth, was originally called "The Nine Ways," and was the scene of a horrible human sacrifice made by Xerxes on his march into Greece.—Thirlwall, *Hist. of Greece*, ch. 15.—It was subsequently taken by the Athenians, B. C. 437, and made a capital city by them [see **ATHENS**: B. C. 440–437], dominating the surrounding district, its name being changed to Amphipolis. During the Peloponnesian War (B. C. 424), the able Lacedæmonian general, Brasidas, led a small army into Macedonia and succeeded in capturing Amphipolis, which caused great dismay and discouragement at Athens. Thucydides, the historian, was one of the generals held responsible for the disaster and he was driven as a consequence into the fortunate exile which produced the composition of his history. Two years later the Athenian demagogue-leader, Cleon, took command of an expedition sent to recover Amphipolis and other points in Macedonia and Thrace. It was disastrously beaten and Cleon was killed, but Brasidas fell likewise in the battle. Whether Athens suffered more from her defeat than Sparta from her victory is a question.—Thucy-

dides, *History*, bk. 4, sect. 102–135, bk. 5, sect. 1–11.—See, also, **ATHENS**: B. C. 466–454, and **GREECE**: B. C. 424–421.—Amphipolis was taken by Philip of Macedon, B. C. 358.—See **GREECE**: B. C. 359–358.

AMPHISSA, Siege and Capture by Philip of Macedon (B. C. 339–338). See **GREECE**: B. C. 357–336.

AMPHITHEATRES, Roman.—"There was hardly a town in the [Roman] empire which had not an amphitheatre large enough to contain vast multitudes of spectators. The savage excitement of gladiatorial combats seems to have been almost necessary to the Roman legionaries in their short intervals of inaction, and was the first recreation for which they provided in the places where they were stationed. . . . Gladiatorial combats were held from early times in the Forum, and wild beasts hunted in the Circus; but until Curio built his celebrated double theatre of wood, which could be made into an amphitheatre by turning the two semi-circular portions face to face, we have no record of any special building in the peculiar form afterwards adopted. It may have been, therefore, that Curio's mechanical contrivance first suggested the elliptical shape. . . . As specimens of architecture, the amphitheatres are more remarkable for the mechanical skill and admirable adaptation to their purpose displayed in them, than for any beauty of shape or decoration. The hugest of all, the Coliseum, was ill-proportioned and unpleasing in its lines when entire."—R. Burn, *Rome and the Campagna*, introd.

AMPHORA.—MODIUS.—"The [Roman] unit of capacity was the Amphora or Quadrantal, which contained a cubic foot . . . equal to 5.687 imperial gallons, or 5 gallons, 2 quarts, 1 pint, 2 gills, nearly. The Amphora was the unit for both liquid and dry measures, but the latter was generally referred to the Modius, which contained one-third of an Amphora. . . . The Culeus was equal to 20 Amphoræ."—W. Ramsay, *Manual of Roman Antiq.*, ch. 13.

AMRITSAR. See **SIKHS**.

AMSTERDAM: The rise of the city.—"In 1205 a low and profitless marsh upon the coast of Holland, not far from the confines of Utrecht, had been partially drained by a dam raised upon the hitherto squandered stream of the Amstel. Near this dam a few huts were tenanted by poor men who earned a scanty livelihood by fishing in the Zuyder Sea; but so uninviting seemed that barren and desolate spot, that a century later Amstel-dam was still an obscure seafaring town, or rather hamlet. Its subsequent progress was more rapid. The spirit of the land was stirring within it, and every portion of it thrilled with new energy and life. Some of the fugitive artizans from Flanders saw in the thriving village safety and peace, and added what wealth they had, and, what was better, their manufacturing intelligence and skill, to the humble hamlet's store. Amsteldam was early admitted to the fellowship of the Hanse League; and, in 1342, having outgrown its primary limits, required to be enlarged. For this an expensive process, that of driving piles into the swampy plain, was necessary; and to this circumstance, no doubt, it is owing that the date of each successive enlargement has been so accurately recorded."—W. T. McCullagh, *Industrial History of Three Nations*, vol. 2, ch. 9.

AMYCLÆ, The Silence of.—Amyclæ was the chief city of Laconia while that district of Peloponnesus was occupied by the Achæans, before the Doric invasion and before the rise of Sparta. It maintained its independence against the Doric Spartans for a long period, but succumbed at length under circumstances which gave rise to a proverbial saying among the Greeks concerning "the silence of Amyclæ." "The peace of Amyclæ, we are told, had been so often disturbed by false alarms of the enemy's approach, that at length a law was passed forbidding such reports, and the silent city was taken by surprise."—C. Thirlwall, *Hist. of Greece*, ch. 7.

ANABAPTISTS OF MÜNSTER.— "Münster is a town in Westphalia, the seat of a bishop, walled round, with a noble cathedral and many churches; but there is one peculiarity about Münster that distinguishes it from all other old German towns; it has not one old church spire in it. Once it had a great many. How comes it that it now has none? In Münster lived a draper, Knipperdolling by name, who was much excited over the doctrines of Luther, and he gathered many people in his house, and spoke to them bitter words against the Pope, the bishops, and the clergy. The bishop at this time was Francis of Waldeck, a man much inclined himself to Lutheranism; indeed, later, he proposed to suppress Catholicism in the diocese, as he wanted to seize on it and appropriate it as a possession to his family. Moreover, in 1544, he joined the Protestant princes in a league against the Catholics; but he did not want things to move too fast, lest he should not be able to secure the wealthy See as personal property. Knipperdolling got a young priest, named Rottmann, to preach in one of the churches against the errors of Catholicism, and he was a man of such fiery eloquence that he stirred up a mob which rushed through the town, wrecking the churches. The mob became daily more daring and threatening. They drove the priests out of the town, and some of the wealthy citizens fled, not knowing what would follow. The bishop would have yielded to all the religious innovations if the rioters had not threatened his temporal position and revenue. In 1532 the pastor, Rottmann, began to preach against the baptism of infants. Luther wrote to him remonstrating, but in vain. The bishop was not in the town; he was at Minden, of which See he was bishop as well. Finding that the town was in the hands of Knipperdolling and Rottmann, who were confiscating the goods of the churches, and excluding those who would not agree with their opinions, the bishop advanced to the place at the head of some soldiers. Münster closed its gates against him. Negotiations were entered into; the Landgrave of Hesse was called in as pacificator, and articles of agreement were drawn up and signed. Some of the churches were given

to the Lutherans, but the Cathedral was reserved for the Catholics, and the Lutherans were forbidden to molest the latter, and disturb their religious services. The news of the conversion of the city of Münster to the gospel spread, and strangers came to it from all parts. Among these was a tailor of Leyden, called John Bockelson. Rottmann now threw up his Lutheranism and proclaimed himself opposed to many of the doctrines which Luther still retained. Amongst other things he rejected was infant baptism. This created a split among the reformed in Münster, and the disorders broke out afresh. The mob now fell on the cathedral and drove the Catholics from it, and would not permit them to worship in it. They also invaded the Lutheran churches, and filled them with uproar. On the evening of January 28, 1534, the Anabaptists stretched chains across the streets, assembled in armed bands, closed the gates and placed sentinels in all directions. When day dawned there appeared suddenly two men dressed like Prophets, with long ragged beards and flowing mantles, staff in hand, who paced through the streets solemnly in the midst of the crowd, who bowed before them and saluted them as Enoch and Elias. These men were John Bockelson, the tailor, and one John Mattheson, head of the Anabaptists of Holland. Knipperdolling at once associated himself with them, and shortly the place was a scene of the wildest ecstasies. Men and women ran about the streets screaming and leaping, and crying out that they saw visions of angels with swords drawn urging them on to the extermination of Lutherans and Catholics alike. . . . A great number of citizens were driven out, on a bitter day, when the land was covered with snow. Those who lagged were beaten; those who were sick were carried to the market-place and re-baptized by Rottmann. . . . This was too much to be borne. The bishop raised an army and marched against the city. Thus began a siege which was to last sixteen months, during which a multitude of untrained fanatics, commanded by a Dutch tailor, held out against a numerous and well-armed force. Thenceforth the city was ruled by divine revelations, or rather, by the crazes of the diseased brains of the prophets. One day they declared that all the officers and magistrates were to be turned out of their offices, and men nominated by themselves were to take their places; another day Mattheson said it was revealed to him that every book in the town except the Bible was to be destroyed; accordingly all the archives and libraries were collected in the market-place and burnt. Then it was revealed to him that all the spires were to be pulled down; so the church towers were reduced to stumps, from which the enemy could be watched and whence cannon could play on them. One day he declared he had been ordered by Heaven to go forth, with promise of victory, against the besiegers. He dashed forth at the head of a large band, but was surrounded and he and his band slain. The death of Mattheson struck dismay into the hearts of the Anabaptists, but John Bockelson took advantage of the moment to establish himself as head. He declared that it was revealed to him that Mattheson had been killed because he had disobeyed the heavenly command, which was to go forth with few. Instead of that he had gone with many. Bockelson said he had

been ordered in vision to marry Mattheson's widow and assume his place. It was further revealed to him that Münster was to be the heavenly Zion, the capital of the earth, and he was to be king over it. . . . Then he had another revelation that every man was to have as many wives as he liked, and he gave himself sixteen wives. This was too outrageous for some to endure, and a plot was formed against him by a blacksmith and about 200 of the more respectable citizens, but it was frustrated and led to the seizure of the conspirators and the execution of a number of them. . . . At last, on midsummer eve, 1536, after a siege of sixteen months, the city was taken. Several of the citizens, unable longer to endure the tyranny, cruelty and abominations committed by the king, helped the soldiers of the prince-bishop to climb the walls, open the gates, and surprise the city. A desperate hand-to-hand fight ensued; the streets ran with blood. John Bockelson, instead of leading his people, hid himself, but was caught. So was Knipperdolling. When the place was in his hands the prince-bishop entered. John of Leyden and Knipperdolling were cruelly tortured, their flesh plucked off with red-hot pincers, and then a dagger was thrust into their hearts. Finally, their bodies were hung in iron cages to the tower of a church in Münster. Thus ended this hideous drama, which produced an indescribable effect throughout Germany. Münster, after this, in spite of the desire of the prince-bishop to establish Lutheranism, reverted to Catholicism, and remains Catholic to this day." —S. Baring-Gould, *The Story of Germany*, ch. 36.

ANARCHISTS.—"The anarchists are . . . a small but determined band. . . . Although their programme may be found almost word for word in Proudhon, they profess to follow more closely Bakounine, the Russian nihilist, who separated himself from Marx and the Internationals, and formed secret societies in Spain, Switzerland, France, and elsewhere, and thus propagated nihilistic views; for anarchy and nihilism are pretty much one and the same thing when nihilism is understood in the older, stricter sense, which does not include, as it does in a larger and more modern sense, those who are simply political and constitutional reformers. Like prince Krapotkine, Bakounine

came of an old and prominent Russian family; like him, he revolted against the cruelties and injustices he saw about him; like him, he despaired of peaceful reform, and concluded that no great improvement could be expected until all our present political, economic, and social institutions were so thoroughly demolished that of the old structure not one stone should be left on another. Out of the ruins a regenerated world might arise. We must be purged as by fire. Like all anarchists and true nihilists, he was a thorough pessimist, as far as our present manner of life was concerned. Reaction against conservatism carried him very far. He wished to abolish private property, state, and inheritance. Equality is to be carried so far that all must wear the same kind of clothing, no difference being made even for sex. Religion is an aberration of the brain, and should be abolished. Fire, dynamite, and assassination are approved of by at least a large number of the party. They are brave men, and fight for their faith with the devotion of martyrs. Imprisonment and death are counted but as rewards. . . . Forty-seven anarchists signed a declaration of principles, which was read by one of their number at their trial at Lyons. . . . 'We wish liberty [they declared] and we believe its existence incompatible with the existence of any power whatsoever, whatever its origin and form—whether it be selected or imposed, monarchical or republican—whether inspired by divine right or by popular right, by anointment or universal suffrage. . . . The best governments are the worst. The substitution, in a word, in human relations, of free contract perpetually revisable and dissoluble, is our ideal.'" —R. T. Ely, *French and German Socialism in Modern Times*, ch. 8. —"In anarchism we have the extreme antithesis of socialism and communism. The socialist desires so to extend the sphere of the state that it shall embrace all the more important concerns of life. The communist, at least of the older school, would make the sway of authority and the routine which follows therefrom universal. The anarchist, on the other hand, would banish all forms of authority and have only a system of the most perfect liberty. The anarchist is an extreme individualist. . . . Anarchism, as a social theory, was first elaborately formulated by Proudhon. In the first part of his work, 'What is Property?' he briefly stated the doctrine and gave it the name 'anarchy,' absence of a master or sovereign. . . . About 12 years before Proudhon published his views, Josiah Warren reached similar conclusions in America." —H. L. Osgood, *Scientific Anarchism* (*Pol. Sci. Quart.*, Mar., 1889), pp. 1-2. —See, also, Nihilism, and SOCIAL MOVEMENTS.

ANCHORITES.—HERMITS.—"The fertile and peaceable lowlands of England . . . offered few spots sufficiently wild and lonely for the habitation of a hermit; those, therefore,

who wished to retire from the world into a more strict and solitary life than that which the monastery afforded were in the habit of immuring themselves, as anchorites, or in old English 'Ankers,' in little cells of stone, built usually against the wall of a church. There is nothing new under the sun; and similar anchorites might have been seen in Egypt, 500 years before the time of St. Antony, immured in cells in the temples of Isis or Serapis. It is only recently that antiquaries have discovered how common this practice was in England, and how frequently the traces of these cells are to be found about our parish churches."—C. Kingsley, *The Hermits*, p. 329.—The term anchorites is applied, generally, to all religious ascetics who lived in solitary cells.—J. Bingham, *Antiq. of the Christian Ch.*, bk. 7, ch. 1, sect. 4.—"The essential difference between an anker or anchorite and a hermit appears to have been that, whereas the former passed his whole life shut up in a cell, the latter, although leading indeed a solitary life, wandered about at liberty."—R. R. Sharpe, *Int. to "Calendar of Wills in the Court of Husting, London,"* v. 2, p. xxi.

ANCIENT REGIME.—The political and social system in France that was destroyed by the Revolution of 1789 is commonly referred to as the "ancien régime." Some writers translate this in the literal English form—"the ancient regime;" others render it more appropriately, perhaps, the "old regime." Its special application is to the state of things described under FRANCE: A. D. 1789.

ANGLES AND JUTES, The.—The mention of the Angles by Tacitus is in the following passage: "Next [to the Langobardi] come the Reudigni, the Aviones, the Anglii, the Varini, the Eudoses, the Suardones, and Nuithones, who are fenced in by rivers or forests. None of these tribes have any noteworthy feature, except their common worship of Ertha, or mother-Earth, and their belief that she interposes in human affairs, and visits the nations in her car. In an island of the ocean there is a sacred grove, and within it a consecrated chariot, covered over with a garment. Only one priest is permitted to touch it. He can perceive the presence of the goddess in this sacred recess, and walks by her side with the utmost reverence as she is drawn along by heifers. It is a season of rejoicing, and festivity reigns wherever she deigns to go and be received. They do not go to battle or wear arms; every weapon is under lock; peace and quiet are welcomed only at these times, till the goddess, weary of human intercourse, is at length restored by the same priest to her temple. Afterwards the car, the vestments, and, if you like to believe it, the divinity herself, are purified in a secret lake. Slaves perform the rite, who are instantly swallowed up by its waters. Hence arises a mysterious terror and a pious ignorance concerning the nature of that which is seen only by men doomed

to die. This branch indeed of the Suevi stretches into the remoter regions of Germany."—Tacitus, *Germany*; trans. by Church and Brodrick, ch. 40. — "In close neighbourhood with the Saxons in the middle of the fourth century were the Angli, a tribe whose origin is more uncertain and the application of whose name is still more a matter of question. If the name belongs, in the pages of the several geographers, to the same nation, it was situated in the time of Tacitus east of the Elbe; in the time of Ptolemy it was found on the middle Elbe, between the Thuringians to the south and the Varini to the north; and at a later period it was forced, perhaps by the growth of the Thuringian power, into the neck of the Cimbric peninsula. It may, however, be reasonably doubted whether this hypothesis is sound, and it is by no means clear whether, if it be so, the Angli were not connected more closely with the Thuringians than with the Saxons. To the north of the Angli, after they had reached their Schleswig home, were the Jutes, of whose early history we know nothing, except their claims to be regarded as kinsmen of the Goths and the close similarity between their descendants and the neighbour Frisians."—W. Stubbs, *Const. Hist. of Eng.*, v. 1, ch. 3. — "Important as are the Angles, it is not too much to say that they are only known through their relations to us of England, their descendants; indeed, without this paramount fact, they would be liable to be confused with the Frisians, with the Old Saxons, and with even Slavonians. This is chiefly because there is no satisfactory trace or fragment of the Angles of Germany within Germany; whilst the notices of the other writers of antiquity tell us as little as the one we find in Tacitus. And this notice is not only brief but complicated. . . . I still think that the Angli of Tacitus were—1: The Angles of England; 2: Occupants of the northern parts of Hanover; 3: At least in the time of Tacitus; 4: And that to the exclusion of any territory in Holstein, which was Frisian to the west, and Slavonic to the east. Still the question is one of great magnitude and numerous complications."—R. G. Latham, *The Germany of Tacitus; Epilogeomena*, sect. 49.

ANGLO-SAXON.—A term which may be considered as a compound of Angle and Saxon, the names of the two principal Teutonic tribes which took possession of Britain and formed the English nation by their ultimate union. As thus regarded and used to designate the race, the language and the institutions which resulted from that union, it is only objectionable, perhaps, as being superfluous, because English is the accepted name of the people of England and all pertaining to them. But the term Anglo-Saxon has also been more particularly employed to designate the Early English people and their language, before the Norman Conquest, as though they were Anglo-Saxon at that period and became English afterwards. Modern historians are protesting strongly against this use of the term. Mr. Freeman (*Norman Conquest*, v.

1, note A), says: "The name by which our forefathers really knew themselves and by which they were known to other nations was English and no other. 'Angli,' 'Engle,' 'Angel-cyn,' 'Englisc,' are the true names by which the Teutons of Britain knew themselves and their language. . . . As a chronological term, Anglo-Saxon is equally objectionable with Saxon. The 'Anglo-Saxon period,' as far as there ever was one, is going on still. I speak therefore of our forefathers, not as 'Saxons,' or even as 'Anglo-Saxons,' but as they spoke of themselves, as Englishmen—'Angli,' 'Engle,' 'Angel-cyn.'"—See, also, SAXONS, and ANGLES AND JUTES.

ANGLON, Battle of. —Fought in Armenia, A. D. 543, between the Romans and the Persians.

ANGOLA. — The name now given to the territory which the Portuguese have occupied on the western coast of South Africa since the 16th century, extending from the Congo Free State, on the north, to Damaraland, on the south, with an interior boundary that is somewhat indefinite. It is divided into four districts, Congo, Loando, Benguela, and Mossamedes.

ANJOU: Creation of the County.—Origin of the Plantagenets. — "It was the policy of this unfairly depreciated sovereign [Charles the Bald, grandson of Charlemagne, who received in the dismemberment of the Carolingian Empire the Neustrian part, out of which was developed the modern kingdom of France, and who reigned from 840 to 877], to recruit the failing ranks of the false and degenerate Frankish aristocracy, by calling up to his peerage the wise, the able, the honest and the bold of ignoble birth. . . . He sought to surround himself with new men, the men without ancestry; and the earliest historian of the House of Anjou both describes this system and affords the most splendid example of the theory adopted by the king. Pre-eminent amongst these parvenus was Torquatus or Tortulfus, an Armorican peasant, a very rustic, a backwoodsman, who lived by hunting and such like occupations, almost in solitude, cultivating his 'quillies,' his 'cueillettes,' of land, and driving his own oxen, harnessed to his plough. Torquatus entered or was invited into the service of Charles-le-Chauve, and rose high in his sovereign's confidence: a prudent, a bold, and a good man. Charles appointed him Forester of the forest called 'the Blackbird's Nest,' the 'nid du merle,' a pleasant name, not the less pleasant for its familiarity. This happened during the conflicts with the Northmen. Torquatus served Charles strenuously in the wars, and obtained great authority. Tertullus, son of Torquatus, inherited his father's energies, quick and acute, patient of fatigue, ambitious and aspiring; he became the liegeman of Charles; and his marriage with Petronilla the King's cousin, Count

Hugh the Abbot's daughter, introduced him into the very circle of the royal family. Château Landon and other benefices in the Gastinois were acquired by him, possibly as the lady's dowry. Seneschal also was Tertullus of the same ample Gastinois territory. Ingelger, son of Tertullus and Petronilla, appears as the first hereditary Count of Anjou Outre-Maine.—Marquis, Consul or Count of Anjou,—for all these titles are assigned to him. Yet the ploughman Torquatus must be reckoned as the primary Plantagenet: the rustic Torquatus founded that brilliant family."—Sir F. Palgrave, *Hist. of Normandy and England*, bk. 1, ch. 3.

A. D. 987-1129.—The greatest of the old Counts.—"Fulc Nerra, Fulc the Black [A. D. 987-1040] is the greatest of the Angevins, the first in whom we can trace that marked type of character which their house was to preserve with a fatal constancy through two hundred years. He was without natural affection. In his youth he burned a wife at the stake, and legend told how he led her to her doom decked out in his gayest attire. In his old age he waged his bitterest war against his son, and exacted from him when vanquished a humiliation which men reserved for the deadliest of their foes. 'You are conquered, you are conquered!' shouted the old man in fierce exultation, as Geoffry, bridled and saddled like a beast of burden, crawled for pardon to his father's feet. . . . But neither the wrath of Heaven nor the curses of men broke with a single mishap the fifty years of his success. At his accession Anjou was the least important of the greater provinces of France. At his death it stood, if not in extent, at least in real power, first among them all. . . . His overthrow of Brittany on the field of Conquereux was followed by the gradual absorption of Southern Touraine. . . . His great victory at Pontlevoy crushed the rival house of Blois; the seizure of Saumur completed his conquests in the South, while Northern Touraine was won bit by bit till only Tours resisted the Angevin. The treacherous seizure of its Count, Herbert Wake-dog, left Maine at his mercy ere the old man bequeathed his unfinished work to his son. As a warrior, Geoffry Martel was hardly inferior to his father. A decisive overthrow wrested Tours from the Count of Blois; a second left Poitou at his mercy; and the seizure of Le Mans brought him to the Norman border. Here . . . his advance was checked by the genius of William the Conqueror, and with his death the greatness of Anjou seemed for the time to have come to an end. Stripped of Maine by the Normans, and weakened by internal dissensions, the weak and profligate administration of Fulc Rechin left Anjou powerless against its rivals along the Seine. It woke to fresh energy with the accession of his son, Fulc of Jerusalem. . . . Fulc was the one enemy whom Henry the First really feared. It was to disarm his restless hostility that the King yielded to his son, Geoffry the Handsome, the hand of his daughter Matilda."—J. R. Green, *A Short History of the English People*, ch. 2, sect. 7.

A. D. 1206-1442.—English attempts to recover the county.—The Third and Fourth Houses of Anjou.—Creation of the Dukedom.—King John, of England, did not voluntarily submit to the sentence of the peers of France which pronounced his forfeiture of the fiefs of Anjou and Maine, "since he invaded and had possession of Angers again in 1206, when, Gothic-like, he demolished its ancient walls. He lost it in the following year, and . . . made no further attempt upon it until 1213. In that year, having collected a powerful army, he landed at Rochelle, and actually occupied Angers, without striking a blow. But . . . the year 1214 beheld him once more in retreat from Anjou, never to reappear there, since he died on the 19th of October, 1216. In the person of King John ended what is called the 'Second House of Anjou.' In 1204, after the confiscations of John's French possessions, Philip Augustus established hereditary seneschals in that part of France, the first of whom was the tutor of the unfortunate Young Arthur [of Brittany], named William des Roches, who was in fact Count in all except the name, over Anjou, Maine, and Touraine, owing allegiance only to the crown of France. The Seneschal, William des Roches, died in 1222. His son-in-law, Amaury de Craon, succeeded him," but was soon afterwards taken prisoner during a war in Brittany and incarcerated. Henry III. of England still claimed the title of Count of Anjou, and in 1230 he "disembarked a considerable army at St. Malo, in the view of reconquering Anjou, and the other forfeited possessions of his crown. Louis IX., then only fifteen years old . . . advanced to the attack of the allies; but in the following year a peace was concluded, the province of Guienne having been ceded to the English crown. In 1241, Louis gave the counties of Poitou and Auvergne to his brother Alphonso; and, in the year 1246, he invested his brother Charles, Count of Provence, with the counties of Anjou and Maine, thereby annulling the rank and title of Seneschal, and instituting the Third House of Anjou. Charles I., the founder of the proud fortunes of this Third House, was ambitious in character, and events long favoured his ambition. Count of Provence, through the inheritance of his consort, had not long been invested with Anjou and Maine, ere he was invited to the conquest of Sicily [see ITALY (SOUTHERN): A. D. 1250-1268]." The Third House of Anjou ended in the person of John, who became King of France in 1350. In 1356 he invested his son Louis with Anjou and Maine, and in 1360 the latter was created the first Duke of Anjou. The Fourth House of Anjou, which began with this first Duke, came to an end two generations later with René, or Regnier,—the "good King René" of history and story, whose kingdom was for the most part a name, and who is best known to English readers, perhaps, as the father of Margaret of Anjou, the stout-hearted queen of Henry VI. On the death of his father, Louis, the second duke, René became by his father's will Count of Guise, his elder brother, Louis, inheriting the dukedom. In 1434 the brother died without issue and René succeeded him in Anjou, Maine and Provence. He had already become Duke of Bar, as the adopted heir of his great-uncle, the cardinal-

duke, and Duke of Lorraine (1430), by designation of the late Duke, whose daughter he had married. In 1435 he received from Queen Joanna of Naples the doubtful legacy of that distracted kingdom, which she had previously bequeathed first, to Alphonso of Aragon, and afterwards—revoking that testament—to René's brother, Louis of Anjou. King René enjoyed the title during his life-time, and the actual kingdom for a brief period; but in 1442 he was expelled from Naples by his competitor Alphonso (see ITALY: A. D. 1412-1447).—M. A. Hookham, *Life and Times of Margaret of Anjou*, introd. and ch. 1-2.

ANNATES, OR FIRST-FRUIT.—"A practice had existed for some hundreds of years, in all the churches of Europe, that bishops and archbishops, on presentation to their sees, should transmit to the pope, on receiving their bulls of investment, one year's income from their new preferments. It was called the payment of Annates, or first-fruits, and had originated in the time of the crusades, as a means of providing a fund for the holy wars. Once established it had settled into custom, and was one of the chief resources of the papal revenue."—J. A. Froude, *History of England*, ch. 4.—"The claim [by the pope] to the first-fruits of bishoprics and other promotions was apparently first made in England by Alexander IV. in 1256, for five years; it was renewed by Clement V. in 1306, to last for two years; and it was in a measure successful. By John XXII. it was claimed throughout Christendom for three years, and met with universal resistance. . . . Stoutly contested as it was in the Council of Constance, and frequently made the subject of debate in parliament and council the demand must have been regularly complied

with."—W. Stubbs, *Const. Hist. of Eng.*, ch. 19, sect. 718.—See, also, QUEEN ANNE'S BOUNTY.

ANTILLES.—ANTILIA.—"Familiar as is the name of the Antilles, few are aware of the antiquity of the word; while its precise significance sets etymology at defiance. Common consent identified the Antilia of legend with the Isle of the Seven Cities. In the year 734, says the story, the Arabs having conquered most of the Spanish peninsula, a number of Christian emigrants, under the direction of seven holy bishops, among them the archbishop of Oporto, sailed westward with all that they had, and reached an island where they founded seven towns. Arab geographers speak of an Atlantic island called in Arabic El-tennyin, or Al-tin (Isle of Serpents), a name which may possibly have become by corruption Antilia. . . . The seven bishops were believed in the 16th century to be still represented by their successors, and to preside over a numerous and wealthy people. Most

geographers of the 15th century believed in the existence of Antilia. It was represented as lying west of the Azores. . . . As soon as it became known in Europe that Columbus had discovered a large island, Española was at once identified with Antilia, . . . and the name . . . has ever since been applied generally to the West Indian islands."—E. J. Payne, *Hist. of the New World called America*, v. 1, p. 98.—See, also, WEST INDIES.

A. D. 969.—Recapture by the Byzantines.—After having remained 328 years in the possession of the Saracens, Antioch was retaken in the winter of A. D. 969 by the Byzantine Emperor, Nicephorus Phokas, and became again a Christian city. Three years later the Moslems made a great effort to recover the city, but were defeated. The Byzantine arms were at this time highly successful in the never ending Saracen war, and John Zimiskes, successor of Nicephorus Phokas, marched triumphantly to the Tigris and threatened even Bagdad. But most of the conquests thus made in Syria and Mesopotamia were not lasting.—G. Finlay, *Hist. of the Byzantine Empire*, A. D. 716-1007, bk. 2, ch. 2.—See BYZANTINE EMPIRE: A. D. 963-1025.

A. D. 1268.—Extinction of the Latin Principality.—Total destruction of the city.—Antioch fell, before the arms of Bibars, the Sultan of Egypt and Syria, and the Latin principality was bloodily extinguished, in 1268. "The first seat of the Christian name was dispeopled by the slaughter of seventeen, and the captivity of one hundred, thousand of her inhabitants." This fate befell Antioch only twenty-three years before the last vestige of the conquests of the crusaders was obliterated at Acre.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 59.—"The sultan halted for several weeks in the plain, and permitted his soldiers to hold a large market, or fair, for the sale of their booty. This market was attended by Jews and pedlars from all parts of the East. . . . 'It was,' says the Cadi Mohieddin, 'a fearful and heart-rending sight. Even the hard stones were softened with grief.' He tells us that the captives were so numerous that a fine hearty boy might be purchased for twelve pieces of silver, and a little girl for five. When the work of pillage had been completed, when all the ornaments and decorations had been carried away from the churches, and the lead torn from the roofs, Antioch was fired in different places, amid the loud thrilling shouts of 'Allah Acbar,' 'God is Victorious.' The great churches of St. Paul and St. Peter burnt with terrific fury for many days."—C. G. Addison, *The Knights Templars*, ch. 6.

ANTIUM.—"Antium, once a flourishing city of the Volsci, and afterwards of the Romans, their conquerors, is at present reduced to a small number of inhabitants. Originally it was without a port; the harbour of the Antiates having been the neighbouring indentation in the coast of Ceno, now Nettuno, distant more than a mile to the eastward. . . . The piracies of the ancient Antiates all proceeded from Ceno, or Cerio, where they had 22 long ships. These Numicius took; . . . some were taken to Rome and their rostra suspended in triumph in the Forum. . . . It [Antium] was reckoned 260 stadia, or about 32 miles, from Ostia."—Sir W. Gell, *Topog. of Rome*, v. 1.

ANTRUSTIONES.—In the Salic law, of the Franks, there is no trace of any recognized order of nobility. "We meet, however, with

several titles denoting temporary rank, derived from offices political and judicial, or from a position about the person of the king. Among these the Antrustiones, who were in constant attendance upon the king, played a conspicuous part. . . . Antrustiones and Convivæ Regis [Romans who held the same position] are the predecessors of the Vassi Dominici of later times, and like these were bound to the king by an especial oath of personal and perpetual service. They formed part, as it were, of the king's family, and were expected to reside in the palace, where they superintended the various departments of the royal household."—W. C. Perry, *The Franks*, ch. 10.

ANTWERP: The name of the City.—Its commercial greatness in the 16th century.—"The city was so ancient that its genealogists, with ridiculous gravity, ascended to a period two centuries before the Trojan war, and discovered a giant, rejoicing in the classic name of Antigonus, established on the Scheld. This patriarch exacted one half the merchandise of all navigators who passed his castle, and was accustomed to amputate and cast into the river the right hands of those who infringed this simple tariff. Thus 'Hand-werpen,' hand-throwing, became Antwerp, and hence, two hands, in the escutcheon of the city, were ever held up in heraldic attestation of the truth. The giant was, in his turn, thrown into the Scheld by a hero, named Brabo, from whose exploits Brabant derived its name. . . . But for these antiquarian researches, a simpler derivation of the name would seem 'an t' werf,' 'on the wharf.' It had now [in the first half of the 16th century] become the principal entrepôt and exchange of Europe . . . the commercial capital of the world. . . . Venice, Nuremberg, Augsburg, Bruges, were sinking, but Antwerp, with its deep and convenient river, stretched its arm to the ocean and caught the golden prize, as it fell from its sister cities' grasp. . . . No city, except Paris, surpassed it in population, none approached it in commercial splendor."—J. L. Motley, *The Rise of the Dutch Republic*, *Hist. Introd.*, sect. 13.

APAMEA.—Apamea, a city founded by Seleucus Nicator on the Euphrates, the site of which is occupied by the modern town of Bir, had become, in Strabo's time (near the beginning of the Christian Era) one of the principal centers of Asiatic trade, second only to Ephesus. Thapsacus, the former customary crossing-place of the Euphrates, had ceased to be so, and the passage was made at Apamea. A place on the opposite bank of the river was called Zeugma, or "the bridge." Bir "is still the usual place at which travellers proceeding from Antioch or Aleppo towards Bagdad cross the Euphrates."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 22, sect. 1 (v. 2, pp. 298 and 317).

APANAGE. See APPANAGE.

APATURIA, The.—An annual family festival of the Athenians, celebrated for three days in the early part of the month of October (Pyaneption). "This was the characteristic festival of the Ionic race; handed down from a period anterior to the constitution of Kleisthenes, and to the ten new tribes each containing so many demes, and bringing together the citizens in their primitive unions of family, gens, phratry, etc., the aggregate of which had originally constituted the four Ionic tribes, now superannuated. At the Apaturia, the family ceremonies were gone through; marriages were enrolled, acts of adoption were promulgated and certified, the names of youthful citizens first entered on the gentile and phratric roll; sacrifices were jointly celebrated by these family assemblages to Zeus Phratrius, Athênê, and other deities, accompanied with much festivity and enjoyment."—G. Grote, *Hist. of Greece*, pt. 2, ch. 64 (v. 7).

APODECTÆ, The.—"When Aristotle speaks of the officers of government to whom the public revenues were delivered, who kept them and distributed them to the several administrative departments, these are called, he adds, apodectæ and treasurers. In Athens the apodectæ were ten in number, in accordance with the number of the tribes. They were appointed by lot. . . . They had in their possession the lists of the debtors of the state, received the money which was paid in, registered an account of it and noted the amount in arrear, and in the council house in the presence of the council, erased the names of the debtors who had paid the demands against them from the list, and deposited this again in the archives. Finally, they, together with the council, apportioned the sums received."—A. Boeckh, *Public Economy of Athens* (tr. by Lamb), bk. 2, ch. 4.

APPANAGE.—"The term appanage denotes the provision made for the younger children of a king of France. This always consisted of lands and feudal superiorities held of the crown by the tenure of peerage. It is evident that this usage, as it produced a new class of powerful feudataries, was hostile to the interests and policy of the sovereign, and retarded the subjugation of the ancient aristocracy. But an usage coeval with the monarchy was not to be abrogated, and the scarcity of money rendered it impossible to provide for the younger branches of the royal family by any other means. It was restrained however as far as circumstances would permit."—H. Hallam, *The Middle Ages*, ch. 1, pt. 2.—"From the words 'ad' and 'panis,' meaning that it was to provide bread for the person who held it. A portion of appanage was now given to each of the king's younger sons, which descended to his direct heirs, but in default of them reverted to the crown."—T. Wright, *Hist. of France*, v. 1, p. 308, note.

APPIAN WAY, The.—Appius Claudius, called the Blind, who was censor at Rome from 312 to 308 B. C. [see ROME: B. C. 312], constructed during that time "the Appian road, the queen of roads, because the Latin road, passing by Tusculum, and through the country of the Hernicans, was so much endangered, and had not yet been quite recovered by the Romans: the Appian road, passing by Terracina, Fundi and Mola, to Capua, was intended to be a shorter and safer one. . . . The Appian road, even if Appius did carry it as far as Capua, was not executed by him with that splendour for which we still admire it in those parts which have not been destroyed intentionally: the closely joined polygons of basalt, which thousands of years have not been able to displace, are of a somewhat later origin. Appius commenced the road because there was actual need for it; in the year A. U. 457 [B. C. 297] peperino, and some years later basalt (silex) was first used for paving roads, and, at the beginning, only on the small distance from the Porta Capena to the temple of Mars, as we are distinctly told by Livy. Roads constructed according to artistic principles had previously existed."—B. G. Niebuhr, *Lects. on the Hist. of Rome*, lect. 45.

AQUILEIA.—Aquileia, at the time of the destruction of that city by the Huns, A. D. 452, was, "both as a fortress and a commercial emporium, second to none in Northern Italy. It was situated at the northernmost point of the gulf of Hadria, about twenty miles northwest of Trieste, and the place where it once stood is now in the Austrian dominions, just over the border which separates them from the kingdom of Italy. In the year 181 B. C. a Roman colony had been sent to this far corner of Italy to serve as an outpost against some intrusive tribes, called by the vague name of Gauls. . . . Possessing a good harbour, with which it was connected by a navigable river, Aquileia gradually became the chief entrepôt for the commerce between Italy and what are now the Illyrian provinces of Austria."—T. Hodgkin, *Italy and Her Invaders*, bk. 2, ch. 4.

AQUITAINE: The ancient tribes.—The Roman conquest of Aquitania was achieved, B. C. 56, by one of Caesar's lieutenants, the Younger Crassus, who first brought the people called the Sotiates to submission and then defeated their combined neighbors in a murderous battle, where three-fourths of them are said to have been slain. The tribes which then submitted "were the Tarbelli, Biggeriones, Preciani, Vocates, Tarusates, Elusates, Garites, Ausci, Garumni, Sibuzates and Cocosates. The Tarbelli were in the lower basin of the Adour. Their chief place was on the site of the hot springs of Dax. The Biggeriones appear in the name Bigorre. The chief place of the Elusates was Elusa, Eause; and the town of Auch on the river Gers preserves the name of the Ausci. The names Garites, if the name is genuine, and Garumni contain the same element, Gar, as the river Garumna [Garonne] and the Gers. It is stated by Walckenaer that the inhabitants of the southern part of Les Landes are still called Cousiots. Cocossa, Causseque, is twenty-four miles from Dax on the road from Dax to Bordeaux."—G. Long, *Decline of the Roman Republic*, v. 4, ch. 6.—"Before the arrival of the brachycephalic Ligurian race, the Iberians ranged over the greater part of France. . . . If, as seems probable, we may identify them with the Aquitani, one of the three races which occupied Gaul in the time of Cæsar, they must have retreated to the neighbourhood of the Pyrenees before the beginning of the historic period."—I. Taylor, *Origin of the Aryans*, ch. 2, sect. 5.

A. D. 681-768.—The independent Dukes and their subjugation.—"The old Roman

Aquitaine, in the first division of the spoils of the Empire, had fallen to the Visigoths, who conquered it without much trouble. In the struggle between them and the Merovingians, it of course passed to the victorious party. But the quarrels, so fiercely contested between the different members of the Frank monarchy, prevented them from retaining a distant possession within their grasp; and at this period [681-718, when the Mayors of the Palace, Pepin and Carl, were gathering the reins of government over the three kingdoms—Austrasia, Neustria and Burgundy—into their hands], Eudo, the duke of Aquitaine, was really an independent prince. The population had never lost its Roman character; it was, in fact, by far the most Romanized in the whole of Gaul. But it had also received a new element in the Vascones or Gascons [see BASQUES], a tribe of Pyrenean mountaineers, who descending from their mountains, advanced towards the north until their progress was checked by the broad waters of the Garonne. At this time, however, they obeyed Eudo. "This duke of Aquitaine, Eudo, allied himself with the Neustrians against the ambitious Austrasian Mayor, Carl Martel, and shared with them the crushing defeat at Soissons, A. D. 718, which established the Hammerer's power. Eudo acknowledged allegiance and was allowed to retain his dukedom. But, half-a-century afterwards, Carl's son, Pepin, who had pushed the 'fainéant' Merovingians from the Frank throne and seated himself upon it, fought a nine years' war with the then duke of Aquitaine, to establish his sovereignty. "The war, which lasted nine years [760-768], was signalized by frightful ravages and destruction of life upon both sides, until, at last, the Franks became masters of Berri, Auvergne, and the Limousin, with their principal cities. The able and gallant Guaifer [or Waifer] was assassinated by his own subjects, and Pepin had the satisfaction of finally uniting the grand-duchy of Aquitaine to the monarchy of the Franks."—J. G. Sheppard, *Fall of Rome*, lect. 8.

A. D. 781.—Erected into a separate kingdom by Charlemagne.—In the year 781 Charlemagne erected Italy and Aquitaine into separate kingdoms, placing his two infant sons, Pepin and Ludwig or Louis on their respective thrones. "The kingdom of Aquitaine embraced Vasconia [Gascony], Septimania, Aquitaine proper (that is, the country between the Garonne and the Loire) and the county, subsequently the duchy, of Toulouse. Nominally a kingdom, Aquitaine was in reality a province, entirely dependent on the central or personal government of Charles. . . . The nominal designations of king and kingdom might gratify the feelings of the Aquitanians, but it was a scheme contrived for holding them in a state of absolute dependence and subordination."—J. I. Mombert, *Hist. of Charles the Great*, bk. 2, ch. 11.

A. D. 843.—In the division of Charlemagne's Empire. See FRANCE: A. D. 843.

A. D. 884-1151.—The end of the nominal kingdom.—The disputed Ducal Title.—"Carloman [who died 884], son of Louis the Stam-

merer, was the last of the Carolingians who bore the title of king of Aquitaine. This vast state ceased from this time to constitute a kingdom. It had for a lengthened period been divided between powerful families, the most illustrious of which are those of the Counts of Toulouse, founded in the ninth century by Fredelon, the Counts of Poitiers, the Counts of Auvergne, the Marquises of Septimania or Gothia, and the Dukes of Gascony. King Eudes had given William the Pius, Count of Auvergne, the investiture of the duchy of Aquitaine. On the extinction of that family in 928, the Counts of Toulouse and those of Poitou disputed the prerogatives and their quarrel stained the south with blood for a long time. At length the Counts of Poitou acquired the title of Dukes of Aquitaine or Guyenne [or Guienne,—supposed to be a corruption of the name of Aquitaine, which came into use during the Middle Ages], which remained in their house up to the marriage of Eleanor of Aquitaine with Henry Plantagenet I. [Henry II.], King of England (1151)."—E. De Bonnechose, *Hist. of France*, bk. 2, ch. 3, foot-note.—"The duchy Aquitaine, or Guyenne, as held by Eleanor's predecessors, consisted, roughly speaking, of the territory between the Loire and the Garonne. More exactly, it was bounded on the north by Anjou and Touraine, on the east by Berry and Auvergne, on the south-east by the Quercy or County of Cahors, and on the south-west by Gascony, which had been united with it for the last hundred years. The old Karolingian kingdom of Aquitania had been of far greater extent; it had, in fact, included the whole country between the Loire, the Pyrenees, the Rhone and the ocean. Over all this vast territory the Counts of Poitou asserted a theoretical claim of overlordship by virtue of their ducal title; they had, however, a formidable rival in the house of the Counts of Toulouse."—K. Norgate, *England under the Angevin Kings*, v. 1, ch. 10.—See, also, TOULOUSE: 10TH AND 11TH CENTURIES.

A. D. 1137-1152.—Transferred by marriage from the crown of France to the crown of England.—In 1137, "the last of the old line of the dukes of Aquitaine—William IX., son of the gay crusader and troubadour whom the Red King had hoped to succeed—died on a pilgrimage at Compostella. His only son was already dead, and before setting out for his pilgrimage he did what a greater personage had done ten years before: with the consent of his barons, he left the whole of his dominions to his daughter. Moreover, he bequeathed the girl herself as wife to the young king Louis [VII.] of France. This marriage more than doubled the strength of the French crown. It gave to Louis absolute possession of all western Aquitaine, or Guyenne as it was now beginning to be called; that is the counties of Poitou and Gascony, with the immediate overlordship of the whole district lying between the Loire and the Pyrenees, the Rhone and the ocean:—a territory five or six times as large as his own royal domain and over which his predecessors had never been able to assert more than the merest shadow of a nominal superiority." In 1152 Louis obtained a divorce from Eleanor, surrendering all the great territory which she had added to his dominions, rather than maintain an unhappy union. The same year the gay duchess was wedded to Henry Plantagenet, then Duke of Normandy, afterwards

Henry II. King of England. By this marriage Aquitaine became joined to the crown of England and remained so for three hundred years.—K. Norgate, *England under the Angevin Kings*, v. 1, ch. 8.

12th Century.—The state of the southern parts. See PROVENÇE: A. D. 1179-1207.

A. D. 1360-1453.—Full sovereignty possessed by the English Kings.—The final conquest and union with France.—“By the Peace of Bretigny [see FRANCE: A. D. 1337-1360] Edward III. resigned his claims on the crown of France; but he was recognized in return as independent Prince of Aquitaine, without any homage or superiority being reserved to the French monarch. When Aquitaine therefore was conquered by France, partly in the 14th, fully in the 15th century [see FRANCE: A. D. 1431-1453], it was not the ‘reunion’ of a forfeited fief, but the absorption of a distinct and sovereign state. The feelings of Aquitaine itself seem to have been divided. The nobles to a great extent, though far from universally, preferred the French connexion. It better fell in with their notions of chivalry, feudal dependency, and the like; the privileges too which French law conferred on noble birth would make their real interests lie that way. But the great cities and, we have reason to believe, the mass of the people, also, clung faithfully to their ancient Dukes; and they had good reason to do so. The English Kings, both by habit and by interest, naturally protected the municipal liberties of Bourdeaux and Bayonne, and exposed no part of their subjects to the horrors of French taxation and general oppression.”—E. A. Freeman, *The Franks and the Gauls* (Historical Essays, 1st Series, No. 7).

AQUITANI, The. See IBERIANS, THE WESTERN.

ARABIA.—ARABS: The Name.—“There can be no doubt that the name of the Arabs was . . . given from their living at the westernmost part of Asia; and their own word ‘Gharb,’ the ‘West,’ is another form of the original Semitic name Arab.”—G. Rawlinson, *Notes to Herodotus*, v. 2, p. 71.

The ancient succession and fusion of Races.—“The population of Arabia, after long centuries, more especially after the propagation and triumph of Islamism, became uniform throughout the peninsula. . . . But it was not always thus. It was very slowly and gradually that the inhabitants of the various parts of Arabia were fused into one race. . . . Several distinct races successively immigrated into the peninsula and remained separate for many ages. Their distinctive characteristics, their manners and their civilisation prove that these nations were not all of one blood. Up to the time of Mahomet, several different languages were spoken in Arabia, and it was the introduction of Islamism alone that gave predominance to that one amongst them now called Arabic. The few Arabian historians deserving of the name, who have used any discernment in collecting the traditions of their country, Ibn Khaldoun, for example, distinguish three successive populations in the peninsula. They divide these primitive, secondary, and tertiary Arabs into three divisions, called Ariba, Motareba, and Mostareba. . . . The Ariba were the first and most ancient inhabitants of Arabia. They consisted prin-

cipally of two great nations, the Adites, sprung from Ham, and the Amalika of the race of Aram, descendants of Shem, mixed with nations of secondary importance, the Thamudites of the race of Ham, and the people of the Tasm, and Jadis, of the family of Aram. The Motareba were tribes sprung from Joktan, son of Eber, always in Arabian tradition called Kahtan. The Mostareba of more modern origin were Ismaelitic tribes. . . . The Cushites, the first inhabitants of Arabia, are known in the national traditions by the name of Adites, from their progenitor, who is called Ad, the grandson of Ham. All the accounts given of them by Arab historians are but fanciful legends. . . . In the midst of all the fabulous traits with which these legends abound, we may perceive the remembrance of a powerful empire founded by the Cushites in very early ages, apparently including the whole of Arabia Felix, and not only Yemen proper. We also find traces of a wealthy nation, constructors of great buildings, with an advanced civilisation analogous to that of Chaldæa, professing a religion similar to the Babylonian; a nation, in short, with whom material progress was allied to great moral depravity and obscene rites. . . . It was about eighteen centuries before our era that the Joktanites entered Southern Arabia. . . . According to all appearances, the invasion, like all events of a similar nature, was accomplished only by force. . . . After this invasion, the Cushite element of the population, being still the most numerous, and possessing great superiority in knowledge and civilisation over the Joktanites, who were still almost in the nomadic state, soon recovered the moral and material supremacy, and political dominion. A new empire was formed in which the power still belonged to the Sabæans of the race of Cush. . . . Little by little the new nation of Ad was formed. The centre of its power was the country of Sheba proper, where, according to the tenth chapter of Genesis, there was no primitive Joktanite tribe, although in all the neighbouring provinces they were already settled. . . . It was during the first centuries of the second Adite empire that Yemen was temporarily subjected by the Egyptians, who called it the land of Pun. . . . Conquered during the minority of Thothmes III., and the regency of the Princess Hatasu, Yemen appears to have been lost by the Egyptians in the troublous times at the close of the eighteenth dynasty. Ramses II. recovered it almost immediately after he ascended the throne, and it was not till the time of the effeminate kings of the twentieth dynasty, that this splendid ornament of Egyptian power was finally lost. . . . The conquest of the land of Pun under Hatasu is related in the elegant bas-reliefs of the temple of Deir-el-Bahari, at Thebes, published by M. Duemichen. . . . The bas-reliefs of the temple of Deir-el-Bahari afford undoubted proofs of the existence of commerce between India and Yemen at the time of the Egyptian expedition under Hatasu. It was this commerce, much more than the fertility of its own soil and its natural productions, that made Southern Arabia one of the richest countries in the world. . . . For a long time it was carried on by land only, by means of caravans crossing Arabia; for the navigation of the Red Sea, much more difficult and dangerous than that of the Indian Ocean, was not attempted till some centuries later. . . .

The caravans of myrrh, incense, and balm crossing Arabia towards the land of Canaan are mentioned in the Bible, in the history of Joseph, which belongs to a period very near to the first establishment of the Canaanites in Syria. As soon as commercial towns arose in Phœnicia, we find, as the prophet Ezekiel said, 'The merchants of Sheba and Raamah, they were thy merchants: they occupied in thy fairs with chief of all spices, and with all precious stones and gold.' . . . A great number of Phœnician merchants, attracted by this trade, established themselves in Yemen, Hadramaut, Oman, and Bahrein. Phœnician factories were also established at several places on the Persian Gulf, amongst others in the islands of Tylos and Arvad, formerly occupied by their ancestors. . . . This commerce, extremely flourishing during the nineteenth dynasty, seems, together with the Egyptian dominion in Yemen, to have ceased under the feeble and inactive successors of Ramses III. . . . Nearly two centuries passed away, when Hiram and Solomon despatched vessels down the Red Sea. . . . The vessels of the two monarchs were not content with doing merely what had once before been done under the Egyptians of the nineteenth dynasty, namely, fetching from the ports of Yemen the merchandise collected there from India. They were much bolder, and their enterprise was rewarded with success. Profiting by the regularity of the monsoons, they fetched the products of India at first hand, from the very place of their shipment in the ports of the land of Ophir, or Abhira. These distant voyages were repeated with success as long as Solomon reigned. The vessels going to Ophir necessarily touched at the ports of Yemen to take in provisions and await favourable winds. Thus the renown of the two allied kings, particularly of the power of Solomon, was spread in the land of the Adites. This was the cause of the journey made by the queen of Sheba to Jerusalem to see Solomon. . . . The sea voyages to Ophir, and even to Yemen, ceased at the death of Solomon. The separation of the ten tribes, and the revolutions that simultaneously took place at Tyre, rendered any such expeditions impracticable. . . . The empire of the second Adites lasted ten centuries, during which the Joktanite tribes, multiplying in each generation, lived amongst the Cushite Sabæans. . . . The assimilation of the Joktanites to the Cushites was so complete that the revolution which gave political supremacy to the descendants of Joktan over those of Cush produced no sensible change in the civilisation of Yemen. But although using the same language, the two elements of the population of Southern Arabia were still quite distinct from each other, and antagonistic in their interests. . . . Both were called Sabæans, but the Bible always carefully distinguishes them by a different orthography. . . . The majority of the Sabæan Cushites, however, especially the superior castes, refused to submit to the Joktanite yoke. A separation, therefore, took place, giving rise to the Arab proverb, 'divided as the Sabæans,' and the mass of the Adites emigrated to another country. According to M. Caussin de Perceval, the passage of the Sabæans into Abyssinia is to be attributed to the consequences of the revolution that established Joktanite supremacy in Yemen. . . . The date of the passage of the

Sabæans from Arabia into Abyssinia is much more difficult to prove than the fact of their having done so. . . . Yarub, the conqueror of the Adites, and founder of the new monarchy of Joktanite Arabs, was succeeded on the throne by his son, Yashdjob, a weak and feeble prince, of whom nothing is recorded, but that he allowed the chiefs of the various provinces of his states to make themselves independent. Abd Shems, surnamed Sheba, son of Yashdjob, recovered the power his predecessors had lost. . . . Abd Shems had several children, the most celebrated being Himyer and Kahlan, who left a numerous posterity. From these two personages were descended the greater part of the Yemenite tribes, who still existed at the time of the rise of Islamism. The Himyarites seem to have settled in the towns, whilst the Kahlanites inhabited the country and the deserts of Yemen. . . . This is the substance of all the information given by the Arab historians."—F. Lenormant and E. Chevalier, *Manual of Ancient Hist. of the East*, bk. 7, ch. 1-2 (v. 2).

Sabæans, The.—"For some time past it has been known that the Himyaritic inscriptions fall into two groups, distinguished from one another by phonological and grammatical differences. One of the dialects is philologically older than the other, containing fuller and more primitive grammatical forms. The inscriptions in this dialect belong to a kingdom the capital of which was at Ma'in, and which represents the country of the Minæans of the ancients. The inscriptions in the other dialect were engraved by the princes and people of Sabā, the Sheba of the Old Testament, the Sabæans of classical geography. The Sabæan kingdom lasted to the time of Mohammed, when it was destroyed by the advancing forces of Islam. Its rulers for several generations had been converts to Judaism, and had been engaged in almost constant warfare with the Ethiopic kingdom of Axum, which was backed by the influence and subsidies of Rome and Byzantium. Dr. Glaser seeks to show that the founders of this Ethiopic kingdom were the Habāsa, or Abyssinians, who migrated from Himyar to Africa in the second or first century B. C.; when we first hear of them in the inscriptions they are still the inhabitants of Northern Yemen and Mahrah. More than once the Axumites made themselves masters of Southern Arabia. About A. D. 300, they occupied its ports and islands, and from 350 to 378 even the Sabæan kingdom was tributary to them. Their last successes were gained in 525, when, with Byzantine help, they conquered the whole of Yemen. But the Sabæan kingdom, in spite of its temporary subjection to Ethiopia, had long been a formidable State. Jewish colonies settled in it, and one of its princes became a convert to the Jewish faith. His successors gradually extended their dominion as far as Ormuz, and after the successful revolt from Axum in 378, brought not only the whole of the southern coast under their sway, but the western coast as well, as far north as Mekka. Jewish influence made itself felt in the future birthplace of Mohammed, and thus introduced those ideas and beliefs which subsequently had so profound an effect upon the birth of Islam. The Byzantines and Axumites endeavoured to counteract the influence of Judaism by means of Christian colonies and proselytism. The result was a conflict between Sabā and its

assailants, which took the form of a conflict between the members of the two religions. A violent persecution was directed against the Christians of Yemen, avenged by the Ethiopian conquest of the country and the removal of its capital to San'a. The intervention of Persia in the struggle was soon followed by the appearance of Mohammedanism upon the scene, and Jew, Christian, and Parsi were alike overwhelmed by the flowing tide of the new creed. The epigraphic evidence makes it clear that the origin of the kingdom of Sabâ went back to a distant date. Dr. Glaser traces its history from the time when its princes were still but Makârib, or 'Priests,' like Jethro, the Priest of Midian, through the ages when they were 'kings of Sabâ,' and later still 'kings of Sabâ and Raidân,' to the days when they claimed imperial supremacy over all the principalities of Southern Arabia. It was in this later period that they dated their inscriptions by an era, which, as Halévy first discovered, corresponds to 115 B. C. One of the kings of Sabâ is mentioned in an inscription of the Assyrian king Sargon (B. C. 715), and Dr. Glaser believes that he has found his name in a 'Himyaritic' text. When the last priest, Samah'ali Darrāh, became king of Sabâ, we do not yet know, but the age must be sufficiently remote, if the kingdom of Sabâ already existed when the Queen of Sheba came from Ophir to visit Solomon. The visit need no longer cause astonishment, notwithstanding the long journey by land which lay between Palestine and the south of Arabia. . . . As we have seen, the inscriptions of Ma'in set before us a dialect of more primitive character than that of Sabâ. Hitherto it had been supposed, however, that the two dialects were spoken contemporaneously, and that the Minæan and Sabæan kingdoms existed side by side. But geography offered difficulties in the way of such a belief, since the seats of Minæan power were embedded in the midst of the Sabæan kingdom, much as the fragments of Cromarty are embedded in the midst of other counties. Dr. Glaser has now made it clear that the old supposition was incorrect, and that the Minæan kingdom preceded the rise of Sabâ. We can now understand why it is that neither in the Old Testament nor in the Assyrian inscriptions do we hear of any princes of Ma'in, and that though the classical writers are acquainted with the Minæan people they know nothing of a Minæan kingdom. The Minæan kingdom, in fact, with its culture and monuments, the relics of which still survive, must have flourished in the grey dawn of history, at an epoch at which, as we have hitherto imagined, Arabia was the home only of nomad barbarism. And yet in this remote age alphabetic writing was already known and practised, the alphabet being a modification of the Phœnician written vertically and not horizontally. To what an early date are we referred for the origin of the Phœnician alphabet itself! The Minæan Kingdom must have had a long existence. The names of thirty-three of its kings are already known to us. . . . A power which reached to the borders of Palestine must necessarily have come into contact with the great monarchies of the ancient world. The army of Ælius Gallus was doubtless not the first which had sought to gain possession of the cities and spice-gardens of the south. One such invasion is alluded to in an inscription which was copied by

M. Halévy. . . . But the epigraphy of ancient Arabia is still in its infancy. The inscriptions already known to us represent but a small proportion of those that are yet to be discovered. . . . The dark past of the Arabian peninsula has been suddenly lighted up, and we find that long before the days of Mohammed it was a land of culture and literature, a seat of powerful kingdoms and wealthy commerce, which cannot fail to have exercised an influence upon the general history of the world."—A. H. Sayce, *Ancient Arabia* (*Contemp. Rev.*, Dec., 1889).

ARCADIA.—The central district of Peloponnesus, the great southern peninsula of Greece—a district surrounded by a singular mountain circle. "From the circle of mountains which has been pointed out, all the rivers of any note take their rise, and from it all the mountainous ranges diverge, which form the many headlands and points of Peloponnesus. The interior part of the country, however, has only one opening towards the western sea, through which all its waters flow united in the Alpheus. The peculiar character of this inland tract is also increased by the circumstance of its being intersected by some lower secondary chains of hills, which compel the waters of the valleys nearest to the great chains either to form lakes, or to seek a vent by subterranean passages. Hence it is that in the mountainous district in the northeast of Peloponnesus many streams disappear and again emerge from the earth. This region is Arcadia; a country consisting of ridges of hills and elevated plains, and of deep and narrow valleys, with streams flowing through channels formed by precipitous rocks; a country so manifestly separated by nature from the rest of Peloponnesus that, although not politically united, it was always considered in the light of a single community. Its climate was extremely cold; the atmosphere dense, particularly in the mountains to the north; the effect which this had on the character and dispositions of the inhabitants has been described in a masterly manner by Polybius, himself a native of Arcadia."—C. O. Müller, *Hist. and Antiq. of the Doric Race*, bk. 1, ch. 4.—"The later Roman poets were wont to speak of Arcadia as a smiling land, where grassy vales, watered by gentle and pellucid streams, were inhabited by a race of primitive and picturesque shepherds and shepherdesses, who divided their time between tending their flocks and making love to one another in the most tender and romantic fashion. This idyllic conception of the country and the people is not to be traced in the old Hellenic poets, who were better acquainted with the actual facts of the case. The Arcadians were sufficiently primitive, but there was very

little that was graceful or picturesque about their land or their lives."—C. H. Hanson, *The Land of Greece*, pp. 381-382.

AREOPAGUS, The.—"Whoever [in ancient Athens] was suspected of having blood upon his hands had to abstain from approaching the common altars of the land. Accordingly, for the purpose of judgments concerning the guilt of blood, choice had been made of the barren, rocky height which lies opposite the ascent to the citadel. It was dedicated to Ares, who was said to have been the first who was ever judged here for the guilt of blood; and to the Erinyes, the dark powers of the guilt-stained conscience. Here, instead of a single judge, a

college of twelve men of proved integrity conducted the trial. If the accused had an equal number of votes for and against him, he was acquitted. The court on the hill of Ares is one of the most ancient institutions of Athens, and none achieved for the city an earlier or more widely-spread recognition."—E. Curtius, *Hist. of Greece*, bk. 2, ch. 2.—"The Areopagus, or, as it was interpreted by an ancient legend, Mars' Hill, was an eminence on the western side of the Acropolis, which from time immemorial had been the seat of a highly revered court of criminal justice. It took cognizance of charges of wilful murder, maiming, poisoning and arson. Its forms and modes of proceeding were peculiarly rigid and solemn. It was held in the open air, perhaps that the judges might not be polluted by sitting under the same roof with the criminals. . . . The venerable character of the court seems to have determined Solon to apply it to another purpose; and, without making any change in its original jurisdiction, to erect it into a supreme council, invested with a superintending and controlling authority, which extended over every part of the social system. He constituted it the guardian of the public morals and religion, to keep watch over the education and conduct of the citizens, and to protect the State from the disgrace or pollution of wantonness and profaneness. He armed it with extraordinary powers of interfering in pressing emergencies, to avert any sudden and imminent danger which threatened the public safety. The nature of its functions rendered it scarcely possible precisely to define their limits; and Solon probably thought it best to let them remain in that obscurity which magnifies whatever is indistinct. . . . It was filled with archons who had discharged their office with approved fidelity, and they held their seats for life."—C. Thirlwall, *Hist. of Greece*, v. 1, ch. 11.—These enlarged functions of the Areopagus were withdrawn from it in the time of Pericles, through the agency of Ephialtes, but were restored about B. C. 400, after the overthrow of the Thirty.—"Some of the writers of antiquity ascribed the first establishment of the senate of Areopagus to Solon. . . . But there can be little doubt that this is a mistake, and that the senate of Areopagus is a primordial institution of immemorial antiquity, though its constitution as well as its functions underwent many changes. It stood at first alone as a permanent and collegiate authority, originally by the side of the kings and afterwards by the side of the archons: it would then of course be known by the title of The Boule,—the senate, or council; its distinctive title 'senate of Areopagus,' borrowed from the place where its sittings were held, would not be bestowed until the formation by 'Solon of the second senate, or council, from which there was need to discriminate it."—G. Grote, *Hist. of Greece*, pt. 2, ch. 10 (v. 3).—See, also, ATHENS: B. C. 477-462, and 460-454.

A. D. 1580-1777.—The final founding of the City of Buenos Ayres.—Conflicts of Spain and Portugal on the Plata.—Creation of the Viceroyalty of Buenos Ayres.—"In the year 1580 the foundations of a lasting city were laid at Buenos Ayres by De Garay on the same situation as had twice previously been chosen—namely, by Mendoza, and by Cabeza de Vaca, respectively. The same leader had before this founded the settlement of Sante Fé on the Paraná. The site selected for the future capital of the Pampas is probably one of the worst ever chosen for a city . . . has probably the worst harbour in the world for a large commercial town. . . . Notwithstanding the inconvenience of its harbour, Buenos Ayres soon became the chief commercial entrepôt of the Valley of the Plata. The settlement was not effected without some severe fighting between De Garay's force and the Querandies. The latter, however, were effectually quelled. . . . The Spaniards were now nominally masters of the Rio de La Plata, but they had still to apprehend hostilities on the part of the natives between their few and far-distant settlements [concerning which see PARAGUAY: A. D. 1515-1557]. Of this liability De Garay himself was to form a lamentable example. On his passage back to Asuncion, having incautiously landed to sleep near the ruins of the old fort of San Espiritu, he was surprised by a party of natives and murdered, with all his companions. The death of this brave Biscayan was mourned as a great loss by the entire colony. The importance of the cities founded by him was soon apparent; and in 1620 all the settlements south of the confluence of the rivers Parana and Paraguay were formed into a separate, independent government, under the name of Rio de La Plata, of which Buenos Ayres was declared the capital. This city likewise became the seat of a bishopric. . . . The merchants of Seville, who had obtained a monopoly of the supply of Mexico and Peru, regarded with much jealousy the prospect of a new opening for the South American trade by way of La Plata," and procured restrictions upon it which were relaxed in 1618 so far as to permit the sending of two vessels of 100 tons each every year to Spain, but subject to a duty of 50 per cent. "Under this miserable commercial legislation Buenos Ayres continued to languish for the first century of its existence. In 1715, after the treaty of Utrecht, the English . . . obtained the 'asiento' or contract for supplying Spanish colonies in America with African slaves, in virtue of which they had permission to form an establishment at Buenos Ayres, and to send thither annually four ships with 1,200 negroes, the value of which they might export in produce of the country. They were strictly forbidden to introduce other goods than those necessary for their own establishments; but under the temptation of gain on the one side and of demand on the other, the asiento ships naturally became the means of transacting a consider-

able contraband trade. . . . The English were not the only smugglers in the river Plate. By the treaty of Utrecht, the Portuguese had obtained the important settlement of Colonia [the first settlement of the Banda Oriental—or 'Eastern Border'—afterwards called Uruguay] directly facing Buenos Ayres. . . . The Portuguese, . . . not contented with the possession of Colonia . . . commenced a more important settlement near Monte Video. From this place they were dislodged by Zavala [Governor of Buenos Ayres], who, by order of his government, proceeded to establish settlements at that place and at Maldonado. Under the above-detailed circumstances of contention . . . was founded the healthy and agreeable city of Monte Video. . . . The inevitable consequence of this state of things was fresh antagonism between the two countries, which it was sought to put an end to by a treaty between the two nations concluded in 1750. One of the articles stipulated that Portugal should cede to Spain all of her establishments on the eastern bank of the Plata; in return for which she was to receive the seven missionary towns [known as the 'Seven Reductions'] on the Uruguay. But . . . the inhabitants of the Missions naturally rebelled against the idea of being handed over to a people known to them only by their slave-dealing atrocities. . . . The result was that when 2,000 natives had been slaughtered [in the war known as the War of the Seven Reductions] and their settlements reduced to ruins, the Portuguese repudiated the compact, as they could no longer receive their equivalent, and they still therefore retained Colonia. When hostilities were renewed in 1762, the governor of Buenos Ayres succeeded in possessing himself of Colonia; but in the following year it was restored to the Portuguese, who continued in possession until 1777, when it was definitely ceded to Spain. The continual encroachments of the Portuguese in the Rio de La Plata, and the impunity with which the contraband trade was carried on, together with the questions to which it constantly gave rise with foreign governments, had long shown the necessity for a change in the government of that colony; for it was still under the superintendence of the Viceroy of Peru, residing at Lima, 3,000 miles distant. The Spanish authorities accordingly resolved to give fresh force to their representatives in the Rio de La Plata; and in 1776 they took the important resolution to sever the connection between the provinces of La Plata and the Viceroyalty of Peru. The former were now erected into a new Viceroyalty, the capital of which was Buenos Ayres. . . . To this Viceroyalty was appointed Don Pedro Cevallos, a former governor of Buenos Ayres. . . . The first act of Cevallos was to take possession of the island of St. Katherine, the most important Portuguese possession on the coast of Brazil. Proceeding thence to the Plate, he razed the fortifications of Colonia to the ground, and drove the Portuguese from the neighbourhood. In October of the following year, 1777, a treaty of peace was signed at St. Ildefonso, between Queen Maria of Portugal and Charles III. of Spain, by virtue of which St. Katherine's was restored to the latter country, whilst Portugal withdrew from the Banda Oriental or Uruguay, and relinquished all pretensions to the right of navigating the Rio de La Plata and its affluents beyond its own frontier line. . . . The Viceroyalty of Buenos Ayres was sub-divided

into the provinces of—(1.) Buenos Ayres, the capital of which was the city of that name, and which comprised the Spanish possessions that now form the Republic of Uruguay, as well as the Argentine provinces of Buenos Ayres, Santa Fé, Entre Rios, and Corrientes; (2.) Paraguay, the capital of which was Asuncion, and which comprised what is now the Republic of Paraguay; (3.) Tucuman, the capital of which was St. Iago del Estero, and which included what are to-day the Argentine provinces of Cordova, Tucuman, St. Iago, Salta, Catamarca, Rioja, and Jujuy; (4.) Las Charcas or Potosi, the capital of which was La Plata, and which now forms the Republic of Bolivia; and (5.) Chiquito or Cuyo, the capital of which was Mendoza, and in which were comprehended the present Argentine provinces of St. Luiz, Mendoza, and St. Juan."—R. G. Watson, *Spanish and Portuguese South America*, v. 2, ch. 13-14.

ALSO IN: E. J. Payne, *History of European Colonies*, ch. 17.—S. H. Wilcocke, *Hist. of the Viceroyalty of Buenos Ayres*.

A. D. 1806-1820.—The English invasion.—The Revolution.—Independence achieved.—Confederation of the Provinces of the Plate River and its dissolution.—"The trade of the Plate River had enormously increased since the substitution of register ships for the annual flotilla, and the erection of Buenos Ayres into a viceroyalty in 1778; but it was not until the war of 1797 that the English became aware of its real extent. The British cruisers had enough to do to maintain the blockade; and when the English learned that millions of hides were rotting in the warehouses of Monte Video and Buenos Ayres, they concluded that the people would soon see that their interests would be best served by submission to the great naval power. The peace put an end to these ideas; but Pitt's favourite project for destroying Spanish influence in South America by the English arms was revived and put in execution soon after the opening of the second European war in 1803. In 1806 . . . he sent a squadron to the Plate River, which offered the best point of attack to the British fleet, and the road to the most promising of the Spanish colonies. The English, under General Beresford, though few in number, soon took Buenos Ayres, for the Spaniards, terrified at the sight of British troops, surrendered without knowing how insignificant the invading force really was. When they found this out, they mustered courage to attack Beresford in the citadel; and the English commander was obliged to evacuate the place. The English soon afterwards took possession of Monte Video, on the other side of the river. Here they were joined by another squadron, who were under orders, after reducing Buenos Ayres, to sail round the Horn, to take Valparaiso, and establish posts across the continent connecting that city with Buenos Ayres, thus executing the long-cherished plan of Lord Anson. Buenos Ayres was therefore invested a second time. But the English land forces were too few for their task. The Spaniards spread all round the city strong breastworks of oxhides, and collected all their forces for its defence. Buenos Ayres was stormed by the English at two points on the 5th of July, 1807; but they were unable to hold their ground against the unceasing fire of the Spaniards, who were greatly superior in numbers, and the next day

they capitulated, and agreed to evacuate the province within two months. The English had imagined that the colonists would readily flock to their standard, and throw off the yoke of Spain. This was a great mistake; and it needed the events of 1808 to lead the Spanish colonists to their independence. . . . In 1810, when it came to be known that the French armies had crossed the Sierra Morena, and that Spain was a conquered country, the colonists would no longer submit to the shadowy authority of the colonial officers, and elected a junta of their own to carry on the Government. Most of the troops in the colony went over to the cause of independence, and easily overcame the feeble resistance that was made by those who remained faithful to the regency in the engagement of Las Piedras. The leaders of the revolution were the advocate Castelli and General Belgrano; and under their guidance scarcely any obstacle stopped its progress. They even sent their armies at once into Upper Peru and the Banda Oriental, and their privateers carried the Independent flag to the coasts of the Pacific; but these successes were accompanied by a total anarchy in the Argentine capital and provinces. The most intelligent and capable men had gone off to fight for liberty elsewhere; and even if they had remained it would have been no easy task to establish a new government over the scattered and half-civilized population of this vast country. . . . The first result of independence was the formation of a not very intelligent party of country proprietors, who knew nothing of the mysteries of politics, and were not ill-content with the existing order of things. The business of the old viceregal government was delegated to a supreme Director; but this functionary was little more than titular. How limited the aspirations of the Argentines at first were may be gathered from the instructions with which Belgrano and Rivadavia were sent to Europe in 1814. They were to go to England, and ask for an English protectorate; if possible under an English prince. They were next to try the same plan in France, Austria, and Russia, and lastly in Spain itself: and if Spain still refused, were to offer to renew the subjection of the colony, on condition of certain specified concessions being made. This was indeed a strange contrast to the lofty aspirations of the Colombians. On arriving at Rio, the Argentine delegates were assured by the English minister, Lord Strangford, that, as things were, no European power would do anything for them: nor did they succeed better in Spain itself. Meanwhile the government of the Buenos Ayres junta was powerless outside the town, and the country was fast lapsing into the utmost disorder and confusion. At length, when Government could hardly be said to exist at all, a general congress of the provinces of the Plate River assembled at Tucuman in 1816. It was resolved that all the states should unite in a confederation to be called the United Provinces of the Plate River; and a constitution was elaborated, in imitation of the famous one of the United States, providing for two legislative chambers and a president. . . . The influence of the capital, of which all the other provinces were keenly jealous, predominated in the congress; and Puyrredon, an active Buenos Ayres politician, was made supreme Director of the

Confederation. The people of Buenos Ayres thought their city destined to exercise over the rural provinces a similar influence to that which Athens, under similar circumstances, had exercised in Greece; and able Buenos Ayreans like Puyrredon, San Martin, and Rivadavia, now became the leaders of the unitary party. The powerful provincials, represented by such men as Lopez and Quiroga, soon found out that the Federal scheme meant the supremacy of Buenos Ayres, and a political change which would deprive them of most of their influence. The Federal system, therefore, could not be expected to last very long; and it did in fact collapse after four years. Artigas led the revolt in the Banda Oriental [now Uruguay], and the Riverene Provinces soon followed the example. For a long time the provinces were practically under the authority of their local chiefs, the only semblance of political life being confined to Buenos Ayres itself."—E. J. Payne, *Hist. of European Colonies*, ch. 17.

A. D. 1819-1874.—Anarchy, civil war, despotism.—The long struggle for order and Confederation.—"A new Congress met in 1819 and made a Constitution for the country, which was never adopted by all the Provinces. Pueyrredon resigned, and on June 10th, 1819, José Rondeau was elected, who, however, was in no condition to pacify the civil war which had broken out during the government of his predecessors. At the commencement of 1830, the last 'Director General' was overthrown; the municipality of the city of Buenos-Aires seized the government; the Confederation was declared dissolved, and each of its Provinces received liberty to organize itself as it pleased. This was anarchy officially proclaimed. After the fall in the same year of some military chiefs who had seized the power, Gen. Martin Rodriguez was named Governor of Buenos-Aires, and he succeeded in establishing some little order in this chaos. He chose M. J. Garcia and Bernardo Rivadavia—one of the most enlightened Argentines of his times—as his Ministers. This administration did a great deal of good by exchanging conventions of friendship and commerce, and entering into diplomatic relations with foreign nations. At the end of his term General Las Heras—9th May, 1824—took charge of the government, and called a Constituent Assembly of all the Provinces, which met at Buenos-Aires, December 16th, and elected Bernardo Rivadavia President of the newly Confederated Republic on the 7th February, 1825. This excellent Argentine, however, found no assistance in the Congress. No understanding could be come to on the form or the test of the Constitution, nor yet upon the place of residence for the national Government. Whilst Rivadavia desired a centralized Constitution—called here 'unitarian'—and that the city of Buenos-Aires should be declared capital of the Republic, the majority of Congress held a different opinion, and this divergence caused the resignation of the President on the 5th July, 1827. After this event, the attempt to establish a Confederation which would include all the Provinces was considered as defeated, and each Province went on its own way, whilst Buenos-

Aires elected Manuel Dorrego, the chief of the federal party, for its Governor. He was inaugurated on the 13th August, 1827, and at once undertook to organize a new Confederation of the Provinces, opening relations to this end with the Government of Cordoba, the most important Province of the interior. He succeeded in reestablishing repose in the interior, and was instrumental in preserving a general peace, even beyond the limits of his young country. The Emperor of Brazil did not wish to acknowledge the rights of the United Provinces over the Cisplatine province, or Banda Oriental [now Uruguay]. He wished to annex it to his empire, and declared war to the Argentine Republic on the 10th of December, 1826. An army was soon organized by the latter, under the command of General Alvear, which on the 20th of February, 1827, gained a complete victory over the Brazilian forces—twice their number—at the plains of Ituzaingó, in the Brazilian province of Rio Grande do Sul. The navy of the Argentines also triumphed on several occasions, so that when England offered her intervention, Brazil renounced all claim to the territory of Uruguay by the convention of the 27th August, 1828, and the two parties agreed to recognize and to maintain the neutrality and independence of that country. Dorrego, however, had but few sympathies in the army, and a short time after his return from Brazil, the soldiers under Lavalle rebelled and forced him to fly to the country on the 1st December of the same year. There he found aid from the Commander General of the country districts, Juan Manuel Rosas, and formed a small battalion with the intention of marching on the city of Buenos-Aires. But Lavalle triumphed, took him prisoner, and shot him without trial on the 13th December. . . . Not only did the whole interior of the province of Buenos-Aires rise against Lavalle, under the direction of Rosas, but also a large part of other Provinces considered this event as a declaration of war, and the National Congress, then assembled at Santa-Fé, declared Lavalle's government illegal. The two parties fought with real fury, but in 1829, after an interview between Rosas and Lavalle, a temporary reconciliation was effected. . . . The legislature of Buenos-Aires, which had been convoked on account of the reconciliation between Lavalle and Rosas, elected the latter as Governor of the Province, on December 6th, 1829, and accorded to him extraordinary powers. . . . During this the first period of his government he did not appear in his true nature, and at its conclusion he refused a re-election and retired to the country. General Juan R. Balcarce was then—17th December, 1832—named Governor, but could only maintain himself some eleven months: Viamont succeeded him, also for a short time only. Now the moment had come for Rosas. He accepted the almost unlimited Dictatorship which was offered to him on the 7th March, 1835, and reigned in a horrible manner, like a madman, until his fall. Several times the attempt was made to deliver Buenos-Aires from his terrible yoke, and above all the devoted and valiant efforts of General Lavalle deserve to be mentioned; but all was in vain; Rosas remained unshaken. Finally, General Justo José De Urquiza, Governor of the province of Entre-Rios, in alliance with the province of Corrientes

and the Empire of Brazil, rose against the Dictator. He first delivered the Republic of Uruguay, and the city of Monte-Video—the asylum of the adversaries of Rosas—from the army which besieged it, and thereafter passing the great river Paraná, with a relatively large army, he completely defeated Rosas at Montecaseros, near Buenos-Aires, on the 3rd February, 1852. During the same day, Rosas sought and received the protection of an English war-vessel which was in the road of Buenos-Aires, in which he went to England, where he still [1876] resides. Meantime Urquiza took charge of the Government of the United Provinces, under the title of 'Provisional Director,' and called a general meeting of the Governors at San Nicolás, a frontier village on the north of the province of Buenos-Aires. This assemblage confirmed him in his temporary power, and called a National Congress which met at Santa-Fé and made a National Constitution under date of 25th May, 1853. By virtue of this Constitution the Congress met again the following year at Paraná, a city of Entre-Rios, which had been made the capital, and on the 5th May, elected General Urquiza the first President of the Argentine Confederation. . . . The important province of Buenos-Aires, however, had taken no part in the deliberations of the Congress. Previously, on the 11th September 1852, a revolution against Urquiza, or rather against the Provincial Government in alliance with him, had taken place and caused a temporary separation of the Province from the Republic. Several efforts to pacify the disputes utterly failed, and a battle took place at Cepeda in Santa-Fé, wherein Urquiza, who commanded the provincial troops, was victorious, although his success led to no definite result. A short time after, the two armies met again at Pavón—near the site of the former battle—and Buenos-Aires won the day. This secured the unity of the Republic of which the victorious General Bartolomé Mitre was elected President for six years from October, 1862. At the same time the National Government was transferred from Paraná to Buenos-Aires, and the latter was declared the temporary capital of the Nation. The Republic owes much to the Government of Mitre, and it is probable that he would have done more good, if war had not broken out with Paraguay, in 1865 [see PARAGUAY]. The Argentines took part in it as one of the three allied States against the Dictator of Paraguay, Francisco Solano Lopez. On the 12th October, 1868, Domingo Faustino Sarmiento succeeded Gen. Mitre in the Presidency. . . . The 12th October, 1874, Dr. Nicolas Avellaneda succeeded him in the Government."—R. Napp, *The Argentine Republic*, ch. 2.

A. D. 1880-1891.—The Constitution and its working.—Governmental corruption.—The Revolution of 1890, and the financial collapse.—"The Argentine constitutional system in its outward form corresponds closely to that of the United States. . . . But the inward grace of enlightened public opinion is lacking, and political practice falls below the level of a self-governing democracy. Congress enacts laws, but the President as commander-in-chief of the

army, and as the head of a civil service dependent upon his will and caprice, possesses absolute authority in administration. The country is governed by executive decrees rather than by constitutional laws. Elections are carried by military pressure and manipulation of the civil service. . . . President Roca [who succeeded Avellaneda in 1880] virtually nominated, and elected his brother-in-law, Juárez Célman, as his successor. President Juárez set his heart upon controlling the succession in the interest of one of his relatives, a prominent official; but was forced to retire before he could carry out his purpose. . . . Nothing in the Argentine surprised me more than the boldness and freedom with which the press attacked the government of the day and exposed its corruption. . . . The government paid no heed to these attacks. Ministers did not trouble themselves to repel charges affecting their integrity. . . . This wholesome criticism from an independent press had one important effect. It gave direction to public opinion in the capital, and involved the organization of the Unión Cívica. If the country had not been on the verge of a financial revulsion, there might not have been the revolt against the Juárez administration in July, 1890; but with ruin and disaster confronting them, men turned against the President whose incompetence and venality would have been condoned if the times had been good. The Unión Cívica was founded when the government was charged with maladministration in sanctioning an illegal issue of \$40,000,000 of paper money. . . . The government was suddenly confronted with an armed coalition of the best battalions of the army, the entire navy, and the Unión Cívica. The manifesto issued by the Revolutionary Junta was a terrible arraignment of the political crimes of the Juárez Government. . . . The revolution opened with every prospect of success. It failed from the incapacity of the leaders to co-operate harmoniously. On July 19, 1890, the defection of the army was discovered. On July 26 the revolt broke out. For four days there was bloodshed without definite plan or purpose. No determined attack was made upon the government palace. The fleet opened a fantastic bombardment upon the suburbs. There was inexplicable mismanagement of the insurgent forces, and on July 29 an ignominious surrender to the government with a proclamation of general amnesty. General Roca remained behind the scenes, apparently master of the situation, while President Juárez had fled to a place of refuge on the Rosario railway, and two factions of the army were playing at cross purposes, and the police and the volunteers of the Unión Cívica were shooting women and children in the streets. Another week of hopeless confusion passed, and General Roca announced the resignation of President Juárez and the succession of vice-President Pellegrini. Then the city was illuminated, and for three days there was a pandemonium of popular rejoicing over a victory which nobody except General Roca understood. . . . In June, 1891, the deplorable state of Argentine finance was revealed in a luminous statement made by President Pellegrini. . . . All business interests were stagnant. Immigration had been diverted to Brazil. . . . All industries were prostrated except politics, and the pernicious activity displayed by factions was an evil augury

for the return of prosperity. . . . During thirty years the country has trebled its population, its increase being relatively much more rapid than that of the United States during the same period. The estimate of the present population [1892] is 4,000,000 in place of 1,160,000 in 1857. . . . Disastrous as the results of political government and financial disorder have been in the Argentine, its ultimate recovery by slow stages is probable. It has a magnificent railway system, an industrious working population recruited from Europe, and nearly all the material appliances for progress."—I. N. Ford, *Tropical America*, ch. 6.—See CONSTITUTION, ARGENTINE.

A. D. 1892.—Presidential Election.—Dr. Luis Sáenz-Peña, former Chief Justice of the Supreme Court, and reputed to be a man of great integrity and ability, was chosen President, and inaugurated October 12, 1892.

ARGINUSAE, Battle of. See GREECE: B. C. 406.

ARGONAUTIC EXPEDITION, The.—"The ship Argo was the theme of many songs during the oldest periods of the Grecian Epic, even earlier than the Odyssey. The king Ætēs, from whom she is departing, the hero Jasōn, who commands her, and the goddess Hērē, who watches over him, enabling the Argo to traverse distances and to escape dangers which no ship had ever before encountered, are all circumstances briefly glanced at by Odysseus in his narrative to Alkinoos. . . . Jasōn, commanded by Pelias to depart in quest of the golden fleece belonging to the speaking ram which had carried away Phryxus and Hellē, was encouraged by the oracle to invite the noblest youth of Greece to his aid, and fifty of the most distinguished amongst them obeyed the call. Hēraklēs, Thēseus, Telamōn and Pēleus, Kastor and Pollux, Idas and Lynkeus—Zētēs and Kalais, the winged sons of Boreas—Meleager, Amphiaras, Kēphēus, Laertēs, Autolykus, Menetius, Aktor, Erginus, Euphēmus, Ankæus, Pœas, Periklymenus, Augeas, Eurytus, Admētus, Akastus, Keneus, Euryalus, Pēneleōs and Léitus, Askalaphus and Ialmenus, were among them. . . . Since so many able men have treated it as an undisputed reality, and even made it the pivot of systematic chronological calculations, I may here repeat the opinion long ago expressed by Heyne, and even indicated by Burmann, that the process of dissecting the story, in search of a basis of fact, is one altogether fruitless."—G. Grote, *Hist. of Greece*, v. 1, pt. 1, ch. 13.—"In the rich cluster of myths which surround the captain of the Argo and his fellows are preserved to us the whole life and doings of the Greek maritime tribes, which gradually united all the coasts with one another, and attracted Hellenes dwelling in the most different seats into the sphere of their activity. . . . The Argo was said to have weighed anchor from a variety of ports—from Iolcus in Thessaly, from Anthedon and Siphæ in Bœotia: the home of Jason himself was on Mount Pelion by the sea, and again on Lemnos and in Corinth; a clear proof of how homogeneous were the influences running on various coasts. However, the myths of the Argo were developed in the greatest completeness on the Pagæan gulf, in the seats of the Minyi; and they are the first with whom a perceptible movement of the Pelasgian tribes beyond the sea—in

other words, a Greek history in Europe—begins.”—E. Curtius, *Hist. of Greece*, bk. 1, ch. 2-3.

ARGOS.—ARGOLIS.—ARGIVES.—“No district of Greece contains so dense a succession of powerful citadels in a narrow space as Argolis [the eastern peninsular projection of the Peloponnesus]. Lofty Larissa, apparently designed by nature as the centre of the district, is succeeded by Mycenæ, deep in the recess of the land; at the foot of the mountain lies Midea, at the brink of the sea-coast Tiryns; and lastly, at a farther distance of half an hour's march, Nauplia, with its harbour. This succession of ancient fastnesses, whose indestructible structure of stone we admire to this day [see Schliemann's '*Mycenæ*' and '*Tiryns*'] is clear evidence of mighty conflicts which agitated the earliest days of Argos; and proves that in this one plain of Inachus several principalities must have arisen by the side of one another, each putting its confidence in the walls of its citadel; some, according to their position, maintaining an intercourse with other lands by sea, others rather a connection with the inland country. The evidence preserved by these monuments is borne out by that of the myths, according to which the dominion of Danaus is divided among his successors. Exiled Prætus is brought home to Argos by Lycian bands, with whose help he builds the coast-fortress of Tiryns, where he holds sway as the first and mightiest in the land. . . . The other line of the Danaidæ is also intimately connected with Lycia; for Perseus . . . [who] on his return from the East finds Mycenæ, as the new regal seat of the united kingdom of Argos, is himself essentially a Lycian hero of light, belonging to the religion of Apollo. . . . Finally, Heracles himself is connected with the family of the Perseidæ, as a prince born on the Tirynthian fastness. . . . During these divisions in the house of Danaus, and the misfortunes befalling that of Prætus, foreign families acquire influence and dominion in Argos: these are of the race of Æolus, and originally belong to the harbour-country of the western coast of Peloponnesus—the Amythaonidæ. . . . While the dominion of the Argive land was thus subdivided, and the native warrior nobility subsequently exhausted itself in savage internal feuds, a new royal house succeeded in grasping the supreme power and giving an entirely new importance to the country. This house was that of the Tantalidæ [or PELOPIDS, which see], united with the forces of Achæan population. . . . The residue of fact is, that the ancient dynasty, connected by descent with Lycia, was overthrown by the house which derived its origin from Lydia. . . . The poetic myths, abhorring long rows of names, mention three princes as ruling here in succession, one leaving the sceptre of Pelops to the other, viz., Atreus, Thyestes and Agamemnon. Mycenæ is the chief seat of their rule, which is not restricted to the district of Argos.”—E. Curtius, *Hist. of Greece*, bk. 1, ch. 3.—After the Doric invasion of the Peloponnesus (see GREECE: THE MIGRATIONS; also, DORIANS AND IONIANS), Argos appears in Greek history as a Doric state, originally the foremost one in power and influence, but humiliated after long years of rivalry by her Spartan neighbours. “Argos never forgot that she had once been the chief power in the peninsula, and her feeling towards Sparta was that of a jealous

but impotent competitor. By what steps the decline of her power had taken place, we are unable to make out, nor can we trace the succession of her kings subsequent to Pheidon [8th century B. C.]. . . . The title [of king] existed (though probably with very limited functions) at the time of the Persian War [B. C. 490-479]. . . . There is some ground for presuming that the king of Argos was even at that time a Herakleid—since the Spartans offered to him a third part of the command of the Hellenic force, conjointly with their own two kings. The conquest of Thyreates by the Spartans [about 547 B. C.] deprived the Argeians of a valuable portion of their Periœkis, or dependent territory. But Orneæ and the remaining portion of Kynuria still continued to belong to them: the plain round their city was very productive; and, except Sparta, there was no other power in Peloponnesus superior to them. Mykenæ and Tiryns, nevertheless, seem both to have been independent states at the time of the Persian War, since both sent contingents to the battle of Plataea, at a time when Argos held aloof and rather favoured the Persians.”—G. Grote, *Hist. of Greece*, pt. 2, ch. 8 (c. 2).

B. C. 496-421.—Calamitous War with Sparta.—Non-action in the Persian War.—Slow recovery of the crippled State.—“One of the heaviest blows which Argos ever sustained at the hand of her traditional foe befell her about 496 B. C., six years before the first Persian invasion of Greece. A war with Sparta having broken out, Cleomenes, the Lacedæmonian king, succeeded in landing a large army, in vessels he had extorted from the Æginetans, at Nauplia, and ravaged the Argive territory. The Argeians mustered all their forces to resist him, and the two armies encamped opposite each other near Tiryns. Cleomenes, however, contrived to attack the Argeians at a moment when they were unprepared, making use, if Herodotus is to be credited, of a stratagem which proves the extreme incapacity of the opposing generals, and completely routed them. The Argeians took refuge in a sacred grove, to which the remorseless Spartans set fire, and so destroyed almost the whole of them. No fewer than 6,000 of the citizens of Argos perished on this disastrous day. Cleomenes might have captured the city itself; but he was, or affected to be, hindered by unfavourable omens, and drew off his troops. The loss sustained by Argos was so severe as to reduce her for some years to a condition of great weakness; but this was at the time a fortunate circumstance for the Hellenic cause, inasmuch as it enabled the Lacedæmonians to devote their whole energies to the work of resistance to the Persian invasion without fear of enemies at home. In this great work Argos took no part, on the occasion of either the first or second attempt of the Persian kings to bring Hellas under their dominion. Indeed, the city was strongly suspected of ‘medising’ tendencies. In the period following the final overthrow of the Persians, while Athens was pursuing the splendid career of aggrandisement and conquest that made her the foremost state in Greece, and while the Lacedæmonians were paralyzed by the revolt of the Messenians, Argos regained strength and influence, which she at once employed and increased by the harsh policy . . . of depopulating Mycenæ and Tiryns, while she compelled

several other semi-independent places in the Argolid to acknowledge her supremacy. During the first eleven years of the Peloponnesian war, down to the peace of Nicias (421 B. C.) Argos held aloof from all participation in the struggle, adding to her wealth and perfecting her military organization. As to her domestic conditions and political system, little is known; but it is certain that the government, unlike that of other Dorian states, was democratic in its character, though there was in the city a strong oligarchic and philo-Laconian party, which was destined to exercise a decisive influence at an important crisis."

ARIA.—AREIOS.—AREIANS.—The name by which the Herirud and its valley, the district of modern Herat, was known to the ancient Greeks. Its inhabitants were known as the Arcians.—M. Duncker, *Hist. of Antiq.*, bk. 7, ch. 1.

ARIANA.—"Strabo uses the name Ariana for the land of all the nations of Iran, except that of the Medes and Persians, i. e., for the whole eastern half of Iran"—Afghanistan and Beloochistan.—M. Duncker, *Hist. of Antiquity*, v. 5, bk. 7, ch. 1.

ARIANISM.—ARIANS.—From the second century of its existence, the Christian church was divided by bitter controversies touching the mystery of the Trinity. "The word Trinity is found neither in the Holy Scriptures nor in the writings of the first Christians; but it had been employed from the beginning of the second cen-

tury, when a more metaphysical turn had been given to the minds of men, and theologians had begun to attempt to explain the divine nature. . . . The Founder of the new religion, the Being who had brought upon earth a divine light, was he God, was he man, was he of an intermediate nature, and, though superior to all other created beings, yet himself created? This latter opinion was held by Arius, an Alexandrian priest, who maintained it in a series of learned controversial works between the years 318 and 325. As soon as the discussion had quitted the walls of the schools, and been taken up by the people, mutual accusations of the gravest kind took the place of metaphysical subtleties. The orthodox party reproached the Arians with blaspheming the deity himself, by refusing to acknowledge him in the person of Christ. The Arians accused the orthodox of violating the fundamental law of religion, by rendering to the creature the worship due only to the Creator. . . . It was difficult to decide which numbered the largest body of followers; but the ardent enthusiastic spirits, the populace in all the great cities (and especially at Alexandria) the women, and the newly-founded order of the monks of the desert . . . were almost without exception partisans of the faith which has since been declared orthodox. . . . Constantine thought this question of dogma might be decided by an assembly of the whole church. In the year 325, he convoked the council of Nice [see NICAÆA, COUNCIL OF], at which 300 bishops pronounced in favour of the equality of the Son with the Father, or the doctrine generally regarded as orthodox, and condemned the Arians to exile and their books to the flames."—J. C. L. de Sismondi, *Fall of the Roman Empire*, ch. 4.—"The victorious faction [at the Council of Nice] . . . anxiously sought for some irreconcilable mark of distinction, the rejection of which might involve the Arians in the guilt and consequences of heresy. A letter was publicly read and ignominiously torn, in which their patron, Eusebius of Nicomedia, ingeniously confessed that the admission of the homoousion, or consubstantial, a word already familiar to the Platonists, was incompatible with the principles of their theological system. The fortunate opportunity was eagerly embraced. . . . The consubstantiality of the Father and the Son was established by the Council of Nice, and has been unanimously received as a fundamental article of the Christian faith by the consent of the Greek, the Latin, the Oriental and the Protestant churches." Notwithstanding the decision of the Council of Nice against it, the heresy of Arius continued to gain ground in the East. Even the Emperor Constantine became friendly to it, and the sons of Constantine, with some of the later emperors who followed them on the eastern throne, were ardent Arians in belief. The Homoousians, or orthodox, were subjected to persecution, which was directed with special bitterness against their great leader, Athanasius, the famous bishop of Alexandria. But Arianism was weakened by hair-splitting distinctions, which resulted in many diverging creeds. "The sect which asserted the doctrine of a 'similar substance' was the most numerous, at least in the provinces of Asia. . . . The Greek word which was chosen to express this mysterious resemblance bears so close an affinity to the orthodox symbol, that the

profane of every age have derided the furious contests which the difference of a single diphthong excited between the Homoousians and the Homoiousians." The Latin churches of the West, with Rome at their head, remained generally firm in the orthodoxy of the Homoousian creed. But the Goths, who had received their Christianity from the East, tinctured with Arianism, carried that heresy westward, and spread it among their barbarian neighbors—Vandals, Burgundians and Sueves—through the influence of the Gothic Bible of Ulfilas, which he and his missionary successors bore to the Teutonic peoples. "The Vandals and Ostrogoths persevered in the profession of Arianism till the final ruin [A. D. 533 and 553] of the kingdoms which they had founded in Africa and Italy. The barbarians of Gaul submitted [A. D. 507] to the orthodox dominion of the Franks; and Spain was restored to the Catholic Church by the voluntary conversion of the Visigoths [A. D. 589]."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 21 and 37.—Theodosius formally proclaimed his adhesion to Trinitarian orthodoxy by his celebrated edict of A. D. 380, and commanded its acceptance in the Eastern Empire. See **ROME**: A. D. 379–395.—A. Neander, *Gen. Hist. of Christ. Rel. and Ch.*, trans. by Torrey, v. 2, sect. 4.

ARICIA, Battle of.—A victory won by the Romans over the Auruncians, B. C. 497, which summarily ended a war that the latter had declared against the former.—Livy, *Hist. of Rome*, bk. 2, ch. 26.

ARICIAN GROVE, The.—The sacred grove at Aricia (one of the towns of old Latium, near Alba Longa) was the center and meeting-place of an early league among the Latin peoples, about which little is known.—W. Ihne, *Hist. of Rome*, bk. 2, ch. 3.—Sir W. Gell, *Topog. of Rome*, v. 1.—"On the northern shore of the lake [of Nemi] right under the precipitous cliffs on which the modern village of Nemi is perched, stood the sacred grove and sanctuary of Diana Nemorensis, or Diana of the Wood. . . . The site was excavated in 1885 by Sir John Saville Lumley, English ambassador at Rome. For a general description of the site and excavations, see the *Athenæum*, 10th October, 1885. For details of the finds see 'Bulletino dell' Instituto di Corrispondenza Archeologica,' 1885. . . . The lake and the grove were sometimes known as the lake and grove of Aricia. But the town of Aricia (the modern La Riccia) was situated about three miles off, at the foot of the Alban Mount. . . . According to one story, the worship of Diana at Nemi was instituted by Orestes, who, after killing Thoas, King of the Tauric Chersonese (the Crimea), fled with his sister to Italy, bringing with him the image of the Tauric Diana. . . . Within the sanctuary at Nemi grew a certain tree, of which no branch might be broken.

Only a runaway slave was allowed to break off, if he could, one of its boughs. Success in the attempt entitled him to fight the priest in single combat, and if he slew him he reigned in his stead with the title of King of the Wood (Rex Nemorensis). Tradition averred that the fateful branch was that Golden Bough which, at the Sibyl's bidding, Æneas plucked before he essayed the perilous journey to the world of the dead. . . . This rule of succession by the sword was observed down to imperial times; for amongst his other freaks Caligula, thinking that the priest of Nemi had held office too long, hired a more stalwart ruffian to slay him."—J. G. Frazer, *The Golden Bough*, ch. 1, sect. 1.

ARISTOCRACY.—OLIGARCHY.—"Aristocracy signifies the rule of the best men. If, however, this epithet is referred to an absolute ideal standard of excellence, it is manifest that an aristocratical government is a mere abstract notion, which has nothing in history, or in nature, to correspond to it. But if we content ourselves with taking the same terms in a relative sense, . . . aristocracy . . . will be that form of government in which the ruling few are distinguished from the multitude by illustrious birth, hereditary wealth, and personal merit. . . . Whenever such a change took place in the character or the relative position of the ruling body, that it no longer commanded the respect of its subjects, but found itself opposed to them, and compelled to direct its measures chiefly to the preservation of its power, it ceased to be, in the Greek sense an aristocracy; it became a faction, an oligarchy."—C. Thirlwall, *Hist. of Greece*, ch. 10.

ARISTOMNEAN WAR. See **MESSENIAN WARS**, **FIRST AND SECOND**.

ARIZONA: The Name.—"Arizona, probably Arizonac in its original form, was the native and probably Pima name of the place—of a hill, valley, stream, or some other local feature—just south of the modern boundary, in the mountains still so called, on the headwaters of the stream flowing past Saric, where the famous Planchas de Plata mine was discovered in the middle of the 18th century, the name being first known to Spaniards in that connection and being applied to the mining camp or real de minas. The aboriginal meaning of the term is not

known, though from the common occurrence in this region of the prefix 'ari,' the root 'son,' and the termination 'ac,' the derivation ought not to escape the research of a competent student. Such guesses as are extant, founded on the native tongues, offer only the barest possibility of a partial and accidental accuracy; while similar derivations from the Spanish are extremely absurd. . . . The name should properly be written and pronounced Arisona, as our English sound of the z does not occur in Spanish."—H. H. Bancroft, *Hist. of the Pacific States*, v. 12, p. 520.

A. D. 1810–1836.—Detached from Missouri.—Organized as a Territory.—Admitted as a State.—"Preparatory to the assumption of state government, the limits of the Missouri Territory were restricted on the south by the parallel of 36° 30' north. The restriction was made by an act of Congress, approved March 3, 1819, entitled an 'Act establishing a separate territorial government in the southern portion of the Missouri Territory.' The portion thus separated was subsequently organized into the second grade of territorial government, and Colonel James Miller, a meritorious and distinguished officer of the Northwestern army, was appointed first governor. This territory was known as the Arkansas Territory, and, at the period of its first organization, contained an aggregate of nearly 14,000 inhabitants. Its limits comprised all the territory on the west side of the Mississippi between the parallels 33° and 36° 30', or between the northern limit of Louisiana and the southern boundary of the State of Missouri. On the west it extended indefinitely to the Mexican territories, at least 550 miles. The Post of Arkansas was made the seat of the new government. The population of this extensive territory for several years was comprised chiefly in the settlements upon the tributaries of White River and the St. Francis; upon the Mississippi, between New Madrid and Point Chicot; and upon both sides of the Arkansas River, within 100 miles of its mouth, but especially in

the vicinity of the Post of Arkansas. . . . So feeble was the attraction in this remote region for the active, industrious, and well-disposed portion of the western pioneers, that the Arkansas Territory, in 1830, ten years after its organization, had acquired an aggregate of only 30,388 souls, including 4,576 slaves. . . . The western half of the territory had been erected, in 1824, into a separate district, to be reserved for the future residence of the Indian tribes, and to be known as the Indian Territory. From this time the tide of emigration began to set more actively into Arkansas, as well as into other portions of the southwest. . . . The territory increased rapidly for several years, and the census of 1835 gave the whole number of inhabitants at 58,134 souls, including 9,630 slaves. Thus the Arkansas Territory in the last five years had doubled its population. . . . The people, through the General Assembly, made application to Congress for authority to establish a regular form of state government. The assent of Congress was not withheld, and a Convention was authorized to meet at Little Rock on the first day of January, 1836, for the purpose of forming and adopting a State Constitution. The same was approved by Congress, and on the 13th of June following the State of Arkansas was admitted into the Federal Union as an independent state, and was, in point of time and order, the twenty-fifth in the confederacy. . . . Like the Missouri Territory, Arkansas had been a slaveholding country from the earliest French colonies. Of course, the institution of negro slavery, with proper checks and limits, was sustained by the new Constitution."—J. W. A. D. 508-510.—Siege by the Franks.—After the overthrow of the Visigothic kingdom of Toulouse, A. D. 507, by the victory of Clovis, king of the Franks, at Voad, near Poitiers, "the great city of Arles, once the Roman capital of Gaul, maintained a gallant defence against the united Franks and Burgundians, and saved for generations the Visigothic rule in Provence and southern Languedoc. Of the siege, which lasted apparently from 508 to 510, we have some graphic details in the life of St. Cæsarius, Bishop of Arles, written by his disciples." The city was relieved in 510 by an Ostrogothic army, sent by king Theodoric of Italy, after a great battle in which 30,000 Franks were reported to be slain. "The result of the battle of Arles was to put Theodoric in secure possession of all Provence and of so much of Languedoc as was needful to ensure his access to Spain"—where the Ostrogothic king, as guardian of his infant grandson, Amalaric, was taking care of the Visigothic kingdom.—T. Hodgkin, *Italy and Her Invaders*, bk. 4, ch. 9.

ARMENIA.—"Almost immediately to the west of the Caspian there rises a high table-land diversified by mountains, which stretches eastward for more than eighteen degrees, between the 37th and 41st parallels. This highland may properly be regarded as a continuation of the great Iranian plateau, with which it is connected at its southeastern corner. It comprises a portion of the modern Persia, the whole of Armenia, and most of Asia Minor. Its principal mountain ranges are latitudinal, or from west to east, only the minor ones taking the opposite or longitudinal direction. . . . The heart of the mountain-region, the tract extending from the district of Erivan on the east to the upper course of the Kizil-Irmak river and the vicinity of Sivas upon

the west, was, as it still is, Armenia. Amidst these natural fastnesses, in a country of lofty ridges, deep and narrow valleys, numerous and copious streams, and occasional broad plains—a country of rich pasture grounds, productive orchards, and abundant harvests—this interesting people has maintained itself almost unchanged from the time of the early Persian kings to the present day. Armenia was one of the most valuable portions of the Persian empire, furnishing, as it did, besides stone and timber, and several most important minerals, an annual supply of 20,000 excellent horses to the stud of the Persian king."—G. Rawlinson, *Five Great Monarchies: Persia*, ch. 1. —Before the Persians established their sovereignty over the country, "it seems certain that from one quarter or another Armenia had been Arianized; the old Turanian character had passed away from it; immigrants had flocked in and a new people had been formed—the real Armenians of later times, and indeed of the present day." Submitting to Alexander, on the overthrow of the Persian monarchy, Armenia fell afterwards under the yoke of the Seleucidæ, but gained independence about 190 B. C., or earlier. Under the influence of Parthia, a branch of the Parthian royal family, the Arsacids, was subsequently placed on the throne and a dynasty established which reigned for nearly six hundred years. The fourth of these kings, Tigranes, who occupied the throne in the earlier part of the last century B. C., placed Armenia in the front rank of Asiatic kingdoms and in powerful rivalry with Parthia. Its subsequent history is one of many wars and invasions and much buffeting between Romans, Parthians, Persians, and their successors in the conflicts of the eastern world. The part of Armenia west of the Euphrates was called by the Romans Armenia Minor. For a short period after the revolt from the Seleucid monarchy, it formed a distinct kingdom called Sophene.—G. Rawlinson, *Sixth and Seventh Great Oriental Monarchies*.

12th-14th Centuries.—The Mediæval Christian Kingdom.—"The last decade of the 12th century saw the establishment of two small Christian kingdoms in the Levant, which long outlived all other relics of the Crusades except the military orders; and which, with very little help from the West, sustained a hazardous existence in complete contrast with almost everything around them. The kingdoms of Cyprus and Armenia have a history very closely intertwined, but their origin and most of their circumstances were very different. By Armenia as a kingdom is meant little more than the ancient Cilicia, the land between Taurus and the sea, from the frontier of the principality of Antioch, eastward, to Kelenderis or Palæopolis, a little beyond Seleucia; this territory, which was computed to contain 16 days' journey in length,

measured from four miles of Antioch, by two in breadth, was separated from the Greater Armenia, which before the period on which we are now employed had fallen under the sway of the Seljuks, by the ridges of Taurus. The population was composed largely of the sweepings of Asia Minor, Christian tribes which had taken refuge in the mountains. Their religion was partly Greek, partly Armenian. . . . Their rulers were princes descended from the house of the Bagratidæ, who had governed the Greater Armenia as kings from the year 885 to the reign of Constantine of Monomachus, and had then merged their hazardous independence in the mass of the Greek Empire. After the seizure of Asia Minor by the Seljuks, the few of the Bagratidæ who had retained possession of the mountain fastnesses of Cilicia or the strongholds of Mesopotamia, acted as independent lords, showing little respect for Byzantium save where there was something to be gained. . . . Rupin of the Mountain was prince [of Cilicia] at the time of the capture of Jerusalem by Saladin; he died in 1189, and his successor, Leo, or Livon, after having successfully courted the favour of pope and emperor, was recognised as king of Armenia by the emperor Henry VI., and was crowned by Conrad of Wittelsbach, Archbishop of Mainz, in 1198." The dynasty ended with Leo IV., whose "whole reign was a continued struggle against the Moslems," and who was assassinated about 1342. "The five remaining kings of Armenia sprang from a branch of the Cypriot house of Lusignan [see CYPRUS: A. D. 1192-1489]."—W. Stubbs, *Lects. on the Study of Medieval and Modern Hist.*, lect. 8.

ARMENIAN CHURCH, The.—The church of the Armenians is "the oldest of all national churches. They were converted by St. Gregory, called 'The Illuminator,' who was a relative of Dertad or Tiridates, their prince, and had been forced to leave the country at the same time with him, and settled at Cesareia in Cappadocia, where he was initiated into the Christian faith. When they returned, both prince and people embraced the Gospel through the preaching of Gregory, A. D. 276, and thus presented the first instance of an entire nation becoming Christian. . . . By an accident they were unrepresented at [the Council of] Chalcedon [A. D. 451], and, owing to the poverty of their language in words serviceable for the purposes of theology, they had at that time but one word for Nature and Person, in consequence of which they misunderstood the decision of that council [that Christ possessed two natures, divine and human, in one Person] with sufficient clearness. . . . It was not until eighty-four years had elapsed that they finally adopted Eutychianism [the doctrine that the divinity is the sole nature in Christ], and an anathema was pronounced on the Chalcedonian decrees (536)."—H. F. Tozer, *The Church and the Eastern Empire*, ch. 5.—"The religion of Armenia could not derive much glory from the learning or the power of its inhabitants. The royalty expired with the origin of their schism; and their Christian kings, who arose and fell in

the 13th century on the confines of Cilicia, were the clients of the Latins and the vassals of the Turkish sultan of Iconium. The helpless nation has seldom been permitted to enjoy the tranquillity of servitude. From the earliest period to the present hour, Armenia has been the theatre of perpetual war; the lands between Tauris and Erivan were dispeopled by the cruel policy of the Sophis; and myriads of Christian families were transplanted, to perish or to propagate in the distant provinces of Persia. Under the rod of oppression, the zeal of the Armenians is fervent and intrepid; they have often preferred the crown of martyrdom to the white turban of Mahomet; they devoutly hate the error and idolatry of the Greeks."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 47.

ARMORIAL BEARINGS, Origin of.—"As to armorial bearings, there is no doubt that emblems somewhat similar have been immemorially used both in war and peace. The shields of ancient warriors, and devices upon coins or seals, bear no distant resemblance to modern blazonry. But the general introduction of such bearings, as hereditary distinctions, has been sometimes attributed to tournaments, wherein the champions were distinguished by fanciful devices; sometimes to the crusades, where a multitude of all nations and languages stood in need of some visible token to denote the banners of their respective chiefs. In fact, the peculiar symbols of heraldry point to both these sources and have been borrowed in part from each. Hereditary arms were perhaps scarcely used by private families before the beginning of the thirteenth century. From that time, however, they became very general."—H. Hallam, *The Middle Ages*, ch. 2, pt. 2.

ARMORICA.—The peninsular projection of the coast of Gaul between the mouths of the Seine and the Loire, embracing modern Brittany, and a great part of Normandy, was known to the Romans as Armorica. The most important of the Armorican tribes in Cæsar's time was that of the Veneti. "In the fourth and fifth centuries, the northern coast from the Loire to the frontier of the Netherlands was called 'Tractus Aremoricus,' or Aremorica, which in Celtic signifies 'maritime country.' The commotions of the third century, which continued to increase during the fourth and fifth, repeatedly drove the Romans from that country. French antiquaries imagine that it was a regularly constituted Gallic republic, of which Chlovis had the protectorate, but this is wrong."—B. G. Niebuhr, *Lects. on Ancient Ethnography and Geog.*, v. 2, p. 318.

ARTHUR, King, and the Knights of the Round Table.—"On the difficult question, whether there was a historical Arthur or not, . . . a word or two must now be devoted . . . ; and here one has to notice in the first place that Welsh literature never calls Arthur a gwledig or prince but emperor, and it may be inferred that his historical position, in case he had such a position, was that of one filling, after the departure of the Romans, the office which under them was that of the Comes Britannicæ or Count of Britain. The officer so called had a roving commission to defend the Province wherever his presence might be called for. The other military captains here were the Dux Britanniarum, who had charge of the forces in the north and especially on the Wall, and the Comes Littoris Saxonici [Count of the Saxon Shore], who was entrusted with the defence of the south-eastern coast of the island. The successors of both these captains seem to have been called in Welsh gwledigs or princes. So Arthur's suggested position as Comes Britannicæ would be in a sense superior to theirs, which harmonizes with his being called emperor and not gwledig. The Welsh have borrowed the Latin title of imperator, 'emperor,' and made it into 'amherawdyr,' later 'amherawdwr,' so it is not impossible, that when the Roman emperor ceased to have anything more to say to this country, the title was given to the highest officer in the island, namely the Comes Britannicæ, and that in the words 'Yr Amherawdyr Arthur,' 'the Emperor Arthur,' we have a remnant of our insular history. If this view be correct, it might be regarded as something more than an accident that Arthur's position relatively to that of the other Brythonic princes of his time is exactly given by Nennius, or whoever it was that wrote the *Historia Brittonum* ascribed to him: there Arthur is represented fighting in company with the kings of the Brythons in defence of their common country, he being their leader in war. If, as has sometimes been argued, the uncle of Maglocunus or Maelgwn, whom the latter is accused by Gilda of having slain and superseded, was no other than Arthur, it would supply one reason why that writer called Maelgwn 'insu-

laris draco,' 'the dragon or war-captain of the island,' and why the latter and his successors after him were called by the Welsh not gwledigs but kings, though their great ancestor Cuneda was only a gwledig. On the other hand the way in which Gildas alludes to the uncle of Maelgwn without even giving his name, would seem to suggest that in his estimation at least he was no more illustrious than his predecessors in the position which he held, whatever that may have been. How then did Arthur become famous above them, and how came he to be the subject of so much story and romance? The answer, in short, which one has to give to this hard question must be to the effect, that besides a historic Arthur there was a Brythonic divinity named Arthur, after whom the man may have been called, or with whose name his, in case it was of a different origin, may have become identical in sound owing to an accident of speech; for both explanations are possible, as we shall attempt to show later. Leaving aside for a while the man Arthur, and assuming the existence of a god of that name, let us see what could be made of him. Mythologically speaking he would probably have to be regarded as a Culture Hero; for, a model king and the institutor of the Knighthood of the Round Table, he is represented as the leader of expeditions to the isles of Hades, and as one who stood in somewhat the same kind of relation to Gwalchmei as Gwydion did to ILeu. It is needless here to dwell on the character usually given to Arthur as a ruler: he with his knights around him may be compared to Conchobar, in the midst of the Champions of Emain Macha, or Woden among the Anses at Valhalla, while Arthur's Knights are called those of the Round Table, around which they are described sitting; and it would be interesting to understand the signification of the term Round Table. On the whole it is the table, probably, and not its roundness that is the fact to which to call attention, as it possibly means that Arthur's court was the first early court where those present sat at a table at all in Britain. No such thing as a common table figures at Conchobar's court or any other described in the old legends of Ireland, and the same applies, we believe, to those of the old Norsemen. The attribution to Arthur of the first use of a common table would fit in well with the character of a Culture Hero which we have ventured to ascribe to him, and it derives countenance from the pretended history of the Round Table; for the Arthurian legend traces it back to Arthur's father, Uthr Bendragon, in whom we have under one of his many names the king of Hades, the realm whence all culture was fabled to have been derived. In a wider sense the Round Table possibly signified plenty or abundance, and might be compared with the table of the Ethiopians, at which Zeus and the other gods of Greek mythology used to feast from time to time."—J. Rhys, *Studies in the Arthurian Legend*, ch. 1.—See, also CUMERIA.

ARYANS.—ARYAS.—"This family (which is sometimes called Japhetic, or descendants of Japhet) includes the Hindus and Persians among Asiatic nations, and almost all the peoples of Europe. It may seem strange that we English should be related not only to the Germans and Dutch and Scandinavians, but to the Russians, French, Spanish, Romans and Greeks as well; stranger still that we can claim kinship with such distant peoples as the Persians and Hindus. . . . What seems actually to have been the case is this: In distant ages, somewhere about the rivers Oxus and Jaxartes, and on the north of that mountainous range called the Hindoo-Koosh, dwelt the ancestors of all the nations we have enumerated, forming at this time a single and united people, simple and primitive in their way of life, but yet having enough of a common national life to preserve a common language. They called themselves Aryas or Aryans, a word which, in its very earliest sense, seems to have meant those who move upwards, or straight; and hence, probably, came to stand for the noble race as compared with other races on whom, of course, they would look down. . . . As their numbers increased, the space wherein they dwelt became too small for them who had out of one formed many different peoples. Then began a series of migrations, in which the collection of tribes who spoke one language and formed one people started off to seek their fortune in new lands. . . . First among them, in all probability, started the Kelts or Celts, who, travelling perhaps to the South of the Caspian and the North of the Black Sea, found their way to Europe and spread far on to the extreme West. . . . Another of the great families who left the Aryan home was the Pelagic or the Græco-Italic. These, journeying along first Southwards and then to the West, passed through Asia Minor, on to the countries of Greece and Italy, and in time separated into those two great peoples, the Greeks (or Hellenes, as they came to call themselves), and the Romans. . . . Next we come to two other great families of nations who seem to have taken the same route at first, and perhaps began their travels together as the Greeks and Romans did. These are the Teutons and the Slaves. . . . The word Slave comes from Slawan, which in old Slavonian meant to speak, and was given by the Slavonians to themselves as the people who could speak in

opposition to other nations whom, as they were not able to understand them, they were pleased to consider as dumb. The Greek word barbaroi (whence our barbarians) arose in obedience to a like prejudice, only from an imitation of babbling such as is made by saying 'bar-bar-bar.'—C. F. Keary, *Dawn of History*, ch. 4.—The above passage sets forth the older theory of an Aryan family of nations as well as of languages in its unqualified form. Its later modifications are indicated in the following: "The discovery of Sanscrit and the further discovery to which it led, that the languages now variously known as Aryan, Aryanian, Indo-European, Indo-Germanic, Indo-Celtic and Japhetic are closely akin to one another, spread a spell over the world of thought which cannot be said to have yet wholly passed away. It was hastily argued from the kinship of their languages to the kinship of the nations that spoke them. . . . The question then arises as to the home of the 'hoethnos,' or parent tribe, before its dispersion and during the pre-ethnic period, at a time when as yet there was neither Greek nor Hindoo, neither Celt nor Teuton, but only an undifferentiated Aryan. Of course, the answer at first was—where could it have been but in the East. And at length the glottologist found it necessary to shift the cradle of the Aryan race to the neighbourhood of the Oxus and the Jaxartes, so as to place it somewhere between the Caspian Sea and the Himalayas. Then Doctor Latham boldly raised his voice against the Asiatic theory altogether, and stated that he regarded the attempt to deduce the Aryans from Asia as resembling an attempt to derive the reptiles of this country from those of Ireland. Afterwards Benfey argued, from the presence in the vocabulary common to the Aryan languages of words for bear and wolf, for birch and beech, and the absence of certain others, such as those for lion, tiger and palm, that the original home of the Aryans must have been within the temperate zone in Europe. . . . As might be expected in the case of such a difficult question, those who are inclined to believe in the European origin of the Aryans are by no means agreed among themselves as to the spot to be fixed upon. Latham placed it east, or south-east of Lithuania, in Podolia, or Volhynia; Benfey had in view a district above the Black Sea and not far from the Caspian; Peschel fixed on the slopes of the Caucasus; Cuno on the great plain of Central Europe; Fligier on the southern part of Russia; Pösche on the tract between the Niemen and the Dnieper; L. Geiger on central and western Germany; and Penka on Scandinavia."—J. Rhys, *Race Theories* (in *New Princeton Rev.*, Jan., 1888).—"Aryan, in scientific language, is utterly inapplicable to race. It means language, and nothing but language; and, if we speak of Aryan race at all, we should know that it means no more than X + Aryan speech. . . . I have declared again and again that if I say Aryas, I mean neither blood nor bones, nor hair nor skull; I mean simply those who speak an Aryan language. The same applies to Hindus, Greeks, Romans, Germans, Celts and Slaves. . . . In that sense, and in that sense only, do I say that even the blackest Hindus represent an earlier stage of Aryan speech and thought than the fairest Scandinavians. . . . If an answer must be given as to the place where our Aryan ancestors dwelt before their separation,

whether in large swarms of millions, or in a few scattered tents and huts, I should still say, as I said forty years ago, 'Somewhere in Asia,' and no more."—F. Max Müller, *Biog. of Words and Home of the Aryas*, ch. 6.—The theories which dispute the Asiatic origin of the Aryans are strongly presented by Canon Taylor in *The Origin of the Aryans*, by G. H. Rendall, in *The Cradle of the Aryans*, and by Dr. O. Schrader in *Prehistoric Antiquities of the Aryan Peoples*.—See, also, INDIA: THE ABORIGINAL INHABITANTS; THE IMMIGRATION AND CONQUESTS OF THE ARYAS, and EUROPE.

AS.—LIBRA.—DENARIUS.—SESTER-TIUS.—"The term As [among the Romans] and the words which denote its divisions, were not confined to weight alone, but were applied to measures of length and capacity also, and in general to any object which could be regarded as consisting of twelve equal parts. Thus they were commonly used to denote shares into which an inheritance was divided." As a unit of weight the As, or Libra, "occupied the same position in the Roman system as the pound does in our own. According to the most accurate researches, the As was equal to about 11½ oz. avoirdupois, or .7375 of an avoirdupois pound." It "was divided into 12 equal parts called uncie, and the uncia was divided into 24 equal parts called scrupula." "The As, regarded as a coin [of copper] originally weighed, as the name implies, one pound, and the smaller copper coins those fractions of the pound denoted by their names. By degrees, however, the weight of the As, regarded as a coin, was greatly diminished. We are told that, about the commencement of the first Punic war, it had fallen from 12 ounces to 2 ounces; in the early part of the second Punic war (B. C. 217), it was reduced to one ounce; and not long afterwards, by a Lex Papiria, it was fixed at half-an-ounce, which remained the standard ever after." The silver coins of Rome were the Denarius, equivalent (after 217 B. C.) to 16 Asses; the Quinarius and the Sestertius, which became, respectively, one half and one fourth of the Denarius in value. The Sestertius, at the close of the Republic, is estimated to have been equivalent in value to two pence sterling of English money. The coinage was debased under the Empire. The principal gold coin of the Empire was the Denarius Aureus, which passed for 25 silver Denarii.—W. Ramsay, *Manual of Roman Antiq.*, ch. 13.

ASIA: The Name.—"There are grounds for believing Europe and Asia to have originally

signified 'the west' and 'the east' respectively. Both are Semitic terms, and probably passed to the Greeks from the Phœnicians. . . . The Greeks first applied the title [Asia] to that portion of the eastern continent which lay nearest to them, and with which they became first acquainted—the coast of Asia Minor opposite the Cyclades; whence they extended it as their knowledge grew. Still it had always a special application to the country about Ephesus."—G. Rawlinson, *Notes to Herodotus*, v. 3, p. 33.

ASIA: The Roman Province (so called).—"As originally constituted, it corresponded to the dominions of the kings of Pergamus . . . left by the will of Attalus III. to the Roman people (B. C. 133). . . . It included the whole of Mysia and Lydia, with Æolis, Ionia and Caria, except a small part which was subject to Rhodes, and the greater part, if not the whole, of Phrygia. A portion of the last region, however, was detached from it."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 20, sect. 1.

ASIA, Central.—Mongol Conquest. See MONGOLS.

Turkish Conquest. See TURKS.

Russian Conquests. See RUSSIA: A. D. 1859-1876, and 1869-1881.

ASIA MINOR.—"The name of Asia Minor, so familiar to the student of ancient geography, was not in use either among Greek or Roman writers until a very late period. Orosius, who wrote in the fifth century after the Christian era, is the first extant writer who employs the term in its modern sense."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 7, sect. 2.—The name Anatolia, which is of Greek origin, synonymous with "The Levant," signifying "The Sunrise," came into use among the Byzantines, about the 10th century, and was adopted by their successors, the Turks.

The Greek Colonies.—"The tumult which had been caused by the irruption of the Thesprotians into Thessaly and the displacement of the population of Greece [see GREECE: THE MIGRATION, &c.] did not subside within the limits of the peninsula. From the north and the south those inhabitants who were unable to maintain their ground against the incursions of the Thessalians, Arnaeans, or Dorians, and preferred exile to submission, sought new homes in the islands of the Aegean and on the western coast of Asia Minor. The migrations continued for several generations. When at length they came to an end, and the Anatolian coast from Mount Ida to the Triopian headland, with the adjacent islands, was in the possession of the Greeks, three great divisions or tribes were distinguished in the new settlements: Dorians, Ionians, and Aeolians. In spite of the presence of some alien elements, the Dorians and Ionians of Asia Minor were the same tribes as the Dorians and Ionians of Greece. The Aeolians, on the other hand, were a composite tribe, as their name implies. . . . Of these three divisions the Aeolians lay farthest to the north. The precise limits of their territory were differently fixed by different authorities. . . . The Aeolic cities fell into two groups: a northern, of which Lesbos was the centre, and a southern, composed of the cities in

the immediate neighbourhood of the Hermus, and founded from Cyme. . . . The northern group included the islands of Tenedos and Lesbos. In the latter there were originally six cities: Methymna, Mytilene, Pyrrha, Eresus, Arisba, and Antissa, but Arisba was subsequently conquered and enslaved by Mytilene. . . . The second great stream of migration proceeded from Athens [after the death of Codrus—see ATHENS: FROM THE DORIAN MIGRATION TO B. C. 683—according to Greek tradition, the younger sons of Codrus leading these Ionian colonists across the Aegean, first to the Carian city of Miletus—see MILETUS,—which they captured, and then to the conquest of Ephesus and the island of Samos]. . . . The colonies spread until a dodecapolis was established, similar to the union which the Ionians had founded in their old settlements on the northern shore of Peloponnesus. In some cities the Ionian population formed a minority. . . . The colonisation of Ionia was undoubtedly, in the main, an achievement of emigrants from Attica, but it was not accomplished by a single family, or in the space of one life-time. . . . The two most famous of the Ionian cities were Miletus and Ephesus. The first was a Carian city previously known as Anactoria. . . . Ephesus was originally in the hands of the Leleges and the Lydians, who were driven out by the Ionians under Androclus. The ancient sanctuary of the tutelary goddess of the place was transformed by the Greeks into a temple of Artemis, who was here worshipped as the goddess of birth and productivity in accordance with Oriental rather than Hellenic ideas." The remaining Ionic cities and islands were Myus (named from the mosquitoes which infested it, and which finally drove the colony to abandon it), Priene, Erythrae, Clazomenae, Teos, Phocaea, Colophon, Lebedus, Samos and Chios. "Chios was first inhabited by Cretans . . . and subsequently by Carians. . . . Of the manner in which Chios became connected with the Ionians the Chians could give no clear account. . . . The southern part of the Anatolian coast, and the southern-most islands in the Aegean were colonised by the Dorians, who wrested them from the Phœnician or Carian occupants. Of the islands, Crete is the most important. . . . Crete was one of the oldest centres of civilisation in the Aegean [see CRETE]. . . . The Dorian colony in Rhodes, like that in Crete, was ascribed to the band which left Argos under the command of Althaemenes. . . . Other islands colonised by the Dorians were Thera, . . . Melos, . . . Carpathus, Calydnæ, Nisyros, and Cos. . . . From the islands, the Dorians spread to the mainland. The peninsula of Cnidus was perhaps the first settlement. . . . Halicarnassus was founded from Troezen, and the Ionian element must have been considerable. . . . Of the Dorian cities, six united in the common worship of Apollo on the headland of Triopium. These were Lindus, Ialysus, and Camirus in Rhodes, Cos, and, on the mainland, Halicarnassus and Cnidus. . . . The territory which the Aeolians acquired is described by Herodotus as more fertile than that occupied by the Ionians, but of a less excellent climate. It was inhabited by a number of tribes, among which the Troes or Teucri were the chief. . . . In Homer the inhabitants of the city of the Troad are Dardani or Troes, and the name Teucri does not occur. In historical times the Gergithes,

who dwelt in the town of the same name . . . near Lampsacus, and also formed the subject population of Miletus, were the only remnants of this once famous nation. But their former greatness was attested by the Homeric poems, and the occurrence of the name Gergithians at various places in the Troad [see TROJA]. To this tribe belonged the Troy of the Grecian epic, the site of which, so far as it represents any historical city, is fixed at Hissarlik. In the Iliad the Trojan empire extends from the Aesepus to the Caicus; it was divided—or, at least, later historians speak of it as divided—into principalities which recognised Priam as their chief. But the Homeric descriptions of the city and its eminence are not to be taken as historically true. Whatever the power and civilisation of the ancient stronghold exhumed by Dr. Schliemann may have been, it was necessary for the epic poet to represent Priam and his nation as a dangerous rival in wealth and arms to the great kings of Mycenae and Sparta. . . . The traditional dates fix these colonies [of the Greeks in Asia Minor] in the generations which followed the Trojan war. . . . We may suppose that the colonisation of the Aegean and of Asia Minor by the Greeks was coincident with the expulsion of the Phoenicians. The greatest extension of the Phoenician power in the Aegean seems to fall in the 15th century B. C. From the 13th it was gradually on the decline, and the Greeks were enabled to secure the trade for themselves. . . . By 1100 B. C. Asia Minor may have been in the hands of the Greeks, though the Phoenicians still maintained themselves in Rhodes and Cyprus. But all attempts at chronology are illusory.”—E. Abbott, *Hist. of Greece*, ch. 4 (v. 1).

B. C. 724–539.—Prosperity of the Greek Colonies.—Their Submission to Crœsus, King of Lydia, and their conquest and annexation to the Persian Empire.—“The Grecian colonies on the coast of Asia early rose to wealth by means of trade and manufactures. Though we have not the means of tracing their commerce, we know that it was considerable, with the mother country, with Italy, and at length Spain, with Phœnicia and the interior of Asia, whence the productions of India passed to Greece. The Milesians, who had fine woollen manufactures, extended their commerce to the Euxine, on all sides of which they founded factories, and exchanged their manufactures and other goods with the Scythians and the neighbouring peoples, for slaves, wool, raw hides, bees-wax, flax, hemp, pitch, etc. There is even reason to suppose that, by means of caravans, their traders bartered their wares not far from the confines of China [see MILETUS]. . . . But while they were advancing in wealth and prosperity, a powerful monarchy formed itself in Lydia, of which the capital was Sardes, a city at the foot of Mount Tmolus.” Gyges, the first of the Mermnad dynasty of Lydian kings (see LYDIANS), whose reign is supposed to have begun about B. C. 724, “turned his arms against the Ionian cities on the coast. During a century and a half the efforts of the Lydian monarchs to reduce these states were unavailing. At length (Ol. 55) [B. C. 568] the celebrated Crœsus

mounted the throne of Lydia, and he made all Asia this side of the River Halys (Lycia and Cilicia excepted) acknowledge his dominion. The Aeolian, Ionian and Dorian cities of the coast all paid him tribute; but, according to the usual rule of eastern conquerors, he meddled not with their political institutions, and they might deem themselves fortunate in being insured against war by the payment of an annual sum of money. Crœsus, moreover, cultivated the friendship of the European Greeks.” But Crœsus was overthrown, B. C. 554, by the conquering Cyrus and his kingdom of Lydia was swallowed up in the great Persian empire then taking form [see PERSIA: B. C. 549–521]. Cyrus, during his war with Crœsus, had tried to entice the Ionians away from the latter and win them to an alliance with himself. But they incurred his resentment by refusing. “They and the Æolians now sent ambassadors, praying to be received to submission on the same terms as those on which they had obeyed the Lydian monarch; but the Milesians alone found favour: the rest had to prepare for war. They repaired the walls of their towns, and sent to Sparta for aid. Aid, however, was refused; but Cyrus, being called away by the war with Babylon, neglected them for the present. Three years afterwards (Ol. 59, 2), Harpagus, who had saved Cyrus in his infancy from his grandfather Astyages, came as governor of Lydia. He instantly prepared to reduce the cities of the coast. Town after town submitted. The Teians abandoned theirs, and retired to Abdera in Thrace; the Phocæans, getting on shipboard, and vowing never to return, sailed for Corsica, and being there harassed by the Carthaginians and Tyrrhenians, they went to Rhegium in Italy, and at length founded Massalia (Marseilles) on the coast of Gaul. The Grecian colonies thus became a part of the Persian empire.”—T. Keightley, *Hist. of Greece*, pt. 1, ch. 9.

ASSASSINS, The.—"I must speak . . . of that wonderful brotherhood of the Assassins, which during the 12th and 13th centuries spread such terror through all Asia, Mussulman and Christian. Their deeds should be studied in Von Hammer's history of their order, of which however there is an excellent analysis in Taylor's History of Mohammedanism. The word Assassin, it must be remembered, in its ordinary signification, is derived from this order, and not the reverse. The Assassins were not so called because they were murderers, but murderers are called assassins because the Assassins were murderers. The origin of the word Assassin has been much disputed by oriental scholars; but its application is sufficiently written upon the Asiatic history of the 12th century. The Assassins were not, strictly speaking, a dynasty, but rather an order, like the Templars; only the office of Grand-Master, like the Caliphate, became hereditary. They were originally a branch of the Egyptian Ishmaelites [see **MAHOMETAN CONQUEST**: A. D. 908-1171] and at first professed the principles of that sect. But there can be no doubt that their inner doctrine became at last a mere negation of all religion and all morality. 'To believe nothing and to dare everything' was the summary of their teaching. Their exoteric principle, addressed to the non-initiated members of the order, was simple blind obedience to the will of their superiors. If the Assassin was ordered to take off a Caliph or a Sultan by the dagger or the bowl,

the deed was done; if he was ordered to throw himself from the ramparts, the deed was done likewise. . . . Their founder was Hassan Sabah, who, in 1090, shortly before the death of Malek Shah, seized the castle of Alamout—the Vulture's nest—in northern Persia, whence they extended their possessions over a whole chain of mountain fortresses in that country and in Syria. The Grand-Master was the Sheikh-al-Jebal, the famous Old Man of the Mountain, at whose name Europe and Asia shuddered.—E. A. Freeman, *Hist. and Conquests of the Saracens*, lect. 4.—“In the Fatimide Khalif of Egypt, they [the Assassins, or Ismailis of Syria and Persia] beheld an incarnate deity. To kill his enemies, in whatever way they best could, was an action, the merit of which could not be disputed, and the reward for which was certain.” Hasan Sabah, the founder of the Order, died at Alamout A. D. 1124. “From the day he entered Alamut until that of his death—a period of thirty-five years—he never emerged, but upon two occasions, from the seclusion of his house. Pitiless and inscrutable as Destiny, he watched the troubled world of Oriental politics, himself invisible, and whenever he perceived a formidable foe, caused a dagger to be driven into his heart.” It was not until more than a century after the death of its founder that the fearful organization of the Assassins was extinguished (A. D. 1257) by the same flood of Mongol invasion which swept Bagdad and the Caliphate out of existence.—R. D. Osborn, *Islam under the Khalifs of Bagdad*, pt. 3, ch. 3.—W. C. Taylor, *Hist. of Mohammedanism and its Sects*, ch. 9.—The Assassins were rooted out from all their strongholds in Kuhistan and the neighboring region, and were practically exterminated, in 1257, by the Mongols under Khulagu, or Houlagou, brother of Mongu Khan, the great sovereign of the Mongol Empire, then reigning. Alamut, the Vulture's Nest, was demolished.—H. H. Howorth, *Hist. of the Mongols*, part 1, p. 193; and part 3, pp. 91–108.—See BAGDAD: A. D. 1258.

ASSINIBOINS, The. See AMERICAN ABORIGINES: SIOUAN FAMILY.

ASSIZE, The Bloody. See ENGLAND: A. D. 1685 (SEPTEMBER).

ASSIZE OF BREAD AND ALE.—The Assize of Bread and Ale was an English ordinance or enactment, dating back to the time of Henry III. in the 13th century, which fixed the price of those commodities by a scale regulated according to the market prices of wheat, barley and oats. “The Assize of bread was re-enacted so lately as the beginning of the last century and

was only abolished in London and its neighbourhood about thirty years ago”—that is, early in the present century.—G. L. Craik, *Hist. of British Commerce*, v. 1, p. 137.

ASSIZE OF CLARENDON, The. See ENGLAND: A. D. 1162–1170.

ASSIZE OF JERUSALEM, The.—“No sooner had Godfrey of Bouillon [elected King of Jerusalem, after the taking of the Holy City by the Crusaders, A. D. 1099] accepted the office of supreme magistrate than he solicited the public and private advice of the Latin pilgrims who were the best skilled in the statutes and customs of Europe. From these materials, with the counsel and approbation of the Patriarch and barons, of the clergy and laity, Godfrey composed the Assize of Jerusalem, a precious monument of feudal jurisprudence. The new code, attested by the seals of the King, the Patriarch, and the Viscount of Jerusalem, was deposited in the holy sepulchre, enriched with the improvements of succeeding times, and respectfully consulted as often as any doubtful question arose in the tribunals of Palestine. With the kingdom and city all was lost; the fragments of the written law were preserved by jealous tradition and variable practice till the middle of the thirteenth century. The code was restored by the pen of John d'Ibelin, Count of Jaffa, one of the principal feudatories; and the final revision was accomplished in the year thirteen hundred and sixty-nine, for the use of the Latin kingdom of Cyprus.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 58.

ASSIZES.—“The formal edicts known under the name of Assizes, the Assizes of Clarendon and Northampton, the Assize of Arms, the Assize of the Forest, and the Assizes of Measures, are the only relics of the legislative work of the period [reign of Henry II. in England]. These edicts are chiefly composed of new regulations for the enforcement of royal justice. . . . In this respect they strongly resemble the capitularies of the Frank Kings, or, to go farther back, the edicts of the Roman prætors. . . . The term Assize, which comes into use in this meaning about the middle of the twelfth century, both on the continent and in England, appears to be the proper Norman name for such edicts. . . . In the ‘Assize of Jerusalem’ it simply means a law; and the same in Henry's legislation. Secondly, it means a form of trial established by the particular law, as the Great Assize, the Assize of Mort d'Ancester; and thirdly the court held to hold such trials, in which sense it is commonly used at the present day.”—W. Stubbs, *Const. Hist. of Eng.*, ch. 13.

ASSUR. See ASSYRIA.

ASSYRIA.—For matter relating to Assyrian history, the reader is referred to the caption SEMITES, under which it will be given. The subject is deferred to that part of this work which will go later into print, for the reason that every month is adding to the knowledge of the students of ancient oriental history and clearing away disputed questions. It is quite possible that the time between the publication of our first volume and our fourth or fifth may make important additions to the scanty literature of the subject in English. Modern excavation on the sites of the ancient cities in the East, bringing to light large library collections of inscribed clay tablets,—sacred and historical writings, official records,

business contracts and many varieties of inscriptions,—have almost revolutionized the study of ancient history and the views of antiquity derived from it. "M. Botta, who was appointed French consul at Mosul in 1842, was the first to commence excavations on the sites of the buried cities of Assyria, and to him is due the honour of the first discovery of her long lost palaces. M. Botta commenced his labours at Kouyunjik, the large mound opposite Mosul, but he found here very little to compensate for his labours. New at the time to excavations, he does not appear to have worked in the best manner; M. Botta at Kouyunjik contented himself with sinking pits in the mound, and on these proving unproductive abandoning them. While M. Botta was excavating at Kouyunjik, his attention was called to the mounds of Khorsabad by a native of the village on that site; and he sent a party of workmen to the spot to commence excavation. In a few days his perseverance was rewarded by the discovery of some sculptures, after which, abandoning the work at Kouyunjik, he transferred his establishment to Khorsabad and thoroughly explored that site. . . . The palace which M. Botta had discovered . . . is one of the most perfect Assyrian buildings yet explored, and forms an excellent example of Assyrian architecture. Beside the palace on the mound of Khorsabad, M. Botta also opened the remains of a temple, and a grand porch decorated by six winged bulls. . . . The operations of M. Botta were brought to a close in 1845, and a splendid collection of sculptures and other antiquities, the fruits of his labours, arrived in Paris in 1846 and was deposited in the Louvre. Afterwards the French Government appointed M. Place consul at Mosul, and he continued some of the excavations of his predecessor. . . . Mr. Layard, whose attention was early turned in this direction, visited the country in 1840, and afterwards took a great interest in the excavations of M. Botta. At length, in 1845, Layard was enabled through the assistance of Sir Stratford Canning to commence excavations in Assyria himself. On the 8th of November he started from Mosul, and descended the Tigris to Nimroud. . . . Mr. Layard has described in his works with great minuteness his successive excavations, and the remarkable and interesting discoveries he made. . . . After making these discoveries in Assyria, Mr. Layard visited Babylonia, and opened trenches in several of the mounds there. On the return of Mr. Layard to England, excavations were continued in the Euphrates valley under the superintendence of Colonel (now Sir Henry) Rawlinson. Under his directions, Mr. Hormuzd Rassam, Mr. Loftus, and Mr. Taylor excavated various sites and made numerous discoveries, the British Museum receiving the best of the monuments. The materials collected in the national museums of France and England, and the numerous inscriptions published, attracted the attention of the learned, and very soon considerable light was thrown on the history, language, manners, and customs of ancient Assyria and Babylonia."—G. Smith, *Assyrian Discoveries*, ch. 1.—"One of the most important results of Sir A. H. Layard's explorations at Nineveh was the discovery of the ruined library of the ancient city, now buried under the mounds of Kouyunjik. The broken clay tablets belonging to this library not only furnished the student with an immense mass of literary matter,

but also with direct aids towards a knowledge of the Assyrian syllabary and language. Among the literature represented in the library of Kouyunjik were lists of characters, with their various phonetic and ideographic meanings, tables of synonyms, and catalogues of the names of plants and animals. This, however, was not all. The inventors of the cuneiform system of writing had been a people who preceded the Semites in the occupation of Babylonia, and who spoke an agglutinative language utterly different from that of their Semitic successors. These Accadians, as they are usually termed, left behind them a considerable amount of literature, which was highly prized by the Semitic Babylonians and Assyrians. A large portion of the Ninevite tablets, accordingly, consists of interlinear or parallel translations from Accadian into Assyrian, as well as of reading books, dictionaries, and grammars, in which the Accadian original is placed by the side of its Assyrian equivalent. . . . The bilingual texts have not only enabled scholars to recover the long-forgotten Accadian language; they have also been of the greatest possible assistance to them in their reconstruction of the Assyrian dictionary itself. The three expeditions conducted by Mr. George Smith [1873–1876], as well as the later ones of Mr. Hormuzd Rassam, have added largely to the stock of tablets from Kouyunjik originally acquired for the British Museum by Sir A. H. Layard, and have also brought to light a few other tablets from the libraries of Babylonia."—A. H. Sayce, *Fresh Light from the Ancient Monuments*, ch. 1.

ASSYRIA, Eponym Canon of.—"Just as there were archons at Athens and consuls at Rome who were elected annually, so among the Assyrians there was a custom of electing one man to be over the year, whom they called 'limu,' or 'eponym.' . . . Babylonian and Assyrian documents were more generally dated by the names of these eponyms than by that of the reigning King. . . . In 1862 Sir Henry Rawlinson discovered the fragment of the eponym canon of Assyria. It was one of the grandest and most important discoveries ever made, for it has decided definitely a great many points which otherwise could never have been cleared up. Fragments of seven copies of this canon were found, and from these the chronology of Assyria has been definitely settled from B. C. 1330 to about B. C. 620."—E. A. W. A Logical Outline of Athenian and Greek History

IN WHICH THE DOMINANT CONDITIONS AND

INFLUENCES ARE DISTINGUISHED BY COLORS.

Physical or material.
Ethnological.
Social and political.
Intellectual, moral and
religious
Foreign.

The most capable people of early times, placed in the most favorable environment that the world in those times could offer them, worked out a civilization—perfect in all refinements except the moral—which has been the admiration and the marvel of later days.

Under modern conditions, the country of the Greeks gives no marked advantage to its inhabitants; but in the age of fiercer struggles, when war among men was tribal, universal, and hand to hand, and when the larger possibilities of pacific intercourse were bounded by one small sea, its intersecting mountains, its separated valleys and plains, its penetrating gulfs and bays, its clustered peninsulas in peninsulas, were helpful beyond measure to their social and political advance. In no other region of Europe could the independent city-states of ancient Hellas have grown up in shelter so safe, under skies so kindly, amid influences from the outer world so urgent and so strong.

It is reasonable to say that these happy conditions had much to do with the shaping of the character and career of the Greek people as a whole. But they differed very greatly from one another in their various political groups, and by differences that cannot be traced to varied surroundings of earth, or air, or sea, or human neighborhood. When every circumstance which distinguishes Athens in situation from Sparta, or from Corinth, or from Argos, has been weighed and reckoned, the Athenian is still parted from the Spartan, from the Corinthian and from the Argive, by a distinction which we name and do not explain by calling it family or race.

At some time in the unknown past, there had been a parting of kindred among the ancestors of the Greeks, and the current of descent ran, for many centuries, perhaps, in two clearly divided streams, which acquired (in what manner, who can guess?) very different characteristics and qualities in their course. Then, in time, the great migrations, which are at the beginning of the traditions of the Greeks, brought these two branches of the race (the Doric and the Ionic, as they are named) into contact again, and associated them in a common career.

In the inherited nature of the Ionian Greeks there was something which made them more sensitive to the finer delights of the mind, and prepared them to be more easily moved by every impulse toward philosophy and art, from the civilizations that were older than their own. In the Dorians there was less of this. They shared in equal measure, perhaps, the keen, clear Greek intellect, but they narrowed it to commoner aims.

It is possible that all which the Athenians came to be, their elder kindred, the Achaeans, might have been. Their peninsula of Argolis is the peninsula of Attica in duplicate,—washed by the same waves, and reaching out to the same eastern world. They were first to touch hands with Phœnicia and with Egypt, and first to borrow arts and ideas from Memphis and Tyra. But their civilization, which they had raised to the height which Homer portrays, was overwhelmed by the Doric conquest; and the fact that these invaders, succeeding to the same vantage ground, rendered as poor in culture as the Argives and their final masters, the Spartans, appear to have been, gives evidence of the strange difference that was rooted in the constitution of the two branches of the race.

By force of this difference, the Spartans formed their state upon the grim lines of a military camp, and took leadership among the Greeks in practical affairs. The Athenians adorned a free city with great and beautiful works, made it hospitable to all guests and all the knowledge of the time, and raised a capital for the civilization of the ancient world. The Dorians, on the other hand, were a people of stern and austere habits, who looked upon the life of the mind as a luxury, and who, in the end, were to be the great conquerors of the world. In Athens that course of evolution was run, but it did not end as with the rest. The Athenian democracy gave way to the purest democracy that has ever had trial in the world.

That this Athenian democracy was wise in itself may be open to doubt, but it produced wise men, and for the century of its great career, it was wonderfully led. How far that came to it from superiority of race, and how far as the fruits of the institutions, no man in say, but the succession of statesmen who raised Athens to her pitch of greatness, without slandering the government of the people, has no parallel in the annals of so small a state.

Sparta, not Athens, was the military head of Greece; but when a great emergency came upon the whole Greek world, it was the larger intelligence and higher spirit of the Attic state which inspired and guided the defence of the land, and drove the Persians back.

Making prompt use of the ascendancy she had won in the Persian War, Athens rose rapidly in power and wealth. Under the guise of a federation of the Ionian cities of the islands and of Asia Minor, she created an empire subject to her rule. She commanded the sea with superior fleets, and became first in commerce, as she was first in knowledge, in politics and in arts. Her coffers overflowed with the riches poured into them by her tribute-gatherers and her men of trade, and she employed them with a noble prodigality upon her temples and the buildings of the state. Her abounding genius yielded fruits, in learning, letters, and art, which surpass the whole experience of the world, before and since, when measured against the smallness of the numbers from which they came.

But the power attained by the Athenian democracy was arrogantly and harshly used, its sovereignty was exercised without generosity or restraint. It provoked the hatred of its subjects, and the bitter jealousy of rival states. Hence war in due time was inevitable, and Athens, alone in the war, was thrown down from her high estate. The last of the great leaders of her golden age died when her need of him was greatest, and her citizens were given over to demagogues who beguiled them to the ruin of the republic.

Sparta regained the supremacy in Greece, and her rude domination, imposed upon all, was harder to bear than the superiority of Athens had been. Under the lead of Epaminondas of Thebes—the most high-souled statesman who ever swayed the Hellenic race—the Spartan yoke was broken.

But, in breaking it, all unity in Hellas was destroyed, and all hope of resistance to any common foe. The foe who first appeared was the half-Greek Macedonian, King Philip, who subdued the whole peninsula with ease, and found none to defend it so heroically as the orator Demosthenes.

But the subjugated Greeks were not yet at the end of their career. With Philip's great son they went forth to a new and higher destiny than the building of petty states. Unwittingly he made conquest of an empire for them, and not for himself. They Hellenized it from the Euxine to the Nile. In Egypt, in Syria, and in Asia Minor, they entered and took possession of every field of activity, and put their impress on every movement of thought. Their philosophy and their literature fed all the intellectual hunger of the age; their energy was its civilizing force.

Then the Romans came, to conquer and be conquered by the spirit of Athenian Greece, and to do for Europe, in the West, what the Macedonians had done in the East. They effaced Greece from history, in the political sense; but they kneeled to her teaching, and became the servants of her civilization, to carry it wherever the Roman eagles went.

A little later, when that civilization was changed by the transforming spirit of the Gospel of Christ, it did not cease to be essentially Greek; for Hellenism and Hebraism were fused in the theology of the rising Christian Church, and Greek thought ruled mankind again in an altered phase.

At last when Roman imperialism was driven from the West, Greece drew it to herself, and reigned in the great name of Rome, and fought gloriously with barbarians and with infidels for a thousand added years, defending the Christian world till it grew strong and stood in peril no more.

ATABEGS, ATTABEGS, OR ATTABECKS.—"From the decline of the dynasty of Seljook to the conquest of Persia by Hulakoo Khan, the son of Chenghis, a period of more than a century, that country was distracted by the contests of petty princes, or governors, called Attabegs, who, taking advantage of the weakness of the last Seljookian monarchs, and of the distractions which followed their final extinction, established their authority over some of the finest provinces of the Empire. Many of these petty dynasties acquired such a local fame as, to this day, gives an importance to their memory with the inhabitants of the countries over which they ruled. . . . The word Attabeg is Turkish: it is a compound word of 'atta,' master, or tutor, and 'beg,' lord; and signifies a governor, or tutor, of a lord or prince."—Sir J.

Malcolm, *Hist. of Persia*, v. 1, ch. 9.—"It is true that the Atabeks appear but a short space as actors on the stage of Eastern history; but these 'tutors of princes' occupy a position neither insignificant nor unimportant in the course of events which occurred in Syria and Persia at the time they flourished."—W. H. Morley, *Preface to Mirkhond's Hist. of the Atabeks*.—See, also, SALADIN, THE EMPIRE OF.

ATHENS.

The Preëminence of Athens.—"When we speak of Greece we think first of Athens. . . . To citizens and to strangers by means of epic recitations and dramatic spectacles, she presented an idealised image of life itself. She was the home of new ideas, the mother-city from which poetry, eloquence, and philosophy spread to distant lands. While the chief dialects of Greece survive, each not as a mere dialect but as the language of literature,—a thing unknown in the history of any other people,—the Attic idiom, in which the characteristic elements of other dialects met and were blended, has become to us, as it did to the ancients, the very type of Hellenic speech. Athens was not only the 'capital of Greece,' the 'school of Greece;' it deserves the name applied to it in an epitaph on Euripides: 'his country is Athens, Greece of Greece.' The rays of the Greek genius here found a centre and a focus."—S. H. Butcher, *Some Aspects of the Greek Genius*, pp. 38-39.—"Our interest in ancient history, it may be said, lies not in details but in large masses. It matters little how early the Arcadians acquired a political unity or what Nabis did to Mycenæ; that which interests us is the constitution of Athens, the repulse of Persia, the brief bloom of Thebes. Life is not so long that we can spend our days over the unimportant fates of uninteresting tribes and towns."

Area and Population.—"The entire circuit of the Asty [the lower city, or Athens proper], Long Walls and maritime city, taken as one inclosure, is equal to about 17 English miles, or 148 stades. This is very different from the 200 stades which Dion Chrysostom states to have been the circumference of the same walls, an estimate exceeding by more than 20 stades even the sum of the peripheries of the Asty and Peiraic towns, according to the numbers of Thucydides. . . . Rome was circular, Syracuse

triangular, and Athens consisted of two circular cities, joined by a street of four miles in length,—a figure, the superficies of which was not more than the fourth part of that of a city of an equal circumference, in a circular form. Hence, when to Rome within the walls were added suburbs of equal extent, its population was greater than that of all Attica. That of Athens, although the most populous city in Greece, was probably never greater than 200,000."—W. M. Leake, *Topography of Athens*, sect. 10.

Ionian Origin. See DORIAN and IONIAN.

The Beginning of the city-state.—How Attica was absorbed in its capital.—"In the days of Cecrops and the first kings [see ATTICA] down to the reign of Theseus, Attica was divided into communes, having their own town-halls and magistrates. Except in case of alarm the whole people did not assemble in council under the king, but administered their own affairs, and advised together in their several townships. Some of them at times even went to war with him, as the Eleusinians under Eumolpus with Erectheus. But when Theseus came to the throne, he, being a powerful as well as a wise ruler, among other improvements in the administration of the country, dissolved the councils and separate governments, and united all the inhabitants of Attica in the present city, establishing one council and town-hall. They continued to live on their own lands, but he compelled them to resort to Athens as their metropolis, and henceforward they were all inscribed in the roll of her citizens. A great city thus arose which was handed down by Theseus to his descendants, and from his day to this the Athenians have regularly celebrated the national festival of the Synœcia, or 'union of the communes' in honour of the goddess Athenè. Before his time, what is now the Acropolis and the ground lying under it to the south was the

city. Many reasons may be urged in proof of this statement."—Thucydides, *History* (Jowett's trans.), bk. 2, sect. 15.

ALSO IN: M. Duncker, *Hist. of Greece*, bk. 3, ch. 7 (v. 2).

From the Dorian Migration to B. C. 683.—End of kingship and institution of the Archons.—At the epoch of the Boeotian and Dorian migrations (see GREECE: THE MIGRATIONS), Attica was flooded by fugitives, both from the north and from the Peloponnesus. "But the bulk of the refugees passed on to Asia, and built up the cities of Ionia. . . . When the swarms of emigrants cleared off, and Athens is again discernable, the crown has passed from the old royal house of the Cecropidae to a family of exiles from Peloponnesus. . . . A generation later the Dorian invasion, which had overwhelmed Corinth and torn away Megara from the Attic dominion, swept up to the very gates of Athens. An oracle declared that the city would never fall if its ruler perished by the hand of the invaders; therefore King Codrus disguised himself as a peasant, set out for the Dorian camp, struck down the first man he met, and was himself slain by the second. The invasion failed, and the Athenians, to perpetuate the memory of their monarch's patriotism, would not allow the title of 'king' to be borne by the descendants who succeeded him on the throne, but changed the name to 'archon,' or 'ruler.' . . . These legends evidently cover some obscure changes in the internal history of Attica."—C. W. C. Oman, *Hist. of Greece*, ch. 11.—"After the death of Codrus the nobles, taking advantage, perhaps, of the opportunity afforded by the dispute between his sons, are said to have abolished the title of king, and to have substituted for it that of Archon. This change, however, seems to have been important, rather as it indicated the new, precarious tenure by which the royal power was held, than as it immediately affected the nature of the office. It was, indeed, still held for life; and Medon, the son of Codrus, transmitted it to his posterity. . . . After twelve reigns, ending with that of Alcmaeon [B. C. 752], the duration of the office was limited to ten years; and through the guilt or calamity of Hippomenes, the fourth decennial archon, the house of Medon was deprived of its privilege, and the supreme magistracy was thrown open to the whole body of nobles. This change was speedily followed by one much more important. . . . The duration of the archonship was again reduced to a single year [B. C. 683]; and, at the same time, its branches were severed and distributed among nine new magistrates. Among these, the first in rank retained the distinguishing title of the Archon, and the year was marked by his name. He represented the majesty of the state, and exercised a peculiar jurisdiction—that which had belonged to the king as the common parent of his people, the protector of families, the guardian of orphans and heiresses, and of the general rights of inheritance. For the second archon the title of king [basileus], if it had been laid aside, was revived, as the functions assigned to him were those most associated with ancient recollections. He represented the king as the high-priest of his people; he regulated the celebration of the mysteries and the most solemn festivals; decided all causes which affected the interests of religion. . . . The third

archon bore the title of Polemarch, and filled the place of the king as the leader of his people in war, and the guardian who watched over its security in time of peace. . . . The remaining six archons received the common title of thesmothetes, which literally signifies legislators, and was probably applied to them as the judges who determined the great variety of causes which did not fall under the cognizance of their colleagues; because, in the absence of a written code, those who declare and interpret the laws may be properly said to make them."—C. Thirlwall, *Hist. of Greece*, ch. 11.—"We are in no condition to determine the civil classification and political constitution of Attica, even at the period of the Archonship of Kreon, 683 B. C., when authentic Athenian chronology first commences, much less can we pretend to any knowledge of the anterior centuries. . . . All the information which we possess respecting that old polity is derived from authors who lived after all or most of these great changes [by Solon, and later]—and who, finding no records, nor anything better than current legends, explained the foretime as well as they could by guesses more or less ingenious, generally attached to the dominant legendary names."—G. Grote, *Hist. of Greece*, pt. 2, ch. 10.

ALSO IN: G. F. Schömann, *Antiq. of Greece: The State*, pt. 3, ch. 3.—M. Duncker, *Hist. of Greece*, bk. 3, ch. 7 (v. 2).

B. C. 624.—Under the Draconian Legislation.—"Drako was the first thesmothet, who was called upon to set down his thesmoi [ordinances and decisions] in writing, and thus to invest them essentially with a character of more or less generality. In the later and better-known times of Athenian law, we find these archons deprived in great measure of their powers of judging and deciding, and restricted to the task of first hearing of parties and collecting the evidence, next, of introducing the matter for trial into the appropriate dikastery, over which they presided. Originally, there was no separation of powers; the archons both judged and administered. . . . All of these functionaries belonged to the Eupatrids, and all of them doubtless acted more or less in the narrow interest of their order; moreover, there was ample room for favouritism in the way of connivance as well as antipathy on the part of the archons. That such was decidedly the case, and that discontent began to be serious, we may infer from the duty imposed on the thesmothet Drako, B. C. 624, to put in writing the thesmoi or ordinances, so that they might be 'shown publicly' and known beforehand. He did not meddle with the political constitution, and in his ordinances Aristotle finds little worthy of remark except the extreme severity of the punishments awarded: petty thefts, or even proved idleness of life, being visited with death or disfranchisement. But we are not to construe this remark as demonstrating any special inhumanity in the character of Drako, who was not invested with the large power which Solon afterwards enjoyed, and cannot be imagined to have imposed upon the community severe laws of his own invention. . . . The general spirit of penal legislation had become so much milder, during the two centuries which followed, that these old ordinances appeared to Aristotle intolerably rigorous."—G. Grote, *Hist. of Greece*, pt. 2, ch. 10 (v. 3).

B. C. 612-595.—Conspiracy of Cylon.—Banishment of the Alcmaeonids.—The first attempt at Athens to overturn the oligarchical government and establish a personal tyranny was made, B. C. 612, by Cylon (Kylon), a patrician, son-in-law of the tyrant of Megara, who was encouraged and helped in his undertaking by the latter. The conspiracy failed miserably. The partisans of Cylon, blockaded in the acropolis, were forced to surrender; but they placed themselves under the protection of the goddess Minerva and were promised their lives. More effectually to retain the protection of the goddess until their escape was effected, they attached a cord to her altar and held it in their hands as they passed out through the midst of their enemies. Unhappily the cord broke, and the archon Megacles at once declared that the safeguard of Minerva was withdrawn from them, whereupon they were massacred without mercy, even though they fled to the neighboring altars and clung to them. The treachery and bad faith of this cruel deed does not seem to have disturbed the Athenian people, but the sacrilege involved in it caused horror and fear when they had had time to reflect upon it. Megacles and his whole family—the Alcmaeonids as they were called, from the name of one of their ancestors—were held accountable for the affront to the gods and were considered polluted and accursed. Every public calamity was ascribed to their sin, and at length, after a solemn trial, they were banished from the city (about 596 or 595 B. C.), while the dead of the family were disinterred and cast out. The agitations of this affair exercised an important influence on the course of events, which opened the way for Solon and his constitutional reforms.—C. Thirlwall, *Hist. of Greece*, ch. 11.

B. C. 610-586.—Struggle with Megara for Salamis.—Cirrhaean or First Sacred War.—“The petty state of Megara, which, since the earlier ages, had, from the dependent of Athens, grown up to the dignity of her rival, taking advantage of the internal dissensions in the latter city, succeeded in wresting from the Athenian government the isle of Salamis. It was not, however, without bitter and repeated struggles that Athens at last submitted to the surrender of the isle. But, after signal losses and defeats, as nothing is ever more odious to the multitude than unsuccessful war, so the popular feeling was such as to induce the government to enact a decree by which it was forbidden, upon pain of death, to propose reasserting the Athenian claims. . . . Many of the younger portion of the community, pining at the dishonour of their country, and eager for enterprise, were secretly inclined to countenance any stratagem that might induce the reversal of the decree. At this time there went a report through the city that a man of distinguished birth . . . had incurred the consecrating misfortune of insanity. Suddenly this person appeared in the market place, wearing the peculiar badge [a cap] that distinguished the sick. . . . Ascending the stone from which the heralds made their proclamations, he began to recite aloud a poem upon the loss of Salamis, boldly reproving the cowardice of the people, and inciting them again to war. His supposed insanity protected him from the law—his rank, reputation, and the circumstance of his being himself a

native of Salamis, conspired to give to his exhortation a powerful effect, and the friends he had secured to back his attempt loudly proclaimed their applauding sympathy with the spirit of the address. The name of the pretended madman was Solon, son of Execestides, the descendant of Codrus. . . . The stratagem and the eloquence of Solon produced its natural effect upon his spirited and excitable audience, and the public enthusiasm permitted the oligarchical government to propose and effect the repeal of the law. An expedition was decreed and planned, and Solon was invested with its command. It was but a brief struggle to recover the little island of Salamis. . . . But the brave and resolute Megarians were not men to be disheartened by a single reverse; they persisted in the contest—losses were sustained on either side, and at length both states agreed to refer their several claims on the sovereignty of the island to the decision of Spartan arbiters. And this appeal from arms to arbitration is a proof how much throughout Greece had extended that spirit of civilisation which is but an extension of the sense of justice. . . . The arbitration of the umpires in favour of Athens only suspended hostilities; and the Megarians did not cease to watch (and shortly afterwards they found) a fitting occasion to regain a settlement so tempting to their ambition. The credit acquired by Solon in this expedition was shortly afterwards greatly increased in the estimation of Greece. In the Bay of Corinth was situated a town called Cirrha, inhabited by a fierce and lawless race, who, after devastating the sacred territories of Delphi, sacrilegiously besieged the city itself, in the desire to possess themselves of the treasures which the piety of Greece had accumulated in the Temple of Apollo. Solon appeared at the Amphietyonic council, represented the sacrilege of the Cirrhaeans, and persuaded the Greeks to arm in defence of the altars of their tutelary god [B. C. 595]. Clisthenes, the tyrant of Sicyon, was sent as commander-in-chief against the Cirrhaeans; and (according to Plutarch) the records of Delphi inform us that Alcmaeon was the leader of the Athenians. The war [known as the First Sacred War] was not very successful at the onset; the oracle of Apollo was consulted, and the answer makes one of the most amusing anecdotes of priestcraft. The besiegers were informed by the god that the place would not be reduced until the waves of the Cirrhaean Sea washed the territories of Delphi. The reply perplexed the army; but the superior sagacity of Solon was not slow in discovering that the holy intention of the oracle was to appropriate the lands of the Cirrhaeans to the profit of the temple. He therefore advised the besiegers to attack and to conquer Cirrha, and to dedicate its whole territory to the service of the god. The advice was adopted—Cirrha was taken [B. C. 586]; it became thenceforth the arsenal of Delphi, and the insulted deity had the satisfaction of seeing the sacred lands washed by the waves of the Cirrhaean Sea. . . . The Pythian games commenced, or were revived, in celebration of this victory of the Pythian god.”—Sir E. Bulwer Lytton, *Athens: Its Rise and Fall*, bk. 2, ch. 1.—See, also, DELPHI.

B. C. 594.—The Constitution of Solon.—The Council of Four Hundred.—“Solon, Archon Ol. 46,1, was chosen mediator. Equity and moderation are described by the ancients as

the characteristics of his mind; he determined to abolish the privileges of particular classes, and the arbitrary power of officers, and to render all the participators in civil and political freedom equal in the eye of the law, at the same time ensuring to every one the integrity of those rights to which his real merits entitled him; on the other hand, he was far from contemplating a total subversion of existing regulations. . . . Whatever was excellent in prescription was incorporated with the new laws and thereby stamped afresh; but prescription as such, with the exception of some unwritten religious ordinances of the Eumolpids, was deprived of force. The law was destined to be the sole centre, whence every member of the political community was to derive a fixed rule of conduct."—W. Wachsmuth, *Historical Antiquities of the Greeks*, sect. 46 (v. 1).—"The factions, to allay the reviving animosities of which was Solon's immediate object, had, at that time, formed parties corresponding to the geographical division of the country, which we have already adverted to; the Pedæi, or inhabitants of the lowlands, insisted on a strict oligarchy; the Paralî, on the coast, who, did we not find the Alcmaeonid Megacles at their head, might be considered the wealthier portion of the people, wished for a mixed constitution; but the Diacrii or Hyperacrii [of the mountainous district] formed the great majority, who, in their impoverished state, looked for relief only from a total revolution. Solon might, had he so chosen, have made himself tyrant by heading this populace; but he preferred acting as mediator, and with this view caused himself to be elected archon, B. C. 594, as being an Eupatrid of the house . . . of Codrus."—C. F. Hermann, *Manual of the Political Antiquities of Greece*, ch. 5, sect. 106.—"The chief power was vested in the collective people; but in order that it might be exercised with advantage it was necessary that they should be endowed with common rights of citizenship. Solon effected this by raising the lower class from its degradation, and by subjecting to legal control those who had till now formed the governing order, as well as by rendering the liberty of both dependent upon the law. . . . This change was brought about by two ordinances, which must not be regarded as mere remedies for the abuses of that period, but as the permanent basis of free and legal citizenship. The one was the Seisachtheia; this was enacted by Solon to afford relief to oppressed debtors, by reducing their debts in amount, and by raising the value of money in the payment of interest and principal; at the same time he abrogated the former rigorous law of debt by which the freeman might be reduced to servitude, and thus secured to him the unmolested possession of his legal rights. . . . A second ordinance enjoined, that their full and entire rights should be restored to all citizens who had incurred Atimia, except to absolute criminals. This was not only destined to heal the wounds which had been caused by the previous dissensions, but as till that time the law of debt had been able to reduce citizens to Atimia, and the majority of the Atimoi pointed out by Solon were slaves for debt, that declaration stood in close connection with the Seisachtheia, and had the effect of a proclamation from the state of its intention to guarantee the validity of the new citizenship.

. . . The right of naturalization was granted by Solon to deserving aliens, when 6,000 citizens declared themselves in favour of the measure, but these new citizens were likewise deficient in a few of the privileges of citizenship. . . . The statement that Solon received a great many foreigners as citizens, and every artisan that presented himself, appears highly improbable, as Solon was the first legislator who systematically regulated the condition of the Metæci. The Metæci . . . probably took the place of the former Demiurgi; their position was one of suzerainty, but the protection of the laws was guaranteed them. . . . The servile order, exclusively consisting of purchased aliens and their descendants, did not, as a body, stand in direct relation with the state; individual slaves became the property of individual citizens, but a certain number were employed by the state as clerks, etc., and were abandoned to the arbitrary pleasure of their oppressive taskmasters. . . . Those who were manumitted stood upon the footing of Metæci; the citizens who enfranchised them becoming their Prostatai. . . . Upon attaining the age of puberty, the sons of citizens entered public life under the name of Ephebi. The state gave them two years for the full development of their youthful strength. . . . Upon the expiration of the second, and according to the most authentic accounts, in their eighteenth year, they received the shield and spear in the popular assembly, complete armour being given to the sons of those who had fallen in battle, and in the temple of Agraalos took the oath of young citizens, the chief obligations of which concerned the defence of their country, and then for the space of one or two years performed military service in the Attic border fortresses under the name of Peripoli. The ceremony of arming them was followed by enrolment in the book which contained the names of those who had attained majority; this empowered the young citizen to manage his own fortune, preside over a household, enter the popular assembly, and speak. When he asserted the last right, viz., the Isegoria, Parrhesia, he was denominated Rhetor, and this appellation denoted the difference between him and the silent member of the assembly, the Idiotês. . . . Upon attaining his 30th year, the citizen might assert his superior rights; he was qualified for a member of the sworn tribunal entitled Heliæa. . . . The word Heliast does not merely signify a judge; but the citizen who has fully attained maturity. . . . The judges of the courts of the Diêtetæ and Ephetæ, which existed without the circle of the ordinary tribunals, were required to be still older men than the Heliasts, viz., 50 or 60 years of age. Solon appointed gradations in the rights of citizenship, according to the conditions of a census in reference to offices of state. . . . Upon the principle of a conditional equality of rights, which assigns to every one as much as he deserves, and which is highly characteristic of Solon's policy in general, he instituted four classes according to a valuation; these were the Pentacosiomedimni [whose land yielded 500 measures of wheat or oil], the Hippeis [horsemen], the Zeugitæ [owners of a yoke of mules], and the Thetes [or laborers]. The valuation, however, only affected that portion of capital from which contributions to the state-burthens were required, consequently, according to

Böckh, a taxable capital. . . . The Thetes, the last of these classes, were not regularly summoned to perform military service, but only exercised the civic right as members of the assembly and the law-courts; . . . the highest class exclusively supplied the superior offices, such as the archonship, and through this the council of the Areopagus. . . . In lieu of the former council of administration, of which no memorial has been preserved, Solon instituted a Council of four hundred citizens taken from the first three classes, 100 from every Phyle, of which no person under 30 years of age could be a member. The appointments were renewed annually; the candidates underwent an examination, and such as were deemed eligible drew lots."—W. Wachsmuth, *Historical Antiquities of the Greeks*, sect. 46-47 (v. 1).

B. C. 560-510.—The tyranny of the Pisistratidæ.—"The constitution which he [Solon] framed was found to be insufficient even in his own life-time. . . . The poor citizens were still poor, in spite of the Seisachtheia and the reform of the constitution. At the same time the admission of the lowest class in the scale of property to the rights of Athenian citizenship, and the authority given to the General Assembly, had thrown a power into the hands of the masses which filled the more conservative citizens with resentment and alarm. And so the old party quarrels, which had divided Attica before the reforms of Solon, reappeared after them with even greater violence. The men of the plain were led by Miltiades, a grandson of the tyrant of Corinth, and Lycurgus, the son of Aristolaidas; the men of the shore by Megacles, the Alcmaeonid, who had recently strengthened the position of his family by his marriage with Agariste, the daughter of Cleisthenes of Sicyon. At the head of the mountaineers stood Pisistratus, a descendant of the royal stock of Nestor, who . . . had greatly distinguished himself in the Salaminian war. As he possessed property in the neighborhood of Marathon, Pisistratus may have been intimately known to the inhabitants of the adjacent hills. . . . Solon watched the failure of his hopes with the deepest distress. He endeavoured to recall the leaders of the contending parties to a sense of their duty to the country, and to soothe the bitterness of their followers. With a true instinct he regarded Pisistratus as by far the most dangerous of the three. Pisistratus was an approved general, and the faction which he led was composed of poor men who had nothing to lose. . . . Pisistratus met the vehement expressions of Solon by driving wounded into the market-place. The people's friend had suffered in the people's cause; his life was in danger. The incident roused the Athenians to an unusual exercise of political power. Without any previous discussion in the Council, a decree was passed by the people allowing Pisistratus to surround himself with a body-guard of fifty men, and to arm them with clubs. Thus protected, he threw off all disguises, and established himself in the Acropolis as tyrant of Athens [B. C. 560]. . . .

Herodotus tells us that Pisistratus was a just and moderate ruler. He did not alter the laws or remove the existing forms of government. The Council was still elected, the Assembly continued to meet, though it is improbable that either the one or the other was allowed to extend its functions beyond domestic affairs. The archons still continued to be the executive magistrates of the city, and cases of murder were tried, as of old, at the Areopagus. The tyrant contented himself with occupying the Acropolis with his troops and securing important posts in the administration for his family or his adherents." Twice, however, Pisistratus was driven from power by the combination of his opponents, and into exile, for four years in the first instance and for ten years in the last; but Athens was compelled to accept him for a ruler in the end. "Pisistratus remained in undisturbed possession of the throne till his death in 527 B. C. He was succeeded by his eldest son Hippias, with whom Hipparchus and Thessalus, his younger sons, were associated in the government." But these younger tyrants soon made themselves intolerably hateful, and a conspiracy formed against them by Harmodius and Aristogeiton was successful in taking the life of Hipparchus. Four years later, in 510 B. C., with the help of Delphi and Sparta, Hippias was driven from the city. Cleisthenes, at the head of the exiled Alcmaeonids, was the master-spirit of the revolution, and it was under his guidance that the Athenian democratic constitution was reorganized.—E. Abbott, *Hist. of Greece*, v. 1, ch. 15.

ALSO IN: G. Grote, *Hist. of Greece*, ch. 11 and 30.

B. C. 510-507.—The constitution of Cleisthenes.—Advance of democracy.—"The expulsion of the Pisistratids left the democratical party, which had first raised them to power, without a leader. The Alcmaeonids had always been considered as its adversaries, though they were no less opposed to the faction of the nobles, which seems at this time to have been headed by Isagoras. . . . Cleisthenes found himself, as his party had always been, unable to cope with it; he resolved, therefore, to shift his ground, and to attach himself to that popular cause which Pisistratus had used as the stepping stone of his ambition. His aims, however, were not confined to a temporary advantage over his rivals; he planned an important change in the constitution, which should forever break the power of his whole order, by dissolving some of the main links by which their sway was secured. For this purpose, having gained the confidence of the commonalty and obtained the sanction of the Delphic oracle, he abolished the four ancient tribes, and made a fresh geographical division of Attica into ten new tribes, each of which bore a name derived from some Attic hero. The ten tribes were subdivided into districts of various extent, called demes, each containing a town or village. . . . Cleisthenes appears to have preserved the ancient phratries; but as they were now left insulated by the abolition of the tribes to which they belonged, they lost all political importance. . . . Cleisthenes at the same time increased the strength of the commonalty by making a great many new citizens, and he is said to have enfranchised not only aliens—and these both residents and adventurers from abroad—but slaves. . . . The whole frame of the state was reorganized to correspond

with the new division of the country. The Senate of the Four Hundred was increased to Five Hundred, that fifty might be drawn from each tribe, and the rotation of the presidency was adapted to this change, the fifty councillors of each tribe filling that office for thirty-five or thirty-six days in succession, and nine councillors being elected one from each of the other tribes to preside at the Council and the Assembly of the People, which was now called regularly four times in the month, certain business being assigned to each meeting. The *Heliæa* was also distributed into ten courts: and the same division henceforth prevailed in most of the public offices, though the number of the archons remained unchanged. To Cleisthenes also is ascribed the formal institution of the ostracism. . . . These changes, and the influence they acquired for their author, reduced the party of Isagoras to utter weakness, and they saw no prospect of maintaining themselves but by foreign aid." Isagoras, accordingly, applied for help to Cleomenes, one of the kings of Sparta, who had already interfered in Athenian affairs by assisting at the expulsion of the Pisistratidæ. Cleomenes responded by coming to Athens with a small force [B. C. 508], which sufficed to overawe the people, and, assuming dictatorial authority, he established Isagoras in power, with an attempted rearrangement of the government. "He began by banishing 700 families designated by Isagoras, and then proceeded to suppress the Council of the Five Hundred, and to lodge the government in the hands of Three Hundred of his friend's partisans. When, however, the councillors resisted this attempt, the people took heart, and, Cleomenes and Isagoras having occupied the citadel, rose in a body and besieged them there. As they were not prepared to sustain a siege, they capitulated on the third day: Cleomenes and Isagoras were permitted to depart with the Lacedæmonian troops, but they were compelled to abandon their adherents to the mercy of their enemies. All were put to death, and Cleisthenes and the 700 banished families returned triumphantly to Athens." Cleomenes soon afterwards raised a force with which to subdue Athens and restore Isagoras. The Athenians in their alarm sent an embassy to Sardis to solicit the protection of the Persians. Fortunately, nothing came of it, and Cleomenes was so much opposed in his project, by the Corinthians and other allies of Sparta, that he had to give it up.—C. Thirlwall, *Hist. of Greece*, ch. 11.

ALSO IN: G. Grote, *Hist. of Greece*, pt. 2, ch. 31.

—E. Abbott, *Hist. of Greece*, ch. 15.—Aristotle on the *Const. of Athens* (tr. by E. Poste), ch. 20-22.

B. C. 509-506.—Hostile undertakings of Cleomenes and Sparta.—Help solicited from the Persian king.—Subjection refused.—Failure of Spartan schemes to restore tyranny.—Protest of the Corinthians.—Successful war with Thebes and Chalcis.—"With Sparta it was obvious that the Athenians now had a deadly quarrel, and on the other side they knew that Hippas was seeking to precipitate on them the power of the Persian king. It seemed therefore to be a matter of stern necessity to anticipate the intrigues of their banished tyrant; and the Athenians accordingly sent ambassadors to Sardis to make an independent alliance with the Persian despot. The envoys, on being

brought into the presence of Artaphernes, the Satrap of Lydia, were told that Darcios would admit them to an alliance if they would give him earth and water,—in other words, if they would acknowledge themselves his slaves. To this demand of absolute subjection the envoys gave an assent which was indignantly repudiated by the whole body of Athenian citizens. . . . Foiled for the time in his efforts, Kleomenes was not cast down. Regarding the Kleisthenian constitution as a personal insult to himself, he was resolved that Isagoras should be despot of Athens. Summoning the allies of Sparta [including the Bœotian League headed by Thebes, and the people of Chalcis in Eubœa], he led them as far as Eleusis, 12 miles only from Athens, without informing them of the purpose of the campaign. He had no sooner confessed it than the Corinthians, declaring that they had been brought away from home on an unrighteous errand, went back, followed by the other Spartan King, Demaratos, the son of Ariston; and this conflict of opinion broke up the rest of the army. This discomfiture of their enemy seemed to inspire fresh strength into the Athenians, who won a series of victories over the Boiotians and Eubœians"—completely overthrowing the latter—the Chalcidians—taking possession of their city, and making it a peculiar colony and dependency of Athens.—See **KLERUCHS**. The anger of Kleomenes "on being discomfited at Eleusis by the defection of his own allies was heightened by indignation at the discovery that in driving out his friend Hippas he had been simply the tool of Kleisthenes and of the Delphian priestess whom Kleisthenes had bribed. It was now clear to him and to his countrymen that the Athenians would not acquiesce in the predominance of Sparta, and that if they retained their freedom, the power of Athens would soon be equal to their own. Their only safety lay, therefore, in providing the Athenians with a tyrant. An invitation was, therefore, sent to Hippas at Sigeion, to attend a congress of the allies at Sparta, who were summoned to meet on the arrival of the exiled despot." The appointed congress was held, and the Spartans besought their allies to aid them in humbling the Athenian Democracy, with the object of restoring Hippas to power. But again the Corinthians protested, bluntly suggesting that if the Spartans thought tyranny a good thing they might first try it for themselves. Hippas, speaking in his own behalf, attempted to convince them that the time was coming "in which they would find the Athenians a thorn in their side. For the present his exhortations were thrown away. The allies protested unanimously against all attempts to interfere with the internal administration of any Hellenic city; and the banished tyrant went back disappointed to Sigeion."—G. W. Cox, *The Greeks and the Persians*, ch. 4.

B. C. 501-490.—Aid to Ionians against Persia.—Provocation of King Darius.—His wrath and attempted vengeance.—The first Persian invasions.—Battle of Marathon.—"It is undeniable that the extension of the Persian dominion over Asia Minor, Syria, and Egypt gave a violent check to the onward movement of Greek life. On the other hand, it seemed as if the great

enterprise of Darius Hystaspis against the Scythians ought to have united the Greeks and Persians. It was of a piece with the general policy of Darius that, after defeating so many other adversaries, he undertook to prevent for all succeeding time a repetition of those inroads with which, some centuries before, the Scythians had visited Asia and the civilized world. He possessed authority enough to unite the different nations which obeyed his sceptre in a great campaign against the Scythians. . . . The Greeks were his best allies in his campaign; they built him the bridge by which he crossed the Bosphorus, and also the bridge of boats over the Danube by which he made his invasion into the enemy's territory. The result was not one which could properly be called unfortunate; yet it was certainly of a very doubtful character. . . . A great region, in which they had already obtained very considerable influence, was closed to them once more. The Persian army brought the populations upon the Strymon, many in number and individually weak, under the dominion of Persia; and even Amyntas, the king of Makedonia, one of a race of rulers of Greek origin, was compelled to do homage to the Great King. Thus the movement which had thrust back the Greeks from Egypt and Asia Minor made advances even into the regions of Europe which bordered upon Northern Hellas. It was an almost inevitable consequence of this that the Greeks were menaced and straitened even in their proper home. A pretext and opportunity for an attack upon the Greek islands was presented to the Persians by the questions at issue between the populations of the cities and the tyrants. . . . The instrument by whom the crisis was brought about was not a person of any great importance. It is not always great natures, or natures strong in the consciousness of their own powers, that bring on such conflicts; this is sometimes the work of those flexible characters which, being at the point of contact between the opposing forces, pass from one side to the other. Such a character was Aristagoras of Miletus. . . . Morally contemptible, but gifted intellectually with a range of ideas of unlimited extent, Aristagoras made for himself an imperishable name by being the first to entertain the thought of a collective opposition to the Persians on the part of all the Greeks, even contemplating the possibility of waging a great and successful offensive war upon them. . . . He announced in Miletus his own resignation of power and the restoration to the people of their old laws. . . . A general overthrow of tyranny ensued [B. C. 501], involving a revolt from Persia, and Strategi were everywhere appointed. The supreme power in the cities was based upon a good understanding between the holders of power and the Persians; the fact that one of these rulers found the authority of the Persians intolerable was the signal for a universal revolt. Aristagoras himself voluntarily renounced the tyranny, the other tyrants were compelled to take the same course; and thus the cities, assuming at the same time a democratic organization, came into hostility with Persia. . . . The cities and islands which had so often been forced to submission could not hope to resist the Persians by their own unaided efforts. Even Aristagoras could not have expected so much. . . . He visited Lakædæmon, the strongest of the Greek powers, in person, and en-

deavored to carry her with him in his plans. . . . Rejected by Sparta, Aristagoras betook himself to Athens. . . . The Athenians granted Aristagoras twenty ships, to which the Eretrians, from friendship to Miletus, added five more. The courage of the Ionians was thus revived, and an attack upon the Persian dominion commenced, directed, not indeed against Susa, but against Sardis, in their immediate neighborhood, the capital of the satrapy which imposed on them their heaviest burdens. . . . By the burning of Sardis, in which a sanctuary of Kybele had been destroyed, the Syrian nations had been outraged in the person of their gods. We know that it was part of the system of the Persians to take the gods of a country under their protection. Nor would the great king who thought himself appointed to be master of the world fail to resent an invasion of his dominions as an insult calling for revenge. The hostile attempts of the Ionians made no great impression upon him, but he asked who were the Athenians, of whose share in the campaign he had been informed. They were foreigners, of whose power the king had scarcely heard. . . . The enterprise of Aristagoras had meanwhile caused general commotion. He had by far the larger part of Cyprus, together with the Carians, on his side. All the country near the Propontis and the Hellespont was in revolt. The Persians were compelled to make it their first concern to suppress this insurrection, a task which, if attempted by sea, did not promise to be an easy one. In their first encounter with the Phœnicians the Ionians had the advantage. When, however, the forces of the great empire were assembled, the insurrection was everywhere put down. . . . It must be reckoned among the consequences of the battle of Lade, by which the combination against the Persian empire had been annihilated, that King Darius, not content with having consolidated his dominion in Ionia, once more resumed the plan of pushing forward into Europe, of which his enterprise against the Scythians formed part. With the execution of this project he commissioned one of the principal persons of the empire and the court, . . . Mardonius by name, whom he united to his family by marrying him to his daughter. . . . This general crossed the Hellespont with a large army, his fleet always accompanying him along the shore whilst he pushed on by the mainland. He once more subdued Makedonia, probably the districts which had not yet, like the Makedonian king, been brought into subjection, and gave out that his aim was directed against Eretria and Athens, the enemies of the king. . . . In the stormy waters near Mount Athos, which have always made the navigation of the Ægean difficult, his fleet suffered shipwreck. But without naval supports he could not hope to gain possession of an island and a maritime town situated on a promontory. Even by land he encountered resistance, so that he found it advisable to postpone the further execution of his undertakings to another time. . . . In order to subdue the recalcitrants, especially Athens and Eretria, another attempt was organized without delay. Under two generals, one of whom, Datis, was a Mede, the other, Artaphernes, the son of the satrap of Sardis of the same name, and brother of the Darius who was in alliance with Hippias, a maritime expedition was undertaken for the immediate subjugation of the

islands and the maritime districts. It was not designed for open hostility against the Greeks in general. . . . Their design was to utilize the internal dissensions of Greece in conquering the principal enemies upon whom the Great King had sworn vengeance, and presenting them as captives at his feet. The project succeeded in the case of Eretria. In spite of a brave resistance it fell by treachery into their hands, and they could avenge the sacrilege committed at Sardis by plundering and devastating Grecian sanctuaries. They expected now to be able to overpower Athens also without much trouble. . . . It was a circumstance of great value to the Athenians that there was a man amongst them who was familiar with the Persian tactics. This was Miltiades, the son of Kimon. . . . Although a Thracian prince, he had never ceased to be a citizen of Athens. Here he was impeached for having held a tyranny, but was acquitted and chosen strategus, for the democracy could not reject a man who was so admirably qualified to be at their head in the interchange of hostilities with Persia. Miltiades was conducting his own personal quarrel in undertaking the defence of Attica. The force of the Persians was indeed incomparably the larger, but the plains of Marathon, on which they were drawn up, prevented their proper deployment, and they saw with astonishment the Athenian hoplites displaying a front as extended as their own. These troops now rushed upon them with an impetus which grew swifter at every moment. The Persians easily succeeded in breaking through the centre of the Athenian army; but that was of no moment, for the strength of the onset lay in the two wings, where now began a hand-to-hand fight. The Persian sword, formidable elsewhere, was not adapted to do good service against the bronze armor and the spear of the Hellenes. On both flanks the Athenians obtained the advantage, and now attacked the Persian centre, which was not able to withstand the onslaught of men whose natural vigor was heightened by gymnastic training. The Persians, to their misfortune, had calculated upon desertion in the ranks of their opponents; foiled in this hope, they retreated to the shore and to their ships. Herodotus intimates that the Persians had secret intelligence with a party in Athens, and took their course round the promontory of Sunium toward the city, in the hope of surprising it. But when they came to anchor the Athenians had arrived also, and they saw themselves once more confronted by the victors of Marathon."—L. von Ranke, *Universal History*, ch. 6.

B. C. 489-480.—Condemnation and death of Miltiades.—The Æginetan war.—Naval power created by Themistocles.—"The victory of Marathon was chiefly due to Miltiades; it was he who brought on the engagement, and he was chief in command on the day when the battle was fought. Such a brilliant success greatly improved his position in the city, and excited in his enemies a still deeper hatred. Ever on the watch for an opportunity to pull down their rival, it was not long before they found one. Soon after his victory, Miltiades came before the Athenians with a request that a

squadron of 70 ships might be placed at his disposal. The purpose for which he required them, he would not disclose, though pledging his word that the expedition would add largely to the wealth and prosperity of the city. The request being granted, he sailed with the ships to Paros, an island which at this time was subject to Persia. From the Parians he demanded 100 talents, and when they refused to pay he blockaded the city. So vigorous and successful was the resistance offered that, after a long delay, Miltiades, himself dangerously wounded, was compelled to return home. His enemies, with Xanthippus at their head, at once attacked him for misconduct in the enterprise. . . . Miltiades was unable to reply in person; he was carried into court, while his friends pleaded his cause. The sentence was given against him, but the penalty was reduced from death to a fine of 50 talents. So large a sum was more than even Miltiades could pay; he was thrown into prison as a public debtor, where he soon died from the mortification of his wound. . . . His condemnation was one in a long series of similar punishments. The Athenians never learnt to be just to those who served them, or to distinguish between treachery and errors of judgment. . . . We have very little information about the state of Athens immediately after the battle of Marathon. So far as we can tell, for the chronology is most uncertain, she was now engaged in a war with Ægina. . . . Meanwhile, a man was rising to power, who may be said to have created the history of Athens for the rest of the century,—Themistocles, the son of Neocles. . . . On the very day of Marathon, Themistocles had probably made up his mind that the Persians would visit Greece again. What was to keep them away, so long as they were masters of the Ægean? . . . With an insight almost incredible he perceived that the Athenians could become a maritime nation; that Athens possesses harbours large enough to receive an enormous fleet, and capable of being strongly fortified; that in possession of a fleet she could not only secure her own safety, but stand forth as a rival power to Sparta. But how could Themistocles induce the Athenians to abandon the line in which they had been so successful for a mode of warfare in which even Miltiades had failed? After the fall of the great general, the conduct of affairs was in the hands of Xanthippus . . . and Aristides. . . . They were by no means prepared for the change which Themistocles was meditating. This is more especially true of Aristides. He had been a friend of Clisthenes; he was known as an admirer of Spartan customs. . . . He had been second in command at Marathon, and was now the most eminent general at Athens. From him Themistocles could only expect the most resolute opposition. Xanthippus and Aristides could reckon on the support of old traditions and great connections. Themistocles had no support of the kind. He had to make his party. . . . Conscious of their own position, Aristides and Xanthippus looked with contempt upon the knot of men who began to gather round their unmannerly and uncultivated leader. And they might, perhaps, have maintained their position if it had not been for the Æginetan war. That unlucky struggle had begun, soon after the reforms of Clisthenes, with an unprovoked attack of the Æginetans on the

coast of Attica (506 B. C.), [Egina being allied with Thebes in the war mentioned above — B. C. 509-506]. It was renewed when the Æginetans gave earth and water to the heralds of Darius in 491, and though suspended at the time of the Persian invasion, it broke out again with renewed ferocity soon afterwards. The Æginetans had the stronger fleet, and defeated the Athenian ships. "Such experiences naturally caused a change in the minds of the Athenians. . . . It was clear that the old arrangements for the navy were quite inadequate to the task which was now required of them. Yet the leaders of the state made no proposals." Themistocles now "came forward publicly with proposals of naval reform, and, as he expected, he drew upon himself the strenuous opposition of Aristides. . . . It was clear that nothing decisive could be done in the Æginetan war unless the proposals of Themistocles were carried; it was equally clear that they never would be carried while Aristides and Xanthippus were at hand to oppose them. Under these circumstances recourse was had to the safety-valve of the constitution. Ostracism was proposed and accepted; and in this manner, by 483 B. C., Themistocles had got rid of both of his rivals in the city. He was now master of the situation. The only obstacle to the realization of his plans was the expense involved in building ships. And this he was able to meet by a happy accident, which brought into the treasury at this time a large surplus from the silver mines from Laurium. . . . By the summer of 480, the Athenians . . . were able to launch 180 vessels, besides providing 20 for the use of the Chalcidians of Eubœa. . . . At the same time Themistocles set about the fortification of the Peiræus. . . . Could he have carried the Athenians with him, he would have made the Peiræus the capital of the country, in order that the ships and the city might be in close connection. But for this the people were not prepared."—E. Abbott, *Pericles and the Golden Age of Athens*, ch. 2.

B. C. 480-479.—The second Persian invasion.—Thermopylæ, Artemisium, Salamis, Plataea.—**Abandonment of the City.**—"The last days of Darius were clouded by the disaster of Marathon; 'that battle formed the turning point of his good fortune,' and it would seem that the news of it led to several insurrections, particularly that of Egypt; but they were soon put down. Darius died (Olymp. 73, 3), and Xerxes, who succeeded him, was prevented from taking revenge on the Athenians by the revolt of Egypt, which engaged his attention during the first years of his reign. But he completely conquered the insurgents after they had maintained themselves about four or five years; and he then made preparations for that vengeance on Athens for which his barbarian pride was longing. The account of the three years' preparations of Xerxes, how he assembled his army in Asia Minor, how he made a bridge across the Hellespont, how he cut a canal through the isthmus of Mount Athos to prevent his fleet being destroyed by storms—all this is known to every one who has read Herodotus. History is here so much interwoven with poetry, that they can no longer

be separated. . . . The Greeks awaited the attack (Olymp. 75, 1), 'but they were not agreed among themselves. The Argives from hatred of Sparta joined the Persians, and the miserable Boeotians likewise supported them. The others kept together only from necessity; and without the noble spirit of the Athenians Greece would have been lost, and that from the most paltry circumstances. A dispute arose as to who was to be honoured with the supreme command; the Athenians gave way to all, for their only desire was to save Greece. Had the Persians moved on rapidly, they would have met with no resistance, but they proceeded slowly, and matters turned out differently.' A Greek army was encamped at Tempe, at the entrance of Thessaly, and at first determined on defending Thessaly. But they must have seen that they could be entirely surrounded from Upper Thessaly; and when they thus discovered the impossibility of stopping the Persians, they retreated. The narrative now contains one inconceivable circumstance after another. . . . It is inconceivable that, as the Greeks did make a stand at Thermopylæ, no one else took his position there except King Leonidas and his Spartans, not including even the Lacedæmonians, for they remained at home! Only 1,000 Phocians occupied the heights, though that people might surely have furnished 10,000 men; 400 of the Boeotians were posted in the rear, as a sort of hostages, as Herodotus remarks, and 700 Thespians. Where were all the rest of the Greeks? . . . Countless hosts are invading Greece; the Greeks want to defend themselves, and are making active preparations at sea; but on land hundreds of thousands are met by a small band of Peloponnesians, 700 Thespians, 400 Thebans as hostages, and 1,000 Phocians, stationed on the heights! A pass is occupied, but only that one, and the others are left unguarded. . . . All this is quite unintelligible; it would almost appear as if there had been an intention to sacrifice Leonidas and his men; but we cannot suppose this. These circumstances alone suggest to us, that the numbers of the Persian army cannot have been as great as they are described; but even if we reduce them to an immense extent, it still remains inconceivable why they were not opposed by greater numbers of the Greeks, for as afterwards they ventured to attack the Persians in the open field, it was certainly much more natural to oppose them while marching across the hills. But however this may be, it is an undoubted fact, that Leonidas and his Spartans fell in the contest, of which we may form a conception from the description of Herodotus, when after a resistance of three days they were surrounded by the Persians. A few of the Spartans escaped on very excusable grounds, but they were so generally despised, that their life became unendurable, and they made away with themselves. This is certainly historical. . . . After the victory of Thermopylæ all Hellas lay open before the Persians, and they now advanced towards Athens, a distance which they could march in a few days. Thebes opened her gates, and joyfully admitted them from hatred of Athens. 'Meantime a portion of the army appeared before Delphi. It is almost inconceivable that the Persians did not succeed in taking the temple. . . . The miracles by which the temple is said to have been saved, are repeated in the same manner during the attack of

the Gauls. But the temple of Delphi was certainly not plundered.' . . . The city of Athens had in the meantime been abandoned by all the people; the defenceless had taken refuge in the small island of Salamis, or of Troezen, 'and all the Athenians capable of bearing arms embarked in the fleet.' . . . The Persians thus took Athens without any resistance. . . . During the same days on which the battle of Thermopylae was fought, the Greek fleet was engaged in two indecisive but glorious battles near the promontory of Artemisium. 'In a third the Persians gained the upper hand, and when the Greeks at the same time heard of the defeat at Thermopylae, they withdrew, and doubling Cape Sunium sailed towards Salamis.' God sent them a storm whereby the Persians in their pursuit suffered shipwreck. . . . While the Greek fleet was stationed in the channel between the island of Salamis and Attica, towards Piræus, discord broke out among the Greeks. The Peloponnesians thought only of themselves; they had fortified the Isthmus; there they were assembled, and there they wanted to offer resistance to the Persians. In their folly they forgot, that if the enemy with his superior fleet, should turn against Peloponnesus, they might land wherever they liked. . . . But Themistocles now declared, that all the hopes of the Athenians were directed towards the recovery of their own city; that, if the Peloponnesians should sacrifice them, and, thinking of themselves only, should abandon Attica to the barbarians, the Athenians would not be so childish as to sacrifice themselves for them, but would take their women and children on board their ships, and sail far away from the Persians to the island of Sardinia, or some other place where Greek colonies were established; that there they would settle as a free people, and abandon Peloponnesus to its fate; and that then the peninsula would soon be in the hands of the enemy. This frightened the Peloponnesians, and they resolved to stand by Athens. It is evident that, throughout that time, Themistocles had to struggle with the most intolerable difficulties, which the allies placed in his way, as well as with their jealousy, meanness, and insolence. 'The rudeness of the Spartans and Corinthians is nowhere more strongly contrasted with the refinement of the Athenians, than on that occasion.' But after he had tried everything, and overcome by every possible means a hundred different difficulties, he yet saw, that he could not rely on the perseverance of the Peloponnesians, and that they would turn to the Isthmus as soon as Xerxes should proceed in that direction. He accordingly induced the Persian king, by a false message, to surround the Greek fleet, for the purpose of cutting off the retreat of the Peloponnesians. He declared himself ready to deliver the whole of the Greek fleet into his hands. This device was quite to the mind of the Persians; Xerxes believed him, and followed his advice. When Themistocles was thus sure of the Peloponnesians, the ever-memorable battle of Salamis commenced, which is as certainly historical as that of Cannæ, or any modern battle, 'whatever the numbers may be.' The battle proceeded somewhat in the manner of the battle of Leipzig: when the issue was decided, a portion of those who ought to have joined their countrymen before, made common cause with the Greeks. . . . Their accession increased the victory of the Greeks. . . . Certain as the battle of Salamis is, all the accounts

of what took place after it, are very doubtful. This much is certain, that Xerxes returned, 'leaving a portion of his army under Mardonius in Greece;' . . . Winter was now approaching, and Mardonius withdrew from ravaged Attica, taking up his winter-quarters partly in Thessaly and partly in Boeotia. . . . The probability is, that the Athenians remained the winter in Salamis in sheds, or under the open sky. Mardonius offered to restore to them Attica uninjured, so far as it had not already been devastated, if they would conclude peace with him. They might at that time have obtained any terms they pleased, if they had abandoned the common cause of the Greeks; and the Persians would have kept the peace; for when they concluded treaties they observed them: they were not faithless barbarians. But on this occasion again, we see the Athenian people in all its greatness and excellence; it scorned such a peace, and preferred the good of the Peloponnesians. . . . Mardonius now again advanced towards Athens; the Spartans, who ought to have proceeded towards Cithaeron, had not arrived, and thus he again took possession of Attica and ravaged it completely. At length, however (Olymp. 75, 2), the Athenians prevailed upon the Peloponnesians to leave the Isthmus, and they gradually advanced towards Boeotia. There the battle of Plataeae was fought. . . . In regard to the accounts of this battle, it is historically certain that it was completely won by the Greeks, and that the remnants of the Persian army retreated without being vigorously pursued. It must have reached Asia, but it then disappears. It is also historically certain, that Pausanias was the commander of the allied army of the Greeks. . . . After their victory, the Greeks advanced towards Thebes. In accordance with a vow which they had made before the war, Thebes ought to have been destroyed by the Greeks. But their opinions were divided. . . . On the same day on which the battle of Plataeae was fought, the allied Greeks gained as complete a victory at sea. . . . After this victory of Mycale, the Ionian cities revolted against the Persians."—B. G. Niebuhr, *Lectures on Ancient History*, v. 1, lects. 37 and 38.

B. C. 479-478.—Protection of Ionia assumed. —Siege and capture of Sestus.—Rebuilding and enlargement of the city and its walls.—Interference of Sparta foiled by Themistocles.—"The advantages obtained by the Hellenes [in their war with Persia] came upon them so unexpectedly as to find them totally unprepared, and accordingly embarrassed by their own victories. What was to be done with Ionia? Was the whole country to be admitted into the Hellenic confederation? Too great a responsibility would, in the opinion of the Peloponnesians, be incurred by such a step. . . . It would be better to sacrifice the country, and establish the Ionians in settlements in other parts, at the expense of those who had favoured the Medes, i. e., of the Argives, Boeotians, Locrians, and Thessalians. . . . The Athenians, on the other hand, espoused the cause of the cities. . . . Ionia ought to be a bulwark against the Barbarians, and to belong to the Hellenes. . . . The Athenians found a support in the feeling

prevalent among the Ionians, who were naturally opposed to any forced settlement. Accordingly, in the first instance, Samos, Lesbos, Chios, and a number of other island-towns, were admitted into the confederation . . . and a new Hellas was formed, a Greek empire comprehending both sides of the sea. Considerations of caution made it necessary, above all, to secure the passage from Asia to Europe; for it was universally believed that the bridge over the Hellespont was either still in existence or had been restored. When it was found to have been destroyed, the Peloponnesians urged the termination of the campaign. . . . The Athenians, on the other hand, declared themselves resolved . . . not to leave unfinished what they had begun. Sestus, the strongest fortress on the Hellespont, ought not to be left in the hands of the enemy; an attack on it ought to be risked without delay, before the city had prepared for a siege. They allowed the Peloponnesians to take their departure, and under the command of Xanthippus united with the ships of the Ionians and Hellespontians for the purpose of new undertakings." The Persians in Sestus resisted obstinately, enduring a long siege, but were forced to surrender at last. "Meanwhile, the main point consisted in the Athenians having remained alone in the field, in their having fraternized with the Ionians as one naval power, and having after such successes attained to a confidence in victory, to which no enterprise any longer seemed either too distant or too difficult. Already they regarded their city as the centre of the coast-lands of Greece. But what was the condition of this city of Athens itself? A few fragments of the ancient city wall, a few scattered houses, which had served the Persian commanders as their quarters, were yet standing; the rest was ashes and ruins. After the battle of Platææ the inhabitants had returned from Salamis, Troezen, and Ægina; not even the fleet and its crews were at hand to afford them assistance. They endeavoured to make shift as best they could, to pass through the trials of the winter. As soon as the spring arrived, the restoration of the city was commenced with all possible activity. . . . But even now it was not the comforts of domesticity which occupied their thoughts, but, above all, the city as a whole and its security. To Themistocles, the founder of the port-town, public confidence was in this matter properly accorded." It was not possible "to carry out a new and regular plan for the city; but it was resolved to extend its circumference beyond the circle of the ancient walls, . . . so as to be able, in case of a future siege, to offer a retreat to the country-population within the capital itself. . . . But the Athenians were not even to be permitted to build their walls undisturbed; for, as soon as their grand plan of operations became known, the envy and insidious jealousy of their neighbours broke out afresh. . . . The Peloponnesian states, above all Ægina and Corinth, hastened to direct the attention of Sparta to the situation of affairs. . . . As at Sparta city walls were objected to on principle, and as no doubts prevailed with regard to the fact that a well-fortified town was impregnable to the military art of the Peloponnesians, it was actually resolved at any price to prevent the building of the walls in Attica." But, for shame's sake, the interference undertaken by Sparta was put upon the ground that in the event of a future

invasion of the country, only the peninsula could be successfully defended; that central Greece would necessarily be abandoned to the enemy; and that every fortified city in it would furnish him a dangerous base. "At such a crisis craft alone could be of avail. When the Spartans made their imperious demand at Athens, Themistocles ordered the immediate cessation of building operations, and with assumed submissiveness, promised to present himself at Sparta, in order to pursue further negotiations in person. On his arrival there, he allowed one day after the other to go by, pretending to be waiting for his fellow envoys." In the meantime, all Athens was toiling night and day at the walls, and time enough was gained by the audacious duplicity of Themistocles to build them to a safe height for defence. "The enemies of Athens saw that their design had been foiled, and were forced to put the best face upon their discomfiture. They now gave out that they had intended nothing beyond good advice."—E. Curtius, *Hist. of Greece*, bk. 3, ch. 2 (v. 2).

ALSO IN G. W. Cox, *Hist. of Greece*, bk. 2, ch. 7-8 (v. 1-2).

B. C. 478-477.—Alienation of the Asiatic Greeks from Sparta.—Formation of the Confederacy of Delos.—The founding of Athenian Empire. See GREECE: B. C. 478-477.

B. C. 477-462.—Constitutional gains for the democracy.—Ascendency of Aristides.—Declining popularity and ostracism of Themistocles.—The sustentation of the commons.—The stripping of power from the Areopagus.—At the time when the Confederacy of Delos was formed, "the Persians still held not only the important posts of Eion on the Strymon and Doriskus in Thrace, but also several other posts in that country which are not specified to us. We may thus understand why the Greek cities on and near the Chalkidic peninsula . . . were not less anxious to seek protection in the bosom of the new confederacy than the Dorian islands of Rhodes and Cos, the Ionic islands of Samos and Chios, the Æolic Lesbos and Tenedos, or continental towns such as Miletus and Byzantium. . . . Some sort of union, organised and obligatory upon each city, was indispensable to the safety of all. Indeed, even with that aid, at the time when the Confederacy of Delos was first formed, it was by no means certain the Asiatic enemy would be effectually kept out, especially as the Persians were strong not merely from their own force, but also from the aid of internal parties in many of the Grecian states—traitors within, as well as exiles without. Among these traitors, the first in rank as well as the most formidable, was the Spartan Pausanias." Pausanias, whose treasonable intrigues with the Persian king began at Byzantium (See GREECE: B. C. 478-477) was convicted some nine or ten years later, and suffered a terrible fate, being shut within a temple to which he had fled, and starved. "His treasonable projects implicated and brought to disgrace a man far greater than himself—the Athenian Themistokles. . . . The charge [against Themistokles] of collusion with the Persians connects itself with the previous movement of political parties. . . . The rivalry of Themistokles and Aristides had been greatly appeased by the invasion of Xerxes, which had imposed upon both the peremptory necessity of

coöperation against a common enemy. And apparently it was not resumed during the times which immediately succeeded the return of the Athenians to their country; at least we hear of both in effective service and in prominent posts. Themistokles stands forward as the contriver of the city walls and architect of Peiræus: Aristeides is commander of the fleet and first organiser of the Confederacy of Delos. Moreover we seem to detect a change in the character of the latter. He had ceased to be the champion of Athenian old-fashioned landed interest, against Themistokles as the originator of the maritime innovations. Those innovations had now, since the battle of Salamis, become an established fact. . . . From henceforth the fleet is endeared to every man as the grand force, offensive and defensive, of the state, in which character all the political leaders agree in accepting it. . . . The triremes, and the men who manned them, taken collectively, were now the determining element in the state. Moreover, the men who manned them had just returned from Salamis, fresh from a scene of trial and danger, and from a harvest of victory, which had equalized for the moment all Athenians as sufferers, as combatants, and as patriots. . . . The political change arising from hence in Athens was not less important than the military. 'The maritime multitude, authors of the victory of Salamis,' and instruments of the new vocation at Athens as head of the Delian Confederacy, appear now ascendant in the political constitution also; not in any way as a separate or privileged class, but as leavening the whole mass, strengthening the democratical sentiment, and protesting against all recognised political inequalities. . . . Early after the return to Attica, the Kleisthenian constitution was enlarged as respects eligibility to the magistracy. According to that constitution, the fourth or last class on the Solonian census, including the considerable majority of freemen, were not admissible to offices of state, though they possessed votes in common with the rest; no person was eligible to be a magistrate unless he belonged to one of the three higher classes. This restriction was now annulled and eligibility extended to all the citizens. We may appreciate the strength of feeling with which such reform was demanded when we find that it was proposed by Aristeides. . . . The popularity thus ensured to him, probably heightened by some regret for his previous ostracism, was calculated to acquire permanence from his straightforward and incorruptible character, now brought into strong relief by his function as assessor to the new Delian Confederacy. On the other hand, the ascendancy of Themistokles, though so often exalted by his unrivalled political genius and daring, as well as by the signal value of his public recommendations, was as often overthrown by his duplicity of means and unprincipled thirst for money. New political opponents sprung up against him, men sympathising with Aristeides. . . . Of these the chief were Kimon [Cimon], (son of Miltiades), and Alkmaeon." In 471 B. C. Themistokles was sent into exile by a vote of ostracism, and retired to Argos. Five years later he was accused of complicity in the treasonable intrigues of Pausanias, and fled to the court of the Persian king, where he spent the remainder of his days. "Aristeides died about three or four years after

the ostracism of Themistokles."—G. Grote, *Hist. of Greece*, pt. 2, ch. 44 (v. 5).—The constitutional effects of the Persian war, and the political situation of Athens immediately after the war, are represented somewhat differently from the account above, in the lately discovered work on the Constitution of Athens which is attributed to Aristotle. The following is quoted from one of the translations of the latter: "After the Median war the council of Areopagus [See AREOPAGUS] recovered strength and ruled the state, not that any law conferred the hegemony on them, but because the aristocratic party had the credit of the victory at Salamis. For when the generals had despaired of the country and proclaimed a *saue qui peut*, the Areopagus raised funds, gave every man eight drachmas (6s. 6d.) and induced them to man the ships. In consequence of this public service the Ecclesia yielded the ascendancy to the Areopagus, and public affairs were admirably administered during the following epoch. For they acquired the art of war, made their name honoured throughout the Hellenic world, and possessed themselves of the sovereignty of the sea with the consent of Lakedaimon. At this time the leaders of the commons were Aristeides, son of Lusimachos, and Themistokles, son of Neokles; the latter studious of the arts of war, the former reputed eminent in statesmanship and honest beyond his contemporaries; which characters made their countrymen employ the one as a general, the other as a councillor. The rebuilding of the walls of Athens was their joint work, though they were otherwise at feud. The detachment of the Ionians from Persia and the formation of an alliance with Sparta were due to the counsels of Aristeides, who seized the opportunity afforded by the discredit cast on the Lakonians by the conduct of Pausanias. He too originally apportioned, two years after the battle of Salamis, in the archonship of Timosthenes (478 B. C.), the contribution to be paid by the islanders. . . . Subsequently, when lofty thoughts filled every bosom and wealth was accumulating, Aristeides advised them to administer the hegemony with their own hands, to leave their country occupations and fix their domicile in the city. Sustentation, he promised, would be provided for all, either as soldiers or sailors in active service, or as troops in garrison or as public servants; and then they could increase the vigour of their imperial sway. They followed his advice, and, taking the rule into their own hands, reduced their allies to the position of vassals, except the Chians, Lesbians, and Samians, whom they kept as satellites of their power, and permitted to retain their own constitutions and to rule their own dependencies: and they provided for their own sustentation by the method which Aristeides indicated; for in the end the public revenues, the taxes and the tributes of the allies gave maintenance to more than 20,000. There were 6,000 dicasts or jurors, 1,600 archers, 1,200 cavalry, 500 senators, 500 soldiers of the dockyard garrison, 50 city guards, 700 home magistrates, 700 foreign magistrates, 2,500 heavy armed soldiers (this was their number at the beginning of the Peloponnesian war), 4,000 sailors manning 20 guardships, 2,000 sailors appointed by lot, manning 20 tribute-collecting ships, and in addition to these the Prutaneion, the orphans, the gaolers; and all

these persons were maintained at the expense of the national treasury. The sustentation of the commons was thus secured. The 17 years which followed the Median war were about the period during which the country continued under the ascendancy of the Areopagus, though its aristocratic features were gradually on the wane. When the masses had grown more and more preponderant, Ephialtes, son of Sophonides, reputed incorruptible in his loyalty to democracy, became leader of the commons, and began to attack the Areopagus. First, he put to death many of its members, by impeaching them of offences committed in their administration. Afterwards in the archonship of Konon (462 B. C.) he despoiled the council itself of all its more recently acquired attributes, which were the keystone of the existing constitution, and distributed them among the Senate of 500, the Ecclesia, and the courts of law. In this work he had the co-operation of Themistokles, who was himself an Areopagite, but expecting to be impeached for treasonable correspondence with Persia. . . . Ephialtes and Themistokles kept accusing the Areopagus before the Senate of 500, and again before the commons, till finally they stripped it of all its principal functions. The assassination of Ephialtes by the instrumentality of Aristodikos of Tanagra followed not long after. Such were the circumstances of the overthrow of the Areopagus. After this the degradation of the constitution proceeded without intermission from the eagerness of politicians to win popular favour; and at the same time there happened to be no organizer of the aristocratic party, whose head, Kimon, the son of Miltiades, was too young for some years to enter political life; besides which their ranks were much devastated by war. Expeditionary forces were recruited by conscription; and as the generals had no military experience and owed their appointment to the reputation of their ancestors, each expedition entailed the sacrifice of 2,000 or 3,000 lives, chiefly of the noblest sons of Athens, whether belonging to the wealthy classes or to the commons."—Aristotle, *On the Constitution of Athens* (tr. by E. Poste.) ch. 23-26.—On the above, Dr. Abbott comments as follows: "So much of this account as refers to Themistokles may be at once dismissed as unhistorical. . . . If the evidence of Thucydides is to count for anything, it is quite certain that Themistokles finally left Greece for Persia about 466 B. C. . . . Plutarch says not a word about Themistokles. But the remainder of the account [of the attack on the Areopagus] is supported by all our authorities—if indeed it is not merely repeated by them."—E. Abbott, *Hist. of Greece*, pt. 2, ch. 11, sect. 5.

B. C. 470-466.—Continued war against the Persians.—Kimon's victories at the Eurymedon.—Revolt and subjugation of Naxos.—"Under the guidance of Athens, the war against the Persians was continued. Kimon [Kimon] sailed with a fleet to the coast of Thrace, and laid siege to Eion on the Strymon [B. C. 470]. The Persian garrison made a gallant defence; and finally Boges, the governor, rather than surrender, cast all his gold and silver into the river; and, having raised a huge pile of wood,

slew his wives, children and slaves, and laid their bodies on it; then setting fire to it, he flung himself into the flames: the garrison surrendered at discretion. Doriscus was attacked in vain, but all the other Persian garrisons in Europe were reduced. Kimon then, as executor of an Amphictyonic decree, turned his arms against the piratic Dolopians of the Isle of Scyros, whom he expelled, and filled the island with Athenian colonists. On this occasion he sought and found (as was supposed) the bones of the hero Theseus, who had died in this island 800 years before; and he brought them in his own trireme to Athens,—an act which gained him great favour with the people. By this time, some of the confederates were grown weary of war, and began to murmur at the toils and expense to which it put them. The people of Naxos were the first who positively refused to contribute any longer; but the Athenians, who had tasted of the sweets of command, would not now permit the exercise of free will to their allies. Kimon appeared (Ol. 78,3) [B. C. 466] with a large fleet before Naxos; the Naxians defended themselves with vigour, but were at length forced to submit; and the Athenians had the hardihood to reduce them to the condition of subjects to Athens—an example which they soon followed in other cases. . . . After the reduction of Naxos, Kimon sailed over to the coast of Asia, and learning that the Persian generals had assembled a large fleet and army in Pamphylia, he collected a fleet of 200 triremes at Knidos, with which he proceeded to the coast of that country, and laid siege to the city of Phaselis, which, though Greek, obeyed the Persian monarch. Having reduced it to submission, he resolved to proceed and attack the Persian fleet and army, which he learned were lying at the river Eurymedon. On his arrival, the Persian fleet, of 350 triremes, fearing at first to fight till 80 Phoenician vessels, which they were expecting, should come up, kept in the river; but finding that the Greeks were preparing to attack, they put out to sea and engaged them. The action did not continue long; the Barbarians fled to the land; 200 ships fell into the hands of the victors, and several were destroyed. Without a moment's delay, Kimon disembarked his men, and led them against the land forces: the resistance of the Persians was obstinate for some time, but at last they turned and fled, leaving their camp a prey to the conquerors; and Kimon had thus the rare glory of having gained two important victories in the one day. Hearing then that the 80 Phoenician vessels were at Hydros, in the Isle of Cyprus, he immediately sailed thither and took or destroyed the whole of them. The victory on the Eurymedon may be regarded as the termination of the conflict between Greece and Persia. The year after it (Ol. 78,4) [B. C. 465], Xerxes was assassinated, and the usual confusion took place in the court of Susa."—T. Keightley, *Hist. of Greece*, pt. 1, ch. 13.

B. C. 466-454.—Leadership in the Delian confederacy changed to sovereignty.—Revolt and subjugation of Thasos.—Help to Sparta and its ungracious requital.—Fall and exile of Kimon.—Rise of Pericles and the democratic anti-Spartan policy.—Removal of the

federal treasury from Delos.—Building the Long Walls.—It was now evident to the whole body of the allies of Athens that by joining the league they had provided themselves with a mistress rather than a leader. . . . Two years after the reduction of Naxos another powerful island-state broke out into rebellion against the supremacy of Athens. The people of Thasos had from very early times possessed territory on the mainland of Thrace opposite to their island. By holding this coast-slip they engrossed the trade of the Valley of the Strymon, and held the rich gold mines of Mount Pangaeus. But the Athenians, after the capture of Eion, set themselves to develop that port as the commercial centre of Thrace. . . . A spot called 'The Nine Ways,' . . . where that great river first begins to broaden out into its estuary, but can still be spanned by a bridge, was the chosen site of a fortress to secure the hold of Athens on the land. But the native Thracian tribes banded themselves together, and fell upon the invaders with such desperation that . . . the Athenian armies were defeated. . . . It was probably the discouragement which this defeat caused at Athens that emboldened Thasos to declare her secession from the Confederacy of Delos. She wished to save her Thracian trade, before Athens could make another attempt to divert it from her. The Thasians did not rely on their own resources alone; they enlisted the Thracians and Macedonians of the mainland, and sent to Sparta to endeavour to induce the ephors to declare war on Athens." The Spartans were well disposed to take up the cause of the Thasians; but at that moment they were overwhelmed by the calamity of the frightful Earthquake of 464, instantly followed by the rising of the Helots and the third Messenian war (See *MESSENIAN WAR, THE THIRD*). "The island-state was therefore left to its own resources; and these were so considerable that she held out against the force of the Athenian confederacy for two whole years. . . . She was obliged at last to surrender to Cimon [B. C. 463], whose army had long been lying before her walls. Like Naxos, she was punished for her defection by the loss of her war-fleet and her fortifications, and the imposition of a fine of many talents. Still more galling must have been the loss of her trade with Thrace, which now passed entirely into Athenian hands. . . . The Spartans were still engaged in a desperate struggle with their revolted subjects when the siege of Thasos came to an end. Cimon, who was now at the height of his reputation and power, saw with distress the troubles of the city he so much admired. He set himself to persuade the Athenians that they ought to forego old grudges, and save from destruction the state which had shared with them the glory of the Persian war. . . . His pleading was bitterly opposed by the anti-Spartan party at Athens, headed by two statesmen, Ephialtes and Pericles, who had already come into notice as antagonists of Cimon. But the more generous and unwise policy prevailed, and 4,000 hoplites were sent to the aid of Sparta [B. C. 462]. This army was pursued by misfortune; it was so unsuccessful in attacking Ithome that the Spartans attributed its failure to ill will rather than ill luck. They, therefore, began to treat their allies with marked discourtesy, and at last sent

them home without a word of thanks, merely stating that their services could be of no further use [See *MESSENIAN WAR, THE THIRD*]. This rudeness and ingratitude fully justified the anti-Spartan party at Athens. . . . Cimon was now no longer able to deal with the policy of the state as he chose, and the conduct of affairs began to pass into the hands of men whose foreign and domestic policy were alike opposed to all his views. Ephialtes and Pericles proceeded to form alliances abroad with all the states which were ill disposed toward Sparta, and at home to commence a revision of the constitution. They were determined to carry out to its furthest logical development the democratic tendency which Cleisthenes had introduced into the Athenian polity. Of Ephialtes, the son of Sophonides, comparatively little is known. But Pericles . . . was the son of Xanthippus, the accuser of Miltiades in 489, B. C., and the victor of Mycale and Sestos; while, on his mother's side, he came of the blood of the Alcmaeonidae. Pericles was staid, self-contained, and haughty—a strange chief for the popular party. But his relationship to Cleisthenes, and the enmity which existed between his house and that of Cimon, urged him to espouse the cause of democracy. . . . While Cimon had Greece in his mind, Pericles could only think of Athens, and the temper of the times was favourable to the narrower policy. . . . The first aim which Pericles and Ephialtes set before themselves was the cutting down of the power of the Areopagus [See above: B. C. 477-462]. That body had since the Persian war become the stronghold of the Conservative and philo-Laonian party. . . . Ephialtes took the lead in the attack on the Areopagus. He chose a moment when Cimon was away at sea, bent on assisting a rebellion against the Great King which had broken out in Egypt. After a violent struggle, he succeeded in carrying a law which deprived the Areopagus of its ancient censorial power, and reduced it to a mere court to try homicides. . . . When Cimon came home from Egypt he was wildly enraged. . . . Recourse was had to the test of ostracism. It decided against Cimon, who therefore went into banishment [B. C. 459]. But this wrong against the greatest general of Athens was, not long after, avenged by an over-zealous and unscrupulous friend. Ephialtes was slain by assassins in his own house. . . . The immediate result of this murder was to leave Pericles in sole and undivided command of the democratic party. The foreign policy of Pericles soon began to involve Athens in troubles at home. He concluded alliances with Argos and Thessaly, both states at variance with Sparta, and thereby made a collision with the Lacedæmonian confederacy inevitable. He gave still more direct offence to Corinth, one of the most powerful members of that confederacy, by concluding a close alliance with Megara. . . . In Boeotia, too, he stirred up enmity, by giving an active support to the democratic party in that country. These provocations made a war inevitable. In 458 B. C. the storm burst. . . . At the moment of the outbreak of the first important naval war which she had to wage with a Greek enemy since the formation of her empire, Athens took two important steps. The first was destined to guard against the risk of misfortunes by sea; it consisted in the transference from Delos to Athens

[dated by different authorities between 461 and 454 B. C.] of the central treasury of the confederacy. . . . It was not long before the Athenians came to regard the treasury as their own, and to draw upon it for purely Attic needs, which had no connection with the welfare of the other confederates. . . . The second important event of the year 458 B. C. was the commencement of the famous 'Long Walls' of Athens [See LONG WALLS]. . . . When they were finished Athens, Peiræus, and Phalerum, formed the angles of a vast fortified triangle, while the space between them, a considerable expanse of open country, could be utilized as a place of refuge for the population of Attica, and even for their flocks and herds."—C. W. C. Oman, *Hist. of Greece*, ch. 23-24.

B. C. 460-449.—Disastrous expedition to Egypt.—Attacks on the Peloponnesian Coast.—Recall of Cimon.—His last enterprise against the Persians.—The disputed Peace of Cimon or Callias.—Five years truce with Sparta.—"Inarus, king of some of the Libyan tribes on the western border of Egypt, had excited an insurrection there against the Persians [about 460 B. C.], and his authority was acknowledged throughout the greater part of the country. Artaxerxes sent his brother Achæmenes with a great army to quell this rebellion. An Athenian armament of 200 galleys was lying at the time off Cyprus, and Inarus sent to obtain its assistance. The Athenian commanders, whether following their own discretion, or after orders received from home, quitted Cyprus, and having joined with the insurgents, enabled them to defeat Achæmenes, who fell in the battle by the hand of Inarus. They then sailed up the Nile to Memphis, where a body of Persians, and some Egyptians, who still adhered to their cause were in possession of one quarter of the city, called White Castle. The rest was subject to Inarus, and there the Athenians stationed themselves, and besieged the Persians. . . . Artaxerxes sent a Persian, named Megabazus, to Sparta, with a sum of money, to be employed in bribing the principal Spartans to use their influence, so as to engage their countrymen in an expedition against Attica. Megabazus did not find the leading Spartans unwilling to receive his money; but they seem to have been unable to render him the service for which it was offered. Ithome still held out: and Sparta had probably not yet sufficiently either recovered her strength or restored internal tranquility, to venture on the proposed invasion. Some rumours of this negotiation may have reached Athens, and have quickened the energy with which Pericles now urged the completion of the long walls. . . . But among his opponents there was a faction who viewed the progress of this great work in a different light from Cimon, and saw in it, not the means of securing the independence of Athens, but a bulwark of the hated commonalty. They too would have gladly seen an invading army in Attica, which might assist them in destroying the work and its authors." This party was accused of sympathy with the Spartan expedition which came to the help of Doris against the Phocians in 457 B. C., and which defeated the Athenians at Tanagra (See GREECE : B. C. 458-

(456). In 455, "the Spartans were reminded that they were also liable to be attacked at home. An Athenian armament of 50 galleys, and, if we may trust Diodorus, with 4,000 heavy armed troops on board, sailed round Peloponnesus under Tolmides, burnt the Spartan arsenal at Gythium, took a town named Chalcis belonging to the Corinthians, and defeated the Sicyonians, who attempted to oppose the landing of the troops. But the most important advantage gained in the expedition was the capture of Naupactus, which belonged to the Ozolian Locrians, and now fell into the hands of the Athenians at a very seasonable juncture. The third Mesenian war had just come to a close. The brave defenders of Ithome had obtained honourable terms. . . . The besieged were permitted to quit Peloponnesus with their families, on condition of being detained in slavery if they ever returned. Tolmides now settled the homeless wanderers in Naupactus. . . . But these successes were counterbalanced by a reverse which befel the arms of Athens this same year in another quarter. After the defeat of Achæmenes, Artaxerxes, disappointed in his hopes of assistance from Sparta, . . . raised a great army, which he placed under the command of an abler general, Megabyzus, son of Zopyrus. Megabyzus defeated the insurgents and their allies, and forced the Greeks to evacuate Memphis, and to take refuge in an island of the Nile, named Prosopitis, which contained a town called Byblus, where he besieged them for 18 months. At length he resorted to the contrivance of turning the stream. . . . The Greek galleys were all left aground, and were fired by the Athenians themselves, that they might not fall into the enemy's hands. The Persians then marched into the island over the dry bed of the river: the Egyptians in dismay abandoned their allies, who were overpowered by numbers and almost all destroyed. . . . Inarus himself was betrayed into the hands of the Persians and put to death. . . . Egypt . . . was again reduced under the Persian yoke, except a part of the Delta, where another pretender, named Amyrtæus, who assumed the title of king . . . maintained himself for several years against the power of the Persian monarchy. But the misfortune of the Athenians did not end with the destruction of the great fleet and army which had been first employed in the war. They had sent a squadron of 50 galleys to the relief of their countrymen, which, arriving before the news of the recent disaster had reached them, entered the Mendesian branch of the Nile. They were here surprised by a combined attack of the Persian land force and a Phœnician fleet, and but few escaped to bear the mournful tidings to Athens. Yet even after this calamity we find the Athenians, not suing for peace, but bent on extending their power, and annoying their enemies." Early in 454 they sent an expedition into Thessaly, to restore a ruler named Orestes, who had been driven out. "But the superiority of the Thessalians in cavalry checked all their operations in the field; they failed in an attempt upon Pharsalus, and were at length forced to retire without having accomplished any of their ends. It was perhaps to soothe the public disappointment that Pericles shortly afterwards embarked at Pegæ with 1,000 men, and, coasting the south side of the Corinthian gulf made a

descent on the territory of Sicyon, and routed the Sicyon force sent to oppose his landing. He then . . . laid siege to the town of Æniadæ. . . . This attempt, however, proved unsuccessful; and the general result of the campaign seems not to have been on the whole advantageous or encouraging. . . . It seems to have been not long after the events which have been just related that Cimon was recalled from his exile; and the decree for that purpose was moved by Pericles himself;—a fact which seems to intimate that some change had taken place in the relations or the temper of parties at Athens. . . . The three years next following Cimon's return, as we have fixed its date [B. C. 454 or 453], passed, happily for his contemporaries, without affording any matter for the historian; and this pause was followed by a five years' truce [with Sparta], in the course of which Cimon embarked in his last expedition, and died near the scene of his ancient glory. The pretender Amyrtæus had solicited succour from the Athenians. . . . Cimon was appointed to the command of a fleet of 200 galleys, with which he sailed to Cyprus, and sent a squadron of 60 to the assistance of Amyrtæus, while he himself with the rest laid siege to Citium. Here he was carried off by illness, or the consequences of a wound; and the armament was soon after compelled, by want of provisions, to raise the siege. But Cimon's spirit still animated his countrymen, who, when they had sailed away with his remains, fell in with a great fleet of Phœnician and Cilician galleys, near the Cyprian Salamis, and, having completely defeated them, followed up their naval victory with another which they gained on shore, either over the troops which had landed from the enemy's ships, or over a land force by which they were supported. After this they were joined by the squadron which had been sent to Egypt, and which returned, it would appear, without having achieved any material object, and all sailed home (B. C. 449). In after-times Cimon's military renown was enhanced by the report of a peace [sometimes called the Peace of Cimon, and sometimes the Peace of Callias], which his victories had compelled the Persian king to conclude on terms most humiliating to the monarchy. Within less than a century after his death it was, if not commonly believed, confidently asserted, that by this treaty, negotiated, as it was supposed, by Callias, son of Hipponicus, the Persians had agreed to abandon at least the military occupation of Asia Minor, to the distance of three days journey on foot, or one on horseback, from the coast, or, according to another account, the whole peninsula west of the Halys, and to abstain from passing the mouth of the Bosphorus and the Chelidonian islands, on the coast of Lycia, or the town of Phaselis, into the Western Sea. The mere silence of Thucydides on so important a transaction would be enough to render the whole account extremely suspicious." —C. Thirlwall, *Hist. of Greece*, ch. 17 (v. 3). Mr. Grote accepts the Peace of Cimon as an historical fact; Prof. Curtius rejects it. —G. Grote, *Hist. of Greece*, pt. 2, ch. 45 (v. 5). —E. Curtius, *Hist. of Greece*, bk. 3, ch. 2 (v. 2).

B. C. 449-445.—Hostile revolution in Bœotia.—Defeat at Coroneia.—Revolt of Eubœa and Megara.—The thirty years' truce.—Territorial losses.—Spartan recognition of the Delian Confederacy. See GREECE: B. C. 449-445.

B. C. 445-431.—Supremacy of Pericles and the popular arts by which he attained it.—The splendor of Athens and grandeur of the Athenian Empire under his rule.—"The conclusion of peace left the Athenians to their confederacy and their internal politics. . . . After the death of Cimon the oligarchical party at Athens had been led by Thucydides, the son of Melesias, a man of high character and a kinsman of Cimon. . . . Hitherto the members had sat here or there in the assembly as they pleased; now they were combined into a single body, and sat in a special place. Such a consolidation was doubtless needed if the party was to hold its own against Pericles, who was rapidly carrying all before him. For years past he had provided a subsistence for many of the poorer citizens by means of his numerous colonies—no fewer than 5,000 Athenians must have been sent out to the 'cleruchies' in the interval between 453 B. C. and 444 B. C. The new system of juries [See DICASTERIA] had also been established on the fall of the Areopagus, and the jurymen were paid—a second source of income to the poor. Such measures were beyond anything that the private liberality of Cimon—splendid as it was—could achieve; and on Cimon's death no other aristocrat came forward to aid his party with his purse. Pericles did not stop here. Since the cessation of the war with Persia there had been fewer drafts on the public purse, and the contributions of the allies were accumulating in the public treasury. A scrupulous man would have regarded the surplus as the money of the allies. . . . Pericles took another view. He plainly told the Athenians that so long as the city fulfilled the contract made with the allied cities, and kept Persian vessels from their shores, the surplus was at the disposal of Athens. Acting on this principle, he devoted a part of it to the embellishment of the city. With the aid of Pheidias, the sculptor, and Ictinus, the architect, a new temple began to rise on the Acropolis in honour of Athena—the celebrated Parthenon or 'Virgin's Chamber' [See PARTHENON]. . . . Other public buildings were also begun about this time. Athens was in fact a vast workshop, in which employment was found for a great number of citizens. Nor was this all. . . . For eight months of the year 60 ships were kept at sea with crews on board, in order that there might be an ample supply of practical seamen. . . . Thus by direct or indirect means Pericles made the state the paymaster of a vast number of citizens, and the state was practically himself, with these paid citizens at his back. At the same time the public festivals of the city were enlarged and adorned with new splendour. . . . That all might attend the theatre in which the plays were acted, Pericles provided that every citizen should receive from the state a sum sufficient to pay the charge demanded from the spectators by the lessee [See DIOBOLY]. We may look on these measures as the arts of a demagogue. . . . Or we may say that Pericles

was able to gratify his passion for art at the expense of the Athenians and their allies. Neither of these views is altogether untenable; and both are far from including the whole truth. Pericles . . . was, if we please to say it, a demagogue and a connoisseur. But he was something more. Looking at the whole evidence before us with impartial eyes, we cannot refuse to acknowledge that he cherished aspirations worthy of a great statesman. He sincerely desired that every Athenian should owe to his city the blessing of an education in all that was beautiful, and the opportunity of a happy and useful life. . . . The oligarchs determined to pull down Pericles, if it were possible. . . . They proposed, in the winter of 445 B. C., that there should be an ostracism in the city. The people agreed, and the usual arrangements were made. But when the day came for decision, in the spring of 444 B. C., the sentence fell, not on Pericles, but on Thucydides. The sentence left no doubt about the feeling of the Athenian people, and it was accepted as final. Thucydides disappeared from Athens, and for the next fifteen years Pericles was master of the city. . . . While Athens was active, organizing her confederacy and securing her communication with the north, the Peloponnesians had allowed the years to pass in apathy and inattention. At length they awoke to a sense of the situation. It was clear that Athens had abandoned all idea of war with Persia, and that the confederacy of Delos was transformed into an Athenian empire, of whose forces the great city was absolutely mistress. And meanwhile in visible greatness Athens had become far the first city in Greece."—E. Abbott, *Pericles*, ch. 10-11.—"A rapid glance will suffice to show the eminence which Athens had attained over the other states of Greece. She was the head of the Ionian League—the mistress of the Grecian seas; with Sparta, the sole rival that could cope with her armies and arrest her ambition, she had obtained a peace; Corinth was humbled—Ægina ruined—Megara had shrunk into her dependency and garrison. The states of Boeotia had received their very constitution from the hands of an Athenian general—the democracies planted by Athens served to make liberty itself subservient to her will, and involved in her safety. She had remedied the sterility of her own soil by securing the rich pastures of the neighbouring Eubœa. She had added the gold of Thasos to the silver of Laurion, and established a footing in Thessaly which was at once a fortress against the Asiatic arms and a mart for Asiatic commerce. The fairest lands of the opposite coast—the most powerful islands of the Grecian seas—contributed to her treasury, or were almost legally subjected to her revenge. . . . In all Greece, Myronides was perhaps the ablest general—Pericles . . . was undoubtedly the most highly educated, cautious and commanding statesman. . . . In actual possession of the tribute of her allies, Athens acquired a new right to its collection and its management, and while she devoted some of the treasures to the maintenance of her strength, she began early to uphold the prerogative of appropriating a part to the enhancement of her splendour. . . . It was now [about B. C. 444] resolved to make Athens also the seat and centre of the judicial authority. The subject-allies were compelled, if not on minor, at least on all important cases,

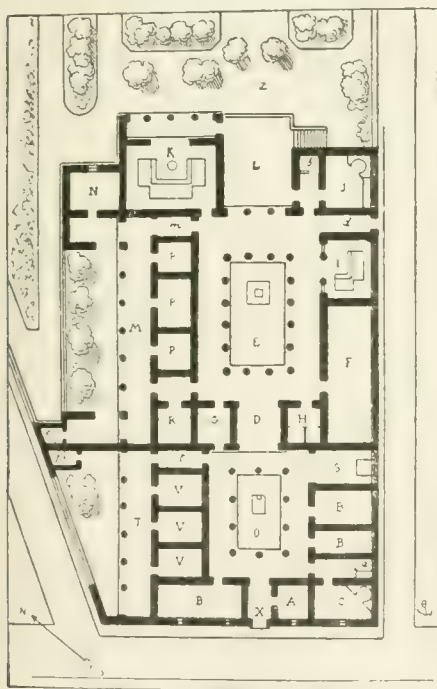

to resort to Athenian courts of law for justice. And thus Athens became, as it were, the metropolis of the allies. . . . Before the Persian war, and even scarcely before the time of Cimon, Athens cannot be said to have eclipsed her neighbours in the arts and sciences. She became the centre and capital of the most polished communities of Greece, and she drew into a focus all the Grecian intellect; she obtained from her dependents the wealth to administer the arts, which universal traffic and intercourse taught her to appreciate; and thus the Odeon, and the Parthenon, and the Propylæa arose. During the same administration, the fortifications were completed, and a third wall, parallel and near to that uniting Piræus with Athens, consummated the works of Themistocles and Cimon, and preserved the communication between the two-fold city, even should the outer walls fall into the hands of an enemy."—E. G. Bulwer-Lytton, *Athens: Its Rise and Fall*, bk. 4, ch. 5, bk. 5, ch. 2.

B. C. 445-429.—The Age of Pericles: Art.—"The Greeks . . . were industrious, commercial, sensitive to physical and moral beauty, eager for discussion and controversy; they were proud of their humanity, and happy in the possession of their poets, their historians, their orators and artists. It is singular, in the history of nations, to meet with a people distinguished at once by mercantile aptitude, and by an exquisite feeling and sympathy for works of art; to see the vanity of wealth compatible with a nice discernment for the true principles of taste; to behold a nation, inconstant in ideas, inconceivably fickle in prejudices, worshipping a man one day and proscribing him the next, yet at the same time progressing with unheard-of rapidity; within the space of a few years traversing all systems of philosophy, all forms of government, laying the foundations of all sciences, making war on all its neighbors, yet, in the midst of this chaos of ideas, systems, and passions, developing art steadily and with calm intelligence, giving to it novelty, originality, and beauty, while preserving it pure from the aberrations and caprices of what we now call fashion. At the time of the battle of Salamis, 480 B. C., Athens had been destroyed, its territory ravaged, and the Athenians had nothing left but their ships; yet so great was the activity of this commercial but artistic people, that, only twenty years afterwards, they had built the Parthenon."—E. E. Viollet-le-Duc, *Discourses on Architecture*, p. 65.

B. C. 445-429.—The Age of Pericles: Domestic life.—The Athenian house.—"For any one coming from Asia it seemed as if in entering Athens he was coming into an ant's nest. Possessing, at the epoch of its greatest power, the three ports of Munychia, Phalerum and the Piræus, it covered a district whose circumference measured two hundred stadia (twenty-four miles). But it was around the Acropolis that the houses were crowded together and the population always in activity. There wagons were passing to and fro, filled with merchandise from the ports or conveying it thither. The streets and public places in which people passed their lives presented a busy and noisy scene. Strangers, who came to buy or to sell, were continually entering or leaving the shops and places of manufacture, and slaves were carrying messages or

burdens. Women as well as men were to be seen in the streets, going to the markets, the public games and the meetings of corporate bodies. From the earliest hours of the day large numbers of peasants might be seen bringing in vegetables, fruit and poultry, and crying their wares in the streets. Houses of the higher class occupied the second zone; they generally possessed a garden and sometimes outbuildings of considerable extent. Around them were to be seen clients and parasites, waiting for the hour when the master should make his appearance; and while away the time discussing the news of the day, repeating the rumours, true or false, that were current in the city; getting the slaves to talk, and laughing among themselves at the strangers, that happened to be passing, or addressing them with a view to make fun of their accent, garb or dress. The house of Chremylus, recently built in that second zone, was a subject of remark for all the idlers. Chremylus, who had lately become wealthy by means of commerce, and of certain transactions of more or less creditable character in the colonies, was an object of envy and criticism to most people, and of admiration for some who did justice to his intelligence and energy. He enjoyed a certain degree of influence in the public assemblies — thanks to his liberality; while he took care to secure the good graces of the archons and to enrich the temples.

PLAN OF ATHENIAN HOUSE.

We have [in the accompanying figure] the ground-plan of the residence of this Athenian citizen. The entrance x opens on the public road. The site is bounded on either side by narrow streets. This entrance x opens on the court O, which is surrounded by porticos. At A is the porter's lodge, and at B the rooms for the slaves, with kitchen at C and latrines at a.

From this first court, in the centre of which is a small fountain with a basin which receives the rain water, the passage D leads into the inner court E, which is larger and is likewise surrounded by porticos. At G is the reception room, at H the strong room for valuables, and at S the private altar. At F is a large storeroom containing provisions and wine; and at I the small dining room (triclinium); the cooking-room for the family being at J with latrines at b. The large triclinium is at K. The passage m admits to the gynæceum, containing the bedrooms P along the portico M, a common room for the women, with its small enclosed garden, and closets at e. The quarters for visitors are entered by the passage t, and consist of bedrooms V, a portico T, a small garden and closets f. At d is an opening into the lane for the servants, when required. The gardens extend in the direction Z. This house is situated on the slopes of the hill which to the south-west looks towards the Acropolis; thus it is sheltered from the violent winds which sometimes blow from this quarter. From the large dining-hall and from the terrace L, which adjoins it, there is a charming prospect; for, above the trees of the garden is seen the city overlooked by the Acropolis, and towards the left the hill of the Areopagus. From this terrace L there is a descent to the garden by about twelve steps. The position was chosen with a view to protection against the sun's heat and the troublesome winds. From the portico of the gynæceum are seen the hills extending towards the north, covered with houses surrounded by olive-trees; and in the background Mount Pentelicus. . . . In the dwelling of Chremylus the various departments were arranged at the proprietor's discretion, and the architect only conformed to his instructions. Thus the front part of the house is assigned to the external relations of the owner. In this court O assemble the agents or factors who come to give an account of the commissions they have executed, or to receive orders. If the master wishes to speak to any of them, he takes him into his reception room; his bedchamber being at R, he can easily repair to that reception-room or to the gynæceum reserved for the women and younger children. If he entertains friends, they have their separate apartments, which are shut off, not being in communication with the first court except through the passage t. All that part of the habitation which is beyond the wide entrance-hall D is consecrated to domestic life; and only the intimate friends of the family are admitted into the second court; for example, if they are invited to a banquet,—which is held in the great hall K. The master usually takes his meals with his wife and one or two members of his family who live in the house, in the smaller room I, the couches of which will hold six persons; whereas fifteen guests can be accommodated on the couches of the great hall K. Chremylus has spared nothing to render his house one of the most sumptuous in the city. The columns of Pentelican marble support architraves of wood, surmounted by friezes and cornices overlaid with stucco and ornamented with delicate painting. Everywhere the walls are coated with fine smooth plaster, adorned with paintings; and the ceilings are of timber artistically wrought and coloured." —E. Viollet-le-Duc, *The Habitations of Man in all Ages*, ch. 17.

B. C. 445-429.—The Age of Pericles: Law and its Administration.—Contrast with the Romans.—"It is remarkable . . . that the 'equality' of laws on which the Greek democracies prided themselves—that equality which, in the beautiful drinking song of Callistratus, Harmodius and Aristogiton are said to have given to Athens—had little in common with the 'equity' of the Romans. The first was an equal administration of civil laws among the citizens, however limited the class of citizens might be; the last implied the applicability of a law, which was not civil law, to a class which did not necessarily consist of citizens. The first excluded a despot; the last included foreigners, and for some purposes slaves. . . . There are two special dangers to which law, and society which is held together by law, appear to be liable in their infancy. One of them is that law may be too rapidly developed. This occurred with the codes of the more progressive Greek communities, which disembarassed themselves with astonishing facility from cumbrous forms of procedure and needless terms of art, and soon ceased to attach any superstitious value to rigid rules and prescriptions. It was not for the ultimate advantage of mankind that they did so, though the immediate benefit conferred on their citizens may have been considerable. One of the rarest qualities of national character is the capacity for applying and working out the law, as such, at the cost of constant miscarriages of abstract justice, without at the same time losing the hope or the wish that law may be conformed to a higher ideal. The Greek intellect, with all its nobility and elasticity, was quite unable to confine itself within the strait waistcoat of a legal formula; and, if we may judge them by the popular courts of Athens, of whose working we possess accurate knowledge, the Greek tribunals exhibited the strongest tendency to confound law and fact. The remains of the Orators and the forensic commonplaces preserved by Aristotle in his Treatise on Rhetoric, show that questions of pure law were constantly argued on every consideration which could possibly influence the mind of the judges. No durable system of jurisprudence could be produced in this way. A community which never hesitated to relax rules of written law whenever they stood in the way of an ideally perfect decision on the facts of particular cases, would only, if it bequeathed any body of judicial principles to posterity, bequeath one consisting of the ideas of right and wrong which happened to be prevalent at the time. Such jurisprudence would contain no framework to which the more advanced conceptions of subsequent ages could be fitted. It would amount at best to a philosophy, marked with the imperfections of the civilisation under which it grew up. . . . The other liability to which the infancy of society is exposed has prevented or arrested the progress of far the greater part of mankind. The rigidity of primitive law, arising chiefly from its earlier association and identification with religion, has chained down the mass of the human race to those views of life and conduct which they entertained at the time when their usages were first consolidated into a systematic form. There were one or two races exempted by a marvellous fate from this calamity, and grafts from these stocks have fertilised a few

modern societies; but it is still true that, over the larger part of the world, the perfection of law has always been considered as consisting in adherence to the ground plan supposed to have been marked out by the original legislator. If intellect has in such cases been exercised on jurisprudence, it has uniformly prided itself on the subtle perversity of the conclusions it could build on ancient texts without discoverable departure from their literal tenour. I know no reason why the law of the Romans should be superior to the laws of the Hindoos, unless the theory of Natural Law had given it a type of excellence different from the usual one."—H. S. Maine, *Ancient Law*, ch. 3-4.—"But both the Greek and the English trial by jury were at one time the great political safeguard against state oppression and injustice; and, owing to this origin, free nations become so attached to it that they are blind to its defects. And just as Ireland would now benefit beyond conception by the abolition of the jury system, so the secured Athenian (or any other) democracy would have thriven better had its laws been administered by courts of skilled judges. For these large bodies of average citizens, who, by the way, were not like our jurymen, unwilling occupants of the jury-box, but who made it a paid business and an amusement, did not regard the letter of the law. They allowed actions barred by the reasonable limits of time; they allowed arguments totally beside the question, though this too was illegal, for there was no competent judge to draw the line; they allowed hearsay evidence, though that too was against the law; indeed the evidence produced in most of the speeches is of the loosest and poorest kind. Worse than all, there were no proper records kept of their decisions, and witnesses were called in to swear what had been the past decisions of a jury sitting in the same city, and under the same procedure. This is the more remarkable, as there were state archives, in which the decrees of the popular assembly were kept. . . . There is a most extraordinary speech of Lysias against a man called Nichomachus, who was appointed to transcribe the laws of Solon in four months, but who kept them in his possession for six years, and is accused of having so falsified them as to have substituted himself for Solon. Hence there can have been no recognized duplicate extant, or such a thing could not be attempted. So again, in the Trapeziticus of Isocrates, it is mentioned as a well known fact, that a certain Pythodorus was convicted of tampering with state-documents, signed and sealed by the magistrates, and deposited in the Acropolis. All these things meet us in every turn in the court speeches of the Attic orators. We are amazed at seeing relationships proved in will cases by a man coming in and swearing that such a man's father had told him that his brother was married to such a woman, of such a house. We find the most libellous charges brought against opponents on matters totally beside the question at issue, and even formal evidence of general bad character admitted. We find some speakers in consequence treating the jury with a sort of mingled deference and contempt which is amusing. 'On the former trial of this case,' they say, 'my opponent managed to tell you many well devised lies; of course you were deceived, how could it be other-

wise, and you made a false decision; or else, 'You were so puzzled that you got at variance with one another, you voted at sixes and sevens, and by a small majority you came to an absurd decision.' 'But I think you know well,' says Isocrates, 'that the city has often repented so bitterly ere this for decisions made in passion and without evidence, as to desire after no long interval to punish those who misled it, and to wish those who had been calumniated were more than restored to their former prosperity. Keeping these facts before you, you ought not to be hasty in believing the prosecutors, nor to hear the defendants with interruption and ill temper. For it is a shame to have the character of being the gentlest and most humane of the Greeks in other respects, and yet to act contrary to this reputation in the trials which take place here. It is a shame that in other cities, when a human life is at stake, a considerable majority of votes is required for conviction, but that among you those in danger do not even get an equal chance with their false accusers. You swear indeed once a year that you will attend to both plaintiff and defendant, but in the interval only keep your oath so far as to accept whatever the accusers say, but you sometimes will not let those who are trying to refute them utter even a single word. You think those cities uninhabitable, in which citizens are executed without trial, and forget that those who do not give both sides a fair hearing are doing the very same thing.'"—J. P. Mahaffy, *Social Life in Greece*, ch. 13.

B. C. 445-429.—The Age of Pericles: Political life.—The democracy.—"The real life of Athens lasted at the most for 200 years: and yet there are moments in which all that we have won by the toils of so many generations seems as if it would be felt to be but a small thing beside a single hour of Periklēs. The Democracy of Athens was in truth the noblest fruit of that self-developing power of the Greek mind which worked every possession of the common heritage into some new and more brilliant shape, but which learned nothing, nothing of all that formed its real life and its real glory, from the Barbarians of the outer world. Men tell us that Greece learned this or that mechanical invention from Phœnicia or Egypt or Assyria. Be it so; but stand in the Pnyx; listen to the contending orators; listen to the ambassadors of distant cities; listen to each side as it is fairly hearkened to, and see the matter in hand decided by the peaceful vote of thousands—here at least of a truth is something which Athens did not learn from any Assyrian despot or from any Egyptian priest. And we, children of the common stock, sharers in the common heritage, as we see man, Aryan man, in the full growth of his noblest type, we may feel a thrill as we think that Kleisthenēs and Periklēs were, after all, men of our own blood—as we think that the institutions which grew up under their hands and the institutions under which we ourselves are living are alike branches sprung from one stock, portions of one inheritance in which Athens and England have an equal right. In the Athenian Democracy we see a popular constitution taking the form which was natural for such a constitution to take when it was able to run its natural course in a commonwealth which consisted only of a single city. Wherever the Assembly really remains, in truth

as well as in name, an Assembly of the whole people in their own persons, it must in its own nature be sovereign. It must, in the nature of things, delegate more or less of power to magistrates and generals; but such power will be simply delegated. Their authority will be a mere trust from the sovereign body, and to that sovereign body they will be responsible for its exercise. That is to say, one of the original elements of the State, the King or chief, now represented by the elective magistracy, will lose its independent powers, and will sink into a body who have only to carry out the will of the sovereign Assembly. So with another of the original elements, the Council. This body too loses its independent being; it has no ruling or checking power; it becomes a mere Committee of the Assembly, chosen or appointed by lot to put measures into shape for more easy discussion in the sovereign body. As society becomes more advanced and complicated, the judicial power can no longer be exercised by the Assembly itself, while it would be against every democratic instinct to leave it in the arbitrary power of individual magistrates. Other Committees of the Assembly, Juries on a gigantic scale, with a presiding magistrate as chairman rather than as Judge, are therefore set apart to decide causes and to sit in judgment on offenders. Such is pure Democracy, the government of the whole people and not of a part of it only, as carried out in its full perfection in a single city. It is a form of government which works up the faculties of man to a higher pitch than any other; it is the form of government which gives the freest scope to the inborn genius of the whole community and of every member of it. Its weak point is that it works up the faculties of man to a pitch so high that it can hardly be lasting, that its ordinary life needs an enthusiasm, a devotion too highly strung to be likely to live through many generations. Athens in the days of her glory, the Athens of Periklēs, was truly 'the roof and crown of things;' her democracy raised a greater number of human beings to a higher level than any government before or since; it gave freer play than any government before or since to the personal gifts of the foremost of mankind. But against the few years of Athenian glory we must set the long ages of Athenian decline. Against the city where Periklēs was General we must set the city where Hadrian was Archon. On the Assemblies of other Grecian cities it is hardly needful to dwell. Our knowledge of their practical working is slight. We have one picture of a debate in the popular Assembly of Sparta, an Assembly none the less popular in its internal constitution because it was the assembly of what, as regarded the excluded classes of the State, was a narrow oligarchy. We see that there, as might be looked for, the chiefs of the State, the Kings, and yet more the Ephors, spoke with a degree of official, as distinguished from personal, authority which fell to the lot of no man in the Assembly of Athens. Periklēs reigned supreme, not because he was one of Ten Generals, but because he was Periklēs. . . . In the Ekklesia which listened to Periklēs and Dēmōsthenēs we feel almost as much at home as in an institution of our own land and our own times. At least we ought to feel at home there; for we have the full materials for calling up the political life of Athens in all its fullness, and within our own times one of the

greatest minds of our own or of any age has given its full strength to clear away the mists of error and calumny which so long shrouded the parent state of justice and freedom. Among the contemporaries and countrymen of Mr. Grote it is shame indeed if men fail to see in the great Democracy the first state which taught mankind that the voice of persuasion could be stronger than a despot's will, the first which taught that disputes could be settled by a free debate and a free vote which in other lands could have been decided only by the banishment or massacre of the weaker side. . . . It must be constantly borne in mind that the true difference between an aristocratic and a democratic government, as those words were understood in the politics of old Greece, lies in this. In the Democracy all citizens, all who enjoy civil rights, enjoy also political rights. In the aristocracy political rights belong to only a part of those who enjoy civil rights. But, in either case, the highest authority of the State is the general Assembly of the whole ruling body, whether that ruling body be the whole people or only a part of it. . . . The slaves and strangers who were shut out at Athens were, according to Greek ideas, no Athenians; but every Athenian had his place in the sovereign assembly of Athens, while every Corinthian had not his place in the sovereign assembly of Corinth. But the aristocratic and the democratic commonwealth both agreed in placing the final authority of the State in the general Assembly of all who enjoy the highest franchise. . . . The people, of its own will, placed at its head men of the same class as those who in the earlier state of things had ruled it against its will. Periklēs, Nikias, Alkibiadēs, were men widely differing in character, widely differing in their relations to the popular government. But all alike were men of ancient birth, who, as men of ancient birth, found their way, almost as a matter of course, to those high places of the State to which Kleôn found his way only by a strange freak of fortune. At Rome we find quite another story. There, no less than at Athens, the moral influence of nobility survived its legal privileges; but, more than this, the legal privileges of the elder nobility were never wholly swept away, and the inherent feeling of respect for illustrious birth called into being a younger nobility by its side. At Athens one stage of reform placed a distinction of wealth instead of a distinction of birth: another stage swept away the distinction of wealth also. But the reform, at each of its stages, was general; it affected all offices alike, save those sacred offices which still remained the special heritage of certain sacred families. . . . In an aristocratic commonwealth there is no room for Periklēs; there is no room for the people that hearkened to Periklēs; but in men of the second order, skilful conservative administrators, men able to work the system which they find established, no form of government is so fertile. . . . But everywhere we learn the same lesson, the inconsistency of commonwealths which boast themselves of their own freedom and exalt themselves at the cost of the freedom of others."—E. A. Freeman, *Comparative Politics*, lect. 5-6.—"Dēmos was himself King, Minister, and Parliament. He had his smaller officials to carry out the necessary details of public business, but he was most undoubtedly his own First Lord of the Treasury, his own Foreign Secretary, his own

Secretary for the Colonies. He himself kept up a personal correspondence both with foreign potentates and with his own officers on foreign service; the 'despatches' of Nikias and the 'notes' of Philip were alike addressed to no officer short of the sovereign himself; he gave personal audience to the ambassadors of other states, and clothed his own with just so great or so small a share as he deemed good of his own boundless authority. He had no need to entrust the care of his thousand dependencies to the mysterious working of a Foreign Office; he himself sat in judgment upon Mitylenian rebels; he himself settled the allotment of lands at Chalkis or Amphipolis; he decreed by his own wisdom what duties should be levied at the Sound of Byzantium; he even ventured on a task of which two-and-twenty ages have not lessened the difficulty, and undertook, without the help of a Lord High Commissioner, to adjust the relations and compose the seditions even of Korkyra and Zakynthos. He was his own Lord High Chancellor, his own Lord Primate, his own Commander-in-Chief. He listened to the arguments of Kleôn on behalf of a measure, and to the arguments of Nikias against it, and he ended by bidding Nikias to go and carry out the proposal which he had denounced as extravagant or unjust. He listened with approval to his own 'explanations'; he passed votes of confidence in his own policy; he advised himself to give his own royal assent to the bills which he had himself passed, without the form of a second or third reading, or the vain ceremony of moving that the Prytaneis do leave their chairs. . . . We suspect that the average Athenian citizen was, in political intelligence, above the average English Member of Parliament. It was this concentration of all power in an aggregate of which every citizen formed a part, which is the distinguishing characteristic of true Greek democracy. Florence had nothing like it; there has been nothing like it in the modern world: the few pure democracies which have lingered on to our own day have never had such mighty questions laid before them, and have never had such statesmen and orators to lead them. The great Democracy has had no fellow; but the political lessons which it teaches are none the less lessons for all time and for every land and people."—E. A. Freeman, *Historical Essays* (v. 3): *The Athenian Democracy*. "The individual freedom which was enjoyed at Athens and which is extolled by Pericles was plainly an exception to the common usage of Greece, and is so regarded in the Funeral Speech. The word 'freedom,' it should be remembered, bore an ambiguous meaning. It denoted on the one hand political independence,—the exercise of sovereign power by the State and of political rights by the citizens. In this sense every Greek citizen could claim it as his birthright. Even the Spartans could tell the Persian Hydarnes that he had not, like them, tasted of freedom, and did not know whether it was sweet or not. But the word also denoted personal and social liberty,—freedom from the excessive restraints of law, the absence of a tyrannous public opinion and of intolerance between man and man. Pericles claims for Athens 'freedom' in this double sense. But freedom so far as it implies the absence of legal interference in the private concerns of life was but little known except at Athens."—S. H. Butcher, *Some Aspects of Greek Genius*, pp.

70-71.—“To Athens . . . we look . . . for an answer to the question, What does history teach in regard to the virtue of a purely democratic government? And here we may safely say that, under favourable circumstances, there is no form of government which, while it lasts, has such a virtue to give scope to a vigorous growth and luxuriant fruitage of various manhood as a pure democracy. . . . But it does not follow that, though in this regard it has not been surpassed by any other form of government, it is therefore absolutely the best of all forms of government. . . . Neither, on the other hand, does it follow from the shortness of the bright reign of Athenian democracy — not more than 200 years from Clis-thenes to the Macedonians — that all democracies are short-lived, and must pay, like dissipated young gentlemen, with premature decay for the feverish abuse of their vital force. Possible no doubt it is, that if the power of what we may call a sort of Athenian Second Chamber, the Areiopagus, instead of being weakened as it was by Aristides and Pericles, had been built up according to the idea of Æschylus and the intelligent aristocrats of his day, such a body, armed, like our House of Lords, with an effective negative on all outbursts of popular rashness, might have prevented the ambition of the Athenians from launching on that famous Syracusan expedition which exhausted their force and maimed their action for the future. But the lesson taught by the short-lived glory of Athens, and its subjugation under the rough foot of the astute Macedonian, is not that democracies, under the influence of faction, and, it may be, not free from venality, will sell their liberties to a strong neighbour — for aristocratic Poland did this in a much more bluish way than democratic Greece — but that any loose aggregate of independent States, given more to quarrel amongst themselves than to unite against a common enemy, whether democratic, or aristocratic, or monarchical in their form of government, cannot in the long run maintain their ground against the firm policy and the well-massed force of a strong monarchy. Athens was blotted out from the map of free peoples at Chæronea, not because the Athenian people had too much freedom, but because the Greek States had too little unity. They were used by Philip exactly in the same way that Napoleon used the German States at the commencement of the present century.”—J. S. Blackie, *What does History Teach?* pp. 28-31.—“In Herodotus you have the beginning of the age of discussion. . . . The discourses on democracy, aristocracy, and monarchy, which he puts into the mouth of the Persian conspirators when the monarchy was vacant, have justly been called absurd, as speeches supposed to have been spoken by those persons. No Asiatic ever thought of such things. You might as well imagine Saul or David speaking them as those to whom Herodotus attributes them. They are Greek speeches, full of free Greek discussions, and suggested by the experience, already considerable, of the Greeks in the results of discussion. The age of debate is beginning, and even Herodotus, the least of a wrangler of any man, and the most of a sweet and simple narrator, felt the effect. When we come to Thucydides, the results of discussion are as full as they have ever been; his light is pure, ‘dry light,’ free from the ‘humours’ of habit, and purged from consecrated usage. As

Grote’s history often reads like a report to Parliament, so half Thucydides reads like a speech, or materials for a speech, in the Athenian Assembly.”—W. Bagehot, *Physics and Politics*, pp. 170-171.

B. C. 440-437.—New settlements of Klerouchoi.—The founding of Amphipolis.—Revolt and subjugation of Samos.—“The great aim of Perikles was to strengthen the power of Athens over the whole area occupied by her confederacy. The establishment of settlers or Klerouchoi [see KLERUCHS], who retained their rights as Athenian citizens, had answered so well in the Lelantian plain of Euboia that it was obviously good policy to extend the system. The territory of Hestiaia in the north of Euboia and the islands of Lemnos, Imbros, and Skyros, were thus occupied; and Perikles himself led a body of settlers to the Thracian Chersonesos where he repaired the old wall at the neck of the peninsula, and even to Sinope which now became a member of the Athenian alliance. A generation had passed from the time when Athens lost 10,000 citizens in the attempt to found a colony at the mouth of the Strymon. The task was now undertaken successfully by Hagnon, and the city came into existence which was to be the cause of disaster to the historian Thucydides and to witness the death of Brasidas and of Kleon [see AMPHIPOLIS]. . . . Two years before the founding of Amphipolis, Samos revolted from Athens. . . . In this revolt of Samos the overt action comes from the oligarchs who had seized upon the Ionian town of Priene, and defeated the Milesians who opposed them. The latter appealed to the Athenians, and received not only their aid but that of the Samian demos. The latter now became the ruling body in the island, fifty men and fifty boys being taken from the oligarchic families and placed as hostages in Lemnos, which, as we have seen, was now wholly occupied by Athenian Klerouchoi. But the Samian exiles (for many had fled rather than live under a democracy) entered into covenant with Pis-southnes, the Sardinian satrap, crossed over to Samos and seized the chief men of the demos, then falling on Lemnos succeeded in stealing away the hostages; and, having handed over to Pis-southnes the Athenian garrison at Samos, made ready for an expedition against Miletos. The tidings that Byzantion had joined in this last revolt left to the Athenians no room to doubt the gravity of the crisis. A fleet of sixty ships was dispatched to Samos under Perikles and nine other generals, of whom the poet Sophokles is said to have been one. Of these ships sixteen were sent, some to gather the allies, others to watch for the Phenician fleet which they believed to be off the Karian coast advancing to the aid of the Samian oligarchs. With the remainder Perikles did not hesitate to engage the Samian fleet of seventy ships which he encountered on its return from Miletos off the island of Tragia. The Athenians gained the day; and Samos was blockaded by land and sea. But no sooner had Perikles sailed with sixty ships to meet the Phenician fleet, than the Samians, making a vigorous sally, broke the lines of the besiegers and for fourteen days remained masters of the sea. The return of Perikles changed the face of things. Soon after the resumption of the siege the arrival of sixty fresh ships from Athens under five Strategoi in two detachments,

with thirty from Chios and Lesbos, damped the energy of the Samian oligarchs; and an unsuccessful effort at sea was followed by their submission in the ninth month after the beginning of the revolt, the terms being that they should raze their walls, give hostages, surrender their ships, and pay the expenses of the war. Following their example, the Byzantines also made their peace with Athens. The Phœnician fleet never came. . . . The Athenians escaped at the same time a far greater danger nearer home. The Samians, like the men of Thasos, had applied for aid to the Spartans, who, no longer pressed by the Helot war, summoned a congress of their allies to discuss the question. For the truce which had still five-and-twenty years to run Sparta cared nothing: but she encountered an opposition from the Corinthians which perhaps she now scarcely expected. . . . The Spartans were compelled to give way; and there can be no doubt that when some years later the Corinthians claimed the gratitude of the Athenians for this decision, they took credit for an act of good service singularly opportune. Had they voted as Sparta wished, Athens might by the extension of revolt amongst her allied cities have been reduced now to the condition to which, in consequence perhaps of this respite, she was not brought until the lifetime of a generation had been spent in desperate warfare."—G. W. Cox, *Hist. of Greece*, bk. 3, ch. 1 (v. 2).

B. C. 431.—Beginning of the Peloponnesian War.—Its Causes.—"In B. C. 431 the war broke out between Athens and the Peloponnesian League, which, after twenty-seven years, ended in the ruin of the Athenian empire. It began through a quarrel between Corinth and Kerkyra, in which Athens assisted Kerkyra. A congress was held at Sparta; Corinth and other States complained of the conduct of Athens, and war was decided on. The real cause of the war was that Sparta and its allies were jealous of the great power that Athens had gained [see GREECE: B. C. 435-432 and 432-431]. A far greater number of Greek States were engaged in this war than had ever been engaged in a single undertaking before. States that had taken no part in the Persian war were now fighting on one side or the other. Sparta was an oligarchy, and the friend of the nobles everywhere; Athens was a democracy, and the friend of the common people; so that the war was to some extent a struggle between these classes all over Greece, and often within the same city walls the nobles and the people attacked one another, the nobles being for Sparta and the people for Athens. On the side of Sparta, when the war began, there was all Peloponnesus except Argos and Achæa, and also the oligarchical Boeotian League under Thebes besides Phokis, Lokris, and other States west of them. They were very strong by land, but the Corinthians alone had a good fleet. Later on we shall see the powerful State of Syracuse with its navy, acting with Sparta. On the side of Athens there were almost all the Ægean islands, and a great number of the Ægean coast towns as well as Kerkyra and certain States in the west of Greece. The Athenians had also made alliance with Sitalkes, the barbarian king of the interior of Thrace. Athens was far stronger by sea than Sparta, but had not such a strong land army. On the other hand it had a large treasure, and a

system of taxes, while the Spartan League had little or no money."—C. A. Fyffe, *Hist. of Greece (History Primers)*, p. 84.—The Ionian cities, called "allies" of Athens, were subjects in reality, and held in subjection by tyrannical measures which made the yoke odious, as is plainly explained by Xenophon, who says: "Some person might say, that it is a great support to the Athenians that their allies should be in a condition to contribute money to them. To the plebeians, however, it seems to be of much greater advantage that every individual of the Athenians should get some of the property of the allies, and that the allies themselves should have only so much as to enable them to live and to till the ground, so that they may not be in a condition to form conspiracies. The people of Athens seem also to have acted injudiciously in this respect, that they oblige their allies to make voyages to Athens for the decision of their lawsuits. But the Athenians consider only, on the other hand, what benefits to the state of Athens are attendant on this practice; in the first place they receive their dues throughout the year from the prytaneia; in the next place, they manage the government of the allied states while sitting at home, and without sending out ships; they also support suitors of the lower orders, and ruin those of an opposite character in their courts of law; but if each state had its own courts, they would, as being hostile to the Athenians, be the ruin of those who were most favourable to the people of Athens. In addition to these advantages, the Athenian people have the following profits from the courts of justice for the allies being at Athens; first of all the duty of the hundredth on what is landed at the Peiræus affords a greater revenue to the city; next, whoever has a lodging-house makes more money by it, as well as whoever has cattle or slaves for hire; and the heralds, too, are benefited by the visits of the allies to the city. Besides, if the allies did not come to Athens for law, they would honour only such of the Athenians as were sent over the sea to them, as generals, and captains of vessels, and ambassadors; but now every individual of the allies is obliged to flatter the people of Athens, knowing that on going to Athens he must gain or lose his cause according to the decision, not of other judges, but of the people, as is the law of Athens; and he is compelled, too, to use supplication before the court, and, as any one of the people enters, to take him by the hand. By these means the allies are in consequence rendered much more the slaves of the Athenian people."—Xenophon, *On the Athenian Government (Minor Works, trans. by Rev. J. S. Watson)*, p. 235.—The revolt of these coerced and hostile "allies," upon the outbreak of the Peloponnesian War, was inevitable.—The prominent events of the Peloponnesian war, in which most of the Greek States were involved, are properly narrated in their connection with Greek history at large (see GREECE: B. C. 431-429, and after). In this place it will only be necessary to take account of the consequences of the war as they affected the remarkable city and people whose superiority had occasioned it by challenging and somewhat offensively provoking the jealousy of their neighbors.

B. C. 431.—Peloponnesian invasions of Attica.—Siege of Athens.—"While the Pello-

ponnesians were gathering at the Isthmus, and were still on their way, but before they entered Attica, Pericles, the son of Xanthippus, who was one of the ten Athenian generals, . . . repeated [to the Athenians] his previous advice; they must prepare for war and bring their property from the country into the city; they must defend their walls but not go out to battle; they should also equip for service the fleet in which lay their strength. . . . The citizens were persuaded, and brought into the city their children and wives, their household goods, and even the wood-work of their houses, which they took down. Their flocks and beasts of burden they conveyed to Euboea and the adjacent islands. The removal of the inhabitants was painful; for the Athenians had always been accustomed to reside in the country. Such a life had been characteristic of them more than of any other Hellenic people, from very early times. . . . When they came to Athens, only a few of them had houses or could find homes among friends or kindred. The majority took up their abode in the vacant spaces of the city, and in the temples and shrines of heroes. . . . Many also established themselves in the turrets of the walls, or in any other place which they could find; for the city could not contain them when they first came in. But afterwards they divided among them the Long Walls and the greater part of the Piræus. At the same time the Athenians applied themselves vigorously to the war, summoning their allies, and preparing an expedition of 100 ships against the Peloponnesians. While they were thus engaged, the Peloponnesian army was advancing: it arrived first of all at Oenoe," where Archidamus, the Spartan king, wasted much time in a fruitless siege and assault. "At last they marched on, and about the eightieth day after the entry of the Thebans into Plataea, in the middle of the summer, when the corn was in full ear, invaded Attica. . . . They encamped and ravaged, first of all, Eleusis and the plain of Thria. . . . At Acharnae they encamped, and remained there a considerable time, ravaging the country." It was the expectation of Archidamus that the Athenians would be provoked to come out and meet him in the open field; and that, indeed, they were eager to do; but the prudence of their great leader held them back. "The people were furious with Pericles, and, forgetting all his previous warnings, they abused him for not leading them to battle." But he was vindicated by the result. "The Peloponnesians remained in Attica as long as their provisions lasted, and then, taking a new route, retired through Boeotia. . . . On their return to Peloponnesus the troops dispersed to their several cities." Meantime the Athenian and allied fleets were ravaging the Peloponnesian coast. "In the same summer [B. C. 431] the Athenians expelled the Aeginetans and their families from Aegina, alleging that they had been the main cause of the war. . . . The Lacedaemonians gave the Aeginetan exiles the town of Thyrea to occupy and the adjoining country to cultivate. . . . About the end of the summer the entire Athenian force, including the metics, invaded the territory of Megara. . . . After ravaging the greater part of the country they retired. They repeated the invasion, sometimes with cavalry, sometimes with the whole Athenian army, every year during the war until Nisaea was taken [B. C. 424]."—Thucy.

dides, *History*; trans. by B. Jowett, bk. 2, sect. 13-31 (v. 1).

B. C. 430.—The funeral oration of Pericles.—During the winter of the year B. C. 431-430, "in accordance with an old national custom, the funeral of those who first fell in this war was celebrated by the Athenians at the public charge. The ceremony is as follows: Three days before the celebration they erect a tent in which the bones of the dead are laid out, and every one brings to his own dead any offering which he pleases. At the time of the funeral the bones are placed in chests of cypress wood, which are conveyed on hearses; there is one chest for each tribe. They also carry a single empty litter decked with a pall for all whose bodies are missing, and cannot be recovered after the battle. The procession is accompanied by any one who chooses, whether citizen or stranger, and the female relatives of the deceased are present at the place of interment and make lamentation. The public sepulchre is situated in the most beautiful spot outside the walls; there they always bury those who fall in war; only after the battle of Marathon the dead, in recognition of their pre-eminent valour, were interred on the field. When the remains have been laid in the earth, some man of known ability and high reputation, chosen by the city, delivers a suitable oration over them; after which the people depart. Such is the manner of interment; and the ceremony was repeated from time to time throughout the war. Over those who were the first buried Pericles was chosen to speak. At the fitting moment he advanced from the sepulchre to a lofty stage, which had been erected in order that he might be heard as far as possible by the multitude, and spoke as follows:—"Most of those who have spoken here before me have commended the lawgiver who added this oration to our other funeral customs; it seemed to them a worthy thing that such an honour should be given at their burial to the dead who have fallen on the field of battle. But I should have preferred that, when men's deeds have been brave, they should be honoured in deed only, and with such an honour as this public funeral, which you are now witnessing. Then the reputation of many would not have been imperilled on the eloquence or want of eloquence of one, and their virtues believed or not as he spoke well or ill. For it is difficult to say neither too little nor too much; and even moderation is apt not to give the impression of truthfulness. The friend of the dead who knows the facts is likely to think that the words of the speaker fall short of his knowledge and of his wishes; another who is not so well informed, when he hears of anything which surpasses his own powers, will be envious and will suspect exaggeration. Mankind are tolerant of the praises of others so long as each hearer thinks that he can do as well or nearly as well himself, but, when the speaker rises above him, jealousy is aroused and he begins to be incredulous. However, since our ancestors have set the seal of their approval upon the practice, I must obey, and to the utmost of my power shall endeavour to satisfy the wishes and beliefs of all who hear me. I will speak first of our ancestors, for it is right and becoming that now, when we are lamenting the dead, a tribute should be paid to their memory. There has never been a time when they did not inhabit this land, which by their valour

they have handed down from generation to generation, and we have received from them a free state. But if they were worthy of praise, still more were our fathers who added to their inheritance, and after many a struggle transmitted to us their sons this great empire. And we ourselves assembled here to-day, who are still most of us in the vigour of life, have chiefly done the work of improvement, and have richly endowed our city with all things, so that she is sufficient for herself both in peace and war. Of the military exploits by which our various possessions were acquired, or of the energy with which we or our fathers drove back the tide of war, Hellenic or Barbarian, I will not speak; for the tale would be long and is familiar to you. But before I praise the dead, I should like to point out by what principles of action we rose to power, and under what institutions and through what manner of life our empire became great. For I conceive, that such thoughts are not unsuited to the occasion, and that this numerous assembly of citizens and strangers may profitably listen to them. Our form of government does not enter into rivalry with the institutions of others. We do not copy our neighbours, but are an example to them. It is true that we are called a democracy, for the administration is in the hands of the many and not of the few. But while the law secures equal justice to all alike in their private disputes, the claim of excellence is also recognised; and when a citizen is in any way distinguished, he is preferred to the public service, not as a matter of privilege, but as the reward of merit. Neither is poverty a bar, but a man may benefit his country whatever be the obscurity of his condition. There is no exclusiveness in our public life, and in our private intercourse we are not suspicious of one another, nor angry with our neighbour if he does what he likes; we do not put on sour looks at him which, though harmless, are not pleasant. While we are thus unconstrained in our private intercourse, a spirit of reverence pervades our public acts; we are prevented from doing wrong by respect for authority and for the laws, having an especial regard to those which are ordained for the protection of the injured as well as to those unwritten laws which bring upon the transgressor of them the reprobation of the general sentiment. And we have not forgotten to provide for our weary spirits many relaxations from toil; we have regular games and sacrifices throughout the year; at home the style of our life is refined; and the delight which we daily feel in all these things helps to banish melancholy. Because of the greatness of our city the fruits of the whole earth flow in upon us; so that we enjoy the goods of other countries as freely as of our own. Then, again, our military training is in many respects superior to that of our adversaries. Our city is thrown open to the world, and we never expel a foreigner or prevent him from seeing or learning anything of which the secret if revealed to an enemy might profit him. We rely not upon management or trickery, but upon our own hearts and hands. And in the matter of education, whereas they from early youth are always undergoing laborious exercises which are to make them brave, we live at ease, and yet are equally ready to face the Lacedaemonians come into Attica not by themselves, but with their whole confederacy following; we go alone into a neighbour's country;

and although our opponents are fighting for their homes and we on a foreign soil we have seldom any difficulty in overcoming them. Our enemies have never yet felt our united strength; the care of a navy divides our attention, and on land we are obliged to send our own citizens everywhere. But they, if they meet and defeat a part of our army, are as proud as if they had routed us all, and when defeated they pretend to have been vanquished by us all. If then we prefer to meet danger with a light heart but without laborious training, and with a courage which is gained by habit and not enforced by law, are we not greatly the gainers? Since we do not anticipate the pain, although, when the hour comes, we can be as brave as those who never allow themselves to rest; and thus too our city is equally admirable in peace and in war. For we are lovers of the beautiful, yet simple in our tastes, and we cultivate the mind without loss of manliness. Wealth we employ, not for talk and ostentation, but when there is a real use for it. To avow poverty with us is no disgrace; the true disgrace is in doing nothing to avoid it. An Athenian citizen does not neglect the state because he takes care of his own household; and even those of us who are engaged in business have a very fair idea of politics. We alone regard a man who takes no interest in public affairs, not as a harmless, but as a useless character; and if few of us are originators, we are all sound judges of a policy. The great impediment to action is, in our opinion, not discussion, but the want of that knowledge which is gained by discussion preparatory to action. For we have a peculiar power of thinking before we act and of acting too, whereas other men are courageous from ignorance but hesitate upon reflection. And they are surely to be esteemed the bravest spirits who, having the clearest sense both of the pains and pleasures of life, do not on that account shrink from danger. In doing good, again, we are unlike others; we make our friends by conferring, not by receiving favours. Now he who confers a favour is the firmer friend, because he would fain by kindness keep alive the memory of an obligation; but the recipient is colder in his feelings, because he knows that in requiting another's generosity he will not be winning gratitude but only paying a debt. We alone do good to our neighbours not upon a calculation of interest, but in the confidence of freedom and in a frank and fearless spirit. To sum up; I say that Athens is the school of Hellas, and that the individual Athenian in his own person seems to have the power of adapting himself to the most varied forms of action with the utmost versatility and grace. This is no passing and idle word, but truth and fact; and the assertion is verified by the position to which these qualities have raised the state. For in the hour of trial Athens alone among her contemporaries is superior to the report of her. No enemy who comes against her is indignant at the reverses which he sustains at the hands of such a city; no subject complains that his masters are unworthy of him. And we shall assuredly not be without witnesses; there are mighty monuments of our power which will make us the wonder of this and of succeeding ages; we shall not need the praises of Homer or of any other panegyrist whose poetry may please for the moment, although his representation of the facts will not bear the light of day. For we

have compelled every land and every sea to open a path for our valour, and have everywhere planted eternal memorials of our friendship and of our enmity. Such is the city for whose sake these men nobly fought and died; they could not bear the thought that she might be taken from them; and every one of us who survive should gladly toil on her behalf. I have dwelt upon the greatness of Athens because I want to show you that we are contending for a higher prize than those who enjoy none of these privileges, and to establish by manifest proof the merit of these men whom I am now commemorating. Their loftiest praise has been already spoken. For in magnifying the city I have magnified them, and men like them whose virtues made her glorious. And of how few Hellenes can it be said as of them, that their deeds when weighed in the balance have been found equal to their fame! Methinks that a death such as theirs has been gives the true measure of a man's worth; it may be the first revelation of his virtues, but is at any rate their final seal. For even those who come short in other ways may justly plead the valour with which they have fought for their country; they have blotted out the evil with the good, and have benefited the state more by their public services than they have injured her by their private actions. None of these men were enervated by wealth or hesitated to resign the pleasures of life; none of them put off the evil day in the hope, natural to poverty, that a man, though poor, may one day become rich. But, deeming that the punishment of their enemies was sweeter than any of these things, and that they could fall in no nobler cause, they determined at the hazard of their lives to be honourably avenged, and to leave the rest. They resigned to hope their unknown chance of happiness; but in the face of death they resolved to rely upon themselves alone. And when the moment came they were minded to resist and suffer, rather than to fly and save their lives; they ran away from the word of dishonour, but on the battle-field their feet stood fast, and in an instant, at the height of their fortune, they passed away from the scene, not of their fear, but of their glory. Such was the end of these men; they were worthy of Athens, and the living need not desire to have a more heroic spirit although they may pray for a less fatal issue. The value of such a spirit is not to be expressed in words. Any one can discourse to you for ever about the advantages of a brave defence which you know already. But instead of listening to him I would have you day by day fix your eyes upon the greatness of Athens, until you become filled with the love of her; and when you are impressed by the spectacle of her glory reflect that this empire has been acquired by men who knew their duty and had the courage to do it; who in the hour of conflict had the fear of dishonour always present to them, and who, if ever they failed in an enterprize, would not allow their virtues to be lost to their country, but freely gave their lives to her as the fairest offering which they could present at her feast. The sacrifice which they collectively made was individually repaid to them; for they received again each one for himself a praise which grows not old, and the noblest of all sepulchres—I speak not of that in which their remains are laid, but of that in which their glory survives, and is proclaimed always and on every fitting occasion

both in word and deed. For the whole earth is the sepulchre of famous men; not only are they commemorated by columns and inscriptions in their own country, but in foreign lands there dwells also an unwritten memorial of them, graven not on stone but in the hearts of men. Make them your examples, and esteeming courage to be freedom and freedom to be happiness, do not weigh too nicely the perils of war. The unfortunate who has no hope of a change for the better has less reason to throw away his life than the prosperous who, if he survive, is always liable to a change for the worse, and to whom any accidental fall makes the most serious difference. To a man of spirit, cowardice and disaster coming together are far more bitter than death striking him unperceived at a time when he is full of courage and animated by the general hope. Wherefore I do not now commiserate the parents of the dead who stand here; I would rather comfort them. You know that your life has been passed amid manifold vicissitudes; and that they may be deemed fortunate who have gained most honour, whether an honourable death like theirs, or an honourable sorrow like yours, and whose days have been so ordered that the term of their happiness is likewise the term of their life. I know how hard it is to make you feel this, when the good fortune of others will too often remind you of the gladness which once lightened your hearts. And sorrow is felt at the want of those blessings, not which a man never knew, but which were a part of his life before they were taken from him. Some of you are of an age at which they may hope to have other children, and they ought to bear their sorrow better; not only will the children who may hereafter be born make them forget their own lost ones, but the city will be doubly a gainer. She will not be left desolate, and she will be safer. For a man's counsel cannot have equal weight or worth, when he alone has no children to risk in the general danger. To those of you who have passed their prime I say: "Congratulate yourselves that you have been happy during the greater part of your days; remember that your life of sorrow will not last long, and be comforted by the glory of those who are gone. For the love of honour alone is ever young, and not riches, as some say, but honour is the delight of men when they are old and useless." To you who are the sons and brothers of the departed, I see that the struggle to emulate them will be an arduous one. For all men praise the dead, and, however pre-eminent your virtue may be, hardly will you be thought, I do not say to equal, but even to approach them. The living have their rivals and detractors, but when a man is out of the way, the honour and good-will which he receives is unalloyed. And, if I am to speak of womanly virtues to those of you who will henceforth be widows, let me sum them up in one short admonition: To a woman not to show more weakness than is natural to her sex is a great glory, and not to be talked about for good or for evil among men. I have paid the required tribute, in obedience to the law, making use of such fitting words as I had. The tribute of deeds has been paid in part; for the dead have been honourably interred, and it remains only that their children should be maintained at the public charge until they are grown up: this is the solid prize with which, as with a garland, Athens crowns

her sons living and dead, after a struggle like theirs. For where the rewards of virtue are greatest, there the noblest citizens are enlisted in the service of the state. And now, when you have duly lamented, every one his own dead, you may depart." Such was the order of the funeral celebrated in this winter, with the end of which ended the first year of the Peloponnesian War."—Thucydides, *History*, trans. by B. Jowett, v. 1, bk. 2, sect. 34-47.

B. C. 430-429.—The Plague in the city.—Death of Pericles.—Capture of Potidæa.—

"As soon as the summer returned [B. C. 430] the Peloponnesians . . . invaded Attica, where they established themselves and ravaged the country. They had not been there many days when the plague broke out at Athens for the first time. . . . The disease is said to have begun south of Egypt in Æthiopia; thence it descended into Egypt and Libya, and after spreading over the greater part of the Persian Empire, suddenly fell upon Athens. It first attacked the inhabitants of the Piræus, and it was supposed that the Peloponnesians had poisoned the cisterns, no conduits having as yet been made there. It afterwards reached the upper city, and then the mortality became far greater. As to its probable origin or the causes which might or could have produced such a disturbance of nature, every man, whether a physician or not, will give his own opinion. But I shall describe its actual course, and the symptoms by which any one who knows them beforehand may recognize the disorder should it ever reappear. For I was myself attacked, and witnessed the sufferings of others. The season was admitted to have been remarkably free from ordinary sickness; and if anybody was already ill of any other disease, it was absorbed in this. Many who were in perfect health, all in a moment, and without any apparent reason, were seized with violent heats in the head and with redness and inflammation of the eyes. Internally the throat and tongue were quickly suffused with blood and the breath became unnatural and fetid. There followed sneezing and hoarseness; in a short time the disorder, accompanied by a violent cough, reached the chest; then fastening lower down, it would move the stomach and bring on all the vomits of bile to which physicians have ever given names; and they were very distressing. . . . The body externally was not so very hot to the touch, nor yet pale; it was a livid colour inclining to red, and breaking out in pustules and ulcers. But the internal fever was intense. . . . The disorder which had originally settled in the head passed gradually through the whole body, and, if a person got over the worst, would often seize the extremities and leave its mark, attacking the privy parts and the fingers and toes; and some escaped with the loss of these, some with the loss of their eyes. . . . The crowding of the people out of the country into the city aggravated the misery; and the newly-arrived suffered most. . . . The mortality among them was dreadful and they perished in wild disorder. The dead lay as they had died, one upon another, while others hardly alive wallowed in the streets and crawled about every fountain craving for water. The temples in which they lodged were full of the corpses of those who died in them; for the violence of the calamity was such that men, not knowing where

to turn, grew reckless of all law, human and divine. . . . The pleasure of the moment and any sort of thing which conduced to it took the place both of honour and of expediency. No fear of God or law of man deterred a criminal." Terrified by the plague, when they learned of it, the Peloponnesians retreated from Attica, after ravaging it for forty days; but, in the meantime, their own coasts had been ravaged, as before, by the Athenian fleet. And now, being once more relieved from the presence of the enemy, though still grievously afflicted by the plague, the Athenians turned upon Pericles with complaints and reproaches, and imposed a fine upon him. They also sent envoys to Sparta, with peace proposals which received no encouragement. But Pericles spoke calmly and wisely to the people, and they acknowledged their sense of dependence upon him by re-electing him general and committing again "all their affairs to his charge." But he was stricken next year with the plague, and, lingering for some weeks in broken health, he died in the summer of 429 B. C. By his death the republic was given over to striving demagogues and factions, at just the time when a capable brain and hand were needed in its government most. The war went on, acquiring more ferocity of temper with every campaign. It was especially embittered in the course of the second summer by the execution, at Athens, of several Lacedæmonian envoys who were captured while on their way to solicit help from the Persian king. One of these unfortunate envoys was Aristæus, who had organized the defence of Potidæa. That city was still holding out against the Athenians, who blockaded it obstinately, although their troops suffered frightfully from the plague. But in the winter of 430-429 B. C. they succumbed to starvation and surrendered their town, being permitted to depart in search of a new home. Potidæa was then peopled anew, with colonists.—Thucydides, *History*, tr. by Jowett, bk. 2, sect. 8-70.

B. C. 429-421.—After Pericles.—The rise of the Demagogues.—"When Pericles rose to power it would have been possible to frame a Pan-Hellenic union, in which Sparta and Athens would have been the leading states; and such a dualism would have been the best guarantee for the rights of the smaller cities. When he died there was no policy left but war with Sparta, and conquest in the West. And not only so, but there was no politician who could adjust the relations of domestic war and foreign conquest. The Athenians passed from one to the other, as they were addressed by Cleon or Alcibiades. We cannot wonder that the men who lived in those days of trouble spoke bitterly of Pericles, holding him accountable for the miseries which fell upon Athens. Other statesmen had bequeathed good laws, as Solon and Clisthenes, or the memory of great achievements, as Themistocles or Cimon, but the only changes which Pericles had introduced were thought, not without reason, to be changes for the worse; and he left his country involved in a ruinous war."—E.

Abbott, *Pericles and the Golden Age of Athens*, pp. 362-363.—“The moral change which had . . . befallen the Attic community had, it is true, even during the lifetime of Pericles, manifested itself by means of sufficiently clear premonitory signs; but Pericles had, notwithstanding, up to the days of his last illness, remained the centre of the state; the people had again and again returned to him, and by subordinating themselves to the personal authority of Pericles had succeeded in recovering the demeanor which befitted them. But now the voice was hushed, which had been able to sway the unruly citizens, even against their will. No other authority was in existence—no aristocracy, no official class, no board of experienced statesmen—nothing, in fact, to which the citizens might have looked for guidance and control. The multitude had recovered absolute independence, and in proportion as, in the interval, readiness of speech and sophistic versatility had spread in Athens, the number had increased of those who now put themselves forward as popular speakers and leaders. But as, among all these, none was capable of leading the multitude after the fashion of Pericles, another method of leading the people, another kind of demagoguery, sprung into existence. Pericles stood above the multitude. . . . His successors were obliged to adopt other means; in order to acquire influence, they took advantage not so much of the strong as of the weak points in the character of the citizens, and achieved popularity by flattering their inclinations, and endeavoring to satisfy the cravings of their baser nature. . . . Now for the first time, men belonging to the lower class of citizens thrust themselves forward to play a part in politics,—men of the trading and artisan class, the culture and wealth of which had so vigorously increased at Athens. . . . The office of general frequently became a post of martyrdom; and the bravest men felt that the prospect of being called to account as to their campaigns by cowardly demagogues, before a capricious multitude, disturbed the straightforward joyousness of their activity, and threw obstacles in the way of their successes. . . . On the orators’ tribune the contrast was more striking. Here the first prominent successor of Pericles was a certain Eucrates, a rude and uneducated man, who was ridiculed on the comic stage as the ‘boar’ or ‘bear of Melite’ (the name of the district to which he belonged), a dealer in tow and mill-owner, who only for a short space of time took the lead in the popular assembly. His place was taken by Lysicles, who had acquired wealth by the cattle-trade. . . . It was not until after Lysicles, that the demagogues attained to power who had first made themselves a name by their opposition against Pericles, and, among them, Cleon was the first who was able to maintain his authority for a longer period of time; so that it is in his proceedings during the ensuing years of the war that the whole character of the new demagoguery first thoroughly manifests itself.”—E. Curtius, *History of Greece*, v. 3, ch. 2. —“The characters of the military commander and the political leader were gradually separated. The first germs of this division we find in the days of Kimôn and Periklēs. Kimôn was no mean politician; but his real genius clearly called him to warfare with the Barbarian. Periklēs was an able and successful general; but in him the

military character was quite subordinate to that of the political leader. It was a wise compromise which entrusted Kimôn with the defence of the state abroad and Periklēs with its management at home. After Periklēs the separation widened. We nowhere hear of Dēmōsthenēs and Phormiōn as political leaders; and even in Nikias the political is subordinate to the military character. Kleôn, on the other hand, was a politician but not a soldier. But the old notion of combining military and political position was not quite lost. It was still deemed that he who proposed a warlike expedition should himself, if it were needful, be able to conduct it. Kleôn in an evil hour was tempted to take on himself military functions; he was forced into command against Sphaktēria; by the able and loyal help of Dēmōsthenēs he acquitted himself with honour. But his head was turned by success; he aspired to independent command; he measured himself against the mighty Brasidas; and the fatal battle of Amphipolis was the result. It now became clear that the Demagogue and the General must commonly be two distinct persons. The versatile genius of Alkibiadēs again united the two characters; but he left no successor. . . . A Demagogue then was simply an influential speaker of popular politics. Dēmōsthenēs is commonly distinguished as an orator, while Kleôn is branded as a Demagogue; but the position of the one was the same as the position of the other. The only question is as to the wisdom and honesty of the advice given either by Kleôn or by Dēmōsthenēs.”—E. A. Freeman, *Historical Essays*, 2d ser., pp. 138-140.

B. C. 424-406.—Socrates as soldier and citizen.—The trial of the Generals.—“Socrates was born very shortly before the year 469 B. C. His father, Sophroniscus, was a sculptor, his mother, Phænarete, a midwife. Nothing definite is known of his moral and intellectual development. There is no specific record of him at all until he served at the siege of Potidæa (432 B. C.—429 B. C.) when he was nearly forty years old. All that we can say is that his youth and manhood were passed in the most splendid period of Athenian or Greek history. . . . As a boy he received the usual Athenian liberal education, in music and gymnastic, an education, that is to say, mental and physical. He was fond of quoting from the existing Greek literature, and he seems to have been familiar with it, especially with Homer. He is represented by Xenophon as repeating Prodicus’ fable of the choice of Heracles at length. He says that he was in the habit of studying with his friends ‘the treasures which the wise men of old have left us in their books:’ collections, that is, of the short and pithy sayings of the seven sages, such as ‘know thyself’; a saying, it may be noticed, which lay at the root of his whole teaching. And he had some knowledge of mathematics, and of science, as it existed in those days. He understood something of astronomy and of advanced geometry; and he

was acquainted with certain, at any rate, of the theories of his predecessors in philosophy, the Physical or Cosmical philosophers, such as Heraclitus and Parmenides, and, especially, with those of Anaxagoras. But there is no trustworthy evidence which enables us to go beyond the bare fact that he had such knowledge. . . . All then that we can say of the first forty years of Socrates' life consists of general statements like these. During these years there is no specific record of him. Between 432 B. C. and 429 B. C. he served as a common soldier at the siege of Potidæa, an Athenian dependency which had revolted, and surpassed every one in his powers of enduring hunger, thirst, and cold, and all the hardships of a severe Thracian winter. At this siege we hear of him for the first time in connection with Alcibiades, whose life he saved in a skirmish, and to whom he eagerly relinquished the prize of valour. In 431 B. C. the Peloponnesian War broke out, and in 424 B. C. the Athenians were disastrously defeated and routed by the Thebans at the battle of Delium. Socrates and Laches were among the few who did not yield to panic. They retreated together steadily, and the resolute bearing of Socrates was conspicuous to friend and foe alike. Had all the Athenians behaved as he did, says Laches, in the dialogue of that name, the defeat would have been a victory. Socrates fought bravely a third time at the battle of Amphipolis [422 B. C.] against the Peloponnesian forces, in which the commanders on both sides, Cleon and Brasidas, were killed: but there is no record of his specific services on that occasion. About the same time that Socrates was displaying conspicuous courage in the cause of Athens at Delium and Amphipolis, Aristophanes was holding him up to hatred, contempt, and ridicule in the comedy of the *Clouds* [B. C. 423]. . . . The *Clouds* is his protest against the immorality of free thought and the Sophists. He chose Socrates for his central figure, chiefly, no doubt, on account of Socrates' well-known and strange personal appearance. The grotesque ugliness, and flat nose, and prominent eyes, and Silenus-like face, and shabby dress, might be seen every day in the streets, and were familiar to every Athenian. Aristophanes cared little—probably he did not take the trouble to find out—that Socrates' whole life was spent in fighting against the Sophists. It was enough for him that Socrates did not accept the traditional beliefs, and was a good centre-piece for a comedy. . . . The *Clouds*, it is needless to say, is a gross and absurd libel from beginning to end: but Aristophanes hit the popular conception. The charges which he made in 423 B. C. stuck to Socrates to the end of his life. They are exactly the charges made by popular prejudice, against which Socrates defends himself in the first ten chapters of the *Apology*, and which he says have been so long 'in the air.' He formulates them as follows: 'Socrates is an evil doer who busies himself with investigating things beneath the earth and in the sky, and who makes the worse appear the better reason, and who teaches others these same things.' . . . For sixteen years after the battle of Amphipolis we hear nothing of Socrates. The next events in his life, of which there is a specific record, are those narrated by himself in the twentieth chapter of the *Apology*. They illustrate, as he meant them to illustrate,

his invincible moral courage. . . . In 406 B. C. the Athenian fleet defeated the Lacedæmonians at the battle of Arginusæ, so called from some small islands off the south-east point of Lesbos. After the battle the Athenian commanders omitted to recover the bodies of their dead, and to save the living from off their disabled enemies. The Athenians at home, on hearing of this, were furious. The due performance of funeral rites was a very sacred duty with the Greeks; and many citizens mourned for friends and relatives who had been left to drown. The commanders were immediately recalled, and an assembly was held in which they were accused of neglect of duty. They defended themselves by saying that they had ordered certain inferior officers (amongst others, their accuser Tharmenes) to perform the duty, but that a storm had come on which had rendered the performance impossible. The debate was adjourned, and it was resolved that the Senate should decide in what way the commanders should be tried. The Senate resolved that the Athenian people, having heard the accusation and the defence, should proceed to vote forthwith for the acquittal or condemnation of the eight commanders collectively. The resolution was grossly unjust, and it was illegal. It substituted a popular vote for a fair and formal trial. . . . Socrates was at that time a member of the Senate, the only office that he ever filled. The Senate was composed of five hundred citizens, elected by lot, fifty from each of the ten tribes, and holding office for one year. The members of each tribe held the *Prytany*, that is, were responsible for the conduct of business, for thirty-five days at a time, and ten out of the fifty were *proedri* or presidents every seven days in succession. Every bill or motion was examined by the *proedri* before it was submitted to the Assembly, to see if it were in accordance with law; if it was not, it was quashed: one of the *proedri* presided over the Senate and the Assembly each day, and for one day only: he was called the *Epistates*: it was his duty to put the question to the vote. In short he was the speaker. . . . On the day on which it was proposed to take a collective vote on the acquittal or condemnation of the eight commanders, Socrates was *Epistates*. The proposal was, as we have seen, illegal: but the people were furious against the accused, and it was a very popular one. Some of the *proedri* opposed it before it was submitted to the Assembly, on the ground of its illegality; but they were silenced by threats and subsided. Socrates alone refused to give way. He would not put a question which he knew to be illegal, to the vote. Threats of suspension and arrest, the clamour of an angry people, the fear of imprisonment or death, could not move him. . . . But his authority lasted only for a day; the proceedings were adjourned, a more pliant *Epistates* succeeded him, and the generals were condemned and executed."—F. J. Church, *Introd. to Trial and Death of Socrates*, pp. 9-23.—See, also, GREECE: B. C. 406.

B. C. 421.—End of the first period of the Peloponnesian War.—The Peace of Nicias.—"The first stage of the Peloponnesian war came to an end just ten years after the invasion of Attica by Archidamus in 431 B. C. Its results had been almost purely negative; a vast quan-

tity of blood and treasure had been wasted on each side, but to no great purpose. The Athenian naval power was unimpaired, and the confederacy of Delos, though shaken by the successful revolt of Amphipolis and the Thracian towns, was still left subsisting. On the other hand, the attempts of Athens to accomplish anything on land had entirely failed, and the defensive policy of Pericles had been so far justified. Well would it have been for Athens if her citizens had taken the lesson to heart, and contented themselves with having escaped so easily from the greatest war they had ever known."—C. W. C. Oman, *Hist. of Greece*, p. 341.—"The treaty called since ancient times the Peace of Nicias . . . put an end to the war between the two Greek confederations of states, after it had lasted for rather more than ten years, viz., from the attack of the Boeotians upon Plataeæ, Ol. lxxxvii. 1 (beginning of April B. C. 431) to Ol. lxxxix. 3 (towards the middle of April B. C. 421). The war was for this reason known under the name of the Ten Years' War, while the Peloponnesians called it the Attic War. Its end constituted a triumph for Athens; for all the plans of the enemies who had attacked her had come to naught; Sparta had been unable to fulfil a single one of the promises with which she had entered upon the war, and was ultimately forced to acknowledge the dominion of Athens in its whole extent,—notwithstanding all the mistakes and misgivings, notwithstanding all the calamities attributable, or not, to the Athenians themselves: the resources of offence and defence which the city owed to Pericles had therefore proved their excellence, and all the fury of her opponents had wasted itself against her in vain. Sparta herself was satisfied with the advantages which the peace offered to her own city and citizens; but great was the discontent among her confederates, particularly among the secondary states, who had originally occasioned the war and obliged Sparta to take part in it. Even after the conclusion of the peace, it was impossible to induce Thebes and Corinth to accede to it. The result of the war to Sparta was therefore the dissolution of the confederation at whose head she had begun the war; she felt herself thereby placed in so dangerously isolated a position, that she was obliged to fall back upon Athens in self-defence against her own confederates. Accordingly the Peace of Nicias was in the course of the same year converted into a fifty years' alliance, under the terms of which Sparta and Athens contracted the obligation of mutual assistance against any hostile attack."—E. Curtius, *Hist. of Greece*, bk. 4, ch 2 (v. 3).—See, also, GREECE: B. C. 424-421.

B. C. 415.—The expedition against Syracuse.—Mutilation of the Hermæ (Hermæi).—A quarrel having broken out in Sicily, between the cities of Segesta and Selinus, "the latter obtained aid from Syracuse. Upon this, Segesta, having vainly sought help from Carthage, ap-

pealed to Athens, where the exiled Sicilians were numerous. Alcibiades had been one of the most urgent for the attack upon Melos, and he did not lose the present opportunity to incite the Athenians to an enterprise of much greater importance, and where he hoped to be in command. . . . All men's minds were filled with ambitious hopes. Everywhere, says Plutarch, were to be seen young men in the gymnasia, old men in workshops and public places of meeting, drawing the map of Sicily, talking about the sea that surrounds it, the goodness of its harbors, its position opposite Africa. Established there, it would be easy to cross over and subjugate Carthage, and extend their sway as far as the Pillars of Hercules. The rich did not approve of this rashness, but feared if they opposed it that the opposite faction would accuse them of wishing to avoid the service and costs of arming galleys. Nicias had more courage; even after the Athenians had appointed him general, with Alcibiades and Lamachos, he spoke publicly against the enterprise, showed the imprudence of going in search of new subjects when those they already had were at the moment in a state of revolt, as in Chalkidike, or only waited for a disaster to break the chain which bound them to Athens. He ended by reproaching Alcibiades for plunging the republic, to gratify his personal ambition, into a foreign war of the greatest danger. . . . One of the demagogues, however, replied that he would put an end to all this hesitation, and he proposed and secured the passage of a decree giving the generals full power to use all the resources of the city in preparing for the expedition (March 24, 415 B. C.) Nicias was completely in the right. The expedition to Sicily was impolitic and foolish. In the Ægean Sea lay the empire of Athens, and there only it could lie, within reach, close at hand. Every acquisition westward of the Peloponnesos was a source of weakness. Syracuse, even if conquered, would not long remain subject. Whatever might be the result of the expedition, it was sure to be disastrous in the end. . . . An event which took place shortly before the departure of the fleet (8-9 June) threw terror into the city: one morning the hermai throughout the city were seen to have been mutilated. . . . 'These Hermæ, or half-statues of the god Hermês, were blocks of marble about the height of the human figure. The upper part was cut into a head, face, neck and bust; the lower part was left as a quadrangular pillar, broad at the base, without arms, body, or legs, but with the significant mark of the male sex in front. They were distributed in great numbers throughout Athens, and always in the most conspicuous situations; standing beside the outer doors of private houses as well as of temples, near the most frequented porticos, at the intersection of cross ways, in the public agora. . . . The religious feelings of the Greeks considered the god to be planted or domiciled where his statue stood, so that the companionship, sympathy, and guardianship of Hermês became associated with most of the manifestations of conjunct life at Athens,—political, social, commercial, or gymnastic.' . . . To all pious minds the city seemed menaced with great misfortunes unless the anger of Heaven should be appeased by a sufficient expiation. While Alcibiades had many partisans, he had also violent enemies. Not long before this time Hyper-

bolos, a contemptible man, had almost succeeded in obtaining his banishment; and he had escaped this danger only by uniting his party with that of Nikias, and causing the demagogue himself to suffer ostracism. The affair of the hermai appeared to his adversaries a favourable occasion to repeat the attempt made by Hyperbolos, and we have good reason to believe in a political machination, seeing this same populace applauded, a few months later, the impious audacity of Aristophanes in his comedy of *The Birds*. An inquiry was set on foot, and certain metoikoi and slaves, without making any deposition as to the hermai, recalled to mind that before this time some of these statues had been broken by young men after a night of carousal and intoxication, thus indirectly attacking Alkibiades. Others in set terms accused him of having at a banquet parodied the Eleusinian Mysteries; and men took advantage of the superstitious terrors of the people to awake their political anxieties. It was repeated that the breakers of sacred statues, the profaners of mysteries, would respect the government even less than they had respected the gods, and it was whispered that not one of these crimes had been committed without the participation of Alkibiades; and in proof of this men spoke of the truly aristocratic license of his life. Was he indeed the author of this sacrilegious freak? To believe him capable of it would not be to calumniate him. Or, on the other hand, was it a scheme planned to do him injury? Although proofs are lacking, it is certain that among the rich, upon whom rested the heavy burden of the naval expenses, a plot had been formed to destroy the power of Alkibiades, and perhaps to prevent the sailing of the fleet. The demagogues, who had intoxicated the people with hope, were for the expedition; but the popularity of Alkibiades was obnoxious to them: a compromise was made between the two factions, as is often done in times when public morality is enfeebled, and Alkibiades found himself threatened on all sides. . . . Urging as a pretext the dangers of delay in sending off the expedition, they obtained a decree that Alkibiades should embark at once, and that the question of his guilt or innocence should be postponed until after his return. It was now the middle of summer. The day appointed for departure, the whole city, citizens and foreigners, went out to Peiræus at daybreak. . . . At that moment the view was clearer as to the doubts and dangers, and also the distance of the expedition; but all eyes were drawn to the immense preparations that had been made, and confidence and pride consoled those who were about to part."—V. Duruy, *Hist. of the Greek People*, ch. 25, sect. 2 (v. 3).

B. C. 415-413.—Fatal end of the expedition against Syracuse.—"Alkibiades was called back to Athens, to take his trial on a charge of impiety. . . . He did not go back to Athens for his trial, but escaped to Peloponnēsos, where we shall hear from him again. Meanwhile the command of the Athenian force in Sicily was left practically in the hands of Nikias. Now Nikias could always act well when he did act; but it was very hard to make him act; above all on an errand which he hated. One might say that Syracuse was saved through the delays of Nikias.

He now went off to petty expeditions in the west of Sicily, under cover of settling matters at Segesta. . . . The Syracusans by this time quite despised the invaders. Their horsemen rode up to the camp of the Athenians at Katane, and asked them if they had come into Sicily merely to sit down there as colonists. . . . The winter (B. C. 415-414) was chiefly spent on both sides in sending embassies to and fro to gain allies. Nikias also sent home to Athens, asking for horsemen and money, and the people, without a word of rebuke, voted him all that he asked. . . . But the most important embassy of all was that which the Syracusans sent to Corinth and Sparta. Corinth zealously took up the cause of her colony and pleaded for Syracuse at Sparta. And at Sparta Corinth and Syracuse found a helper in the banished Athenian Alkibiades, who was now doing all that he could against Athens. . . . He told the Spartans to occupy a fortress in Attica, which they soon afterwards did, and a great deal came of it. But he also told them to give vigorous help to Syracuse, and above all things to send a Spartan commander. The mere name of Sparta went for a great deal in those days; but no man could have been better chosen than the Spartan who was sent. He was Gylippos, the deliverer of Syracuse. He was more like an Athenian than a Spartan, quick and ready of resource, which few Spartans were. . . . And now at last, when the spring came (414) Nikias was driven to do something. . . . The Athenians . . . occupied all that part of the hill which lay outside the walls of Syracuse. They were joined by their horsemen, Greek and Sikel, and after nearly a year, the siege of Syracuse really began. The object of the Athenians now was to build a wall across the hill and to carry it down to the sea on both sides. Syracuse would thus be hemmed in. The object of the Syracusans was to build a cross-wall of their own, which should hinder the Athenian wall from reaching the two points it aimed at. This they tried more than once; but in vain. There were several fights on the hill, and at last there was a fight of more importance on the lower ground by the Great Harbour. . . . The Syracusans were defeated, as far as fighting went; but they gained far more than they lost. For Lamachos was killed, and with him all vigour passed away from the Athenian camp. At the same moment the Athenian fleet sailed into the Great Harbour, and a Syracusan attack on the Athenian works on the hill was defeated. Nikias remained in command of the invaders; but he was grievously sick, and for once in his life his head seems to have been turned by success. He finished the wall on the south side; but he neglected to finish it on the north side also, so that Syracuse was not really hemmed in. But the hearts of the Syracusans sank. . . . It was at this darkest moment of all that deliverance came. . . . A Corinthian ship, under its captain Gongylos, sailed into the Little Harbour. He brought the news that other ships were on their way from Peloponnēsos to the help of Syracuse, and, yet more, that a Spartan general was actually in Sicily, getting together a land force for the same end. As soon as the good news was heard, there was no more talk of surrender. . . . And one day the Athenian camp was startled by the appearance of a Lacedæmonian herald, offering them a truce of five days, that they might get them

out of Sicily with bag and baggage. Gylippos was now on the hill. He of course did not expect that the Athenian army would really go away in five days. But it was a great thing to show both to the besiegers and to the Syracusans that the deliverer had come, and that deliverance was beginning. Nikias had kept such bad watch that Gylippos and his troops had come up the hill and the Syracusans had come out and met them, without his knowledge. The Spartan, as a matter of course, took the command of the whole force; he offered battle to the Athenians, which they refused; he then entered the city. The very next day he began to carry out his scheme. This was to build a group of forts near the western end of the hill, and to join them to the city by a wall running east and west, which would hinder the Athenians from ever finishing their wall to the north. Each side went on building, and some small actions took place. . . . Another winter (B. C. 414-413) now came on, and with it much sending of envoys. Gylippos went about Sicily collecting fresh troops. . . . Meanwhile Nikias wrote a letter to the Athenian people. . . . This letter came at a time when the Lacedæmonian alliance had determined to renew the war with Athens, and when they were making everything ready for an invasion of Attica. To send out a new force to Sicily was simple madness. We hear nothing of the debates in the Athenian assembly, whether any one argued against going on with the Sicilian war, and whether any demagogue laid any blame on Nikias. But the assembly voted that a new force equal to the first should be sent out under Dêmostenês, the best soldier in Athens, and Eurymedôn. . . . Meanwhile the Syracusans were strengthened by help both in Sicily and from Peloponnêsos. Their main object now was to strike a blow at the fleet of Nikias before the new force came. . . . It had been just when the Syracusans were most downcast that they were cheered by the coming of the Corinthians and of Gylippos. And just now that their spirits were highest, they were dashed again by the coming of Dêmostenês and Eurymedôn. A fleet as great as the first, seventy-five ships, carrying 5,000 heavy-armed and a crowd of light troops of every kind, sailed into the Great Harbour with all warlike pomp. The Peloponnesians were already in Attica; they had planted a Peloponnesian garrison there, which brought Athens to great straits; but the fleet was sent out to Syracuse all the same. Dêmostenês knew what to do as well as Lamachos had known. He saw that there was nothing to be done but to try one great blow, and, if that failed, to take the fleet home again. . . . The attack was at first successful, and the Athenians took two of the Syracusan forts. But the Thespian allies of Syracuse stood their ground, and drove the assailants back. Utter confusion followed. . . . The last chance was now lost, and Dêmostenês was eager to go home. But Nikias would stay on. . . . When sickness grew in the camp, when fresh help from Sicily and the great body of the allies from Peloponnêsos came into Syracuse, he at last agreed to go. Just at that moment the moon was eclipsed. . . . Nikias consulted his soothsayers, and he gave out that they must stay twenty-nine days, another full revolution of the moon. This resolve was the destruction of the besieging army. . . . It was

felt on both sides that all would turn on one more fight by sea, the Athenians striving to get out of the harbour, and the Syracusans striving to keep them in it. The Syracusans now blocked up the mouth of the harbour by mooring vessels across it. The Athenians left their position on the hill, a sign that the siege was over, and brought their whole force down to the shore. It was no time now for any skillful manoeuvres; the chief thing was to make the sea-fight as much as might be like a land-fight, a strange need for Athenians. . . . The last fight now began, 110 Athenian ships against 80 of the Syracusans and their allies. Never before did so many ships meet in so small a space. . . . The fight was long and confused; at last the Athenians gave way and fled to the shore. The battle and the invasion were over. Syracuse was not only saved; she had begun to take vengeance on her enemies. . . . The Athenians waited one day, and then set out, hoping to make their way to some safe place among the friendly Sikels in the inland country. The sick had to be left behind. . . . On the sixth day, after frightful toil, they determined to change their course. . . . They set out in two divisions, that of Nikias going first. Much better order was kept in the front division and by the time Nikias reached the river, Dêmostenês was six miles behind. . . . In the morning a Syracusan force came up with the frightful news that the whole division of Dêmostenês were prisoners. . . . The Athenians tried in vain to escape in the night. The next morning they set out, harassed as before, and driven wild by intolerable thirst. They at last reached the river Assinaros, which runs by the present town of Noto. There was the end. . . . The Athenians were so maddened by thirst that, though men were falling under darts and the water was getting muddy and bloody, they thought of nothing but drinking. . . . No further terms were made; most of the horsemen contrived to cut their way out; the rest were made prisoners. Most of them were embezzled by Syracusans as their private slaves; but about 7,000 men out of the two divisions were led prisoners into Syracuse. They were shut up in the stone-quarries, with no further heed than to give each man daily half a slave's allowance of food and drink. Many died; many were sold; some escaped, or were set free; the rest were after a while taken out of the quarries and set to work. The generals had made no terms for themselves. Hermokratês wished to keep them as hostages against future Athenian attempts against Sicily. Gylippos wished to take them in triumph to Sparta. The Corinthians were for putting them to death; and so it was done. . . . So ended the Athenian invasion of Sicily, the greatest attempt ever made by Greeks against Greeks, and that which came to the most utter failure."—E. A. Freeman, *The Story of Sicily*, pp. 117-137.

B. C. 413-412.—Consequences of the Sicilian Expedition.—Spartan alliance with the Persians.—Plotting of Alcibiades.—The Decelion War.—"At Athens, where, even before this, every one had been in the most anxious suspense, the news of the loss of the expedition produced a consternation, which was certainly greater than

that at Rome after the battle of Cannæ, or that in our own days, after the battle of Jena. . . . At least 40,000 citizens, allies and slaves, had perished; and among them there may easily have been 10,000 Athenian citizens, most of whom belonged to the wealthier and higher classes. The flower of the Athenian people was destroyed, as at the time of the plague. It is impossible to say what amount of public property may have been lost; the whole fleet was gone.' The consequences of the disaster soon shewed themselves. It was to be foreseen that Chios, which had long been wavering, and whose disposition could not be trusted, would avail itself of this moment to revolt; and the cities in Asia, from which Athens derived her large revenues, were expected to do the same. It was, in fact, to be foreseen, that the four islands of Lesbos, Chios, Samos, and Rhodes, would instantly revolt. The Spartans were established at Decelea, in Attica itself, and thence ravaged the country far and wide: so that it was impossible to venture to go to the coast without a strong escort. Although there were many districts in which no Spartan was seen from one year's end to the other, yet there was no safety anywhere, except in fortified places, 'and the Athenians were constantly obliged to guard the walls of their city; and this state of things had already been going on for the last twelve months.' In this fearful situation, the Athenian people showed the same firmness as the Romans after the battle of Cannæ. Had they but had one great man among them, to whom the state could have been entrusted, even more might perhaps have been done; but it is astonishing that, although there was no such man, and although the leading men were only second or third-rate persons, yet so many useful arrangements were made to meet the necessities of the case. . . . The most unfortunate circumstance for the Athenians was, that Alcibiades, now an enemy of his country, was living among the Spartans; for he introduced into the undertakings of the Spartans the very element which before they had been altogether deficient in, namely energy and elasticity: he urged them on to undertakings, and induced them now to send a fleet to Ionia. . . . Erythrae, Teos, and Miletus, one after another, revolted to the Peloponnesians, who now concluded treaties with Tissaphernes in the name of the king of Persia—Darius was then king—and in his own name as satrap; and in this manner they sacrificed to him the Asiatic Greeks. . . . The Athenians were an object of antipathy and implacable hatred to the Persians; they had never doubted that the Athenians were their real opponents in Greece, and were afraid of them; but they did not fear the Spartans. They knew that the Athenians would take from them not only the islands, but the towns on the main land, and were in great fear of their maritime power. Hence they joined the Spartans; and the latter were not ashamed of negotiating a treaty of subsidies with the Persians, in which Tissaphernes, in the king's name, promised the assistance of the Phœnician fleet; and large subsidies, as pay for the army. . . . In return for this, they renounced, in the name of the Greeks, all claims to independence for the Greek cities in Asia."—B. G. Niebuhr, *Lectures on Ancient History*, v. 2, lects. 53 and 54.—See, also, GREECE: B. C. 413-412.

B. C. 413-412.—Revolt of Chios, Miletus, Lesbos and Rhodes from Athens.—Revolution of Samos. See GREECE: B. C. 413.

B. C. 413-411.—The Probuli.—Intrigues of Alcibiades.—Conspiracy against the Constitution.—The Four Hundred and the Five Thousand.—Immediately after the dreadful calamity at Syracuse became known, "extraordinary measures were adopted by the people; a number of citizens of advanced age were formed into a deliberative and executive body under the name of Probuli, and empowered to fit out a fleet. Whether this laid the foundation for oligarchical machinations or not, those aged men were unable to bring back men's minds to their former course; the prosecution of the Hermocypidæ had been most mischievous in its results; various secret associations had sprung up and conspired to reap advantage to themselves from the distress and embarrassment of the state; the indignation caused by the infuriated excesses of the people during that trial, possibly here, as frequently happened in other Grecian states, determined the more respectable members of the community to guard against the recurrence of similar scenes in future, by the establishment of an aristocracy. Lastly, the watchful malice of Alcibiades, who was the implacable enemy of that populace, to whose blind fury he had been sacrificed, baffled all attempts to restore confidence and tranquillity, and there is no doubt that, whilst he kept up a correspondence with his partisans at home, he did everything in his power to increase the perplexity and distress of his native city from without, in order that he might be recalled to provide for its safety and defence. A favourable opportunity for the execution of his plans presented itself in the fifth year of his exile, OI. 92. 1; 411. B. C.; as he had incurred the suspicion of the Spartans, and stood high in the favour of Tissaphernes, the Athenians thought that his intercession might enable them to obtain assistance from the Persian king. The people in Athens were headed by one of his most inveterate enemies, Androcles; and he well knew that all attempts to effect his return would be fruitless, until this man and the other demagogues were removed. Hence Alcibiades entered into negotiations with the commanders of the Athenian fleet at Samos, respecting the establishment of an oligarchical constitution, not from any attachment to that form of government in itself, but solely with the view of promoting his own ends. Phrynichus and Pisander were equally insincere in their co-operation with Alcibiades. . . . Their plan was that the latter should reconcile the people to the change in the constitution which he wished to effect, by promising to obtain them the assistance of the great king; but they alone resolved to reap the benefit of his exertions. Pisander took upon himself to manage the Athenian populace. It was in truth no slight undertaking to attempt to overthrow a democracy of a hundred and twenty years' standing, and of intense development; but most of the able bodied citizens were absent with the fleet, whilst such as were still in the city were confounded by the imminence of the danger from without; on the other hand, the prospect of succour from the Persian king doubtless had some weight with them, and they possibly felt some symptoms of returning affection for their former favourite Alcibiades. Nevertheless, Pisan-

der and his accomplices employed craft and perfidy to accomplish their designs; the people were not persuaded or convinced, but entrapped into compliance with their measures. Pisander gained over to his purpose the above named clubs, and induced the people to send him with ten plenipotentiaries to the navy at Samos. In the mean time the rest of the conspirators prosecuted the work of remodelling the constitution."—W. Wachsmuth, *Hist. Antiquities of the Greeks*, v. 2, pp. 252-255.—The people, or an assembly cleverly made up and manipulated to represent the people, were induced to vote all the powers of government into the hands of a council of Four Hundred, of which council the citizens appointed only five members. Those five chose ninety-five more, to make one hundred, and each of that hundred then chose three colleagues. The conspirators thus easily made up the Four Hundred to their liking, from their own ranks. This council was to convene an assembly of Five Thousand citizens, whenever it saw fit to do so. But when news of this constitutional change reached the army at Samos, where the Athenian headquarters for the Ionian war were fixed, the citizen soldiers refused to submit to it—repudiated it altogether—and organized themselves as an independent state. The ruling spirit among them was Thrasybulus, and his influence brought about a reconciliation with Alcibiades, then an exile sheltered at the Persian court. Alcibiades was recalled by the army and placed at its head. Presently a reaction at Athens ensued, after the oligarchical party had given signs of treasonable communication with Sparta, and in June the people assembled in the Pnyx and reasserted their sovereignty. "The Council was deposed, and the supreme sovereignty of the state restored to the people—not, however, to the entire multitude; for the principle was retained of reserving full civic rights to a committee of men of a certain amount of property; and, as the lists of the Five Thousand had never been drawn up, it was decreed, in order that the desired end might be speedily reached, to follow the precedent of similar institutions in other states and to constitute all Athenians able to furnish themselves with a complete military equipment from their own resources, full citizens, with the rights of voting and participating in the government. Thus the name of the Five Thousand had now become a very inaccurate designation; but it was retained, because men had in the last few months become habituated to it. At the same time, the abolition of pay for civic offices and functions was decreed, not merely as a temporary measure, but as a fundamental principle of the new commonwealth, which the citizens were bound by a solemn oath to maintain. This reform was, upon the whole, a wise combination of aristocracy and democracy; and, according to the opinion of Thucydides, the best constitution which the Athenians had hitherto possessed. On the motion of Critias, the recall of Alcibiades was decreed about the same time; and a deputation was despatched to Samos, to accomplish the union between army and city."—E. Curtius, *Hist. of Greece*, bk. 4, ch. 5.—Most of the leaders of the Four Hundred fled to the Spartan camp at Decelia. Two were taken, tried and executed.—Thucydides, *History*, bk. 8, sect. 48-97.—See, also, GREECE: B. C. 413-412.

B. C. 404.—The Surrender to Lysander.—After the battle of Ægospotami (August, B. C. 405), which destroyed their navy, and cut off nearly all supplies to the city by sea, as the Spartans at Declea had long cut off supplies upon the land side, the Athenians had no hope. They waited in terror and despair for their enemies to close in upon them. The latter were in no haste, for they were sure of their prey. Lysander, the victor at Ægospotami, came leisurely from the Hellespont, receiving on his way the surrender of the cities subject or allied to Athens, and placing Spartan harmosts and garrisons in them, with the local oligarchs established uniformly in power. About November he reached the Saronic gulf and blockaded the Athenian harbor of Piræus, while an overwhelming Peloponnesian land force, under the Lacedæmonian king Pausanias, arrived simultaneously in Attica and encamped at the gates of the city. The Athenians had no longer any power except the power to endure, and that they exercised for more than three months, mainly resisting the demand that their Long Walls—the walls which protected the connection of the city with its harbors—should be thrown down. But when famine had thinned the ranks of the citizens and broken the spirit of the survivors, they gave up. "There was still a high-spirited minority who entered their protest and preferred death by famine to such insupportable disgrace. The large majority, however, accepted them [the terms] and the acceptance was made known to Lysander. It was on the 16th day of the Attic month Munychion,—about the middle or end of March,—that this victorious commander sailed into the Peiræus, twenty-seven years, almost exactly, after the surprise of Plataea by the Thebans, which opened the Peloponnesian War. Along with him came the Athenian exiles, several of whom appear to have been serving with his army and assisting him with their counsel."—G. Grote, *Hist. of Greece*, pt. 2, ch. 65 (v. 8).—The Long Walls and the fortifications of Piræus were demolished, and then followed the organization of an oligarchical government at Athens, resulting in the reign of terror under "The Thirty."—E. Curtius, *Hist. of Greece*, bk. 4, ch. 5.

B. C. 404-403.—The tyranny of the Thirty.—The Year of Anarchy.—In the summer of B. C. 404, following the siege and surrender of Athens, and the humiliating close of the long Peloponnesian War, the returned leaders of the oligarchical party, who had been in exile, succeeded with the help of their Spartan friends, in overthrowing the democratic constitution of the city and establishing themselves in power. The revolution was accomplished at a public assem-

by of citizens, in the presence of Lysander, the victorious Lacedæmonian admiral, whose fleet in the Piræus lay ready to support his demands. "In this assembly, Dracontidas, a scoundrel upon whom repeated sentences had been passed, brought forward a motion, proposing the transfer of the government into the hands of Thirty persons; and Theramenes supported this proposal which he declared to express the wishes of Sparta. Even now, these speeches produced a storm of indignation; after all the acts of violence which Athens had undergone, she yet contained men outspoken enough to venture to defend the constitution, and to appeal to the fact that the capitulation sanctioned by both parties contained no provision as to the internal affairs of Athens. But, hereupon, Lysander himself came forward and spoke to the citizens without reserve, like one who was their absolute master. . . . By such means the motion of Dracontidas was passed; but only a small number of unpatriotic and cowardly citizens raised their hands in token of assent. All better patriots contrived to avoid participation in this vote. Next, ten members of the government were chosen by Critias and his colleagues [the Critias of Plato's Dialogues, pupil of Socrates, and now the violent and blood-thirsty leader of the anti-democratic revolution], ten by Theramenes, the confidential friend of Lysander, and finally ten out of the assembled multitude, probably by a free vote; and this board of Thirty was hereupon established as the supreme government authority by a resolution of the assembly present. Most of the members of the new government had formerly been among the Four Hundred, and had therefore long pursued a common course of action." The Thirty Tyrants so placed in power were masters of Athens for eight months, and executed their will without conscience or mercy, having a garrison of Spartan soldiers in the Acropolis to support them. They were also sustained by a picked body of citizens, "the Three Thousand," who bore arms while other citizens were stripped of every weapon. Large numbers of the more patriotic and high-spirited Athenians had escaped from their unfortunate city and had taken refuge, chiefly at Thebes, the old enemy of Athens, but now sympathetic in her distress. At Thebes these exiles organized themselves under Thrasybulus and Anytus, and determined to expel the tyrants and to recover their homes. They first seized a strong post at Phyle, in Attica, where they gained in numbers rapidly, and from which point they were able in a few weeks to advance and occupy the Piræus. When the troops of The Thirty came out to attack them, they drew back to the adjacent height of Munychia and there fought a battle which delivered their city from the Tyrants. Critias, the master-spirit of the usurpation, was slain; the more violent of his colleagues took refuge at Eleusis, and Athens, for a time, remained under the government of a new oligarchical Board of Ten; while Thrasybulus and the democratic liberators maintained their headquarters at Munychia. All parties waited the action of Sparta. Lysander, the Spartan general, marched an army into Attica to restore the tyranny which was of his own creating; but one of the two Spartan kings, Pausanias, intervened, assumed the command in his own person, and applied his efforts to the arranging of peace

between the Athenian parties. The result was a restoration of the democratic constitution of the Attic state, with some important reforms. Several of The Thirty were put to death,—treacherously, it was said,—but an amnesty was extended to all their partisans. The year in which they and The Ten controlled affairs was termed in the official annals of the city the Year of Anarchy, and its magistrates were not recognized.—E. Curtius, *Hist. of Greece*, bk. 4, ch. 5, and bk. 5, ch. 1.

B. C. 378-357.—The New Confederacy and the Social War.—Upon the Liberation of Thebes and the signs that began to appear of the decline of Spartan power—during the year of the archonship of Nausimachus, B. C. 378-7, which was made memorable at Athens by various movements of political regeneration,—the organization of a new Confederacy was undertaken, analagous to the Confederacy of Delos, formed a century before. Athens was to be, "not the ruling capital, but only the directing city in possession of the primacy, the seat of the federal council. . . . Callistratus was in a sense the Aristides of the new confederation and doubtless did much to bring about an agreement; it was likewise his work that, in place of the 'tributes' of odious memory, the payments necessary to the existence of the confederation were introduced under the gentler name of 'contributions.' . . . Amicable relations were resumed with the Cyclades, Rhodes and Perinthus; in other words, the ancient union of navies was at once renewed upon a large scale and in a wide extent. Even such states joined it as had hitherto never stood in confederate relations with Athens, above all Thebes."—E. Curtius, *Hist. of Greece*, bk. 6, ch. 1.—This second confederacy renewed much of the prosperity and influence of Athens for a brief period of about twenty years. But in 357 B. C., four important members of the Confederacy, namely, Chios, Cos, Rhodes, and Byzantium leagued themselves in revolt, with the aid of Mausolus, prince of Caria, and an inglorious war ensued, known as the Social War, which lasted three years. Athens was forced at last to assent to the secession of the four revolted cities and to recognize their independence, which greatly impaired her prestige and power, just at the time when she was called upon to resist the encroachments of Philip of Macedonia.—C. Thirlwall, *Hist. of Greece*, ch. 42.

B. C. 359-338.—The collision with Philip of Macedon.—The Policy of Demosthenes and Policy of Phocion.—"A new period opens with the growth of the Macedonian power under Philip (359-336 B. C.). We are here chiefly concerned to notice the effect on the City-State [of Athens], not only of the strength and policy of this new power, but also of the efforts of the

Greeks themselves to counteract it. At the time of Philip's accession the so-called Theban supremacy had just practically ended with the death of Epaminondas. There was now a kind of balance of power between the three leading States, Sparta, Athens, and Thebes, no one of which was greatly stronger than the others; and such a balance could easily be worked upon by any great power from without. Thus when Macedon came into the range of Greek politics, under a man of great diplomatic as well as military capacity, who, like a Czar of to-day, wished to secure a firm footing on the sea-board of the Ægean [see GREECE: B. C. 359-358], she found her work comparatively easy. The strong imperial policy of Philip found no real antagonist except at Athens. Weak as she was, and straitened by the break-up of her new confederacy, Athens could still produce men of great talent and energy; but she was hampered by divided counsels. Two Athenians of this period seem to represent the currents of Greek political thought, now running in two different directions. Demosthenes represents the cause of the City-State in this age, of a union, that is, of perfectly free Hellenic cities against the common enemy. Phocion represents the feeling, which seems to have been long growing up among thinking men at Athens, that the City-State was no longer what it had been, and could no longer stand by itself; that what was needed was a general Hellenic peace, and possibly even an arbiter from without, an arbiter not wholly un-Hellenic like the Persian, yet one who might succeed in stilling the fatal jealousies of the leading States. . . . The efforts of Demosthenes to check Philip fall into two periods divided by the peace of Philocrates in 346 B. C. In the first of these he is acting chiefly with Athens alone; Philip is to him not so much the common enemy of Greece as the dangerous rival of Athens in the north. His whole mind was given to the internal reform of Athens so as to strengthen her against Philip. In her relation to other Greek States he perhaps hardly saw beyond a balance of power. . . . After 346 his Athenian feeling seems to become more distinctly Hellenic. But what could even such a man as Demosthenes do with the Hellas of that day? He could not force on the Greeks a real and permanent union; he could but urge new alliances. His strength was spent in embassies with this object, embassies too often futile. No alliance could save Greece from the Macedonian power, as subsequent events plainly showed. What was needed was a real federal union between the leading States, with a strong central controlling force; and Demosthenes' policy was hopeless just because Athens could never be the centre of such a union, nor could any other city. Demosthenes is thus the last, and in some respects the most heroic champion of the old Greek instinct for autonomy. He is the true child of the City-State, but the child of its old age and decrepitude. He still believes in Athens, and it is on Athens that all his hopes are based. He looks on Philip as one who must inevitably be the foe alike of Athens and of Greece. He seems to think that he can be beaten off as Xerxes was, and to forget that even Xerxes almost triumphed over the divisions of the Greek States, and that Philip is a nearer, a more prominent, and a far less barbarian foe. . . . Phocion was

the somewhat odd exponent of the practical side of a school of thought which had been gaining strength in Greece for some time past. This school was now brought into prominence by the rise of Macedon, and came to have a marked influence on the history of the City-State. It began with the philosophers, and with the idea that the philosopher may belong to the world as well as to a particular city. . . . Athens was far more open to criticism now than in the days of Pericles; and a cynical dislike betrays itself in the Republic for the politicians of the day and their tricks, and a longing for a strong government of reason. . . . Aristotle took the facts of city life as they were and showed how they might be made the most of. . . . To him Macedon was assuredly not wholly barbarian; and war to the death with her kings could not have been to him as natural or desirable as it seemed to Demosthenes. And though he has nothing to tell us of Macedon, we can hardly avoid the conclusion that his desire was for peace and internal reform, even if it were under the guarantee of the northern power. . . . Of this philosophical view of Greek politics Phocion was in a manner the political exponent. But his policy was too much a negative one; it might almost be called one of indifference, like the feeling of Lessing and Goethe in Germany's most momentous period. So far as we know, Phocion never proposed an alliance of a durable kind, either Athenian or Hellenic, with Macedon; he was content to be a purely restraining influence. Athens had been constantly at war since 432; her own resources were of the weakest; there was little military skill to be found in her, no reserve force, much talk, but little solid courage. Athens was vulnerable at various points, and could not possibly defend more than one at a time, therefore Phocion despaired of war, and the event proved him right. The faithfulness of the Athenians towards him is a proof that they also instinctively felt that he was right. But he was wanting on the practical and creative side, and never really dominated either Athens, Greece, or Philip. . . . A policy of resistance found the City-State too weak to defend itself; a policy of inaction would land it in a Macedonian empire which would still further weaken its remaining vitality. The first policy, that of Demosthenes, did actually result in disaster and the presence of Macedonian garrisons in Greek cities. The second policy then took its place, and initiated a new era for Greece. After the fatal battle of Chæronea (338 B. C.) Philip assumed the position of leader of the Greek cities."—W. W. Fowler, *The City-State of the Greeks and Romans*, ch. 10.—See, also, GREECE: 357-336.

B. C. 340.—Alliance with Byzantium against Philip of Macedon. See GREECE: B. C. 340.

B. C. 336-322.—End of the Struggle with the Macedonians.—Fall of Democracy.—Death of Demosthenes.—Athenian decline.—"An unexpected incident changes the whole aspect of things. Philip falls the victim of assassination; and a youth, who as yet is but little known, is his successor. Immediately Demosthenes institutes a second alliance of the Greeks; but Alexander suddenly appears before Thebes; the terrible vengeance which he here takes, instantly destroys the league; Demosthenes, Lycurgus, and several of their support

ers, are required to be delivered up; but Demades is at that time able to settle the difficulty and to appease the king. His strength was therefore enfeebled as Alexander departed for Asia; he begins to raise his head once more when Sparta attempts to throw off the yoke; but under Antipater he is overpowered. Yet it was about this very time that by the most celebrated of his discourses he gained the victory over the most eloquent of his adversaries; and Æschines was forced to depart from Athens. But this seems only to have the more embittered his enemies, the leaders of the Macedonian party; and they soon found an opportunity of preparing his downfall. When Harpalus, a fugitive from the army of Alexander, came with his treasures to Athens, and the question arose, whether he could be permitted to remain there, Demosthenes was accused of having been corrupted by his money, at least to be silent. This was sufficient to procure the imposition of a fine; and as this was not paid, he was thrown into prison. From thence he succeeded in escaping; but to the man who lived only for his country, exile was no less an evil than imprisonment. He resided for the most part in Ægina and at Troezen, from whence he looked with moist eyes toward the neighbouring Attica. Suddenly and unexpectedly a new ray of light broke through the clouds. Tidings were brought, that Alexander was dead. The moment of deliverance seemed at hand; the excitement pervaded every Grecian state; the ambassadors of the Athenians passed through the cities; Demosthenes joined himself to the number and exerted all his eloquence and power to unite them against Macedonia. In requital for such services, the people decreed his return; and years of sufferings were at last followed by a day of exalted compensation. A galley was sent to Ægina to bring back the advocate of liberty. . . . It was a momentary glimpse of the sun, which still darker clouds were soon to conceal. Antipater and Craterus were victorious; and with them the Macedonian party in Athens; Demosthenes and his friends were numbered among the accused, and at the instigation of Demades were condemned to die. . . . Demosthenes had escaped to the island Calauria in the vicinity of Troezen; and took refuge in the temple of Neptune. It was to no purpose that Archias, the satellite of Antipater, urged him to surrender himself under promise of pardon. He pretended he wished to write something; bit the quill, and swallowed the poison contained in it."—A. H. L. Heeren, *Reflections on the Politics of Ancient Greece*, trans. by G. Bancroft, pp. 278-280.—See, also, on the "Lamian War," the suppression of Democracy at Athens, and the expulsion of poor citizens, GREECE: B. C. 323-332.—"With the decline of political independence, . . . the mental powers of the nation received a fatal blow. No longer knit together by a powerful esprit de corps, the Greeks lost the habit of working for the common weal; and, for the most part, gave themselves up to the petty interests of home life and their own personal troubles. Even the better disposed were too much occupied in opposing the low tone and corruption of the times, to be able to devote themselves, in their moments of relaxation, to a free and speculative consideration of things. What could be expected in such an age, but that philosophy would take a decidedly practical

turn, if indeed it were studied at all? And yet such were the political antecedents of the Stoic and Epicurean systems of philosophy. . . . Stoic apathy, Epicurean self-satisfaction, and Sceptic imperturbability, were the doctrines which responded to the political helplessness of the age. They were the doctrines, too, which met with the most general acceptance. The same political helplessness produced the sinking of national distinctions in the feeling of a common humanity, and the separation of morals from politics which characterise the philosophy of the Alexandrian and Roman period. The barriers between nations, together with national independence, had been swept away. East and West, Greeks and barbarians, were united in large empires, being thus thrown together, and brought into close contact on every possible point. Philosophy might teach that all men were of one blood, that all were equally citizens of one empire, that morality rested on the relation of man to his fellow men, independently of nationalities and of social ranks; but in so doing she was only explicitly stating truths which had been already realised in part, and which were in part corollaries from the existing state of society."—E. Zeller, *The Stoics, Epicureans, and Sceptics*, pp. 16-18.—"What we have said concerning the evidence of comedy about the age of the first Diadochi amounts to this: Menander and his successors—they lasted barely two generations—printed in a few stereotypes a small and very worthless society at Athens. There was no doubt a similar set of people at Corinth, at Thebes, possibly even in the city of Lycurgus. These people, idle, for the most part rich, and in good society, spent their earlier years in debauchery, and their later in sentimental reflections and regrets. They had no serious object in life, and regarded the complications of a love affair as more interesting than the rise and fall of kingdoms or the gain and loss of a nation's liberty. They were like the people of our day who spend all their time reading novels from the libraries, and who can tolerate these eternal variations in twaddle not only without disgust but with interest. They were surrounded with slaves, on the whole more intelligent and interesting, for in the first place slaves were bound to exercise their brains, and in the second they had a great object—liberty—to give them a keen pursuit in life. The relations of the sexes in this set or portion of society were bad, owing to the want of education in the women, and the want of earnestness in the men. As a natural consequence a class was found, apart from household slaves, who took advantage of these defects, and, bringing culture to fascinate unprincipled men, established those relations which brought estrangements, if not ruin, into the home life of the day."—J. P. Mahaffy, *Greek Life and Thought*, pp. 123-124.—"The amount of Persian wealth poured into Greece by the accidents of the conquest, not by its own industries, must have produced a revolution in prices not since equalled except by the influx of the gold of the Aztecs and Incas into Spain. I have already pointed out how this change must have pressed upon poor people in Greece who did not share in the plunder. The price of even necessary and simple things must have often risen beyond their means. For the adventurers brought home large fortunes, and the traders

and purveyors of the armies made them; and with these Eastern fortunes must have come in the taste for all the superior comforts and luxuries which they found among the Persian grandees. Not only the appointments of the table, in the way of plate and pottery, but the very tastes and flavours of Greek cookery must have profited by comparison with the knowledge of the East. So also the furniture, especially in carpets and hangings, must have copied Persian fashion, just as we still affect oriental stuffs and designs. It was not to be expected that the example of so many regal courts and so much royal ceremony should not affect those in contact with them. These influences were not only shown in the vulgar 'braggart captain,' who came to show off his sudden wealth in impudent extravagance among his old townspeople, but in the ordinary life of rich young men. So I imagine the personal appointments of Alcibiades, which were the talk of Greece in his day, would have appeared poor and mean beside those of Aratus, or of the generation which preceded him. Pictures and statues began to adorn private houses, and not temples and public buildings only—a change beginning to show itself in Demosthenes's day, but coming in like a torrent with the opening of Greece to the Eastern world. It was noticed that Phocion's house at Athens was modest in size and furniture, but even this was relieved from shabbiness by the quaint wall decoration of shining plates of bronze—a fashion dating from prehistoric times, but still admired for its very antiquity."—J. P. Mahaffy, *Greek Life and Thought*, pp. 105-106.—"The modern historians of Greece are much divided on the question where a history of Hellas ought to end. Curtius stops with the battle of Chaeroneia and the prostration of Athens before the advancing power of Macedon. Grote narrates the campaigns of Alexander, but stops short at the conclusion of the Lamian War, when Greece had in vain tried to shake off the supremacy of his generals. Thirlwall brings his narrative down to the time of Mummius, the melancholy sack of Corinth and the constitution of Achaia as a Roman province. Of these divergent views we regard that of the German historian as the most correct. . . . The historic sense of Grote did not exclude prejudices, and in this case he was probably led astray by political bias. At the close of his ninety-sixth chapter, after mentioning the embassies sent by the degenerate Athenians to King Ptolemy, King Lysimachus, and Antipater, he throws down his pen in disgust, 'and with sadness and humiliation brings his narrative to a close.' Athens was no longer free and no longer dignified, and so Mr. Grote will have done with Greece at the very moment when the new Comedy was at its height, when the Museum was founded at Alexandria, when the plays of Euripides were acted at Babylon and Cabul, and every Greek soldier of fortune carried a diadem in his baggage. Surely the historian of Greece ought either to have stopped when the iron hand of Philip of Macedon put an end to the liberties and the political wranglings of Hellas, or else persevered to the time when Rome and Parthia crushed Greek power between them, like a ship between two icebergs. No doubt his reply would be, that he declined to regard the triumph abroad of Macedonian arms as a continuation of the history of Hellas. . . .

The truth is, that the history of Greece consists of two parts, in every respect contrasted one with the other. The first recounts the stories of the Persian and Peloponnesian wars, and ends with the destruction of Thebes and the subjugation of Athens and Sparta. The Hellas of which it speaks is a cluster of autonomous cities in the Peloponnesus, the Islands, and Northern Greece, together with their colonies scattered over the coasts of Italy, Sicily, Thrace, the Black Sea, Asia Minor, and Africa. These cities care only to be independent, or at most to lord it over one another. Their political institutions, their religious ceremonies, their customs, are civic and local. Language, commerce, a common Pantheon, and a common art and poetry are the ties that bind them together. In its second phase, Greek history begins with the expedition of Alexander. It reveals to us the Greek as everywhere lord of the barbarian, as founding kingdoms and federal systems, as the instructor of all mankind in art and science, and the spreader of civil and civilized life over the known world. In the first period of her history Greece is forming herself, in her second she is educating the world. We will venture to borrow from the Germans a convenient expression, and call the history of independent Greece the history of Hellas, that of imperial Greece the history of Hellenism. . . . The Athens of Pericles was dictator among the cities which had joined her alliance. Corinth, Sparta, Thebes, were each the political head of a group of towns, but none of the three admitted these latter to an equal share in their councils, or adopted their political views. Even in the Olynthian League, the city of Olynthus occupied a position quite superior to that of the other cities. But the Greek cities had not tried the experiment of an alliance on equal terms. This was now attempted by some of the leading cities of the Peloponnesus, and the result was the Achaean League, whose history sheds a lustre on the last days of independent Greece, and whose generals will bear comparison with the statesmen of any Greek Republic [see GREECE: B. C. 280-146]. . . . On the field of Sellasia the glorious hopes of Cleomenes were wrecked, and the recently reformed Sparta was handed over to a succession of bloodthirsty tyrants, never again to emerge from obscurity. But to the Achaeans themselves the interference of Macedon was little less fatal. Henceforth a Macedonian garrison occupied Corinth, which had been one of the chief cities of the League; and King Antigonus Doson was the recognized arbiter in all disputes of the Peloponnesian Greeks. . . . In Northern Greece a strange contrast presented itself. The historic races of the Athenians and Boeotians languished in peace, obscurity, and luxury. With them every day saw something added to the enjoyments and elegancies of life, and every day politics drifted more and more into the background. On the other hand, the rude semi-Greeks of the West, Aetolians, Acarnanians, and Epirotes, to whose manhood the repulse of the Gauls was mainly due, came to the front and showed the bold spirit of Greeks divorced from the finer faculties of the race. The Acarnanians formed a league somewhat on the plan of the Achaean. But they were overshadowed by their neighbors the Aetolians, whose union was of a different character. It was the first time that there had

been formed in Hellas a state framed in order to prey upon its neighbours. . . . In the course of the Peloponnesian War Greek religion began to lose its hold on the Greeks. This was partly the work of the sophists and philosophers, who sought more lofty and moral views of Deity than were furnished by the tales of popular mythology. Still more it resulted from growing materialism among the people, who saw more and more of their immediate and physical needs, and less and less of the underlying spiritual elements in life. But though philosophy and materialism had made the religion of Hellas paler and feebler, they had not altered its nature or expanded it. It still remained essentially national, almost tribal. When, therefore, Greeks and Macedonians suddenly found themselves masters of the nations of the East, and in close contact with a hundred forms of religion, an extraordinary and rapid change took place in their religious ideas. In religion, as in other matters, Egypt set to the world the example of prompt fusion of the ideas of Greeks and natives. . . . Into Greece proper, in return for her population which flowed out, there flowed in a crowd of foreign deities. Isis was especially welcomed at Athens, where she found many votaries. In every cult the more mysterious elements were made more of, and the brighter and more materialistic side passed by. Old statues which had fallen somewhat into contempt in the days of Pheidias and Praxiteles were restored to their places and received extreme veneration, not as beautiful, but as old and strange. On the coins of the previous period the representations of deities had been always the best that the die-cutter could frame, taking as his models the finest contemporary sculpture; but henceforth we often find them strange, uncouth figures, remnants of a period of struggling early art, like the Apollo at Amyclae, or the Hera of Samos. . . . In the intellectual life of Athens there was still left vitality enough to formulate the two most complete expressions of the ethical ideas of the times, the doctrines of the Stoics and the Epicureans, towards one or the other of which all educated minds from that day to this have been drawn. No doubt our knowledge of these doctrines, being largely drawn from the Latin writers and their Greek contemporaries, is somewhat coloured and unjust. With the Romans a system of philosophy was considered mainly in its bearing upon conduct, whence the ethical elements in Stoicism and Epicureanism have been by their Roman adherents so thrust into the foreground, that we have almost lost sight of the intellectual elements, which can have had little less importance in the eyes of the Greeks. Notwithstanding, the rise of the two philosophies must be held to mark a new era in the history of thought, an era when the importance of conduct was for the first time recognized by the Greeks. It is often observed that the ancient Greeks were more modern than our own ancestors of the Middle Ages. But it is less generally recognized how far more modern than the Greeks of Pericles were the Greeks of Aratus. In very many respects the age of Hellenism and our own age present remarkable similarity. In both there appears a sudden increase in the power over material nature, arising alike from the greater accessibility of all parts of the world

and from the rapid development of the sciences which act upon the physical forces of the world. In both this spread of science and power acts upon religion with a dissolving and, if we may so speak, centrifugal force, driving some men to take refuge in the most conservative forms of faith, some to fly to new creeds and superstitions, some to drift into unmeasured scepticism. In both the facility of moving from place to place, and finding a distant home, tends to dissolve the closeness of civic and family life, and to make the individual rather than the family or the city the unit of social life. And in the family relations, in the character of individuals, in the state of morality, in the condition of art, we find at both periods similar results from the similar causes we have mentioned."—P. Gardner, *New Chapters in Greek History*, ch. 15.

B. C. 317-316.—Siege by Polysperchon.—Democracy restored.—Execution of Phocion.—Demetrius of Phaleron at the head of the government. See GREECE: B. C. 321-312.

B. C. 307-197.—Under Demetrius Poliorcetes and the Antigonids. See GREECE: B. C. 307-197.

B. C. 288-263.—Twenty years of Independence.—Siege and subjugation by Antigonus Gonatas.—When Demetrius Poliorcetes lost the Macedonian throne, B. C. 288, his fickle Athenian subjects and late worshippers rose against his authority, drove his garrisons from the Museum and the Piræus and abolished the priesthood they had consecrated to him. Demetrius gathered an army from some quarter and laid siege to the city, but without success. The Athenians went so far as to invite Pyrrhus, the warrior king of Epirus, to assist them against him. Pyrrhus came and Demetrius retired. The dangerous ally contented himself with a visit to the Acropolis as a worshipper, and left Athens in possession, undisturbed, of her freshly gained freedom. It was enjoyed after a fashion for twenty years, at the end of which period, B. C. 268, Antigonus Gonatas, the son of Demetrius, having regained the Macedonian crown, reasserted his claim on Athens, and the city was once more besieged. The Lacedæmonians and Ptolemy of Egypt both gave some ineffectual aid to the Athenians, and the siege, interrupted on several occasions, was prolonged until B. C. 263, when Antigonus took possession of the Acropolis, the fortified Museum and the Piræus as a master (see MACEDONIA, &c.: B. C. 277-244). This was sometimes called the Chremonidean War, from the name of a patriotic Athenian who took the most prominent part in the long defence of his city.—C. Thirlwall, *Hist. of Greece*, ch. 61.

B. C. 229.—Liberation by the Achaian League. See GREECE: B. C. 280-146.

B. C. 200.—Vandalism of the second Macedonian Philip.—In the year B. C. 200 the Macedonian king, Philip, made an attempt to surprise Athens and failed. "He then encamped in the outskirts, and proceeded to wreak his vengeance on the Athenians, as he had indulged it at Thermus and Pergamus. He destroyed or defaced all the monuments of religion and of art, all the sacred and pleasant places which adorned the suburbs. The Academy, the Lyceum, and Cynosarges, with their temples, schools, groves and gardens, were all wasted with fire. Not even the sepulchres were spared."—C. Thirlwall, *Hist. of Greece*, ch. 64.

B. C. 197-A. D. 138.—Under Roman rule.

—“Athens . . . affords the disheartening picture of a commonwealth pampered by the supreme power, and financially as well as morally ruined. By rights it ought to have found itself in a flourishing condition. . . . No city of antiquity elsewhere possessed a domain of its own, such as was Attica, of about 700 square miles. . . . But even beyond Attica they retained what they possessed, as well after the Mithridatic War, by favour of Sulla, as after the Pharsalian battle, in which they had taken the side of Pompeius, by the favour of Caesar;—he asked them only how often they would still ruin themselves and trust to be saved by the renown of their ancestors. To the city there still belonged not merely the territory, formerly possessed by Haliartus, in Boeotia, but also on their own coast Salamis, the old starting-point of their dominion of the sea, and in the Thracian Sea the lucrative islands Scyros, Lemnos, and Imbros, as well as Delos in the Aegean. . . . Of the further grants, which they had the skill to draw by flattery from Antoninus, Augustus, against whom they had taken part, took from them certainly Aegina and Eretria in Euboea, but they were allowed to retain the smaller islands of the Thracian Sea. . . . Hadrian, moreover, gave to them the best part of the great island of Cephalenia in the Ionian Sea. It was only by the Emperor Severus, who bore them no good will, that a portion of these extraneous possessions was withdrawn from them. Hadrian further granted to the Athenians the delivery of a certain quantity of grain at the expense of the empire, and by the extension of this privilege, hitherto reserved for the capital, acknowledged Athens, as it were, as another metropolis. Not less was the blissful institute of alimentary endowments, which Italy had enjoyed since Trajan’s time, extended by Hadrian to Athens, and the capital requisite for this purpose certainly presented to the Athenians from his purse. . . . Yet the community was in constant distress.”—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 7.

ALSO IN: J. P. Mahaffy, *The Greek World under Roman Sway*.—See, also, GREECE: B. C. 146—A. D. 180.

B. C. 87-86.—Siege and capture by Sulla.—Massacre of citizens.—Pillage and depopulation.—Lasting injuries.—The early successes of Mithridates of Pontus, in his savage war with the Romans, included a general rising in his favor among the Greeks [see MITHRIDATIC WARS], supported by the fleets of the Pontic king and by a strong invading army. Athens and the Piræus were the strongholds of the Greek revolt, and at Athens an adventurer named Aristion, bringing from Mithridates a body-guard of 2,000 soldiers, made himself tyrant of the city. A year passed before Rome, distracted by the beginnings of civil war, could effectively interfere. Then Sulla came (B. C. 87) and laid siege to the Piræus, where the principal Pontic force was lodged, while he shut up Athens by blockade. In the following March, Athens was starved to such weakness that the Romans entered almost unopposed and killed and plundered with no mercy; but the buildings of the city suffered little harm at their hands. The siege of the Piræus was carried on for some weeks longer, until Sulla had driven the Pontic forces from every part except Munychia, and that they evacu-

ated in no long time.—W. Ihne, *Hist. of Rome*, bk. 7, ch. 17.—“Athens was . . . taken by assault. . . . The majority of the citizens was slain; the carnage was so fearfully great as to become memorable even in that age of bloodshed; the private movable property was seized by the soldiery, and Sylla assumed some merit to himself for not committing the rifled houses to the flames. . . . The fate of the Piræus, which he utterly destroyed, was more severe than that of Athens. From Sylla’s campaign in Greece the commencement of the ruin and depopulation of the country is to be dated. The destruction of property caused by his ravages in Attica was so great that Athens from that time lost its commercial as well as its political importance. The race of Athenian citizens was almost extirpated, and a new population, composed of a heterogeneous mass of settlers, received the right of citizenship.”—G. Finlay, *Greece under the Romans*, ch. 1.

A. D. 54 (?).—The Visit of St. Paul.—Planting of Christianity.—“When the Jews of Thessalonica had knowledge that the word of God was proclaimed of Paul at Berea also, they came thither likewise, stirring up and troubling the multitude. And then immediately the brethren sent forth Paul to go as far as to the sea; and Silas and Timotheus abode there still. But they that conducted Paul brought him as far as Athens; and receiving a commandment unto Silas and Timotheus that they should come to him with all speed, they departed. Now while Paul waited for them at Athens, his spirit was provoked within him, as he beheld the city full of idols. So he reasoned in the synagogue with the Jews, and the devout persons, and in the market place every day with them that met with him. And certain also of the Epicurean and Stoic philosophers encountered him. And some said, what would this babbler say? other some, He seemeth to be a setter forth of strange gods: because he preached Jesus and the resurrection. And they took hold of him, and brought him unto the Areopagus, saying, May we know what this new teaching is, which is spoken by thee? For thou bringest certain strange things to our ears: we would know therefore what these things mean. (Now all the Athenians and the strangers sojourning there spent their time in nothing else, but either to tell or to hear some new thing.) And Paul stood in the midst of the Areopagus, and said, Ye men of Athens, in all things I perceive that ye are somewhat superstitious. For as I passed along and observed the objects of your worship, I found also an altar with this inscription, ‘To an Unknown God.’ What therefore ye worship in ignorance, this set I forth unto you. . . . Now when they heard of the resurrection of the dead, some mocked; but others said, We will hear thee concerning this yet again. Thus Paul went out from among them. Howbeit certain men clave unto him, and believed: among whom also was Dionysius the Areopagite, and a woman named Damaris, and others with them.”—*Acts of the Apostles, Revised Version*, ch. 17.—“Consider the difficulties which must have beset the planting of the Church in Athens. If the burning zeal of the great Apostle ever permitted him to feel diffidence in addressing an assembly, he may well have felt it when he addressed on Mars’ Hill for the first time an Athenian crowd. No doubt the Athens of his time was in her decay, inferior in opulence and grandeur to many younger cities.

Yet even to a Jew, provided he had received some educational impressions beyond the fanatical shibboleths of Pharisaism, there was much in that wonderful centre of intelligence to shake his most inveterate prejudices and inspire him with unwilling respect. Shorn indeed of her political greatness, deprived even of her philosophical supremacy, she still shone with a brilliant after-glow of æsthetic and intellectual prestige. Her monuments flashed on the visitor memories recent enough to dazzle his imagination. Her schools claimed and obtained even from Emperors the homage due to her unique past. Recognising her as the true nurse of Hellenism and the chief missionary of human refinement, the best spirits of the age held her worthy of admiring love not unmingled with awe. As the seat of the most brilliant and popular university, young men of talent and position flocked to her from every quarter, studied for a time within her colonnades, and carried thence the recollection of a culture which was not always deep, not always erudite, but was always and genuinely Attic. To subject to the criticism of this people a doctrine professing to come direct from God, a religion and not a philosophy, depending not on argument but on revelation, was a task of which the difficulties might seem insuperable. When we consider what the Athenian character was, this language will not seem exaggerated. Keen, subtle, capricious, satirical, sated with ideas, eager for novelty, yet with the eagerness of amused frivolity, not of the truth-seeker: critical by instinct, exquisitely sensitive to the ridiculous or the absurd, disputatious, ready to listen, yet impatient of all that was not wit, satisfied with everything in life except its shortness, and therefore hiding all references to this unwelcome fact under a veil of complacent euphemism—where could a more uncongenial soil be found for the seed of the Gospel? . . . To an Athenian the Jew was not so much an object of hatred (as to the Roman), nor even of contempt (as to the rest of mankind), as of absolute indifference. He was simply ignored. To the eclectic philosophy which now dominated the schools of Athens, Judaism alone among all human opinions was as if non-existent. That Athenians should be convinced by the philosophy of a Jew would be a proposition expressible in words but wholly destitute of meaning. On the other hand, the Jew was not altogether uninfluenced by Greek thought. Wide apart as the two minds were, the Hebraic proved not insensible to the charm of the Hellenic; witness the Epistle to the Hebrews, witness Philo, witness the intrusion of Greek methods of interpretation even into the text-books of Rabbiniism. And it was Athens, as the quintessence of Hellas, Athens as represented by Socrates, and still more by Plato, which had gained this subtle power. And just as Judea alone among all the Jewish communities retained its exclusiveness wholly unimpaired by Hellenism, so Athens, more than any Pagan capital, was likely to ignore or repel a faith coming in the garb of Judaism. And yet within less than a century we find this faith so well established there as to yield to the Church the good fruits of martyrdom in the person of its bishop, and of able defences in the person of three of its teachers. The early and the later fortunes of the Athenian Church are buried in oblivion; it comes but for a brief period before the scene of history. But

the undying interest of that one dramatic moment when Paul proclaimed a bodily resurrection to the authors of the conception of a spiritual immortality, will always cause us to linger with a strange sympathy over every relic of the Christianity of Athens."—C. T. Cruttwell, *A Literary History of Early Christianity*, v. 1, bk. 3, ch. 4.

ALSO IN: W. J. Conybeare and J. S. Howson, *Life and Letters of St. Paul*, v. 1, ch. 10.—F. C. Baur, *Paul*, pt. 1, ch. 7 (v. 1).—On the inscription, see E. de Pressensé, *The Early Years of Christianity: The Apostolic Era*, bk. 2, ch. 1.

A. D. 125-134.—The works of Hadrian.—The Emperor Hadrian interested himself greatly in the venerable decaying capital of the Greeks, which he visited, or resided in, for considerable periods, several times, between A. D. 125 and 134. These visits were made important to the city by the great works of rebuilding which he undertook and supervised. Large parts of the city are thought to have been reconstructed by him, "in the open and luxurious style of Antioch and Ephesus." One quarter came to be called "Hadrianapolis," as though he had created it. Several new temples were erected at his command; but the greatest of the works of Hadrian at Athens was the completing of the vast national temple, the Olympieum, the beginning of which dated back to the age of Pisistratus, and which Augustus had put his hand to without finishing.—C. Merivale, *Hist. of the Romans*, ch. 66.

A. D. 267.—Capture of, by the Goths. See **GOths**: A. D. 258-267.

A. D. 395.—Surrender to Alaric and the Goths.—When the Goths under Alaric invaded and ravaged Greece, A. D. 395, Athens was surrendered to them, on terms which saved the city from being plundered. "The fact that the depredations of Alaric hardly exceeded the ordinary license of a rebellious general, is . . . perfectly established. The public buildings and monuments of ancient splendour suffered no wanton destruction from his visit; but there can be no doubt that Alaric and his troops levied heavy contributions on the city and its inhabitants."—G. Finlay, *Greece under the Romans*, ch. 2, sect. 8.

ALSO IN: E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 30.—See, also, **GOths**: A. D. 395. **ALARIC'S INVASION OF GREECE.**

A. D. 529.—Suppression of the Schools by Justinian.—"The Attic schools of rhetoric and philosophy maintained their superior reputation from the Peloponnesian War to the reign of Justinian. Athens, though situate in a barren soil, possessed a pure air, a free navigation, and the monuments of ancient art. That sacred retirement was seldom disturbed by the business of trade or government; and the last of the Athenians were distinguished by their lively wit, the purity of their taste and language, their social manners, and some traces, at least in discourse, of the magnanimity of their fathers. In the suburbs of the city, the Academy of the Platonists, the Lyceum of the Peripatetics, the Portico of the Stoics and the Garden of the Epicureans were planted with trees and decorated with statues; and the philosophers, instead of being immured in a cloister, delivered their instructions in spacious and pleasant walks, which, at different hours, were consecrated to the exercises of the mind and body. The genius of the founders still lived in those venerable seats. . . .

The schools of Athens were protected by the wisest and most virtuous of the Roman princes. . . . Some vestige of royal bounty may be found under the successors of Constantine. . . . The golden chain, as it was fondly styled, of the Platonic succession, continued . . . to the edict of Justinian [A. D. 529] which imposed a perpetual silence on the schools of Athens, and excited the grief and indignation of the few remaining votaries of Greek science and superstition."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 40.

A. D. 1205.—The founding of the Latin Dukedom.—"The portion of Greece lying to the south of the kingdom of Saloniki was divided by the Crusaders [after their conquest of Constantinople, A. D. 1204—see BYZANTINE EMPIRE: A. D. 1203-1204] among several great feudatories of the Empire of Romania. . . . The lords of Boudonitza, Salona, Negropont, and Athens are alone mentioned as existing to the north of the isthmus of Corinth, and the history of the petty sovereigns of Athens can alone be traced in any detail. . . . Otho de la Roche, a Burgundian nobleman, who had distinguished himself during the siege of Constantinople, marched southward with the army of Boniface the king-marquis, and gained possession of Athens in 1205. Thebes and Athens had probably fallen to his share in the partition of the Empire, but it is possible that the king of Saloniki may have found means to increase his portion, in order to induce him to do homage to the crown of Saloniki for this addition. At all events, it appears that Otho de la Roche did homage to Boniface, either as his immediate superior, or as viceroy for the Emperor of Romania. . . . Though the Byzantine aristocracy and dignified clergy were severe sufferers by the transference of the government into the hands of the Franks, the middle classes long enjoyed peace and security. . . . The social civilization of the inhabitants, and their ample command of the necessaries and many of the luxuries of life, were in those days as much superior to the condition of the citizens of Paris and London as they are now inferior. . . . The city was large and wealthy, the country thickly covered with villages, of which the ruins may still be traced in spots affording no indications of Hellenic sites. . . . The trade of Athens was considerable, and the luxury of the Athenian ducal court was celebrated in all the regions of the West where chivalry flourished."—G. Finlay, *Hist. of Greece from its Conquest by the Crusaders*, ch. 7.

A. D. 1456.—The Turks in possession.—Athens was not occupied by the Turks until three years after the conquest of Constantinople (see CONSTANTINOPLE: A. D. 1453). In the meantime the reign of the Florentine dukes of the house of Acciaoli came to a tragical close. The last of the dukes, Maurice Acciaoli died, leaving a young son and a young widow, the latter renowned for her beauty and her talents. The duchess, whom the will of her husband had made regent, married a comely Venetian named Palmerio, who was said to have poisoned his wife in order to be free to accept her hand. Thereupon a nephew of the late duke, named Franco, stirred up insurrections at Athens and fled to Constantinople to complain to the sultan, Mahomet II. "The sultan, glad of all pretexts that coloured his armed intervention in the affairs of these principalities, ordered Omar, son of Tourakhan, chief of the permanent army of the Peloponnesus, to take possession of Athens, to dethrone the duchess and to confine her sons in his prisons of the citadel of Megara." This was done; but Palmerio, the duchess's husband, made his way to the sultan and interceded in her behalf. "Mahomet, by the advice of his viziers, feigned to listen equally to the complaints of Palmerio, and to march to reestablish the legitimate sovereignty. But already Franco, entering Megara under the auspices of the Ottomans, had strangled both the duchess and her son. Mahomet, advancing in turn to punish him for his vengeance, expelled Franco from Athens on entering it, and gave him, in compensation, the inferior and dependent principality of Thebes, in Boeotia. The sultan, as lettered as he was warlike, evinced no less pride and admiration than Sylla at the sight of the monuments of Athens. 'What gratitude,' exclaimed he before the Parthenon and the temple of Theseus, 'do not religion and the Empire owe to the son of Tourakhan, who has made them a present of these spoils of the genius of the Greeks.'"—A. Lamartine, *Hist. of Turkey*, bk. 13, sect. 10-12.

ATLANTIC CABLE. See ELECTRICAL DISCOVERY AND INVENTION: A. D. 1854-1866.

ATLANTIC OCEAN. The name.—The Atlantic Ocean is mentioned by that name in a single passage of Herodotus; "but it is clear, from the incidental way in which it [the name] is here introduced, that it was one well known in his day."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 7, sect. 1, note.—For a sketch of the history of the modern use of the name, see PACIFIC OCEAN.

ATREBATES, The.—This name was borne by a tribe in ancient Belgic Gaul, which occupied modern Artois and part of French Flanders, and, also, by a tribe or group of tribes in Britain, which dwelt in a region between the Thames and the Severn. The latter was probably a colony from the former. See **BELGÆ**; also **BRITAIN, CELTIC TRIBES**.

ATROPATENE. — MEDIA ATROPATENE.—"Atropatene, as a name for the Alpine land in the northwest of Iran (now Azerbaijan), came into use in the time of the Greek Empire [Alexander's]; at any rate we cannot trace it earlier. 'Athrapaiti' means 'lord of fire;' 'Athrapata,' 'one protected by fire;' in the remote mountains of this district the old fire-worship was preserved with peculiar zeal under the Seleucids."—M. Duncker, *Hist. of Antiquity*, bk. 7, ch. 4.—Atropatene "comprises the entire basin of Lake Urumiyeh, together with the country intervening between that basin and the high mountain chain which curves round the southwestern corner of the Caspian."—G. Rawlinson, *Five Great Monarchies: Media*, ch. 1.—Atropatene was "named in honour of the satrap Atropates, who had declared himself king after Alexander's death."—J. P. Mahaffy, *Story of Alexander's Empire*, ch. 13.

ATTACAPAN FAMILY, The. See **AMERICAN ABORIGINES: ATTACAPAN FAMILY**.

ATTAINDER. — BILL OF ATTAINDER.—"An attainder ('attinctura') is a degradation or public dishonouring, which draws after it corruption of blood. It is the consequence of any condemnation to death, and induces the dishonour of the heirs of the condemned person, which can only be removed by means of parliament. A bill of attainder, or of pains and penalties, inflicts the consequences of a penal sentence on any state criminal. . . . By the instrumentality of such bill the penalties of high treason are generally imposed. Penalties may, however, be imposed at pleasure, either in accordance with, or in contravention of, the common law. No other court of law can protect a person condemned in such manner. The first bill of the kind occurred under Edward IV., when the commons had to confirm the statute condemning Clarence to death. This convenient method of getting rid of disagreeable opponents was in high favour during the reign of Henry VIII. . . . What had been an instrument of kingly despotism, under Tudor sway, was converted, under the Stuarts, into a parliamentary engine against the crown. The points of indictment against Strafford were so weak that the lords were for acquitting him. Thereupon, Sir Arthur Haselrig introduced a bill of attainder in the commons. The staunch friends of freedom, such as Pym and Hampden, did not support this measure. A bill of attainder may refer simply to a concrete case, and contrive penalties for acts which are not specially punishable by statute, whereas an impeachment applies to some violation of recognized legal principles, and is a solemn indictment preferred by the commons to the house of lords."—E. Fischel, *The Eng. Constitution*, bk. 7, ch. 9.—"By the 33 & 34 Vict. c. 23, forfeiture and attainder for treason or felony have been abolished."—T. P. Taswell-Lang-

mead, *Eng. Const. Hist.*, ch. 10 (2d ed., p. 393), *foot-note*.

ATTIC SALT.—Thyme was a favorite condiment among the ancient Greeks, "which thrived nowhere else so well as in Attica. Even salt was seasoned with thyme. Attic salt, however, is famed rather in the figurative than in the literal sense, and did not form an article of trade."—G. F. Schömann, *Antiq. of Greece: The State*, pt. 3, ch. 3.

ATTIC TALENT. See **TALENT**.

ATTIC WAR, The. See **TEN YEARS' WAR**.

ATTICA.—"It forms a rocky peninsula, separated from the mainland by trackless mountains, and jutting so far out into the Eastern Sea that it lay out of the path of the tribes moving from north to south. Hence the migratory passages which agitated the whole of Hellas left Attica untouched, and for this reason Attic history is not divided into such marked epochs as that of Peloponnesus; it possesses a superior unity, and presents an uninterrupted development of conditions of life native in their origin to the land. . . . On the other hand Attica was perfectly adapted by nature for receiving immigrants from the sea. For the whole country, as its name indicates, consists of coast-land; and the coast abounds in harbours, and on account of the depth of water in the roads is everywhere accessible; while the best of its plains open towards the coast. . . . Into the centre of the entire plain advances from the direction of Hymettus a group of rocky heights, among them an entirely separate and mighty block which, with the exception of a narrow access from the west, offers on all sides vertically precipitous walls, surmounted by a broad level sufficiently roomy to afford space for the sanctuaries of the national gods and the habitations of the national rulers. It seems as if nature had designedly placed this rock in this position as the ruling castle and the centre of the national history. This is the Acropolis of Athens. . . . So far from being sufficiently luxuriant to allow even the idle to find easy means of sustenance, the Attic soil was stony, devoid of a sufficient supply of water, and for the most part only adapted to the cultivation of barley; everywhere . . . labour and a regulated industry were needed. But this labour was not unremunerative. Whatever orchard and garden fruits prospered were peculiarly delicate and agreeable to the taste; the mountain-herbs were nowhere more odorous than on Hymettus; and the sea abounded with fish. The mountains not only by the beauty of their form invest the whole scenery with a certain nobility, but in their depths lay an abundance of the most excellent building-stone and silver ore; in the lowlands was to be found the best kind of clay for purposes of manufacture. The materials existed for all arts and handicrafts; and finally Attica rejoiced in what the ancients were wise enough to recognize as a special favour of Heaven, a dry and transparent atmosphere. . . . The immigrants who domesticated themselves in Attica were . . . chiefly families of superior eminence, so that Attica gained not only in numbers of population, but also in materials of

culture of every description."—E. Curtius, *Hist. of Greece*, bk. 2, ch. 2.

AUDIENCIAS.—"For more than two centuries and a half the whole of South America, except Brazil, settled down under the colonial government of Spain, and during the greater part of that time this vast territory was under the rule of the Viceroy of Peru residing at Lima. The impossibility of conducting an efficient administration from such a centre . . . at once became apparent. Courts of justice called Audiencias were, therefore, established in the distant provinces, and their presidents, sometimes with the title of captains-general, had charge of the executive under the orders of the Viceroy. The Audiencia of Charcas (the modern Bolivia) was established in 1559. Chile was ruled by captains-general, and an Audiencia was established at Santiago in 1568. In New Grenada the president of the Audiencia, created in 1564, was also captain-general. The Audiencia of Quito, also with its president as captain-general, dated from 1542; and Venezuela was under a captain-general."—C. R. Markham, *Colonial Hist. of S. Am. AUGURS. — PONTIFICES. — FETIALES.—"There was . . . enough of priesthood and of priests in Rome. Those, however, who had business with a god resorted to the god, and not to the priest. Every suppliant and inquirer addressed himself directly to the divinity . . . ; no intervention of a priest was allowed to conceal or to obscure this original and simple relation. But it was no easy matter to hold converse with a god. The god had his own way of speaking, which was intelligible only to those acquainted with it; but one who did rightly understand it knew not only how to ascertain, but also how to manage, the will of the god, and even in case of need to overreach or to constrain him. It was natural, therefore, that the worshipper of the god should regularly consult such men of skill and listen to their advice; and thence arose the corporations or colleges of men specially skilled in religious lore, a thoroughly national Italian institution, which had a far more important influence on political development than the individual priests or priesthoods. These colleges have been often, but erroneously, confounded with the priesthoods. The priesthoods were charged with the worship of a specific divinity. . . . Under the Roman constitution and that of the Latin communities in general there were originally but two such colleges: that of the augurs and that of the pontifices. The six augurs were skilled in interpreting the language of the gods from the flight of birds; an art which was prosecuted with great earnestness and reduced to a quasi-scientific system. The five 'bridge builders' (pontifices) derived their name from their function, as sacred as it was politically important, of conducting the building and demolition of the bridge over the Tiber. They were the Roman engineers, who understood the mystery of measures and numbers; whence there devolved upon them also the duties of managing the calendar of the state, of proclaiming to the people the time of new and full moon and the days of festivals, and of seeing that every religious and every judicial act took place on the right day. . . . Thus they acquired (although not probably to the full extent till after the abolition of the monarchy) the general oversight of Roman worship and of whatever was connected with it. [The president of their college was called the Pontifex Maximus.] . . . They themselves described the sum of their knowledge as 'the science of things divine and human.' . . . By the side of these two oldest and most eminent corporations of men versed in spiritual lore may be to some extent ranked the college of the twenty state-heralds (fetiales, of uncertain derivation) destined as a living repository to preserve traditionally the remembrance of the treaties concluded with neighboring communities, to pronounce an authoritative opinion on alleged infractions of treatyrights, and in case of need to demand satisfaction and declare war."—T. Mommsen, *Hist. of Rome*, bk. 1, ch. 12.

AUGUSTA VEROMANDUORUM.—Modern St. Quentin. See **BELOGE**.

AUGUSTA VINDELICORUM.—"Augusta Vindellicorum is the modern Augsburg, founded, it may be supposed, about the year 740 [B. C. 14] after the conquest of Rætia by Drusus. . . . The Itineraries represent it as the centre of the roads from Verona, Sirmium, and Treviri."—C. Merivale, *Hist. of the Romans*, ch. 36, note.

AUGUSTODUNUM.—The Emperor Augustus changed the name of Bibracte in Gaul to Augustodunum, which time has corrupted, since to Autun.

AUGUSTONEMETUM. See **GERGOVIA OF THE ARVERNI**.

AUGUSTUS.—**AUGUSTA: The Title**.—"Octavius [see **ROME**: B. C. 31-14] had warily declined any of the recognized designations of sovereign rule. Antonius had abolished the dictatorship; his successor respected the acclamations with which the people had greeted this decree. The voices which had saluted Cæsar with the title of king were peremptorily commanded to be dumb. Yet Octavius was fully aware of the influence which attached to distinctive titles of honour. While he scrupulously renounced the names upon which the breath of human jealousy had blown, he conceived the subtler policy of creating another for himself, which borrowing its original splendour from his own character, should reflect upon him an untarnished lustre. . . . The epithet Augustus . . . had never been borne by any man before. . . . But the adjunct, though never given to a man, had been applied to things most noble, most venerable and most divine. The rites of the gods were called august, the temples were august; the word itself was derived from the holy auguries by which the divine will was revealed; it was connected with the favour and authority of Jove himself. . . . The illustrious title was bestowed upon the heir of the Cæsarian Empire in the middle of the month of January, 727 [B. C. 27], and thenceforth it is by the name of Augustus that he is recognized in Roman history."—C. Merivale, *Hist. of the Romans*, ch. 30.—"When Octavianus had firmly established his power and was now left without a rival, the Senate, being desirous of distinguishing him by some peculiar and emphatic title, decreed, in B. C. 27, that he should be styled Augustus, an epithet properly applicable to some object demanding respect and veneration beyond what is bestowed upon human things. . . . This being an honorary appellation . . . it would, as a matter of course, have been transmitted by inheritance to his immediate descendants. . . . Claudius, although he could not be regarded as a descendant of Octavianus, assumed on his accession the title of Augustus, and his example was followed by all succeeding rulers . . . who communicated the title of Augusta to their consorts."—W. AUSPICES, Taking the.—"The Romans, in the earlier ages of their history, never entered upon any important business whatsoever, whether public or private, without endeavouring, by means of divination, to ascertain the will of the gods in reference to the undertaking. . . . This operation was termed 'sumere auspicia'; and if the omens proved unfavourable the business was abandoned or deferred. . . . No meeting of the Comitia Curiata nor of the Comitia Centuriata could be held unless the auspices had been previously taken. . . . As far as public proceedings were concerned, no private individual, even among the patricians, had the right of taking auspices. This duty devolved upon the supreme magistrate alone. . . . In an army this power belonged exclusively to the commander-in-chief; and hence all achievements were said to be performed under his auspices, even although he were not present. . . . The objects observed in taking these auspices were birds, the class of animals from which the word is derived ('Auspicium ab ave spicienda'). Of these, some were believed to give indications by their flight . . . others by their notes or cries . . . while a third class consisted of chickens ('pulli') kept in cages. When it was desired to obtain an omen from these last, food was placed before them, and the manner in which they comported themselves was closely watched. . . . The manner of taking the auspices previous to the Comitia was as follows:—The magistrate who was to preside at the assembly arose immediately after midnight on the day for which it had been summoned, and called upon an augur to assist him. . . . With his aid a region of the sky and

a space of ground, within which the auspices were observed, were marked out by the divining staff ('lituus') of the augur. . . . This operation was performed with the greatest care. . . . In making the necessary observations, the president was guided entirely by the augur, who reported to him the result."—W. Ramsay, *Manual of Rom. Antig.*, ch. 4.

AUSTIN CANONS, OR CANONS OF ST. AUGUSTINE.—"About the middle of the 11th century an attempt had been made to redress the balance between the regular and secular clergy, and restore to the latter the influence and consideration in spiritual matters which they had, partly by their own fault, already to a great extent lost. Some earnest and thoughtful spirits, distressed at once by the abuse of monastic privileges and by the general decay of ecclesiastical order, sought to effect a reform by the establishment of a stricter and better organized discipline in those cathedral and other churches which were served by colleges of secular priests. . . . Towards the beginning of the twelfth century the attempts at canonical reform issued in the form of what was virtually a new religious order, that of the Augustinians, or Canons Regular of the order of S. Augustine. Like the monks and unlike the secular canons, from whom they were carefully distinguished, they had not only their table and dwelling but all things in common, and were bound by a vow to the observance of their rule, grounded upon a passage in one of the letters of that great father of the Latin Church from whom they took their name. Their scheme was a compromise between the old-fashioned system of canons and that of the monastic confraternities; but a compromise leaning strongly towards the monastic side. . . . The Austin canons, as they were commonly called, made their way across the channel in Henry's reign."—K. Norgate, *England under the Angevin Kings*, v. 1, ch. 1.

AUSTRALIA: A. D. 1601-1800.—Discovery and early exploration.—The founding of the penal colonies at Sydney and Norfolk Island.—"Australia has had no Columbus. It is even doubtful if the first navigators who reached her shores set out with any idea of discovering a great south land. At all events, it would seem, their achievements were so little esteemed by themselves and their countrymen that no means were taken to preserve their names in connexion with their discoveries. Holland long had the credit of bringing to light the existence of that island-continent, which until recent years was best known by her name. In 1861, however, Mr. Major, to whom we are indebted for more recent research upon the subject, produced evidence which appeared to demonstrate that the Portuguese had reached the shores of Australia in 1601, five years before the Dutch yacht *Duyphen*, or *Dove*,—the earliest vessel whose name has been handed down,—sighted, about March, 1606, what is believed to have been the coast near Cape York. Mr. Major,

in a learned paper read before the Society of Antiquaries in 1872, indicated the probability that the first discovery was made 'in or before the year 1531.' The dates of two of the six maps from which Mr. Major derives his information are 1531 and 1542. The latter clearly indicates Australia, which is called *Javela Grande*. New Zealand is also marked."—F. P. Labilliere, *Early Hist. of the Colony of Victoria*, ch. 1.—In 1606, De Quiros, a Spanish navigator, sailing from Peru, across the Pacific, reached a shore which stretched so far that he took it to be a continent. "He called the place 'Tierra Australis de Espiritu Santo,' that is 'Southern Land of the Holy Spirit.' It is now known that this was not really a continent, but merely one of the New Hebrides Islands, and more than a thousand miles away from the mainland. . . . In after years, the name he had invented was divided into two parts; the island he had really discovered being called *Espiritu Santo*, while the continent he thought he had discovered was called *Terra Australis*. This last name was shortened by another discoverer—Flinders—to the present term *Australia*." After the visit to the Australian coast of the small Dutch ship, the "*Dove*," it was touched, during the next twenty years, by a number of vessels of the same nationality. "In 1622 a Dutch ship, the '*Leeuwin*,' or '*Lioness*,' sailed along the southern coast, and its name was given to the southwest cape of Australia. . . . In 1628 General Carpenter sailed completely round the large Gulf to the north, which has taken its name from this circumstance. Thus, by degrees, all the northern and western, together with part of the southern shores, came to be roughly explored, and the Dutch even had some idea of colonizing this continent. . . . During the next fourteen years we hear no more of voyages to Australia; but in 1642 Antony Van Diemen, the Governor of the Dutch possessions in the East Indies, sent out his friend Abel Jansen Tasman, with two ships, to make discoveries in the South Seas." Tasman discovered the island which he called Van Diemen's Land, but which has since been named in his own honor—Tasmania. "This he did not know to be an island; he drew it on his maps as if it were a peninsula belonging to the mainland of Australia." In 1699, the famous buccaneer, William Dampier, was given the command of a vessel sent out to the southern seas, and he explored about 900 miles of the north-western coast of Australia; but the description which he gave of the country did not encourage the adventurous to seek fortune in it. "We hear of no further explorations in this part of the world until nearly a century after; and, even then, no one thought of sending out ships specially for the purpose. But in the year 1770 a series of important discoveries were indirectly brought about. The Royal Society of London, calculating that the planet Venus would cross the disc of the sun in 1769, persuaded the English Government to send out an expedition to the Pacific Ocean for the purpose of making observations on this event which would enable astronomers to calculate the distance of the earth from the sun. A small vessel, the '*Endeavour*,' was chosen; astronomers with their instruments embarked, and the whole placed under the charge of" the renowned sailor, Captain James Cook. The astronomical purposes of the expedition

were satisfactorily accomplished at Otaheite, and Captain Cook then proceeded to an exploration of the shores of New Zealand and Australia. Having entered a fine bay on the south-eastern coast of Australia, "he examined the country for a few miles inland, and two of his scientific friends—Sir Joseph Banks and Dr. Solander—made splendid collections of botanical specimens. From this circumstance the place was called Botany Bay, and its two head-lands received the names of Cape Banks and Cape Solander. It was here that Captain Cook . . . took possession of the country on behalf of His Britannic Majesty, giving it the name 'New South Wales,' on account of the resemblance of its coasts to the southern shores of Wales. Shortly after they had set sail from Botany Bay they observed a small opening in the land, but Cook did not stay to examine it, merely marking it on his chart as Port Jackson, in honour of his friend Sir George Jackson. . . . The reports brought home by Captain Cook completely changed the beliefs current in those days with regard to Australia. . . . It so happened that, shortly after Cook's return, the English nation had to deal with a great difficulty in regard to its criminal population. In 1776 the United States declared their independence, and the English then found they could no longer send their convicts over to Virginia, as they had formerly done. In a short time the goals of England were crowded with felons. It became necessary to select a new place of transportation; and, just as this difficulty arose, Captain Cook's voyages called attention to a land in every way suited for such a purpose, both by reason of its fertility and of its great distance. Viscount Sydney, therefore, determined to send out a party to Botany Bay, in order to found a convict settlement there; and in May, 1787, a fleet was ready to sail." After a voyage of eight months the fleet arrived at Botany Bay, in January, 1788. The waters of the Bay were found to be too shallow for a proper harbour, and Captain Phillip, the appointed Governor of the settlement, set out, with three boats, to search for something better. "As he passed along the coast he turned to examine the opening which Captain Cook had called Port Jackson, and soon found himself in a winding channel of water, with great cliffs frowning overhead. All at once a magnificent prospect opened on his eyes. A harbour, which is, perhaps, the most beautiful and perfect in the world, stretched before him far to the west, till it was lost on the distant horizon. It seemed a vast maze of winding waters, dotted here and there with lovely islets. . . . Captain Phillip selected, as the place most suitable to the settlement, a small inlet, which, in honour of the Minister of State, he called Sydney Cove. It was so deep as to allow vessels to approach within a yard or two of the shore." Great difficulties and sufferings attended the founding of the penal settlement, and many died of actual starvation as well as of disease; but in twelve years the population had risen to between 6,000 and 7,000 persons. Meantime a branch colony had been established on Norfolk Island. In 1792 Governor Phillip, broken in health, had resigned, and in 1795 he had been succeeded by Governor Hunter. "When Governor Hunter arrived, in 1795, he brought with him, on board his ship, the 'Reliance,' a young surgeon, George Bass,

and a midshipman called Matthew Flinders. They were young men of the most admirable character. . . . Within a month after their arrival they purchased a small boat about eight feet in length, which they christened the 'Tom Thumb.' Its crew consisted of themselves and a boy to assist." In this small craft they began a survey of the coast, usefully charting many miles of it. Soon afterwards, George Bass, in an open whale-boat, pursued his explorations southwards, to the region now called Victoria, and through the straits which bear his name, thus discovering the fact that Van Diemen's Land, or Tasmania, is an island, not a peninsula. In 1798, Bass and Flinders, again associated and furnished with a small sloop, sailed round and surveyed the entire coast of Van Diemen's Land. Bass now went to South America and there disappeared. Flinders was commissioned by the British Government in 1800 to make an extensive survey of the Australian coasts, and did so. Returning to England with his maps, he was taken prisoner on the way by the French and held in captivity for six years, while the fruits of his labor were stolen. He died a few years after being released.—A. and G. Sutherland, *Hist. of Australia*, ch. 1-3.

Also in: G. W. Rusden, *Hist. of Australia*, ch. 1-3 (v. 1).

A. D. 1800-1840.—Beginning of the Prosperity of New South Wales.—Introduction of sheep-farming.—The founding of Victoria and South Australia.—"For twenty years and more no one at home gave a thought to New South Wales, or 'Botany Bay,' as it was still erroneously called, unless in vague horror and compassion for the poor creatures who lived there in exile and starvation. The only civilizing element in the place was the presence of a devoted clergyman named Johnson, who had voluntarily accompanied the first batch of convicts. . . . Colonel Lachlan Macquarie entered on the office of governor in 1810, and ruled the settlement for twelve years. His administration was the first turning point in its history. . . . Macquarie saw that the best and cheapest way of ruling the convicts was to make them freemen as soon as possible. Before his time, the governors had looked on the convicts as slaves, to be worked for the profit of the government and of the free-settlers. Macquarie did all he could to elevate the class of emancipists, and to encourage the convicts to persevere in sober industry in the hope of one day acquiring a respectable position. He began to discontinue the government farms, and to employ the convicts in road-making, so as to extend the colony in all directions. When he came to Sydney, the country more than a day's ride from the town was quite unknown. The growth of the settlement was stopped on the west by a range called the Blue Mountains, which before his time no one had succeeded in crossing. But in 1813, there came a drought upon the colony: the cattle, on which everything depended, were unable to find food. Macquarie surmised that there must be plenty of pasture on the plains above the Blue Mountains; he sent an exploring party, telling them that a pass must be discovered. In a few months, not only was this task accomplished, and the vast and fertile pastures of Bathurst reached, but a road 130 miles long was made, connecting them with Sydney. The Lachlan and Macquarie rivers were

traced out to the west of the Blue Mountains. Besides this, coal was found at the mouth of the Hunter river, and the settlement at Newcastle formed. . . . When it became known that the penal settlement was gradually becoming a free colony, and that Sydney and its population were rapidly changing their character, English and Scotch people soon bethought them of emigrating to the new country. Macquarie returned home in 1822, leaving New South Wales four times as populous, and twenty times as large as when he went out, and many years in advance of what it might have been under a less able and energetic governor. The discovery of the fine pastures beyond the Blue Mountains settled the destiny of the colony. The settlers came up thither with their flocks long before Macquarie's road was finished; and it turned out that the downs of Australia were the best sheep-walks in the world. The sheep thrives better there, and produces finer and more abundant wool, than anywhere else. John Macarthur, a lieutenant in the New South Wales corps, had spent several years in studying the effect of the Australian climate upon the sheep; and he rightly surmised that the staple of the colony would be its fine wool. In 1803, he went to England and procured some pure Spanish merino sheep from the flock of George III. . . . The Privy Council listened to his wool projects, and he received a large grant of land. Macarthur had found out the true way to Australian prosperity. When the great upland pastures were discovered, the merino breed was well established in the colony; and the sheep-owners, without waiting for grants, spread with their flocks over immense tracts of country. This was the beginning of what is called squatting. The squatters afterwards paid a quit-rent to the government and thus got their runs, as they called the great districts where they pastured their flocks, to a certain extent secured to them. . . . Hundreds upon hundreds of square miles of the great Australian downs were now explored and stocked with sheep for the English wool-market. . . . It was in the time of Macquarie's successor, Sir Thomas Brisbane, that the prospects of New South Wales became generally known in England. Free emigrants, each bringing more or less capital with him, now poured in; and the demand for labour became enormous. At first the penal settlements were renewed as depots for the supply of labour, and it was even proposed that the convicts should be sold by auction on their arrival; but in the end the influx of free labourers entirely altered the question. In Brisbane's time, and that of his successor, Sir Ralph Darling, wages fell and work became scarce in England; and English working men now turned their attention to Australia. Hitherto the people had been either convicts or free settlers of more or less wealth, and between these classes there was great bitterness of feeling, each, naturally enough, thinking that the colony existed for their own exclusive benefit. The free labourers who now poured in greatly contributed in course of time to fusing the population into one. In Brisbane's time, trial by jury and a free press were introduced. The finest pastures in Australia, the Darling Downs near Moreton Bay, were discovered and settled [1825]. The rivers which pour into Moreton Bay were explored: one of them was named the Brisbane, and a few miles from its mouth the town of the same name

was founded. Brisbane is now the capital of the colony of Queensland; and other explorations in his time led to the foundation of a second independent colony. The Macquarie was traced beyond the marshes, in which it was supposed to lose itself, and named the Darling; and the Murray river was discovered [1829]. The tracing out of the Murray river by the adventurous traveller Sturt, led to a colony on the site which he named South Australia. In Darling's time, the Swan River Colony, now called Western Australia, was commenced. Darling . . . was the first to sell the land at a small fixed price, on the system adopted in America. . . . Darling returned to England in 1831; and the six-years administration of his successor, Sir Richard Bourke, marks a fresh turning-point in Australian history. In his time the colony threw off two great offshoots. Port Phillip, on which now stands the great city of Melbourne, had been discovered in 1802, and in the next year the government sent hither a convict colony. This did not prosper, and this fine site was neglected for thirty years. When the sudden rise of New South Wales began, the squatters began to settle to the west and north of Port Phillip; and the government at once sent an exploring party, who reported most favourably of the country around. In 1836, Governor Bourke founded a settlement in this new land, which had been called, from its rich promise, Australia Felix: and under his directions the site of a capital was laid out, to be called Melbourne, in honour of the English Prime Minister. This was in 1837, so that the beginning of the colony corresponds nearly with that of Queen Victoria's reign; a circumstance which afterwards led to its being named Victoria. Further west still, a second new colony arose about this time on the site discovered by Sturt in 1829. This was called South Australia, and the first governor arrived there at the end of the year 1836. The intended capital was named Adelaide, in honour of the Queen of William IV. Both the new colonies were commenced on a new system, called from its inventor the Wakefield system, but the founders of South Australia were able to carry it out most effectually, because they were quite independent of the experience and the prejudices of the Sydney government. Mr. Wakefield was an ingenious man and a clever writer. . . . His notion was that the new colonies ought to be made 'fairly to represent English society.' His plan was to arrest the strong democratic tendencies of the new community, and to reproduce in Australia the strong distinction of classes which was found in England. He wanted the land sold as dear as possible, so that labourers might not become land-owners: and the produce of the land was to be applied in tempting labourers to emigrate with the prospect of better wages than they got at home. A Company was easily formed to carry out these ideas in South Australia. . . . Like the settlement of Carolina as framed by Locke and Somers, it was really a plan for getting the advantages of the colony into the hands of the non-labouring classes: and by the natural laws of political economy, it failed everywhere. Adelaide became the scene of an Australian 'bubble.' The land-jobbers and money-lenders made fortunes: but the people who emigrated, mostly belonging to the middle and upper

classes, found the scheme to be a delusion. Land rapidly rose in value, and as rapidly sank; and lots for which the emigrants had paid high prices became almost worthless. The labourers emigrated elsewhere, and so did those of the capitalists who had anything left. . . . The depression of South Australia, however, was but temporary. It contains the best corn land in the whole island; and hence it of course soon became the chief source of the food supply of the neighbouring colonies, besides exporting large quantities of corn to England. It contains rich mines of copper, and produces large quantities of wool."—E. J. Payne, *Hist. of European Colonies*, ch. 12. See SOUTH WALES, VICTORIA, and SOUTH AUSTRALIA.

ALSO IN: G. W. Rusden, *Hist. of Australia*.

A.D. 1839-1855.—Progress of the Port Phillip District.—Its Separation from New South Wales and erection into the colony of Victoria.—Discovery of Gold.—Constitutional organization of the colony.—"In 1839 the population of Port Phillip amounted to nearly 6,000, and was being rapidly augmented from without. The sheep in the district exceeded half a million, and of cattle and horses the numbers were in proportion equally large. The place was daily growing in importance. The Home Government therefore decided to send an officer, with the title of Superintendent, to take charge of the district, but to act under the Governor of New South Wales. Charles Joseph La Trobe, Esq., was appointed to this office. . . . He arrived at Melbourne on the 30th September, 1839. Soon after this all classes of the new community appear to have become affected by a mania for speculation. . . . As is always the case when speculation takes the place of steady industry, the necessities of life became fabulously dear. Of money there was but little, in consideration of the amount of business done, and large transactions were effected by means of paper and credit. From highest to lowest, all lived extravagantly. . . . Such a state of things could not last forever. In 1842, by which time the population had increased to 24,000, the crash came. . . . From this depression the colony slowly recovered, and a sounder business system took the place of the speculative one. . . . All this time, however, the colony was a dependency of New South Wales, and a strong feeling had gained ground that it suffered in consequence. . . . A cry was raised for separation. The demand was, as a matter of course, resisted by New South Wales, but as the agitation was carried on with increased activity, it was at last yielded to by the Home authorities. The vessel bearing the intelligence arrived on the 11th November, 1850. The news soon spread, and great was the satisfaction of the colonists. Rejoicings were kept up in Melbourne for five consecutive days. . . . Before, however, the separation could be legally accomplished, it was necessary that an Act should be passed in New South Wales to settle details. . . . The requisite forms were at length given effect to, and, on the 1st July, 1851, a day which has ever since been scrupulously observed as a public holiday, it was proclaimed that the Port Phillip district of New South Wales had been erected into a separate colony to be called Victoria, after the name of Her Most Gracious Majesty. At the same time the Superintendent, Mr. C. J. La Trobe, was raised to the rank of Lieutenant-

Governor. At the commencement of the year of separation the population of Port Phillip numbered 76,000, the sheep 6,000,000, the cattle 380,000. . . . In a little more than a month after the establishment of Victoria as an independent colony, it became generally known that rich deposits of gold existed within its borders. . . . The discovery of gold . . . in New South Wales, by Hargreaves, in February, 1851, caused numbers to emigrate to that colony. This being considered detrimental to the interests of Victoria, a public meeting was held in Melbourne on the 9th of June, at which a 'gold-discovery committee' was appointed, which was authorized to offer rewards to any that should discover gold in remunerative quantities within the colony. The colonists were already on the alert. At the time this meeting was held, several parties were out searching for, and some had already found gold. The precious metal was first discovered at Clunes, then in the Yarra ranges at Anderson's Creek, soon after at Buninyong and Ballarat, shortly afterwards at Mount Alexander, and eventually at Bendigo. The deposits were found to be richer and to extend over a wider area than any which had been discovered in New South Wales. Their fame soon spread to the adjacent colonies, and thousands hastened to the spot. . . . When the news reached home, crowds of emigrants from the United Kingdom hurried to our shores. Inhabitants of other European countries quickly joined in the rush. Americans from the Atlantic States were not long in following. Stalwart Californians left their own gold-yielding rocks and placers to try their fortunes at the Southern Eldorado. Last of all, swarms of Chinese arrived, eager to unite in the general scramble for wealth. . . . The important position which the Australian colonies had obtained in consequence of the discovery of gold, and the influx of population consequent thereon, was the occasion of the Imperial Government determining in the latter end of 1852 that each colony should be invited to frame such a Constitution for its government as its representatives might deem best suited to its own peculiar circumstances. The Constitution framed in Victoria, and afterwards approved by the British Parliament, was avowedly based upon that of the United Kingdom. It provided for the establishment of two Houses of Legislature, with power to make laws, subject to the assent of the Crown as represented generally by the Governor of the colony; the Legislative Council, or Upper House, to consist of 30, and the Legislative Assembly, or Lower House, to consist of 60 members. Members of both Houses to be elective and to possess property qualifications. Electors of both Houses to possess either property or professional qualifications [the property qualification of members and electors of the Lower House has since been abolished]. . . . The Upper House not to be dissolved, but five members to retire every two years, and to be eligible for re-election. The Lower House to be dissolved every five years [since reduced to three], or oftener, at the discretion of the Governor. Certain officers of the Government, four at least of whom should have seats in Parliament, to be deemed 'Responsible Ministers.' . . . This Constitution was proclaimed in Victoria on the 23d November, 1855."—H. H. Hayter, *Notes on the Colony of Victoria*, ch. 1.

A. D. 1859.—Separation of the Moreton Bay District from New South Wales.—Its erection into the colony of Queensland.—“Until December, 1859, the north-west portion of the Fifth Continent was known as the Moreton Bay district, and belonged to the colony of New South Wales; but at that date it had grown so large that it was erected into a separate and independent colony, under the name of Queensland. It lies between lat. 10° 43' S. and 29° S., and long. 138° and 153° E., bounded on the north by Torres Straits; on the north-east by the Coral Sea; on the east by the South Pacific; on the south by New South Wales and South Australia; on the west by South Australia and the Northern Territory; and on the north-west by the Gulf of Carpentaria. It covers an area . . . twenty times as large as Ireland, twenty-three times as large as Scotland, and eleven times the extent of England. . . . Numerous good harbours are found, many of which form the outlets of navigable rivers. The principal of these [is] Moreton Bay, at the head of which stands Brisbane, the capital of the colony. . . . The mineral wealth of Queensland is very great, and every year sees it more fully developed. . . . Until the year 1867, when the Gympie field was discovered, gold mining as an industry was hardly known.”—C. H. Eden, *The Fifth Continent*, ch. 10.

A. D. 1885-1892.—Proposed Federation of the Colonies.—“It has been a common saying in Australia that our fellow countrymen in that part of the world did not recognise the term ‘Australian;’ each recognised only his own colony and the empire. But the advocates of combination for certain common purposes achieved a great step forward in the formation of a ‘Federal Council’ in 1885. It was to be only a ‘Council,’ its decisions having no force over any colony unless accepted afterwards by the colonial Legislature. Victoria, Queensland, Tasmania, and West Australia joined, New South Wales, South Australia, and New Zealand standing out, and, so constituted, it met twice. The results of the deliberations were not unsatisfactory, and the opinion that the move was in the right direction rapidly grew. In February of 1890 a Federation Conference, not private but representative of the different Governments, was called at Melbourne. It adopted an address to the Queen declaring the opinion of the conference to be that the best interests of the Australian colonies require the early formation of a union under the Crown into one Government, both legislative and executive. Events proceed quickly in Colonial History. In the course of 1890 the hesitation of New South Wales was finally overcome; powerful factors being the weakening of the Free Trade position at the election of 1890, the report of General Edwards on the Defences, and the difficulties about Chinese immigration. A Convention accordingly assembled at Sydney in March, 1891, which agreed upon a Constitution to be recommended to the several Colonies.”—A. Caldecott, *English Colonization and Empire*, ch. 7, sect. 2.—“On Monday, March 2nd, 1891, the National Australasian Convention met at the Parliament House, Sydney, New South Wales, and was attended by seven representatives from each Colony, except New Zealand, which only sent

three. Sir Henry Parkes (New South Wales) was elected President of the Convention, and Sir Samuel Griffith (Queensland), Vice-President. A series of resolutions, moved by Sir Henry Parkes, occupied the attention of the Convention for several days. These resolutions set forth the principles upon which the Federal Government should be established, which were to the effect that the powers and privileges of existing Colonies should be kept intact, except in cases where surrender would be necessary in order to form a Federal Government; that intercolonial trade and intercourse should be free; that power to impose Customs duties should rest with the Federal Government and Parliament; and that the naval and military defence of Australia should be entrusted to the Federal Forces under one command. The resolutions then went on to approve of a Federal Constitution which should establish a Federal Parliament to consist of a Senate and a House of Representatives; that a Judiciary, to consist of a Federal Supreme Court, to be a High Court of Appeal for Australia, should be established; and that a Federal Executive, consisting of a Governor-General, with responsible advisers, should be constituted. These resolutions were discussed at great length, and eventually were adopted. The resolutions were then referred to three Committees chosen from the delegates, one to consider Constitutional Machinery and the distribution of powers and functions; one to deal with matters relating to Finance, Taxation, and Trade Regulations; and the other to consider the question of the establishment of a Federal Judiciary. A draft Bill, to constitute the ‘Commonwealth of Australia,’ was brought up by the first mentioned of these Committees, and after full consideration was adopted by the Convention, and it was agreed that the Bill should be presented to each of the Australian Parliaments for approval and adoption. On Thursday, April 9th, the Convention closed its proceedings. The Bill to provide for the Federation of the Australasian colonies entitled ‘A Bill to constitute a Commonwealth of Australia,’ which was drafted by the National Australasian Convention, has been introduced into the Parliaments of most of the colonies of the group, and is still (October, 1892), under consideration. In Victoria it has passed the Lower House with some amendments.”—*Statesman's Year-book*, 1893, p. 308.

A. D. 1890.—New South Wales and Victoria.—“New South Wales bears to Victoria a certain statistical resemblance. The two colonies have [1890] about the same population, and, roughly speaking, about the same revenues, expenditure, debt and trade. In each, a great capital collects in one neighbourhood more than a third of the total population. . . . But . . . considerable differences lie behind and are likely to develop in the future. New South Wales, in the opinion of her enemies, is less enterprising than Victoria, and has less of the go-ahead spirit which distinguishes the Melbourne people. On the other hand she possesses a larger territory, abundant supplies of coal, and will have probably, in consequence, a greater future. Although New South Wales is three and a half times as large as Victoria, and has the area of the German Empire and Italy combined, she is of course much smaller than the three other but as yet less important colonies of the Australian continent [see

QUEENSLAND, SOUTH AUSTRALIA AND WESTERN AUSTRALIA]. As the country was in a large degree settled by assisted emigrants, of whom something like half altogether have been Irish, while the English section was largely composed of Chartists, . . . the legislation of New South Wales has naturally shown signs of its origin. Manhood suffrage was carried in 1858; the abolition of primogeniture in 1862; safe and easy transfer of land through the machinery of the Torrens Act in the same year; and also the abolition of state aid to religion. A public system of education was introduced, with other measures of democratic legislation. . . . Public education, which in Victoria is free, is still paid for by fees in New South Wales, though children going to or returning from school are allowed to travel free by railway. In general it may be said that New South Wales legislation in recent times has not been so bold as the legislation of Victoria. . . . The land of New South Wales has to a large extent come into the hands of wealthy persons who are becoming a territorial aristocracy. This has been the effect firstly of grants and of squatting legislation, then of the perversion of the Act of 1861 [for 'Free Selection before Survey'] to the use of those against whom it had been aimed, and finally of natural causes—soil, climate and the lack of water. . . . The traces of the convict element in New South Wales have become very slight in the national character. The prevailing cheerfulness, running into fickleness and frivolity, with a great deal more vivacity than exists in England, does not suggest in the least the intermixture of convict blood. It is a natural creation of the climate, and of the full and varied life led by colonists in a young country. . . . A population of an excellent type has swallowed up not only the convict element, but also the unstable and thriftless element shipped by friends in Britain to Sydney or to Melbourne. The ne'er-do-weels were either somewhat above the average in brains, as was often the case with those who recovered themselves and started life afresh, or people who drank themselves to death and disappeared and left no descendants. The convicts were also of various classes; some of them were men in whom crime was the outcome of restless energy, as, for instance, in many of those transported for treason and for manslaughter; while some were people of average morality ruined through companions, wives, or sudden temptation, and some persons of an essentially depraved and criminal life. The better classes of convicts, in a new country, away from their old companions and old temptations, turned over a new leaf, and their abilities and their strong vitality, which in some cases had wrought their ruin in the old world, found healthful scope in subduing to man a new one. Crime in their cases was an accident, and would not be transmitted to the children they left behind them. On the other hand, the genuine criminals, and also the drunken ne'er-do-weels, left no children. Drink and vice among the 'assigned servants' class of convicts, and an absence of all facilities for marriage, worked them off the face of the earth, and those who had not been killed before the gold discovery generally drank themselves to death upon the diggings."—Sir C. W. Dilke, *Problems of Greater Britain*, pt. 2, ch. 2.

AUSTRASIA AND NEUSTRIA, OR

NEUSTRASIA.—"It is conjectured by Luden, with great probability, that the Ripuarians were originally called the 'Eastern' people to distinguish them from the Salian Franks who lived to the West. But when the old home of the conquerors on the right bank of the Rhine was united with their new settlements in Gaul, the latter, as it would seem, were called Neustria or Neustrasia (New Lands); while the term Austrasia came to denote the original seats of the Franks, on what we now call the German bank of the Rhine. The most important difference between them (a difference so great as to lead to their permanent separation into the kingdoms of France and Germany by the treaty of Verdun) was this: that in Neustria the Frankish element was quickly absorbed by the mass of Gallo-Romanism by which it was surrounded; while in Austrasia, which included the ancient seats of the Frankish conquerors, the German element was wholly predominant. The import of the word Austrasia (Austria, Austrifracia) is very fluctuating. In its widest sense it was used to denote all the countries incorporated into the Frankish Empire, or even held in subjection to it, in which the German language and population prevailed; in this acceptation it included therefore the territory of the Alemanni, Bavarians, Thuringians, and even that of the Saxons and Frises. In its more common and proper sense it meant that part of the territory of the Franks themselves which was not included in Neustria. It was subdivided into Upper Austrasia on the Moselle, and Lower Austrasia on the Rhine and Meuse. Neustria (or, in the fulness of the monkish Latinity, Neustrasia) was bounded on the north by the ocean, on the south by the Loire, and on the southwest [southeast?] towards Burgundy by a line which, beginning below Gien on the Loire, ran through the rivers Loing and Yonne, not far from their sources, and passing north of Auxerre and south of Troyes, joined the river Aube above Arcis."—W. C. Perry, *The Franks*, ch. 3.—"The northeastern part of Gaul, along the Rhine, together with a slice of ancient Germany, was already distinguished, as we have seen, by the name of the Eastern Kingdom, or Oster-rike, Latinized into Austrasia. It embraced the region first occupied by the Ripuarian Franks, and where they still lived the most compactly and in the greatest number. . . . This was, in the estimation of the Franks, the kingdom by eminence, while the rest of the north of Gaul was simply not it—'ne-oster-rike,' or Neustria. A line drawn from the mouth of the Scheldt to Cambrai, and thence across the Marne at Chateau-Thierry to the Aube of Bar-sur-Aube, would have separated the one from the other, Neustria comprising all the northwest of Gaul, between the Loire and the ocean, with the exception of Brittany. This had been the first possession of the Salian Franks in Gaul. . . . To such an extent had they been absorbed and influenced by the Roman elements of the population, that the Austrasians scarcely considered them Franks, while they, in their turn, regarded the Austrasians as the merest untutored barbarians."—P. Godwin, *Hist. of France: Ancient Gaul*, bk. 3, ch. 13, with note.

AUSTRIA.

The Name.—"The name of Austria, Oesterreich—Ostrich as our forefathers wrote it—is, naturally enough, a common name for the eastern part of any kingdom. The Frankish kingdom of the Merwings had its Austria; the Italian kingdom of the Lombards had its Austria also. We are half inclined to wonder that the name was never given in our own island either to Essex or to East-Anglia. But, while the other Austrias have passed away, the Oesterreich, the Austria, the Eastern mark, of the German kingdom, its defence against the Magyar invader, has lived on to our own times. It has not only lived on, but it has become one of the chief European powers. And it has become so by a process to which it would be hard to find a parallel."—E. A. Freeman, *The Historical Geography of Europe*, v. 1, ch. 8, p. 305.

The birthplace.—"On the disputed frontier, in the zone of perpetual conflict, were formed and developed the two states which, in turn, were to dominate over Germany, namely, Austria and Prussia. Both were born in the midst of the enemy. The cradle of Austria was the Eastern march, established by Charlemagne on the Danube, beyond Bavaria, at the very gate through which have passed so many invaders from the Orient. . . . The cradle of Prussia was the march of Brandenburg, between the Elbe and the Oder, in the region of the exterminated Slavs."—E. Lavisse, *General View of the Political History of Europe*, ch. 3, sect. 13.

The Singularity of Austrian history.—"A power which is not a national power."—It is by no means an easy task to tell the story of the various lands which have at different times come under the dominion of Austrian princes, the story of each land by itself, and the story of them all in relation to the common power. A continuous narrative is impossible. . . . Much mischief has been done by one small fashion of modern speech. It has within my memory become usual to personify nations and powers on the smallest occasions in a way which was formerly done only in language more or less solemn, rhetorical or poetical. We now talk every moment of England, France, Germany, Russia, Italy, as if they were persons. And as long as it is only England, France, Germany, Russia, or Italy of which we talk in this way, no practical harm is done; the thing is a mere question of style. For those are all national powers. . . . But when we go on to talk in this way of 'Austria,' of 'Turkey,' direct harm is done; thought is confused, and facts are misrepresented. . . . I have seen the words 'Austrian national honour;' I have come across people who believed that 'Austria' was one land inhabited by 'Austrians,' and that 'Austrians' spoke the 'Austrian' language. All such phrases are misapplied. It is to be presumed that in all of them 'Austria' means something more than the true Austria, the archduchy; what is commonly meant by them is the whole dominions of the sovereign of Austria. People fancy that the inhabitants of those dominions have a common being, a common interest, like that of the people of England, France, or Italy. . . . There is no Austrian language, no Austrian nation; therefore there can be no such thing as 'Austrian national honour.' Nor can there be an 'Austrian policy' in

the same sense in which there is an English or a French policy, that is, a policy in which the English or French government carries out the will of the English or French nation. . . . Such phrases as 'Austrian interests,' 'Austrian policy,' and the like, do not mean the interests or the policy of any land or nation at all. They simply mean the interests and policy of a particular ruling family, which may often be the same as the interests and wishes of particular parts of their dominions, but which can never represent any common interest or common wish on the part of the whole. . . . We must ever remember that the dominions of the House of Austria are simply a collection of kingdoms, duchies, etc., brought together by various accidental causes, but which have nothing really in common, no common speech, no common feeling, no common interest. In one case only, that of the Magyars in Hungary, does the House of Austria rule over a whole nation; the other kingdoms, duchies, etc., are only parts of nations, having no tie to one another, but having the closest ties to other parts of their several nations which lie close to them, but which are under other governments. The only bond among them all is that a series of marriages, wars, treaties, and so forth, have given them a common sovereign. The same person is king of Hungary, Archduke of Austria, Count of Tyrol, Lord of Trieste, and a hundred other things. That is all. . . . The growth and the abiding dominion of the House of Austria is one of the most remarkable phenomena in European history. Powers of the same kind have arisen twice before; but in both cases they were very short-lived, while the power of the House of Austria has lasted for several centuries. The power of the House of Anjou in the twelfth century, the power of the House of Burgundy in the fifteenth century, were powers of exactly the same kind. They too were collections of scraps, with no natural connexion, brought together by the accidents of warfare, marriage, or diplomacy. Now why is it that both these powers broke in pieces almost at once, after the reigns of two princes in each case, while the power of the House of Austria has lasted so long? Two causes suggest themselves. One is the long connexion between the House of Austria and the Roman Empire and kingdom of Germany. So many Austrian princes were elected Emperors as to make the Austrian House seem something great and imperial in itself. I believe that this cause has done a good deal towards the result; but I believe that another cause has done yet more. This is that, though the Austrian power is not a national power, there is, as has been already noticed, a nation within it. While it contains only scraps of other nations, it contains the whole of the Magyar nation. It thus gets something of the strength of a national power. . . . The kingdom of Hungary is an ancient kingdom, with known boundaries which have changed singularly little for several centuries; and its connexion with the archduchy of Austria and the kingdom of Bohemia is now of long standing. Anything beyond this is modern and shifting. The so-called 'empire of Austria' dates only from the year 1804. This is one of the simplest matters in the world, but one which is constantly forgotten. . . . A smaller point on which cor-

fusion also prevails is this. All the members of the House of Austria are commonly spoken of as archdukes and archduchesses. I feel sure that many people, if asked the meaning of the word archduke, would say that it was the title of the children of the 'Emperor of Austria,' as grand-duke is used in Russia, and prince in most countries. In truth, archduke is the title of the sovereign of Austria. He has not given it up; for he calls himself Archduke of Austria still, though he calls himself 'Emperor of Austria' as well. But by German custom, the children of a duke or count are all called dukes and counts for ever and ever. In this way the Prince of Wales is called 'Duke of Saxony,' and in the same way all the children of an Archduke of Austria are archdukes and archduchesses. Formally and historically [then, the taking of an hereditary imperial title by the Archduke of Austria in 1804, and the keeping of it after the

growth, ages in which the idea of right, as embodied in law, was the leading idea of statesmen, and the idea of rights justified or justifiable by the letter of law, was a profound influence with politicians. . . . The house of Austria . . . lays thus the foundation of that empire which is to be one of the great forces of the next age; not by fraud, not by violence, but here by a politic marriage, here by a well advocated inheritance, here by a claim on an imperial fief forfeited or escheated: honestly where the letter of the law is in her favour, by chicanery it may be here and there, but that a chicanery that wears a specious garb of right. The imperial idea was but a small influence compared with the superstructure of right, inheritance, and suzerainty, that legal instincts and a general acquiescence in legal forms had raised upon it."—W. Stubbs, *Seventeen Lectures on the Study of Medieval and Modern History*, pp. 209-215.

prince who took it had ceased in 1806 to be King of Germany and Roman Emperor-elect, was a sheer and shameless imposture. But it is an imposture which has thoroughly well served its ends."—E. A. Freeman, *Preface to Leger's History of Austro-Hungary*.—"Medieval History is a history of rights and wrongs; modern History as contrasted with medieval divides itself into two portions; the first a history of powers, forces, and dynasties; the second, a history in which ideas take the place of both rights and forces. . . . Austria may be regarded as representing the more ancient form of right. . . . The middle ages proper, the centuries from the year 1000 to the year 1500, from the Emperor Henry II. to the Emperor Maximilian, were ages of legal

The Races.—"The ethnical elements of the population are as follows (1890 for Austria and 1880 for Hungary) on the basis of language:—Austria (1890): German 8,461,580; Bohemian, Moravian and Slovak 5,472,871; Polish 3,719,232; Ruthenian 3,105,221; Slovene 1,176,672; Serbian and Croatian 644,926; Italian and Latin 675,305; Roumanian 209,110; Magyar 8,139. Hungary (1880): German 1,972,115; Bohemian, Moravian and Slovak 1,892,806; Ruthenian 360,051; Slovene 86,401; Serbian and Croatian 2,359,708; Roumanian 2,423,387; Magyar 6,478,711; Gipsies 82,256; Others 83,940."—*Statesman's Year Book*, 1893; ed. by J. S. Keltie.

Babenbergs.—Changing relations to Bavaria.—End of the Babenberg Dynasty.—“Austria, as is well known, is but the Latin form of the German Oesterreich, the kingdom of the east [see above: AUSTRIA]. This celebrated historical name appears for the first time in 996, in a document signed by the emperor Otto III. (‘in regione vulgari nomine Oesterrichi’). The land to which it is there applied was created a march after the destruction of the Avar empire [805], and was governed like all the other German marches. Politically it was divided into two margraviates; that of Friuli, including Friuli properly so called, Lower Pannonia to the south of the Drave, Carinthia, Istria, and the interior of Dalmatia—the sea-coast having been ceded to the Eastern emperor;—the eastern margraviate comprising Lower Pannonia to the north of the Drave, Upper Pannonia, and the Ostmark properly so called. The Ostmark included the Traungau to the east of the Enns, which was completely German, and the Grunzvittigau. . . . The early history of these countries lacks the unity of interest which the fate of a dynasty or a nation gives to those of the Magyar and the Chekh. They form but a portion of the German kingdom, and have no strongly marked life of their own. The march, with its varying frontier, had not even a geographical unity. In 876, it was enlarged by the addition of Bavaria; in 890, it lost Pannonia, which was given to Bracislaw, the Croat prince, in return for his help against the Magyars, and in 937, it was destroyed and absorbed by the Magyars, who extended their frontier to the river Enns. After the battle of Lechfeld or Augsburg (955), Germany and Italy being no longer exposed to Hungarian invasions, the march was re-constituted and granted to the margrave Burkhard, the brother-in-law of Henry of Bavaria. Leopold of Babenberg succeeded him (973), and with him begins the dynasty of Babenberg, which ruled the country during the time of the Premyslides [in Bohemia] and the house of Arpad [in Hungary]. The Babenbergs derived their name from the castle of Babenberg, built by Henry, margrave of Nordgau, in honor of his wife, Baba, sister of Henry the Fowler. It reappears in the name of the town of Bamberg, which now forms part of the kingdom of Bavaria. . . . Though not of right an hereditary office, the margraviate soon became so, and remained in the family of the Babenbergs; the march was so important a part of the empire that no doubt the emperor was glad to make the defence of this exposed district the especial interest of one family. . . . The marriages of the Babenbergs were fortunate; in 1138 the brother of Leopold [Fourth of that name in the Margraviate] Conrad of Hohenstaufen, Duke of Franconia, was made emperor. It was now that the struggle began between the house of Hohenstaufen and the great house of Welf [or Guelph: See GUELFS AND GIBELINES] whose representative was Henry the Proud, Duke of Saxony and Bavaria. Henry was defeated in the unequal strife, and was placed under the ban of the Empire, while the duchy of Saxony was awarded to Albert the Bear of Brandenburg, and the duchy of Bavaria fell to the share of Leopold IV. (1138). Henry the Proud died in the following year, leaving behind him a son under age, who was known later on as Henry the Lion. His uncle Welf would not submit to the forfeiture by his house of their old dominions, and marched

against Leopold to reconquer Bavaria, but he was defeated by Conrad at the battle of Weinsberg (1140). Leopold died shortly after this victory, and was succeeded both in the duchy of Bavaria and in the margraviate of Austria by his brother, Henry II.” Henry II. endeavored to strengthen himself in Bavaria by marrying the widow of Henry the Proud, and by extorting from her son, Henry the Lion, a renunciation of the latter’s rights. But Henry the Lion afterwards repudiated his renunciation, and in 1156 the German diet decided that Bavaria should be restored to him. Henry of Austria was wisely persuaded to yield to the decision, and Bavaria was given up. “He lost nothing by this unwilling act of disinterestedness, for he secured from the emperor considerable compensation. From this time forward, Austria, which had been largely increased by the addition of the greater part of the lands lying between the Enns and the Inn, was removed from its almost nominal subjection to Bavaria and became a separate duchy [Henry II. being the first hereditary Duke of Austria]. An imperial edict, dated the 21st of September, 1156, declares the new duchy hereditary even in the female line, and authorizes the dukes to absent themselves from all diets except those which were held in Bavarian territory. It also permits them, in case of a threatened extinction of their dynasty, to propose a successor. . . . Henry II. was one of the founders of Vienna. He constructed a fortress there, and, in order to civilize the surrounding country, sent for some Scotch monks, of whom there were many at this time in Germany.” In 1177 Henry II. was succeeded by Leopold V., called the Virtuous. “In his reign the duchy of Austria gained Styria, an important addition to its territory. This province was inhabited by Slovenes and Germans, and took its name from the castle of Steyer, built in 980 by Otokar III., count of the Trungau. In 1056, it was created a margraviate, and in 1150 it was enlarged by the addition of the counties of Maribor (Marburg) and Cilly. In 1180, Otokar VI. of Styria (1164-1192) obtained the hereditary title of duke from the Emperor in return for his help against Henry the Lion.” Dying without children, Otokar made Leopold of Austria his heir. “Styria was annexed to Austria in 1192, and has remained so ever since. . . . Leopold V. is the first of the Austrian princes whose name is known in Western Europe. He joined the third crusade,” and quarrelled with Richard Coeur de Lion at the siege of St. Jean d’Acre. Afterwards, when Richard, returning home by the Adriatic, attempted to pass through Austrian territory incognito, Leopold revenged himself by seizing and imprisoning the English king, finally selling his royal captive to a still meaner Emperor for 20,000 marks. Leopold VI. who succeeded to the Austrian duchy in 1198, did much for the commerce of his country. “He made Vienna the staple town, and lent a sum of 30,000 marks of silver to the city to enable it to increase its trade. He adorned it with many new buildings, among them the Neue Burg.” His son, called Frederick the Fighter (1230-1246) was the last of the Babenberg dynasty. His hand was against all his neighbors, including the Emperor Frederick II., and their hands were against him. He perished in June, 1246, on the banks of the Leitha, while at war with the Hungarians.—L. Leger, *Hist. of Austro-Hungary*, ch. 9.

A. D. 1246-1282.—Rodolph of Hapsburg and the acquisition of the Duchy for his family.—"The House of Austria owes its origin and power to Rhodolph of Hapsburgh, son of Albert IV. count of Hapsburgh. The Austrian genealogists, who have taken indefatigable but ineffectual pains to trace his illustrious descent from the Romans, carry it with great probability to Ethico, duke of Alsace, in the seventh century, and unquestionably to Guntram the Rich, count of Alsace and Brisgau, who flourished in the tenth." A grandson of Guntram, Werner by name, "became bishop of Strasburgh, and on an eminence above Windisch, built the castle of Hapsburgh ['Habichtsburg' 'the castle of vultures'], which became the residence of the future counts, and gave a new title to the descendants of Guntram. . . . The successors of Werner increased their family inheritance by marriages, donations from the Emperors, and by becoming prefects, advocates, or administrators of the neighbouring abbeys, towns, or districts, and his great grandson, Albert III., was possessor of no inconsiderable territories in Suabia, Alsace, and that part of Switzerland which is now called the Argau, and held the landgraviate of Upper Alsace. His son, Rhodolph, received from the Emperor, in addition to his paternal inheritance, the town and district of Lauffenburgh, an imperial city on the Rhine. He acquired also a considerable accession of territory by obtaining the advocacy of Uri, Schweitz, and Underwalden, whose natives laid the foundation of the Helvetic Confederacy, by their union against the oppressions of feudal tyranny."—W. Coxe, *Hist. of the House of Austria*, ch. 1.—"On the death of Rodolph in 1232 his estates were divided between his sons Albert IV. and Rodolph II.; the former receiving the landgraviate of Upper Alsace, and the county of Hapsburg, together with the patrimonial castle; the latter, the counties Rheinfelden and Lauffenburgh, and some other territories. Albert espoused Hedwige, daughter of Ulric, count of Kyburg; and from this union sprang the great Rodolph, who was born on the 1st of May 1218, and was presented at the baptismal font by the Emperor Frederic II. On the death of his father Albert in 1240, Rodolph succeeded to his estates; but the greater portion of these were in the hands of his paternal uncle, Rodolph of Lauffenburgh; and all he could call his own lay within sight of the great hall of his castle. . . . His disposition was wayward and restless, and drew him into repeated contests with his neighbours and relations. . . . In a quarrel with the Bishop of Basle, Rodolph led his troops against that city, and burnt a convent in the suburbs, for which he was excommunicated by Pope Innocent IV. He then entered the service of Ottocar II. King of Bohemia, under whom he served, in company with the Teutonic Knights, in his wars against the Prussian pagans; and afterwards against Bela IV. King of Hungary." The surprising election, in 1272, of this little known count of Hapsburg, to be King of the Romans, with the substance if not the title of the imperial dignity which that election carried with it, was due to a singular friendship which he had acquired some fourteen years before. When Archbishop Werner, Elector of Mentz, was on his way to Rome

in 1259, to receive the pallium, he "was escorted across the Alps by Rodolph of Hapsburg, and under his protection secured from the robbers who beset the passes. Charmed with the affability and frankness of his protector, the Archbishop conceived a strong regard for Rodolph;" and when, in 1272, after the Great Interregnum [see GERMANY: A. D. 1250-1272], the Germanic Electors found difficulty in choosing an Emperor, the Elector of Mentz recommended his friend of Hapsburg as a candidate. "The Electors are described by a contemporary as desiring an Emperor but detesting his power. The comparative lowliness of the Count of Hapsburg recommended him as one from whom their authority stood in little jeopardy; but the claims of the King of Bohemia were vigorously urged; and it was at length agreed to decide the election by the voice of the Duke of Bavaria. Lewis without hesitation nominated Rodolph. . . . The early days of Rodolph's reign were disturbed by the contumacy of Ottocar, King of Bohemia. That Prince . . . persisted in refusing to acknowledge the Count of Hapsburg as his sovereign. Possessed of the duchies of Austria, Styria, Carniola and Carinthia, he might rely upon his own resources; and he was fortified in his resistance by the alliance of Henry, Duke of Lower Bavaria. But the very possession of these four great fiefs was sufficient to draw down the envy and distrust of the other German Princes. To all these territories, indeed, the title of Ottocar was sufficiently disputable. On the death of Frederic II. fifth duke of Austria [and last of the Babenberg dynasty] in 1246, that duchy, together with Styria and Carniola, was claimed by his niece Gertrude and his sister Margaret. By a marriage with the latter, and a victory over Bela IV. King of Hungary, whose uncle married Gertrude, Ottocar obtained possession of Austria and Styria; and in virtue of a purchase from Ulric, Duke of Carinthia and Carniola, he possessed himself of those duchies on Ulric's death in 1269, in defiance of the claims of Philip, brother of the late Duke. Against so powerful a rival the Princes assembled at Augsburg readily voted succours to Rodolph; and Ottocar having refused to surrender the Austrian dominions, and even hanged the heralds who were sent to pronounce the consequent sentence of proscription, Rodolph with his accustomed promptitude took the field [1276], and confounded his enemy by a rapid march upon Austria. In his way he surprised and vanquished the rebel Duke of Bavaria, whom he compelled to join his forces; he besieged and reduced to the last extremity the city of Vienna; and had already prepared a bridge of boats to cross the Danube and invade Bohemia, when Ottocar arrested his progress by a message of submission. The terms agreed upon were severely humiliating to the proud soul of Ottocar," and he was soon in revolt again, with the support of the Duke of Bavaria. Rodolph marched against him, and a desperate battle was fought at Marschfeld, August 26, 1278, in which Ottocar, deserted at a critical moment by the Moravian troops, was defeated and slain. "The total loss of the Bohemians on that fatal day amounted to more than 14,000 men. In the first moments of his triumph, Rodolph designed to appropriate the dominions of his deceased

enemy. But his avidity was restrained by the Princes of the Empire, who interposed on behalf of the son of Ottoear; and Wenceslaus was permitted to retain Bohemia and Moravia. The projected union of the two families was now renewed: Judith of Hapsburg was affianced to the young King of Bohemia; whose sister Agnes was married to Rodolph, youngest son of the King of the Romans." In 1282, Rodolph, "after satisfying the several claimants to those territories by various cessions of lands . . . obtained the consent of a Diet held at Augsburg to the settlement of Austria, Styria, and Carniola, upon his two surviving sons; who were accordingly jointly invested with those duchies with great pomp and solemnity; and they are at this hour enjoyed by the descendants of Rodolph of Hapsburg."—Sir R. Comyn, *Hist. of the Western Empire*, ch. 14.

A. D. 1291-1349.—Loss and recovery of the imperial crown.—Liberation of Switzerland.—Conflict between Frederick and Lewis of Bavaria.—The imperial crown lost once more.—Rudolf of Hapsburg desired the title of King of the Romans for his son. "But the electors already found that the new house of Austria was becoming too powerful, and they refused. On his death, in fact, in 1291, a prince from another family, poor and obscure, Adolf of Nassau, was elected after an interregnum of ten months. His reign of six years is marked by two events; he sold himself to Edward I. in 1294, against Philip the Fair, for 100,000 pounds sterling, and used the money in an attempt to obtain in Thuringia a principality for his family as Rudolf had done in Austria. The electors were displeased and chose Albert of Austria to succeed him, who conquered and killed his adversary at Gölheim, near Worms (1298). The ten years reign of the new king of the Romans showed that he was very ambitious for his family, which he wished to establish on the throne of Bohemia, where the Slavonic dynasty had lately died out, and also in Thuringia and Meissen, where he lost a battle. He was also bent upon extending his rights, even unjustly—in Alsace and Switzerland—and it proved an unfortunate venture for him. For, on the one hand, he roused the three Swiss cantons of Uri, Schweitz, and Unterwalden to revolt; on the other hand, he roused the wrath of his nephew John of Swabia, whom he defrauded of his inheritance (domains in Switzerland, Swabia, and Alsace). As he was crossing the Reuss, John thrust him through with his sword (1308). The assassin escaped. One of Albert's daughters, Agnes, dowager queen of Hungary, had more than a thousand innocent people killed to avenge the death of her father. The greater part of the present Switzerland had been originally included in the Kingdom of Burgundy, and was ceded to the empire, together with that kingdom, in 1033. A feudal nobility, lay and ecclesiastic, had gained a firm footing

there. Nevertheless, by the 12th century the cities had risen to some importance. Zurich, Basel, Bern, and Freiburg had an extensive commerce and obtained municipal privileges. Three little cantons, far in the heart of the Swiss mountains, preserved more than all the others their indomitable spirit of independence. When Albert of Austria became Emperor [King?] he arrogantly tried to encroach upon their independence. Three heroic mountaineers, Werner Stauffacher, Arnold of Melchthal, and Walter Fürst, each with ten chosen friends, conspired together at Rütli, to throw off the yoke. The tyranny of the Austrian bailiff Gessler, and William Tell's well-aimed arrow, if tradition is to be believed, gave the signal for the insurrection [see SWITZERLAND: THE THREE FOREST CANTONS]. Albert's violent death left to Leopold, his successor in the duchy of Austria, the care of repressing the rebellion. He failed and was completely defeated at Morgarten (1315). That was Switzerland's field of Marathon. . . . When Rudolf of Hapsburg was chosen by the electors, it was because of his poverty and weakness. At his death accordingly they did not give their votes for his son Albert. . . . Albert, however, succeeded in overthrowing his rival. But on his death they were firm in their decision not to give the crown for a third time to the new and ambitious house of Hapsburg. They likewise refused, for similar reasons, to accept Charles of Valois, brother of Philip the Fair, whom the latter tried to place on the imperial throne, in order that he might indirectly rule over Germany. They supported the Count of Luxembourg, who became Henry VII. By choosing emperors [kings?] who were poor, the electors placed them under the temptation of enriching themselves at the expense of the empire. Adolf failed, it is true, in Thuringia, but Rudolf gained Austria by victory; Henry succeeded in Bohemia by means of marriage, and Bohemia was worth more than Austria at that time because, besides Moravia, it was made to cover Silesia and a part of Lusatia (Oberlausitz). Henry's son, John of Luxembourg, married the heiress to that royal crown. As for Henry himself he remained as poor as before. He had a vigorous, restless spirit, and went to try his fortunes on his own account beyond the Alps. . . . He was seriously threatening Naples, when he died either from some sickness or from being poisoned by a Dominican in partaking of the host (1313). A year's interregnum followed; then two emperors [kings?] at once: Lewis of Bavaria and Frederick the Fair, son of the Emperor Albert. After eight years of war, Lewis gained his point by the victory of Mühldorf (1322), which delivered Frederick into his hands. He kept him in captivity for three years, and at the end of that time became reconciled with him, and they were on such good terms that both bore the title of King and governed in common. The fear inspired in Lewis by France and the Holy See dictated this singular agreement. Henry VII. had revived the policy of interference by the German emperors in the affairs of Italy, and had kindled again the quarrel with the Papacy which had long appeared extinguished. Lewis IV. did the same. . . . While Boniface VIII. was making war on Philip the Fair, Albert allied himself with him; when, on the other hand, the Papacy was reduced to the state of a

servile auxiliary to France, the Emperor returned to his former hostility. When ex-communicated by Pope John XXII., who wished to give the empire to the king of France, Charles IV., Lewis IV. made use of the same weapons. . . . Tired of a crown loaded with anxieties, Lewis of Bavaria was finally about to submit to the Pope and abdicate, when the electors perceived the necessity of supporting their Emperor and of formally releasing the supreme power from foreign dependency which brought the whole nation to shame. That was the object of the Pragmatic Sanction of Frankfurt, pronounced in 1338 by the Diet, on the report of the electors. . . . The king of France and Pope Clement VI., whose claims were directly affected by this declaration, set up against Lewis IV. Charles of Luxemburg, son of John the Blind, who became king of Bohemia in 1346, when his father had been killed fighting on the French side at the battle of Crécy. Lewis died the following year. He had gained possession of Brandenburg and the Tyrol for his house, but it was unable to retain possession of them. The latter county reverted to the house of Austria in 1363. The electors most hostile to the French party tried to put up, as a rival candidate to Charles of Luxemburg, Edward III., king of England, who refused the empire; then they offered it to a brave knight, Gunther of Schwarzburg, who died, perhaps poisoned, after a few months (1349). The king of Bohemia then became Emperor as Charles IV. by a second election."—V. Duruy, *The History of the Middle Ages*, bk. 9, ch. 30.—See, also, GERMANY: A. D. 1314-1347.

A. D. 1330-1364.—Forged charters of Duke Rudolf.—The Privilegium Majus.—His assumption of the Archducal title.—Acquisition of Tyrol.—Treaties of inheritance with Bohemia and Hungary.—King John, of Bohemia, had married his second son, John Henry, at the age of eight, to the afterwards notable Margaret Maultasche (Pouchmouth), daughter of the duke of Tyrol and Carinthia, who was then twelve years old. He hoped by this means to reunite those provinces to Bohemia. To thwart this scheme, the Emperor, Louis of Bavaria, and the two Austrian princes, Albert the Wise and Otto the Gay, came to an understanding. "By the treaty of Hagenau (1330), it was arranged that on the death of duke Henry, who had no male heirs, Carinthia should become the property of Austria, Tyrol that of the Emperor. Henry died in 1335, whereupon the Emperor, Louis of Bavaria, declared that Margaret Maultasche had forfeited all rights of inheritance, and proceeded to assign the two provinces to the Austrian princes, with the exception of some portion of the Tyrol which devolved on the house of Wittelsbach. Carinthia alone, however, obeyed the Emperor; the Tyrolese nobles declared for Margaret, and, with the help of John of Bohemia, this princess was able to keep possession of this part of her inheritance. . . . Carinthia also did not long remain in the undisputed possession of Austria. Margaret was soon divorced from her very youthful husband (1342), and shortly after married the son of the Emperor Louis of Bavaria, who hoped to be able to invest his son, not only with Tyrol, but also with Carinthia, and once more we find the houses of Hapsburg and Luxemburg united by a common interest. . . . When . . . Charles IV. of Bohemia was chosen em-

peror, he consented to leave Carinthia in the possession of Austria. Albert did homage for it. . . . According to the wish of their father, the four sons of Albert reigned after him; but the eldest, Rudolf IV., exercised executive authority in the name of the others [1358-1365]. . . . He was only 19 when he came to the throne, but he had already married one of the daughters of the Emperor Charles IV. Notwithstanding this family alliance, Charles had not given Austria such a place in the Golden Bull [see GERMANY: A. D. 1347-1492] as seemed likely to secure either her territorial importance or a proper position for her princes. They had not been admitted into the electoral college of the Empire, and yet their scattered possessions stretched from the banks of the Leitha to the Rhine. . . . These grievances were enhanced by their feeling of envy towards Bohemia, which had attained great prosperity under Charles IV. It was at this time that, in order to increase the importance of his house, Rudolf, or his officers of state, had recourse to a measure which was often employed in that age by princes, religious bodies, and even by the Holy See. It was pretended that there were in existence a whole series of charters which had been granted to the house of Austria by various kings and emperors, and which secured to their princes a position entirely independent of both empire and Emperor. According to these documents, and more especially the one called the 'privilegium majus,' the duke of Austria owed no kind of service to the empire, which was, however, bound to protect him; . . . he was to appear at the diets with the title of archduke, and was to have the first place among the electors. . . . Rudolf pretended that these documents had just come to light, and demanded their confirmation from Charles IV., who refused it. Nevertheless on the strength of these lying charters, he took the title of palatine archduke, without waiting to ask the leave of Charles, and used the royal insignia. Charles IV., who could not fail to be irritated by these pretensions, in his turn revived the claims which he had inherited from Premysl Otakar II. to the lands of Austria, Styria, Carinthia, and Carniola. These claims, however, were simply theoretical, and no attempt was made to enforce them, and the mediation of Louis the Great, King of Hungary, finally led to a treaty between the two princes, which satisfied the ambition of the Habsburgs (1364). By this treaty, the houses of Habsburg in Austria and of Luxemburg in Bohemia each guaranteed the inheritance of their lands to the other, in case of the extinction of either of the two families, and the estates of Bohemia and Austria ratified this agreement. A similar compact was concluded between Austria and Hungary, and thus the boundaries of the future Austrian state were for the first time marked out. Rudolf himself gained little by these long and intricate negotiations, Tyrol being all he added to his territory. Margaret Maultasche had married her son Meinhard to the daughter of Albert the Wise, at the same time declaring that, in default of heirs male to her son, Tyrol should once more become the possession of Austria, and it did so in 1363. Rudolf immediately set out for Botzen, and there received the homage of the Tyrolese nobles. . . . The acquisition of Tyrol was most important to Austria. It united Austria Proper with the old possessions of the Habsburgs in Western Ger-

many, and opened the way to Italy. Margaret Mauntasche died at Vienna in 1369. The memory of this restless and dissolute princess still survives among the Tyrolese."—L. Leger, *Hist. of Austro-Hungary*, pp. 143-148.

A. D. 1386-1388.—Defeats by the Swiss at Sempach and Naefels. See SWITZERLAND: A. D. 1386-1388.

A. D. 1437-1516.—Contests for Hungary and Bohemia.—The right of Succession to the Hungarian Crown secured.—"Europe would have had nothing to fear from the Barbarians, if Hungary had been permanently united to Bohemia, and had held them in check. But Hungary interfered both with the independence and the religion of Bohemia. In this way they weakened each other, and in the 15th century wavered between the two Slavonic and German powers on their borders (Poland and Austria) [see HUNGARY: A. D. 1301-1442, and 1442-1458]. United under a German prince from 1455 to 1458, separated for a time under national sovereigns (Bohemia until 1471, Hungary until 1490), they were once more united under Polish princes until 1526, at which period they passed definitively into the hands of Austria. After the reign of Ladislas of Austria, who won so much glory by the exploits of John Hunniades, George Podiebrad obtained the crown of Bohemia, and Matthias Corvinus, the son of Hunniades, was elected King of Hungary (1458). These two princes opposed successfully the chimerical pretensions of the Emperor Frederick III. Podiebrad protected the Hussites and incurred the enmity of the Popes. Matthias victoriously encountered the Turks and obtained the favour of Paul II., who offered him the crown of Podiebrad, his father-in-law. The latter opposed to the hostility of Matthias the alliance of the King of Poland, whose eldest son, Ladislas, he designated as his successor. At the same time, Casimir, the brother of Ladislas, endeavoured to take from Matthias the crown of Hungary. Matthias, thus pressed on all sides, was obliged to renounce the conquest of Bohemia, and content himself with the provinces of Moravia, Silesia, and Lusatia, which were to return to Ladislas if Matthias died first (1475-1478). The King of Hungary compensated himself at the expense of Austria. On the pretext that Frederick III. had refused to give him his daughter, he twice invaded his states and retained them in his possession [see HUNGARY: A. D. 1471-1487]. With this great prince Christendom lost its chief defender, Hungary her conquests and her political preponderance (1490). The civilization which he had tried to introduce into his kingdom was deferred for many centuries. . . . Ladislas (of Poland), King of Bohemia, having been elected King of Hungary, was attacked by his brother John Albert, and by Maximilian of Austria, who both pretended to that crown. He appeased his brother by the cession of Silesia (1491), and Maximilian by vesting in the House of Austria the right of succession to the throne of Hungary, in case he himself should die without male issue. Under Ladislas, and under his son Louis II., who succeeded him while still a child, in 1516 Hungary was ravaged with impunity by the Turks."—J. Michélet, *A Summary of Modern History*, ch. 4.—See, also, BOHEMIA: A. D. 1458-1471.

A. D. 1438-1493.—The Imperial Crown lastingly regained.—The short reign of Albert II.,

and the long reign of Frederick III.—"After the death of Sigismund, the princes, in 1438, elected an emperor [king?] from the house of Austria, which, with scarcely any intermission, has ever since occupied the ancient throne of Germany. Albert II. of Austria, who, as son-in-law of the late Emperor Sigismund, had become at the same time King of Hungary and Bohemia, was a well-meaning, distinguished prince, and would, without doubt, have proved of great benefit to the empire; but he died . . . in the second year of his reign, after his return from an expedition against the Turks. . . . In the year 1431, during the reign of Sigismund, a new council was assembled at Basle, in order to carry on the work of reforming the church as already commenced at Constance. But this council soon became engaged in many perplexing controversies with Pope Eugene IV. . . . The Germans, for a time, took no part in the dispute; at length, however, under the Emperor [King?] Albert II., they formally adopted the chief decrees of the council of Basle, at a diet held at Mentz in the year 1439. . . . Amongst the resolutions then adopted were such as materially circumscribed the existing privileges of the pope. . . . These and other decisions, calculated to give important privileges and considerable independence to the German church, were, in a great measure, annulled by Albert's cousin and successor, Duke Frederick of Austria, who was elected by the princes after him in the year 1440, as Frederick III. . . . Frederick, the emperor, was a prince who meant well but, at the same time, was of too quiet and easy a nature; his long reign presents but little that was calculated to distinguish Germany or add to its renown. From the east the empire was endangered by the approach of an enemy—the Turks, against whom no precautionary measures were adopted. They, on the 29th of May, 1453, conquered Constantinople. . . . They then made their way towards the Danube, and very nearly succeeded also in taking Hungary [see HUNGARY: A. D. 1442-1458]. . . . The Hungarians, on the death of the son of the Emperor Albert II., Wladislas Posthumus, in the year 1457, without leaving an heir to the throne, chose Matthias, the son of John Corvinus, as king, being resolved not to elect one from amongst the Austrian princes. The Bohemians likewise selected a private nobleman for their king, George Padriabrad [or Podiebrad], and thus the Austrian house found itself for a time rejected from holding possession of either of these countries. . . . In Germany, meantime, there existed numberless contests and feuds; each party considered only his own personal quarrels. . . . The emperor could not give any weight to public measures; scarcely could he maintain his dignity amongst his own subjects. The Austrian nobility were even bold enough to send challenges to their sovereign; whilst the city of Vienna revolted, and his brother Albert, taking pleasure in this disorder, was not backward in adding to it. Things even went to such an extremity, that, in 1462, the Emperor Frederick, together with his consort and son, Maximilian, then four years of age, was besieged by his subjects in his own castle of Vienna. A plebeian burgher, named Holzer, had placed himself at the head of the insurgents, and was made burgomaster, whilst Duke Albert came to Vienna personally to superintend the siege of the castle, which was intrenched and bombarded. . . . The

German princes, however, could not witness with indifference such disgraceful treatment of their emperor, and they assembled to liberate him. George Podiebrad, King of Bohemia, was the first who hastened to the spot with assistance, set the emperor at liberty, and effected a reconciliation between him and his brother. The emperor, however, was obliged to resign to him, for eight years, Lower Austria and Vienna. Albert died in the following year. . . . In the Germanic empire, the voice of the emperor was as little heeded as in his hereditary lands. . . . The feudal system raged under Frederick's reign to such an extent, that it was pursued even by the lower classes. Thus, in 1471, the shoeblacks in Leipsic sent a challenge to the university of that place; and the bakers of the Count Palatine Lewis, and those of the Margrave of Baden defied several imperial cities in Swabia. The most important transaction in the reign of Frederick, was the union which he formed with the house of Burgundy, and which laid the foundation for the greatness of Austria. . . . In the year 1486, the whole of the assembled princes, influenced especially by the representations of the faithful and now venerable Albert, called the Achilles of Brandenburg, elected Maximilian, the emperor's son, King of Rome. Indeed, about this period a changed and improved spirit began to show itself in a remarkable degree in the minds of many throughout the empire, so that the profound contemplator of coming events might easily see the dawn of a new era. . . . These last years were the best in the whole life of the emperor, and yielded to him in return for his many sufferings that tranquillity which was so well merited by his faithful generous disposition. He died on the 19th of August, 1493, after a reign of 54 years. The emperor lived long enough to obtain, in the year 1490, the restoration of his hereditary estates by the death of King Matthias, by means of a compact made with Wladislas, his successor." —F. Kohlrausch, *History of Germany*, ch. 14.—See GERMANY: A. D. 1347-1493.

A. D. 1468.—Invasion by George Podiebrad of Bohemia.—The crusade against him. See BOHEMIA: A. D. 1158-1471.

A. D. 1471-1491.—Hungarian invasion and capture of Vienna.—Treaty of Presburg.—Succession to the throne of Hungary secured.—"George, King of Bohemia, expired in 1471; and the claims of the Emperor and King of Hungary being equally disregarded, the crown was conferred on Uladislus, son of Casimir IV. King of Poland, and grandson of Albert II. To this election Frederic long persisted in withholding his assent; but at length he determined to crush the claim of Matthias by formally investing Uladislus with the kingdom and electorate of Bohemia, and the office of imperial cup-bearer. In revenge for this affront, Matthias marched into Austria: took possession of the fortresses of the Danube; and compelled the Emperor to purchase a cessation of hostilities by undertaking to pay an hundred thousand golden florins, one-half of which was disbursed by the Austrian states at the appointed time. But as the King of Hungary still delayed to yield up the captured fortresses, Frederic refused all further payment; and the war was again renewed. Matthias invaded and ravaged Austria; and though he experienced formidable resistance from several towns, his arms were

crowned with success, and he became master of Vienna and Neustadt. Driven from his capital the terrified Emperor was reduced to the utmost distress, and wandered from town to town and from convent to convent, endeavouring to arouse the German States against the Hungarians. Yet even in this exigency his good fortune did not wholly forsake him; and he availed himself of a Diet at Frankfort to procure the election of his son Maximilian as King of the Romans. To this Diet, however, the King of Bohemia received no summons, and therefore protested against the validity of the election. A full apology and admission of his right easily satisfied Uladislus, and he consented to remit the fine which the Golden Bull had fixed as the penalty of the omission. The death of Matthias Corvinus in 1490, left the throne of Hungary vacant, and the Hungarians, influenced by their widowed queen, conferred the crown upon the King of Bohemia, without listening to the pretensions of Maximilian. That valorous prince, however, sword in hand, recovered his Austrian dominions; and the rival kings concluded a severe contest by the treaty of Presburg, by which Hungary was for the present secured to Uladislus; but on his death without heirs was to vest in the descendants of the Emperor."—Sir R. Comyn, *The History of the Western Empire*, ch. 28 (c. 2).—See HUNGARY: A. D. 1471-1487, and 1487-1526.

A. D. 1477-1495.—Marriage of Maximilian with Mary of Burgundy.—His splendid dominion.—His joyous character.—His vigorous powers.—His ambitions and aims.—"Maximilian, who was as active and enterprising as his father was indolent and timid, married at eighteen years of age, the only daughter of Charles the Bold, duke of Burgundy [see NETHERLANDS: A. D. 1477]. She brought him Flanders, Franche-Comté, and all the Low Countries. Louis XI, who disputed some of these territories, and who, on the death of the duke, had seized Burgundy, Picardy, Pontlieu, and Artois, as fiefs of France, which could not be possessed by a woman, was defeated by Maximilian at Guinegate; and Charles VIII., who renewed the same claims, was obliged to conclude a disadvantageous peace." Maximilian succeeded to the imperial throne on the death of his father in 1493.—W. Russell, *Hist. of Modern Europe*, letter 49 (v. 1).—"Between the Alps and the Bohemian frontier, the mark Austria was first founded round and about the castles of Krems and Melk. Since then, beginning first in the valley towards Bavaria and Hungary, and coming to the House of Habsburg, it had extended across the whole of the northern slope of the Alps until where the Slavish, Italian, and German tongues part, and over to Alsace; thus becoming an archduchy from a mark. On all sides the Archdukes had claims; on the German side to Switzerland, on the Italian to the Venetian possessions, and on the Slavish to Bohemia and Hungary. To such a pitch of greatness had Maximilian by his marriage with Maria of Burgundy brought the heritage received from Charles the Bold. True to the Netherlanders' greeting, in the inscription over their gates, 'Thou art our Duke, fight our battle for us,' war was from the first his handicraft. He adopted Charles the Bold's hostile attitude towards France; he saved the greater part of his inheritance from the schemes of Louis XI. Day and night it was his whole

thought, to conquer it entirely. But after Maria of Burgundy's premature death, revolution followed revolution, and his father Frederick being too old to protect himself, it came about that in the year 1488 he was ousted from Austria by the Hungarians, whilst his son was kept a prisoner in Bruges by the citizens, and they had even to fear the estrangement of the Tyrol. Yet they did not lose courage. At this very time the father denoted with the vowels, A. E. I. O. U. ('*Alles Erdreich ist Oesterreich unterthan*'—All the earth is subject to Austria), the extent of his hopes. In the same year, his son negotiated for a Spanish alliance. Their real strength lay in the imperial dignity of Maximilian, which they had from the German Empire. As soon as it began to bestir itself, Maximilian was set at liberty; as soon as it supported him in the persons of only a few princes of the Empire, he became lord in his Netherlands. . . . Since then his plans were directed against Hungary and Burgundy. In Hungary he could gain nothing except securing the succession to his house. But never, frequently as he concluded peace, did he give up his intentions upon Burgundy. . . . Now that he had allied himself with a Sforza, and had joined the Liga, now that his father was dead, and the Empire was pledged to follow him across the mountains, and now, too, that the Italian complications were threatening Charles, he took fresh hope, and in this hope he summoned a Diet at Worms. Maximilian was a prince of whom, although many portraits have been drawn, yet there is scarcely one that resembles another, so easily and entirely did he suit himself to circumstances. . . . His soul is full of motion, of joy in things, and of plans. There is scarcely anything that he is not capable of doing. In his mines he is a good screener, in his armoury the best plater, capable of instructing others in new inventions. With musket in hand, he defeats his best marksman, George Purkhard; with heavy cannon, which he has shown how to cast, and has placed on wheels, he comes as a rule nearest the mark. He commands seven captains in their seven several tongues; he himself chooses and mixes his food and medicines. In the open country, he feels himself happiest. . . . What really distinguishes his public life is that presentiment of the future greatness of his dynasty which he has inherited of his father, and the restless striving to attain all that devolved upon him from the House of Burgundy. All his policy and all his schemes were concentrated, not upon his Empire, for the real needs of which he evinced little real care, and not immediately upon the welfare of his hereditary lands, but upon the realization of that sole idea. Of it all his letters and speeches are full. . . . In March, 1495, Maximilian came to the Diet at Worms. . . . At this Reichstag the King gained two momentous prospects. In Wurtemberg there had sprung of two lines two counts of quite opposite characters. . . . With the elder, Maximilian now entered into a compact. Wurtemberg was to be raised to a dukedom—an elevation which excluded the female line from the succession—and, in the event of the stock failing, was to be a 'widow's portion' of the realm to the use of the Imperial Chamber. Now as the sole hopes of this family centred in a weakling of a boy, this arrangement held out to Maximilian and his successors the prospect of acquiring a

splendid country. Yet this was the smaller of his two successes. The greater was the espousal of his children, Philip and Margaret, with the two children of Ferdinand the Catholic, Juana and Juan, which was here settled. This opened to his house still greater expectations,—it brought him at once into the most intimate alliance with the Kings of Spain. These matters might possibly, however, have been arranged elsewhere. What Maximilian really wanted in the Reichstag at Worms was the assistance of the Empire against the French with its world-renowned and much-envied soldiery. For at this time in all the wars of Europe, German auxiliaries were decisive. . . . If Maximilian had united the whole of this power in his hand, neither Europe nor Asia would have been able to withstand him. But God disposed that it should rather be employed in the cause of freedom than oppression. What an Empire was that which in spite of its vast strength allowed its Emperor to be expelled from his heritage, and did not for a long time take steps to bring him back again? If we examine the constitution of the Empire, not as we should picture it to ourselves in Henry III.'s time, but as it had at length become—the legal independence of the several estates, the emptiness of the imperial dignity, the electiveness of a head, that afterwards exercised certain rights over the electors,—we are led to inquire not so much into the causes of its disintegration, for this concerns us little, as into the way in which it was held together. What welded it together, and preserved it, would (leaving tradition and the Pope out of the question) appear, before all else, to have been the rights of individuals, the unions of neighbours, and the social regulations which universally obtained. Such were those rights and privileges that not only protected the citizen, his guild, and his quarter of the town against his neighbours and more powerful men than himself, but which also endowed him with an inner independence. . . . Next, the unions of neighbours. These were not only leagues of cities and peasantries, expanded from ancient fraternities—for who can tell the origin of the Hansa, or the earliest treaty between Uri and Schwyz?—into large associations, or of knights, who strengthened a really insignificant power by confederations of neighbours, but also of the princes, who were bound together by joint inheritances, mutual expectancies, and the ties of blood, which in some cases were very close. This ramification, dependent upon a supreme power and confirmed by it, bound neighbour to neighbour; and, whilst securing to each his privilege and his liberty, blended together all countries of Germany in legal bonds of union. But it is only in the social regulations that the unity was really perceivable. Only as long as the Empire was an actual reality, could the supreme power of the Electors, each with his own special rights, be maintained; only so long could dukes and princes, bishops and abbots hold their neighbours in due respect, and through court offices or hereditary services, through fiefs and the dignity of their independent position give their vassals a peculiar position to the whole. Only so long could the cities enjoying immediateness under the Empire, carefully divided into free and imperial cities, be not merely protected, but also assured of a participation in the government of the whole. Under this sanctified and

traditional system of suzerainty and vassalage all were happy and contented, and bore a love to it such as is cherished towards a native town or a father's house. For some time past, the House of Austria had enjoyed the foremost position. It also had a union, and, moreover, a great faction on its side. The union was the Suabian League. Old Suabia was divided into three leagues—the league of the peasantry (the origin of Switzerland); the league of the knights in the Black Forest, on the Kocher, the Neckar, and the Danube; and the league of the cities. The peasantry were from the first hostile to Austria. The Emperor Frederick brought it to pass that the cities and knights, that had from time out of mind lived in feud, bound themselves together with several princes, and formed, under his protection, the league of the land of Suabia. But the party was scattered throughout the whole Empire. —L. von Ranke, *History of the Latin and Teutonic Nations*, bk. 1, ch. 3.

A. D. 1496-1526.—Extraordinary aggrandizement of the House of Austria by its marriages.—The Heritage of Charles V.—His cession of the German inheritance to Ferdinand.—The division of the House into Spanish and German branches.—Acquisition of Hungary and Bohemia.—In 1496, Philip the Fair, son of Maximilian, Archduke and Emperor, by his marriage with Mary of Burgundy, "espoused the Infanta of Spain, daughter of Ferdinand [of Aragon] and Isabella of Castile. They had two sons, Charles and Ferdinand, the former of whom, known in history by the name of Charles V., inherited the Low Countries in right of his father, Philip (1506). On the death of Ferdinand, his maternal grandfather (1516), he became heir to the whole Spanish succession, which comprehended the kingdoms of Spain, Naples, Sicily, and Sardinia, together with Spanish America. To these vast possessions were added his patrimonial dominions in Austria, which were transmitted to him by his paternal grandfather, the Emperor Maximilian I. About the same time (1519), the Imperial dignity was conferred on this prince by the electors [see GERMANY: A. D. 1519]; so that Europe had not seen, since the time of Charlemagne, a monarchy so powerful as that of Charles V. This Emperor concluded a treaty with his brother Ferdinand; by which he ceded to him all his hereditary possessions in Germany. The two brothers thus became the founders of the two principal branches of the House of Austria, viz., that of Spain, which began with Charles V. (called Charles I. of Spain), and ended with Charles II. (1700); and that of Germany, of which Ferdinand I. was the ancestor, and which became extinct in the male line in the Emperor Charles VI. (1740). These two branches, closely allied to each other, acted in concert for the advancement of their reciprocal interests; moreover they gained each their own separate advantages by the marriage connexions which they

formed. Ferdinand I. of the German line married Anne (1521), sister of Louis King of Hungary and Bohemia, who having been slain by the Turks at the battle of Mohacs (1526), these two kingdoms devolved to Ferdinand of the House of Austria. Finally, the marriage which Charles V. contracted with the Infant Isabella, daughter of Emmanuel, King of Portugal, procured Philip II. of Spain, the son of that marriage, the whole Portuguese monarchy, to which he succeeded on the death of Henry, called the Cardinal (1580). So vast an aggrandisement of power alarmed the Sovereigns of Europe."—C. W. Koch, *The Revolutions of Europe*, period 6.

A. D. 1519-1555.—The imperial reign of Charles V.—The objects of his policy.—His conflict with the Reformation and with France.—"Charles V. did not receive from nature all the gifts nor all the charms she can bestow, nor did experience give him every talent; but he was equal to the part he had to play in the world. He was sufficiently great to keep his many-jewelled diadem. . . . His ambition was cold and wise. The scope of his ideas, which are not quite easy to divine, was vast enough to control a state composed of divers and distant portions, so as to make it always very difficult to amalgamate his armies, and to supply them with food, or to procure money. Indeed its very existence would have been exposed to permanent danger from powerful coalitions, had Francis I. known how to place its most vulnerable points under a united pressure from the armies of France, of England, of Venice, and of the Ottoman Empire. Charles V. attained his first object when he prevented the French monarch from taking possession of the inheritance of the house of Anjou, at Naples, and of that of the Viscontis at Milan. He was more successful in stopping the march of Solymán into Austria than in checking the spread of the Reformation in Germany. . . . Charles V. had four objects very much at heart: he wished to be the master in Italy, to check the progress of the Ottoman power in the west of Europe, to conquer the King of France, and to govern the Germanic body by dividing it, and by making the Reformation a religious pretext for oppressing the political defenders of that belief. In three out of four of these objects he succeeded. Germany alone was not conquered: if she was beaten in battle, neither any political triumph nor any religious results ensued. In Germany, Charles V. began his work too late, and acted too slowly; he undertook to subdue it at a time when the abettors of the Reformation had grown strong, when he himself was growing weaker. . . . Like many other brilliant careers, the career of Charles V. was more successful and more striking at the commencement and the middle than at the end, of its course. At Madrid, at Cambrai, at Nice, he made his rival bow down his head. At Crespy he again forced him to obey his will, but as he had completely made up his mind to have peace, Charles dictated it, in some manner, to his own detriment. At Passau he had to yield to the terms of his enemy

—of an enemy whom Charles V. encountered in his old age, and when his powers had decayed. Although it may be said that the extent and the power of the sovereignty which Charles V. left to his successor at his death were not diminished, still his armies were weakened, his finances were exhausted, and the country was weary of the tyranny of the imperial lieutenants. The supremacy of the empire in Germany, for which he had struggled so much, was as little established at the end as at the beginning of his reign; religious unity was solemnly destroyed by the 'Recess' of Augsburg. But that which marks the position of Charles V. as the representative man of his epoch, and as the founder of the policy of modern times, is that, wherever he was victorious, the effect of his success was to crush the last efforts of the spirit of the middle ages, and of the independence of nations. In Italy, in Spain, in Germany, and in the Low Countries, his triumphs were so much gain to the cause of absolute monarchy and so much loss to the liberty derived from the old state of society. Whatever was the character of liberty in the middle ages—whether it were contested or incomplete, or a mockery—it played a greater part than in the four succeeding centuries. Charles V. was assuredly one of those who contributed the most to found and consolidate the political system of modern governments. His history has an aspect of grandeur. Had Francis I. been as sagacious in the closet as he was bold in the field, by a vigorous alliance with England, with Protestant Germany, and with some of the republics of Italy, he might perhaps have balanced and controlled the power of Charles V. But the French monarch did not possess the foresight and the solid understanding necessary to pursue such a policy with success. His rival, therefore, occupies the first place in the historical picture of the epoch. Charles V. had the sentiment of his position and of the part he had to play."—J. Van Praet, *Essays on the Political History of the 15th, 16th, and 17th Centuries*, pp. 190-194.—See, also, GERMANY: A. D. 1519 to 1552-1561, and FRANCE: A. D. 1520-1523, to 1547-1559.

A. D. 1525-1527.—Successful Contest for the Hungarian and Bohemian Crowns.—In Hungary, "under King Matthias the house of Zapolya, so called from a Slavonic village near Poschega, whence it originated, rose to peculiar eminence. To this house, in particular, King Wladislas had owed his accession to the throne; whence, however, it thought itself entitled to claim a share in the sovereign power, and even a sort of prospective right to the throne. Its members were the wealthiest of all the magnates; they possessed seventy-two castles. . . . It is said that a prophecy early promised the crown to the young John Zapolya. Possessed of all the power conferred by his rich inheritance, Count of Zips, and Woiwode of Transylvania, he soon collected a strong party around him. It was he who mainly persuaded the Hungarians, in the year 1505, to exclude all foreigners from the throne by a formal decree; which, though they were not always able to maintain in force, they could never be induced absolutely to revoke. In the year 1514 the Woiwode succeeded in putting down an exceedingly formidable insurrection of the peasants with his own forces; a service which the lesser nobility prized the more highly, because

it enabled them to reduce the peasantry to a still harder state of servitude. His wish was, on the death of Wladislas, to become Gubernator of the kingdom, to marry the deceased king's daughter Anne, and then to await the course of events. But he was here encountered by the policy of Maximilian. Anne was married to the Archduke Ferdinand; Zapolya was excluded from the administration of the kingdom; even the vacant Palatinate was refused him and given to his old rival Stephen Bathory. He was highly incensed. . . . But it was not till the year 1525 that Zapolya got the upper hand at the Rakosch. . . . No one entertained a doubt that he aimed at the throne. . . . But before anything was accomplished—on the contrary, just as these party conflicts had thrown the country into the utmost confusion, the mighty enemy, Soliman, appeared on the frontiers of Hungary, determined to put an end to the anarchy. . . . In his prison at Madrid, Francis I. had found means to entreat the assistance of Soliman; urging that it well beseemed a great emperor to succour the oppressed. Plans were laid at Constantinople, according to which the two sovereigns were to attack Spain with a combined fleet, and to send armies to invade Hungary and the north of Italy. Soliman, without any formal treaty, was by his position an ally of the Ligue, as the king of Hungary was, of the emperor. On the 23d of April, 1526, Soliman, after visiting the graves of his forefathers and of the old Moslem martyrs, marched out of Constantinople with a mighty host, consisting of about a hundred thousand men, and incessantly strengthened by fresh recruits on its road. . . . What power had Hungary, in the condition we have just described, of resisting such an attack? . . . The young king took the field with a following of not more than three thousand men. . . . He proceeded to the fatal plain of Mohaez, fully resolved with his small band to await in the open field the overwhelming force of the enemy. . . . Personal valour could avail nothing. The Hungarians were immediately thrown into disorder, their best men fell, the others took to flight. The young king was compelled to flee. It was not even granted him to die in the field of battle; a far more miserable end awaited him. Mounted behind a Silesian soldier, who served him as a guide, he had already been carried across the dark waters that divide the plain; his horse was already climbing the bank, when he slipped, fell back, and buried himself and his rider in the morass. This rendered the defeat decisive. . . . Soliman had gained one of those victories which decide the fate of nations during long epochs. . . . That two thrones, the succession to which was not entirely free from doubt, had thus been left vacant, was an event that necessarily caused a great agitation throughout Christendom. It was still a question whether such a European power as Austria would continue to exist;—a question which it is only necessary to state, in order to be aware of its vast importance to the fate of mankind at large, and of Germany in particular. . . . The claims of Ferdinand to both crowns, unquestionable as they might be in reference to the treaties with the reigning houses, were opposed in the nations themselves, by the right of election and the authority of considerable rivals. In Hungary, as soon as the Turks had retired, John Zapolya appeared with the fine

army which he had kept back from the conflict; the fall of the king was at the same time the fall of his adversaries. . . . Even in Tokay, however, John Zapolya was saluted as king. Meanwhile, the dukes of Bavaria conceived the design of getting possession of the throne of Bohemia. . . . Nor was it in the two kingdoms alone that these pretenders had a considerable party. The state of politics in Europe was such as to insure them powerful supporters abroad. In the first place, Francis I. was intimately connected with Zapolya: in a short time a delegate from the pope was at his side, and the Germans in Rome maintained that Clement assisted the faction of the Woiwode with money. Zapolya sent an agent to Venice with a direct request to be admitted a member of the Ligue of Cognac. In Bohemia, too, the French had long had devoted partisans. . . . The consequences that must have resulted, had this scheme succeeded, are so incalculable, that it is not too much to say they would have completely changed the political history of Europe. The power of Bavaria would have outweighed that of Austria in both German and Slavonian countries, and Zapolya, thus supported, would have been able to maintain his station; the Ligue, and with it high ultra-montane opinions would have held the ascendancy in eastern Europe. Never was there a project more pregnant with danger to the growing power of the house of Austria. Ferdinand behaved with all the prudence and energy which that house has so often displayed in difficult emergencies. For the present, the all-important object was the crown of Bohemia. . . . All his measures were taken with such skill and prudence, that on the day of election, though the Bavarian agent had, up to the last moment, not the slightest doubt of the success of his negotiations, an overwhelming majority in the three estates elected Ferdinand to the throne of Bohemia. This took place on the 23d October, 1526. . . . On his brother's birth-day, the 24th of February, 1527, Ferdinand was crowned at Prague. . . . The affairs of Hungary were not so easily or so peacefully settled. . . . At first, when Zapolya came forward, full armed and powerful out of the general desolation, he had the uncontested superiority. The capital of the kingdom sought his protection, after which he marched to Stuhlweissenburg, where his partisans bore down all attempts at opposition: he was elected and crowned (11th of November, 1526); in Croatia, too, he was acknowledged king at a diet; he filled all the numerous places, temporal and spiritual, left vacant by the disaster of Mohacz, with his friends. . . . [But] the Germans advanced without interruption; and as soon as it appeared possible that Ferdinand might be successful, Zapolya's followers began to desert him. . . . Never did the German troops display more bravery and constancy. They had often neither meat nor bread, and were obliged to live on such fruits as they found in the gardens: the inhabitants were wavering and uncertain—they submitted, and then revolted again to the enemy; Zapolya's troops, aided by their knowledge of the ground, made several very formidable attacks by night; but the Germans evinced, in the moment of danger, the skill and determination of a Roman legion: they showed, too, a noble constancy under difficulties and privations. At Tokay they defeated Zapolya and compelled him

to quit Hungary. . . . On the 3d November, 1527, Ferdinand was crowned in Stuhlweissenburg: only five of the magnates of the kingdom adhered to Zapolya. The victory appeared complete. Ferdinand, however, distinctly felt that this appearance was delusive. . . . In Bohemia, too, his power was far from secure. His Bavarian neighbours had not relinquished the hope of driving him from the throne at the first general turn of affairs. The Ottomans, meanwhile, acting upon the persuasion that every land in which the head of their chief had rested belonged of right to them, were preparing to return to Hungary: either to take possession of it themselves, or at first, as was their custom, to bestow it on a native ruler—Zapolya, who now eagerly sought an alliance with them—as their vassal.”—L. Von Ranke, *History of the Reformation in Germany*, bk. 4, ch. 4 (v. 2).

A. D. 1564-1618.—The tolerance of Maximilian II.—The bigotry and tyranny of Rodolph and Ferdinand II.—Prelude to the Thirty Years War.—“There is no period connected with these religious wars that deserves more to be studied than these reigns of Ferdinand I., Maximilian [the Second], and those of his successors who preceded the thirty years' war. We have no sovereign who exhibited that exercise of moderation and good sense which a philosopher would require, but Maximilian; and he was immediately followed by princes of a different complexion. . . . Nothing could be more complete than the difficulty of toleration at the time when Maximilian reigned; and if a mild policy could be attended with favourable effects in his age and nation, there can be little fear of the experiment at any other period. No party or person in the state was then disposed to tolerate his neighbour from any sense of the justice of such forbearance, but from motives of temporal policy alone. The Lutherans, it will be seen, could not bear that the Calvinists should have the same religious privileges with themselves. The Calvinists were equally opinionated and unjust; and Maximilian himself was probably tolerant and wise, chiefly because he was in his real opinions a Lutheran, and in outward profession, as the head of the empire, a Roman Catholic. For twelve years, the whole of his reign, he preserved the religious peace of the community, without destroying the religious freedom of the human mind. He supported the Roman Catholics, as the predominant party, in all their rights, possessions, and privileges; but he protected the Protestants in every exercise of their religion which was then practicable. In other words, he was as tolerant and just as the temper of society then admitted, and more so than the state of things would have suggested. . . . The merit of Maximilian was but too apparent the moment that his son Rodolph was called upon to supply his place. . . . He had always left the education of his son and successor too much to the discretion of his bigoted consort. Rodolph, his son, was therefore as ignorant and furious on his part as were the Protestants on theirs: he had immediate recourse to the usual expedients—force, and the execution of the laws to the very letter. . . . After Rodolph comes Matthias, and, unhappily for all Europe, Bohemia and the empire fell afterwards under the management of Ferdinand II. Of the different Austrian princes, it is the reign of Ferdinand

II. that is more particularly to be considered. Such was the arbitrary nature of his government over his subjects in Bohemia, that they revolted. They elected for their king the young Elector Palatine, hoping thus to extricate themselves from the bigotry and tyranny of Ferdinand. This crown so offered was accepted; and, in the event, the cause of the Bohemians became the cause of the Reformation in Germany, and the Elector Palatine the hero of that cause. It is this which gives the great interest to this reign of Ferdinand II., to these concerns of his subjects in Bohemia, and to the character of this Elector Palatine. For all these events and circumstances led to the thirty years' war."

A. D. 1618-1648.—The Thirty Years War.—The Peace of Westphalia.—"The thirty years' war made Germany the centre-point of European politics. . . . No one at its commencement could have foreseen the duration and extent. But the train of war was everywhere laid, and required only the match to set it going; more than one war was joined to it, and swallowed up in it; and the melancholy truth, that war feeds itself, was never more clearly displayed. . . . Though the war, which first broke out in Bohemia, concerned only the house of Austria, yet by its originating in religious disputes, by its peculiar character as a religious war, and by the measures adopted both by the insurgents and the emperor, it acquired such an extent, that even the quelling of the insurrection was insufficient to put a stop to it. . . . Though the Bohemian war was apparently terminated, yet the flame had communicated to Germany and Hungary, and new fuel was added by the act of proscription promulgated against the elector Frederic and his adherents. From this the war derived that revolutionary character, which was henceforward peculiar to it; it was a step that could not but lead to further results, for the question of the relations between the emperor and his states, was in a fair way of being practically considered. New and bolder projects were also formed in Vienna and Madrid, where it was resolved to renew the war with the Netherlands. Under the present circumstances, the suppression of the Protestant religion and the overthrow of German and Dutch liberty appeared inseparable; while the success of the imperial arms, supported as they were by the league and the co-operation of the Spaniards, gave just grounds for hope. . . . By the carrying of the war into Lower Saxony, the principal seat of the Protestant religion in Germany (the states of which had appointed Christian IV. of Denmark, as duke of Holstein, head of their confederacy), the northern states had already, though without any beneficial result, been involved in the strife, and the Danish war had broken out. But the elevation of Albert of Wallenstein to the dignity of duke of Friedland and imperial general over the army raised by himself, was of considerably more importance, as it affected the whole course and character of the war. From this time the

war was completely and truly revolutionary. The peculiar situation of the general, the manner of the formation as well as the maintenance of his army, could not fail to make it such. . . . The distinguished success of the imperial arms in the north of Germany unveiled the daring schemes of Wallenstein. He did not come forward as conqueror alone, but, by the investiture of Mecklenburg as a state of the empire, as a ruling prince. . . . But the elevation and conduct of this novus homo, exasperated and annoyed the Catholic no less than the Protestant states, especially the league and its chief; all implored peace, and Wallenstein's discharge. Thus, at the diet of the electors at Augsburg, the emperor was reduced to the alternative of resigning him or his allies. He chose the former. Wallenstein was dismissed, the majority of his army disbanded, and Tilly nominated commander-in-chief of the forces of the emperor and the league. . . . On the side of the emperor sufficient care was taken to prolong the war. The refusal to restore the unfortunate Frederic, and even the sale of his upper Palatine to Bavaria, must with justice have excited the apprehensions of the other princes. But when the Jesuits finally succeeded, not only in extorting the edict of restitution, but also in causing it to be enforced in the most odious manner, the Catholic states themselves saw with regret that peace could no longer exist. . . . The greater the success that attended the house of Austria, the more actively foreign policy laboured to counteract it. England had taken an interest in the fate of Frederic V. from the first, though this interest was evinced by little beyond fruitless negotiations. Denmark became engaged in the quarrel mostly through the influence of this power and Holland. Richelieu, from the time he became prime minister of France, had exerted himself in opposing Austria and Spain. He found employment for Spain in the contests respecting Veltelin, and for Austria soon after, by the war of Mantua. Willingly would he have detached the German league from the interest of the emperor; and though he failed in this, he procured the fall of Wallenstein. . . . Much more important, however, was Richelieu's influence on the war, by the essential share he had in gaining Gustavus Adolphus' active participation in it. . . . The nineteen years of his [Gustavus Adolphus'] reign which had already elapsed, together with the Polish war, which lasted nearly that time, had taught the world but little of the real worth of this great and talented hero. The decisive superiority of Protestantism in Germany, under his guidance, soon created a more just knowledge, and at the same time showed the advantages which must result to a victorious supporter of that cause. . . . The battle at Leipzig was decisive for Gustavus Adolphus and his party, almost beyond expectation. The league fell asunder; and in a short time he was master of the countries from the Baltic to Bavaria, and from the Rhine to Bohemia. . . . But the misfortunes and death of Tilly brought Wallenstein again on the stage as absolute commander-in-chief, bent on plans not a whit less extensive than those he had before formed. No period of the war gave promise of such great and rapid successes or reverses as the present, for both leaders were determined to effect them; but the victory at

Lützen, while it cost Gustavus his life, prepared the fall of Wallenstein. . . . Though the fall of Gustavus Adolphus frustrated his own private views, it did not those of his party. . . . The school of Gustavus produced a number of men, great in the cabinet and in the field; yet it was hard, even for an Oxenstern, to preserve the importance of Sweden unimpaired; and it was but partially done by the alliance of Heilbronn. . . . If the forces of Sweden overrun almost every part of Germany in the following months, under the guidance of the pupils of the king, Bernard of Weimar and Gustavus Horn, we must apparently attribute it to Wallenstein's intentional inactivity in Bohemia. The distrust of him increased in Vienna the more, as he took but little trouble to diminish it; and though his fall was not sufficient to atone for treachery, if proved, it was for his equivocal character and imprudence. His death probably saved Germany from a catastrophe. . . . A great change took place upon the death of Wallenstein; as a prince of the blood, Ferdinand, king of Hungary and Bohemia, obtained the command. Thus an end was put to plans of revolutions from this quarter. But in the same year the battle of Nordlingen gave to the imperial arms a sudden preponderance, such as it had never before acquired. The separate peace of Saxony with the emperor at Prague, and soon after an alliance, were its consequences; Sweden driven back to Pomerania, seemed unable of herself, during the two following years, to maintain her ground in Germany: the victory of Wittstock turned the scale in her favour. . . . The war was prolonged and greatly extended by the active share taken in it by France: first against Spain, and soon against Austria. . . . The German war, after the treaty with Bernhard of Weimar, was mainly carried on by France, by the arming of Germans against Germans. But the pupil of Gustavus Adolphus preferred to fight for himself rather than others, and his early death was almost as much coveted by France as by Austria. The success of the Swedish arms revived under Baner. . . . At the general diet, which was at last convened, the emperor yielded to a general amnesty, or at least what was so designated. But when at the meeting of the ambassadors of the leading powers at Hamburg, the preliminaries were signed, and the time and place of the congress of peace fixed, it was deferred after Richelieu's death, (who was succeeded by Mazarin), by the war, which both parties continued, in the hope of securing better conditions by victory. A new war broke out in the north between Sweden and Denmark, and when at last the congress of peace was opened at Munster and Osnabruck, the negotiations dragged on for three years. . . . The German peace was negotiated at Munster between the emperor and France, and at Osnabruck between the emperor and Sweden; but both treaties, according to express agreement, Oct. 24, 1648, were to be considered as one, under the title of the Westphalian."—A. H. L. Heeren, *A Manual of the History of the Political System of Europe and its Colonies*, pp. 91-99.—"The Peace of Westphalia has met manifold hostile comments, not only in earlier, but also in later, times. German patriots complained that by it the unity of the Empire was rent; and indeed the connection of the States, which even before was loose, was relaxed

to the extreme. This was, however, an evil which could not be avoided, and it had to be accepted in order to prevent the French and Swedes from using their opportunity for the further enslavement of the land. . . . The religious parties also made objections to the peace. The strict Catholics condemned it as a work of inexcusable and arbitrary injustice. . . . The dissatisfaction of the Protestants was chiefly with the recognition of the Ecclesiastical Reservation. They complained also that their brethren in the faith were not allowed the free exercise of their religion in Austria. Their hostility was limited to theoretical discussions, which soon ceased when Louis XIV. took advantage of the preponderance which he had won to make outrageous assaults upon Germany, and even the Protestants were compelled to acknowledge the Emperor as the real defender of German independence."—A. A. D. 1672-1714.—The wars with Louis XIV. of France: War of the Grand Alliance.—Peace of Ryswick.—"The leading principle of the reign [in France] of Louis XIV. . . . is the principle of war with the dynasty of Charles V.—the elder branch of which reigned in Spain, while the descendants of the younger branch occupied the imperial throne of Germany. . . . At the death of Mazarin, or to speak more correctly, immediately after the death of Philip IV., . . . the early ambition of Louis XIV. sought to prevent the junior branch of the Austrian dynasty from succeeding to the inheritance of the elder branch. He had no desire to see reconstituted under the imperial sceptre of Germany the monarchy which Charles V. had at one time wished to transmit entire to his son, but which, worn out and weakened, he subsequently allowed without regret to be divided between his son and his brother. Before making war upon Austria, Louis XIV. cast his eyes upon a portion of the territory belonging to Spain, and the expedition against Holland, begun in 1672 [see NETHERLANDS (HOLLAND): A. D. 1672-1674, and 1674-1678], for the purpose of absorbing the Spanish provinces by overwhelming them, opened the series of his vast enterprises. His first great war was, historically speaking, his first great fault. He failed in his object: for at the end of six campaigns, during

which the French armies obtained great and deserved success. Holland remained unconquered. Thus was Europe warned that the lust of conquest of a young monarch, who did not himself possess military genius, but who found in his generals the resources and ability in which he was himself deficient, would soon threaten her independence. Condé and Turenne, after having been rebellious subjects under the Regency, were about to become the first and the most illustrious lieutenants of Louis XIV. Europe, however, though warned, was not immediately ready to defend herself. It was from Austria, more directly exposed to the dangers of the great war now commencing, that the first systematic resistance ought to have come. But Austria was not prepared to play such a part; and the Emperor Leopold possessed neither the genius nor the wish for it. He was, in fact, nothing more than the nominal head of Germany. . . . Such was the state of affairs in Europe when William of Orange first made his appearance on the stage. . . . The old question of supremacy, which Louis XIV. wished to fight out as a duel with the House of Austria, was now about to change its aspect, and, owing to the presence of an unexpected genius, to bring into the quarrel other powers besides the two original competitors. The foe of Louis XIV. ought by rights to have been born on the banks of the Danube, and not on the shores of the North Sea. In fact, it was Austria that at that moment most needed a man of genius, either on the throne or at the head of affairs. The events of the century would, in this case, doubtless have followed a different course: the war would have been less general, and the maritime nations would not have been involved in it to the same degree. . . . The treaties of peace would have been signed in some small place in France or Germany, and not in two towns and a village in Holland, such as Nimeguen, Ryswick, and Utrecht. . . . William of Orange found himself in a position soon to form the Triple Alliance which the very policy of Louis XIV. suggested. For France to attack Holland, when her object was eventually to reach Austria, and keep her out of the Spanish succession, was to make enemies at one and the same time of Spain, of Austria, and of Holland. But if it afterwards required considerable efforts on the part of William of Orange to maintain this alliance, it demanded still more energy to extend it. It formed part of the Stadtholder's ulterior plans to combine the union between himself and the two branches of the Austrian family, with the old Anglo-Swedish Triple Alliance, which had just been dissolved under the strong pressure brought to bear on it by Louis XIV. . . . Louis XIV., whose finances were exhausted, was very soon anxious to make peace, even on the morrow of his most brilliant victories; whilst William of Orange, beaten and retreating, ardently desired the continuance of the war. . . . The Peace of Nimeguen was at last signed, and by it were secured to Louis XIV. Franche-Comté, and some important places in the Spanish Low Countries on his northern frontier [see NIMEGUEN, PEACE OF]. This was the culminating point of the reign of Louis XIV. Although the coalition had prevented him from attaining the full object of his designs against the House of Austria, which had been to absorb by conquest so much of the territory

belonging to Spain as would secure him against the effect of a will preserving the whole inheritance intact in the family, yet his armies had been constantly successful, and many of his opponents were evidently tired of the struggle. . . . Some years passed thus, with the appearance of calm. Europe was conquered; and when peace was broken, because, as was said, the Treaty of Nimeguen was not duly executed, the events of the war were for some time neither brilliant or important, for several campaigns began and ended without any considerable result. . . . At length Louis XIV. entered on the second half of his reign, which differed widely from the first. . . . During this second period of more than thirty years, which begins after the Treaty of Nimeguen and lasts till the Peace of Utrecht, events succeed each other in complete logical sequence, so that the reign presents itself as one continuous whole, with a regular movement of ascension and decline. . . . The leading principle of the reign remained the same; it was always the desire to weaken the House of Austria, or to secure an advantageous partition of the Spanish succession. But the Emperor of Germany was protected by the coalition, and the King of Spain, whose death was considered imminent, would not make up his mind to die. . . . During the first League, when the Prince of Orange was contending against Louis XIV. with the co-operation of the Emperor of Germany, of the King of Spain, and of the Electors on the Rhine, the religious element played only a secondary part in the war. But we shall see this element make its presence more manifest. . . . Thus the influence of Protestant England made itself more and more felt in the affairs of Europe, in proportion as the government of the Stuarts, from its violence, its unpopularity, and from the opposition offered to it, was approaching its end. . . . The second coalition was neither more united nor more firm than the first had been: but, after the expulsion of the Stuarts, the germs of dissolution no longer threatened the same dangers. . . . The British nation now made itself felt in the balance of Europe, and William of Orange was for the first time in his life successful in war at the head of his English troops. . . . This was the most brilliant epoch of the life of William III. . . . He was now at the height of his glory, after a period of twenty years from his start in life, and his destiny was accomplished; so that until the Treaty of Ryswick, which in 1698 put an end to his hostilities with France, and brought about his recognition as King of England by Louis XIV., not much more was left for him to gain; and he had the skill to lose nothing. . . . The negotiations for the Treaty of Ryswick were conducted with less ability and boldness, and concluded on less advantageous terms, than the Truce of Ratisbon or the Peace of Nimeguen. Nevertheless, this treaty, which secured to Louis the possession of Strasbourg, might, particularly as age was now creeping on him, have closed his military career without disgrace, if the eternal question, for the solution of which he had made so many sacrifices, and which had always held the foremost place in his thoughts, had not remained as unsettled and as full of difficulty as on the day when he had mounted the throne. Charles II. of Spain was not dead, and the question of the Spanish succession, which had so actively

employed the armies of Louis XIV., and taxed his diplomacy, was as undecided as at the beginning of his reign. Louis XIV. saw two alternatives before him: a partition of the succession between the Emperor and himself (a solution proposed thirty years before as a means to avoid war), or else a will in favour of France, followed of course by a recommencement of general hostilities. . . . Louis XIV. proposed in succession two schemes, not, as thirty years before, to the Emperor, but to the King of England, whose power and whose genius rendered him the arbiter of all the great affairs of Europe. . . . In the first of the treaties of partition, Spain and the Low Countries were to be given to the Prince of Bavaria; in the second, to the Archduke Charles. In both, France obtained Naples and Sicily for the Dauphin. . . . Both these arrangements . . . suited both France and England as a pacific solution of the question. . . . But events, as we know, deranged all these calculations, and Charles II., who, by continuing to live, had disappointed so much impatient expectation, by his last will provoked a general war, to be carried on against France by the union of England with the Empire and with Holland—a union which was much strengthened under the new dynasty, and which afterwards embraced the northern states of Germany. . . . William III. died at the age of fifty-two, on the 9th of March, 1702, at the beginning of the War of Succession. After him, the part he was to have played was divided. Prince Eugene, Marlborough, and Heinsius (the Grand Pensionary) had the conduct of political and especially of military affairs, and acted in concert. The disastrous consequences to France of that war, in which William had no part, are notorious. The battles of Blenheim, of Ramilies, and of Oudenarde brought the allied armies on the soil of France, and placed Louis XIV. on the verge of ruin.—J. Van Praet, *Essays on the Political History of the 15th, 16th, and 17th Centuries*, pp. 390-414 and 441-455.

A. D. 1711.—The War of the Spanish Succession.—Its Circumstances changed.—“The death of the Emperor Joseph I., who expired April 17, 1711, at the age of thirty-two, changed the whole character of the War of the Spanish Succession. As Joseph left no male heirs, the

hereditary dominions of the House of Austria devolved to his brother, the Archduke Charles; and though that prince had not been elected King of the Romans, and had therefore to become a candidate for the imperial crown, yet there could be little doubt that he would attain that dignity. Hence, if Charles should also become sovereign of Spain and the Indies, the vast empire of Charles V. would be again united in one person; and that very evil of an almost universal monarchy would be established, the prevention of which had been the chief cause for taking up arms against Philip V. . . . After an interregnum of half a year, during which the affairs of the Empire had been conducted by the Elector Palatine and the Elector of Saxony, as imperial vicars for South and North Germany, the Archduke Charles was unanimously named Emperor by the Electoral College (Oct. 12th). . . . Charles . . . received the imperial crown at Frankfort, Dec. 22d, with the title of Charles VI.”—T. H. Dyer, *Hist. of Modern Europe*, bk. 5, ch. 6 (v. 3).

A. D. 1718-1738.—The question of the Succession.—The Pragmatic Sanction of Charles VI., and its guarantee by the Powers.—“On the death [A. D. 1711] of Joseph, the hopes of the house of Austria and the future destiny of Germany rested on Charles [then, as titular king of Spain, Charles III., ineffectually contesting the Spanish throne with the Bourbon heir, Philip V.; afterwards, as Emperor, Charles VI.] who was the only surviving male of his illustrious family. By that event the houses of Austria, Germany and Europe were placed in a new and critical situation. From a principle of mistaken policy the succession to the hereditary dominions had never been established according to an invariable rule; for it was not clearly ascertained whether males of the collateral branches should be preferred to females in lineal descent, an uncertainty which had frequently occasioned many vehement disputes. To obviate this evil, as well as to prevent future disputes, Leopold [father of Joseph and Charles] had arranged the order of succession: to Joseph he assigned Hungary and Bohemia, and the other hereditary dominions; and to Charles the crown of Spain, and all the territories which belonged to the Spanish inheritance. Should Joseph die without issue male, the whole succession was to descend to Charles, and in case of his death, under similar circumstances, the Austrian dominions were to devolve on the daughters of Joseph in preference to those of Charles. This family compact was signed by the two brothers in the presence of Leopold. Joseph died without male issue; but left two daughters.” He was succeeded by Charles in accordance with the compact. “On

the 2nd of August, 1718, soon after the signature of the Quadruple Alliance, Charles promulgated a new law of succession for the inheritance of the house of Austria, under the name of the Pragmatic Sanction. According to the family compact formed by Leopold, and confirmed by Joseph and Charles, the succession was entailed on the daughters of Joseph in preference to the daughters of Charles, should they both die without issue male. Charles, however, had scarcely ascended the throne, though at that time without children, than he reversed this compact, and settled the right of succession, in default of his male issue, first on his daughters, then on the daughters of Joseph, and afterwards on the queen of Portugal and the other daughters of Leopold. Since the promulgation of that decree, the Empress had borne a son who died in his infancy, and three daughters, Maria Theresa, Maria Anne and Maria Amelia. With a view to insure the succession of these daughters, and to obviate the dangers which might arise from the claims of the Josephine archduchesses, he published the Pragmatic Sanction, and compelled his nieces to renounce their pretensions on their marriages with the electors of Saxony and Bavaria. Aware, however, that the strongest renunciations are disregarded, he obtained from the different states of his extensive dominions the acknowledgement of the Pragmatic Sanction, and made it the great object of his reign, to which he sacrificed every other consideration, to procure the guaranty of the European powers." This guaranty was obtained in treaties with the several powers, as follows: Spain in 1725; Russia, 1726, renewed in 1733; Prussia, 1728; England and Holland, 1731; France, 1738; the Empire, 1732. The inheritance which Charles thus endeavored to secure to his daughter was vast and imposing. "He was by election Emperor of Germany, by hereditary right sovereign of Hungary, Transylvania, Bohemia, Austria, Styria, Carinthia and Carniola, the Tyrol, and the Brisgau, and he had recently obtained Naples and Sicily, the Milanese and the Netherlands."—W. Coxe, *Hist. of the House of Austria*, ch. 80, 84-85 (v. 3).—"The Pragmatic Sanction, though framed to legalize the accession of Maria Theresa, excludes the present Emperor's daughters and his grandchild by postponing the succession of females to that of males in the family of Charles VI."—J. D. Bouchier, *The Heritage of the Hapsburgs* (*Fortnightly Rev.*, March, 1889).

A. D. 1740 (October).—Treachery among the Guarantors of the Pragmatic Sanction.—The inheritance of Marie Theresa disputed.—"The Emperor Charles VI. . . . died on the 20th of October, 1740. His daughter Maria Theresa, the heiress of his dominions with the title of Queen of Hungary, was but twenty-three years of age, without experience or knowledge of business; and her husband Francis, the titular Duke of Lorraine and reigning Grand Duke of Tuscany, deserved the praise of amiable qualities rather than of commanding talents. Her Ministers were timorous, irresolute, and useless: 'I saw them in despair,' writes Mr. Robinson, the British envoy, 'but that very despair was not capable of rendering them bravely desperate.' The treasury was exhausted, the army dispersed, and no General risen to replace Eugene. The succession of Maria Theresa was, indeed, cheerfully acknowledged by her subjects, and seemed to be secured amongst foreign powers by their guarantee of the Pragmatic Sanction; but it soon appeared that such guarantees are mere worthless parchments where there is strong temptation to break and only a feeble army to support them. The principal claimant to the succession was the Elector of Bavaria, who maintained that the will of the Emperor Ferdinand the First devised the Austrian states to his daughter, from whom the Elector descended, on failure of male lineage. It appeared that the original will in the archives at Vienna referred to the failure, not of the male but of the legitimate issue of his sons; but this document, though ostentatiously displayed to all the Ministers of state and foreign ambassadors, was very far from inducing the Elector to desist from his pretensions. As to the Great Powers—the Court of France, the old ally of the Bavarian family, and mindful of its injuries from the House of Austria, was eager to exalt the first by the depression of the latter. The Bourbons in Spain followed the direction of the Bourbons in France. The King of Poland and the Empress of Russia were more friendly in their expressions than in their designs. An opposite spirit pervaded England and Holland, where motives of honour and of policy combined to support the rights of Maria Theresa. In Germany itself the Elector of Cologne, the Bavarian's brother, warmly espoused his cause; and 'the remaining Electors,' says Chesterfield, 'like electors with us, thought it a proper opportunity of making the most of their votes,—and all at the expense of the helpless and abandoned House of Austria!' The first blow, however, came from Prussia, where the King Frederick William had died a few months before, and been succeeded by his son Frederick the Second; a Prince surnamed the Great by poets."—Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713-1783, ch. 23 (v. 3).—"The elector of Bavaria acted in a prompt, honest, and consistent manner. He at once lodged a protest against any disposition of the hereditary estates to the prejudice of his own rights; insisted on the will of Ferdinand I.; and demanded the production of the original text. It was promptly produced. But it was found to convey the succession to the heirs of his daughter, the ancestress of the

elector, not, as he contended, on the failure of male heirs, but in the absence of more direct heirs born in wedlock. Maria Theresa could, however, trace her descent through nearer male heirs, and had, therefore, a superior title. Charles Albert was in any event only one of several claimants. The King of Spain, a Bourbon, presented himself as the heir of the Hapsburg emperor Charles V. The King of Sardinia alleged an ancient marriage contract, from which he derived a right to the duchy of Milan. Even August of Saxony claimed territory by virtue of an antiquated title, which, it was pretended, the renunciation of his wife could not affect. All these were, however, mere vultures compared to the eagle [Frederick of Prussia] which was soon to descend upon its prey."—H. Tuttle, *Hist. of Prussia*, 1740-1745, ch. 2.

A. D. 1740 (October—November).—The War of the Succession.—Conduct of Frederick the Great as explained by himself.—"This Pragmatic Sanction had been guaranteed by France, England, Holland, Sardinia, Saxony, and the Roman empire; nay by the late King Frederic William [of Prussia] also, on condition that the court of Vienna would secure to him the succession of Juliers and Berg. The emperor promised him the eventual succession, and did not fulfil his engagements; by which the King of Prussia, his successor, was freed from this guarantee, to which his father, the late king, had pledged himself, conditionally. . . . Frederic I., when he erected Prussia into a kingdom, had, by that vain grandeur, planted the scion of ambition in the bosom of his posterity; which, soon or late, must fructify. The monarchy he had left to his descendants was, if I may be permitted the expression, a kind of hermaphrodite, which was rather more an electorate than a kingdom. Fame was to be acquired by determining the nature of this being; and this sensation certainly was one of those which strengthened so many motives, conspiring to engage the king in grand enterprises. If the acquisition of the duchy of Berg had not even met with almost insurmountable impediments, it was in itself so small that the possession would add little grandeur to the house of Brandenburg. These reflections occasioned the king to turn his views toward the house of Austria, the succession of which would become matter of litigation, at the death of the emperor, when the throne of the Cæsars should be vacant. That event must be favourable to the distinguished part which the king had to act in Germany, by the various claims of the houses of Saxony and Bavaria to these states; by the number of candidates which might canvass for the Imperial crown; and by the projects of the court of Versailles, which, on such an occasion, must naturally profit by the troubles that the death of Charles VI. could not fail to excite. This accident did not long keep the world in expectation. The emperor ended his days at the palace La Favorite, on the 26th [20th] day of October, 1740. The news arrived at Rheinsberg when the king was ill of a fever. . . . He immediately resolved to reclaim the principalities of Silesia; the rights of his house to which [long dormant, the claim dating back to a certain covenant of heritage-brotherhood with the duke of Liegnitz, in 1537, which the emperor of that day caused to be annulled by the States of Bohemia] were incontestable; and he prepared, at the same time, to support these pre-

tensions, if necessary, by arms. This project accomplished all his political views; it afforded the means of acquiring reputation, of augmenting the power of the state, and of terminating what related to the litigious succession of the duchy of Berg. . . . The state of the court of Vienna, after the death of the emperor, was deplorable. The finances were in disorder; the army was ruined and discouraged by ill success in its wars with the Turks; the ministry disunited, and a youthful unexperienced princess at the head of the government, who was to defend the succession from all claimants. The result was that the government could not appear formidable. It was besides impossible that the king should be destitute of allies. . . . The war which he might undertake in Silesia was the only offensive war that could be favoured by the situation of his states, for it would be carried on upon his frontiers, and the Oder would always furnish him with a sure communication. . . . Add to these reasons, an army fit to march, a treasury ready prepared, and, perhaps, the ambition of acquiring renown. Such were the causes of the war which the king declared against Maria Theresa of Austria, queen of Hungary and Bohemia."—Frederick II. (Frederick the Great), *Hist. of My Own Times: Posthumous Works* (trans. by Holcroft), v. 1, ch. 1-2.

A. D. 1740-1741.—The War of the Succession: Faithlessness of the King of Prussia.—The Macaulay verdict.—"From no quarter did the young queen of Hungary receive stronger assurances of friendship and support than from the King of Prussia. Yet the King of Prussia, the 'Anti-Machiavel,' had already fully determined to commit the great crime of violating his plighted faith, of robbing the ally whom he was bound to defend, and of plunging all Europe into a long, bloody, and desolating war, and all this for no end whatever except that he might extend his dominions and see his name in the gazettes. He determined to assemble a great army with speed and secrecy, to invade Silesia before Maria Theresa should be apprized of his design, and to add that rich province to his kingdom. . . . Without any declaration of war, without any demand for reparation, in the very act of pouring forth compliments and assurances of good will, Frederic commenced hostilities. Many thousands of his troops were actually in Silesia before the Queen of Hungary knew that he had set up any claim to any part of her territories. At length he sent her a message which could be regarded only as an insult. If she would but let him have Silesia, he would, he said, stand by her against any power which should try to deprive her of her other dominions: as if he was not already bound to stand by her, or as if his new promise could be of more value than the old one. It was the depth of winter. The cold was severe, and the roads deep in mire. But the Prussians pressed on. Resistance was impossible. The Austrian army was then neither numerous nor efficient. The small portion of that army which lay in Silesia was unprepared for hostilities. Glogau was blockaded; Breslau opened its gates; Ohlau was evacuated. A few scattered garrisons still held out; but the whole open country was subjugated: no enemy ventured to encounter the king in the field; and, before the end of January, 1741, he returned to receive the congratula-

tions of his subjects at Berlin. Had the Silesian question been merely a question between Frederic and Maria Theresa it would be impossible to acquit the Prussian king of gross perfidy. But when we consider the effects which his policy produced, and could not fail to produce, on the whole community of civilized nations, we are compelled to pronounce a condemnation still more severe. . . . The selfish rapacity of the king of Prussia gave the signal to his neighbours. . . . The evils produced by this wickedness were felt in lands where the name of Prussia was unknown; and, in order that he might rob a neighbour whom he had promised to defend, black men fought on the coast of Coromandel, and red men scalped each other by the great lakes of North America. Silesia had been occupied without a battle; but the Austrian troops were advancing to the relief of the fortresses which still held out. In the spring Frederic rejoined his army. He had seen little of war, and had never commanded any great body of men in the field. . . . Frederic's first battle was fought at Mollwitz [April 10, 1741], and never did the career of a great commander open in a more inauspicious manner. His army was victorious. Not only, however, did he not establish his title to the character of an able general, but he was so unfortunate as to make it doubtful whether he possessed the vulgar courage of a soldier. The cavalry, which he commanded in person, was put to flight. Unaccustomed to the tumult and carnage of a field of battle, he lost his self-possession, and listened too readily to those who urged him to save himself. His English gray carried him many miles from the field, while Schwerin, though wounded in two places, manfully upheld the day. The skill of the old Field-Marshal and the steadiness of the Prussian battalions prevailed, and the Austrian army was driven from the field with the loss of 8,000 men. The news was carried late at night to a mill in which the king had taken shelter. It gave him a bitter pang. He was successful; but he owed his success to dispositions which others had made, and to the valour of men who had fought while he was flying. So unpromising was the first appearance of the greatest warrior of that age."—Lord Macaulay, *Frederic the Great* (*Essays*, v. 4).

A. D. 1741 (April—May).—The War of the Succession: French responsibility.—The Carlyle verdict.—"The battle of Mollwitz went off like a signal shot among the Nations; intimating that they were, one and all, to go battling. Which they did, with a witness; making a terrible thing of it, over all the world, for above seven years to come. . . . Not that Mollwitz kindled Europe; Europe was already kindled for some two years past;—especially since the late Kaiser died, and his Pragmatic Sanction was superadded to the other troubles afoot. But ever since that image of Jenkins's Ear had at last blazed-up in the slow English brain, like a fiery constellation or Sign in the Heavens, symbolic of such injustices and unendurabilities, and had lighted the Spanish-English War [see ENGLAND: A. D. 1739-1741], Europe was slowly but pretty surely taking fire. France 'could not see Spain humbled,' she said: England (in its own dim feeling, and also in the fact of things), could not do at all without considerably humbling Spain. France, endlessly interested in that

Spanish-English matter, was already sending out fleets, firing shots,—almost, or altogether, putting her hand in it. 'In which case, will not, must not, Austria help us?' thought England,—and was asking, daily, at Vienna . . . when the late Kaiser died. . . . But if not as cause, then as signal, or as signal and cause together (which it properly was), the Battle of Mollwitz gave the finishing stroke and set all in motion. . . . For directly on the back of Mollwitz, there ensued, first, an explosion of Diplomatic activity, such as was never seen before; Excellencies from the four winds taking wing towards Friedrich; and talking and insinuating, and fencing and furling, after their sort, in that Silesian camp of his, the centre being there. A universal rookery of Diplomats, whose loud cackle is now as if gone mad to us; their work wholly fallen putrescent and avoidable, dead to all creatures. And secondly, in the train of that, there ensued a universal European War, the French and the English being chief parties in it; which abounds in battles and feats of arms, spirited but delirious, and cannot be got stilled for seven or eight years to come; and in which Friedrich and his War swim only as an intermittent Episode henceforth. . . . The first point to be noted is, Where did it originate? To which the answer mainly is . . . with Monseigneur, the *Maréchal de Belleisle* principally; with the ambitious cupidities and baseless vanities of the French Court and Nation, as represented by Belleisle. . . . The English-Spanish War had a basis to stand on in this Universe. The like had the Prussian-Austrian one; so all men now admit. If Friedrich had not business there, what man ever had in an enterprise he ventured on? Friedrich, after such trial and proof as has seldom been, got his claims on Schlesien allowed by the Destinies. . . . Friedrich had business in this War; and Maria Theresa versus Friedrich had likewise cause to appear in Court, and do her utmost pleading against him. But if we ask, What Belleisle or France and Louis XV. had to do there? the answer is rigorously Nothing. Their own windy vanities, ambitions, sanctioned not by fact and the Almighty Powers, but by Phantasm and the babble of Versailles; transcendent self-conceit, intrinsically insane; pretensions over their fellow-creatures which were without basis anywhere in Nature, except in the French brain; it was this that brought Belleisle and France into a German War. And Belleisle and France having gone into an Anti-Pragmatic War, the unlucky George and his England were dragged into a Pragmatic one,—quitting their own business, on the Spanish Main, and hurrying to Germany,—in terror as at Doomsday, and zeal to save the Keystone of Nature there. That is the notable point in regard to this War: That France is to be called the author of it, who, alone of all the parties, had no business there whatever."—T. Carlyle, *Hist. of Friedrich II.*, bk. 12, ch. 11 (v. 4).—See, also, FRANCE: A. D. 1733.

A. D. 1741 (May—June).—Mission of Belleisle.—The thickening of the Plot.—"The defeat of Maria Theresa's only army [at Mollwitz] swept away all the doubts and scruples of France. The fiery Belleisle had already set out upon his mission to the various German courts, armed with powers which were reluctantly granted by the cardinal [Fleury, the French minister], and were promptly enlarged by the ambassador to

suit his own more ambitious views of the situation. He travelled in oriental state. . . . The almost royal pomp with which he strode into the presence of princes of the blood, the copious eloquence with which he pleaded his cause, . . . were only the outward decorations of one of the most iniquitous schemes ever devised by an unscrupulous diplomacy. The scheme, when stripped of all its details, did not indeed at first appear absolutely revolting. It proposed simply to secure the election of Charles Albert of Bavaria as emperor, an honor to which he had a perfect right to aspire. But it was difficult to obtain the votes of certain electors without offering them the prospect of territorial gains, and impossible for Charles Albert to support the imperial dignity without greater revenues than those of Bavaria. It was proposed, therefore, that provinces should be taken from Maria Theresa herself, first to purchase votes against her own husband, and then to swell the income of the successful rival candidate. The three episcopal electors were first visited, and subjected to various forms of persuasion,—bribes, flattery, threats,—until the effects of the treatment began to appear; the count palatine was devoted to France; and these four with Bavaria made a majority of one. But that was too small a margin for Belleisle's aspirations, or even for the safety of his project. The four remaining votes belonged to the most powerful of the German states, Prussia, Hanover, Saxony and Bohemia. . . . Bohemia, if it voted at all, would of course vote for the grand-duke Francis [husband of Maria Theresa]. Saxony and Hanover were already negotiating with Maria Theresa; and it was well understood that Austria could have Frederick's support by paying his price." Austria refused to pay the price, and Frederick signed a treaty with the king of France at Breslau on the 4th of June, 1741. "The essence of it was contained in four secret articles. In these the king of Prussia renounced his claim to Jülich-Berg in behalf of the house of Sulzbach, and agreed to give his vote to the elector of Bavaria for emperor. The king of France engaged to guarantee Prussia in the possession of Lower Silesia, to send within two months an army to the support of Bavaria, and to provoke an immediate rupture between Sweden and Russia."—H. Tuttle, *Hist. of Prussia*, 1740-1745, ch. 4.

ALSO IN: W. Coxe, *Hist. of the House of Austria*, ch. 99 (v. 3).

A. D. 1741 (June-September).—Maria Theresa and the Hungarians.—"During these anxious summer months Maria Theresa and the Austrian court had resided mainly at Presburg, in Hungary. Here she had been occupied in the solution of domestic as well as international problems. The Magyars, as a manly and chivalrous race, had been touched by the perilous situation of the young queen; but, while ardently protesting their loyalty, insisted not the less on the recognition of their own inalienable rights. These had been inadequately observed in recent years, and in consequence no little disaffection prevailed in Hungary. The magnates resolved, therefore, as they had resolved at the beginning of previous reigns, to demand the restoration of all their rights and privileges. But it does not appear that they wished to take any ungenerous advantage of the sex or the necessities of Maria Theresa. They were argu-

mentative and stubborn, yet not in a bargaining, mercenary spirit. They accepted in June a qualified compliance with their demands; and when on the 25th of that month the queen appeared before the diet to receive the crown of St. Stephen, and, according to custom, waved the great sword of the kingdom toward the four points of the compass, toward the north and the south, the east and the west, challenging all enemies to dispute her right, the assembly was carried away by enthusiasm, and it seemed as if an end had forever been put to constitutional technicalities. Such was, however, not the case. After the excitement caused by the dramatic coronation had in a measure subsided, the old contentions revived, as bitter and vexatious as before. These concerned especially the manner in which the administration of Hungary should be adjusted to meet the new state of things. Should the chief political offices be filled by native Hungarians, as the diet demanded? Could the co-regency of the grand-duke, which was ardently desired by the queen, be accepted by the Magyars? For two months the dispute over these problems raged at Presburg, until finally Maria Theresa herself found a bold, ingenious, and patriotic solution. The news of the Franco-Bavarian alliance and the fall of Passau determined her to throw herself completely upon the gallantry and devotion of the Magyars. It had long been the policy of the court of Vienna not to entrust the Hungarians with arms. . . . But Maria Theresa had not been robbed, in spite of her experience with France and Prussia, of all her faith in human nature. She took the responsibility of her decision, and the result proved that her insight was correct. On the 11th of September she summoned the members of the diet before her, and, seated on the throne, explained to them the perilous situation of her dominions. The danger, she said, threatened herself, and all that was dear to her. Abandoned by all her allies, she took refuge in the fidelity and the ancient valor of the Hungarians, to whom she entrusted herself, her children, and her empire. Here she broke into tears, and covered her face with her handkerchief. The diet responded to this appeal by proclaiming the 'insurrection' or the equipment of a large popular force for the defence of the queen. So great was the enthusiasm that it nearly swept away even the original aversion of the Hungarians to the grand-duke Francis, who, to the queen's delight, was finally, though not without some murmurs, accepted as co-regent. . . . This uprising was organized not an hour too early, for dangers were pressing upon the queen from every side."—H. Tuttle, *Hist. of Prussia*, 1740-1745, ch. 4.

A. D. 1741 (August-November).—The French-Bavarian onset.—"France now began to act with energy. In the month of August [1741] two French armies crossed the Rhine, each about 40,000 strong. The first marched into Westphalia, and frightened George II. into concluding a treaty of neutrality for Hanover, and promising his vote to the Elector of Bavaria. The second advanced through South Germany on Passau, the frontier city of Bavaria and Austria. As soon as it arrived on German soil, the French officers assumed the blue and white cockade of

Bavaria, for it was the cue of France to appear only as an auxiliary, and the nominal command of her army was vested in the Elector. From Passau the French and Bavarians passed into Upper Austria, and on Sept. 11 entered its capital, Linz, where the Elector assumed the title of Archduke. Five days later Saxony joined the allies. Sweden had already declared war on Russia. Spain trumped up an old claim and attacked the Austrian dominions in Italy. It seemed as if Belleisle's schemes were about to be crowned with complete success. Had the allies pushed forward, Vienna must have fallen into their hands. But the French did not wish to be too victorious, lest they should make the Elector too powerful, and so independent of them. Therefore, after six weeks' delay, they turned aside to the conquest of Bohemia."—F. W. Longman, *Frederick the Great and the Seven Years War*, ch. 4, sect. 4. —"While . . . a portion of the French troops, under the command of the Count de Segur, was left in Upper Austria, the remainder of the allied army turned towards Bohemia; where they were joined by a body of Saxons, under the command of Count Rutowsky. They took Prague by assault, on the night of the 25th of November, while the Grand Duke of Tuscany, the husband of Maria Theresa, was marching to his relief. In Prague, 3,000 prisoners were taken. The elector of Bavaria hastened there, upon hearing of the success of his arms, was crowned King of Bohemia, during the month of December, and received the oath of fidelity from the constituted authorities. But while he was thus employed, the Austrian general, Khevenhuller, had driven the Count de Segur out of Austria, and had himself entered Bavaria; which obliged the Bavarian army to abandon Bohemia and hasten to the defence of their own country."—Lord Dover, *Life of Frederick II.*, bk. 2, ch. 2 (v. 1).

A. D. 1741 (October).—Secret Treaty with Frederick.—Lower Silesia conceded to him. —**Austrian success.**—"By October, 1741, the fortunes of Maria Theresa had sunk to the lowest ebb, but a great revulsion speedily set in. The martial enthusiasm of the Hungarians, the subsidy from England, and the brilliant military talents of General Khevenhuller, restored her armies. Vienna was put in a state of defence, and at the same time jealousies and suspicion made their way among the confederates. The Electors of Bavaria and Saxony were already in some degree divided; and the Germans, and especially Frederick, were alarmed by the growing ascendancy, and irritated by the haughty demeanour of the French. In the moment of her extreme depression, the Queen consented to a concession which England had vainly urged upon her before, and which laid the foundation of her future success. In October 1741 she entered into a secret convention with Frederick [called the convention of Ober-Schnellendorf], by which that astute sovereign agreed to desert his allies, and desist from hostilities, on condition of ultimately obtaining Lower Silesia, with Breslau and Neisse. Every precaution was taken to ensure secrecy. It was arranged that Frederick should continue to besiege Neisse, that the town should ultimately be surrendered to him, and that his troops should then retire into winter quarters, and take no further part in the war. As the

sacrifice of a few more lives was perfectly indifferent to the contracting parties, and in order that no one should suspect the treachery that was contemplated, Neisse, after the arrangement had been made for its surrender, was subjected for four days and four nights to the horrors of bombardment. Frederick, at the same time talked, with his usual cynical frankness, to the English ambassador about the best way of attacking his allies the French; and observed, that if the Queen of Hungary prospered, he would perhaps support her, if not—everyone must look for himself. He only assented verbally to this convention, and, no doubt, resolved to await the course of events, in order to decide which Power it was his interest finally to betray; but in the meantime the Austrians obtained a respite, which enabled them to throw their whole forces upon their other enemies. Two brilliant campaigns followed. The greater part of Bohemia was recovered by an army under the Duke of Lorraine, and the French were hemmed in at Prague; while another army, under General Khevenhuller, invaded Upper Austria, drove 10,000 French soldiers within the walls of Linz, blockaded them, defeated a body of Bohemians who were sent to the rescue, compelled the whole French army to surrender, and then, crossing the frontier, poured in a resistless torrent over Bavaria. The fairest plains of that beautiful land were desolated by hosts of irregular troops from Hungary, Croatia, and the Tyrol; and on the 12th of February the Austrians marched in triumph into Munich. On that very day the Elector of Bavaria was crowned Emperor of Germany, at Frankfort, under the title of Charles VII., and the imperial crown was thus, for the first time, for many generations, separated from the House of Austria."—W. E. H. Lecky, *Hist. of Eng.*, 18th Century, ch. 3 (v. 1).

A. D. 1741-1743.—Successes in Italy. See ITALY: A. D. 1741-1743.

A. D. 1742 (January—May).—Frederick breaks faith again.—Battle of Chotusitz.—"The Queen of Hungary had assembled in the beginning of the year two considerable armies in Moravia and Bohemia, the one under Prince Lobkowitz, to defend the former province, and the other commanded by Prince Charles of Lorraine, her brother-in-law. This young Prince possessed as much bravery and activity as Frederick, and had equally with him the talent of inspiring attachment and confidence. . . . Frederick, alarmed at these preparations and the progress of the Austrians in Bavaria, abruptly broke off the convention of Ober-Schnellendorf, and recommenced hostilities. . . . The King of Prussia became apprehensive that the Queen of Hungary would again turn her arms to recover Silesia. He therefore dispatched Marshal Schwerin to seize Olmutz and lay siege to Glatz, which surrendered after a desperate resistance on the 9th of January. Soon after this event, the King rejoined his army, and endeavoured to drive the Austrians from their advantageous position in the southern parts of Bohemia, which would have delivered the French troops in the neighbourhood and checked the progress of Khevenhüller in Bavaria. The king advanced to Iglau, on the frontiers of Bohemia, and, oc-

cupying the banks of the Taya, made irruptions into Upper Austria, his hussars spreading terror even to the gates of Vienna. The Austrians drew from Bavaria a corps of 10,000 men to cover the capital, while Prince Charles of Lorraine, at the head of 50,000 men, threatened the Prussian magazines in Upper Silesia, and by this movement compelled Frederick to detach a considerable force for their protection, and to evacuate Moravia, which he had invaded. Broglie, who commanded the French forces in that country, must now have fallen a sacrifice, had not the ever-active King of Prussia brought up 30,000 men, which, under the Prince of Anhalt-Dessau, entering Bohemia, came up with Prince Charles at Czaslau, about thirty-five miles from Prague, before he could form a junction with Prince Lobkowitz. Upon this ensued [May 17, 1742] what is known in history as the battle of Czaslau [also, and more commonly, called the battle of Chotusitz]. . . . The numbers in the two armies were nearly equal, and the action was warmly contested on both sides. . . . The Prussians remained masters of the field, with 18 cannon, two pairs of colours and 1,200 prisoners; but they indeed paid dearly for the honour, for it was computed that their loss was equal to that of their enemy, which amounted to 7,000 men on either side; while the Prussian cavalry, under Field-Marshal Buddenbroch, was nearly ruined. . . . Although in this battle the victory was, without doubt, on the side of the Prussians, yet the immediate consequences were highly favourable to the Queen of Hungary. The King was disappointed of his expected advantages, and conceived a disgust to the war. He now lowered his demands and made overtures of accommodation, which, on the 11th of June, resulted in a treaty of peace between the two crowns, which was signed at Breslau under the mediation of the British Ambassador."—Sir E. Cust, *Annals of the Wars of the 18th Century*, v. 2, p. 19.

ALSO IN: T. Carlyle, *Hist. of Friedrich II. of Prussia*, bk. 13, ch. 13 (v. 5).

A. D. 1742 (June).—Treaty of Breslau with the King of Prussia.—"The following are the preliminary articles which were signed at Breslau: 1. The queen of Hungary ceded to the king of Prussia Upper and Lower Silesia, with the principality of Glatz; except the towns of Troppau, Jaegendorff and the high mountains situated beyond the Oppa. 2. The Prussians undertook to repay the English 1,700,000 crowns; which sum was a mortgage loan on Silesia. The remaining articles related to a suspension of arms, an exchange of prisoners, and the freedom of religion and trade. Thus was Silesia united to the Prussian States. Two years were sufficient for the conquest of that important province. The treasures which the late king had left were almost expended; but provinces that do not cost more than seven or eight millions are cheaply purchased."—Frederic II., *Hist. of My Own Times (Posthumous Works)*, v. 1, ch. 6.

A. D. 1742 (June—December).—Expulsion of the French from Bohemia.—Belleisle's retreat from Prague.—"The Austrian arms began now to be successful in all quarters. Just before the signature of the preliminaries, Prince Lobkowitz, who was stationed at Budweiss with 10,000 men, made an attack on Frauenberg; Broglie and Belleisle advanced from Piseck to relieve the town, and a combat took place at Sahay, in

which the Austrians were repulsed with the loss of 500 men. This trifling affair was magnified into a decisive victory. . . . Marshal Broglie, elated with this advantage, and relying on the immediate junction of the King of Prussia, remained at Frauenberg in perfect security. But his expectations were disappointed; Frederic had already commenced his secret negotiations, and Prince Charles was enabled to turn his forces against the French. Being joined by Prince Lobkowitz, they attacked Broglie, and compelled him to quit Frauenberg with such precipitation that his baggage fell into the hands of the light troops, and the French retreated towards Branau, harassed by the Croats and other irregulars. . . . The Austrians, pursuing their success against the French, drove Broglie from Branau, and followed him to the walls of Prague, where he found Belleisle. . . . After several consultations, the two generals called in their posts, and secured their army partly within the walls and partly within a peninsula of the Moldau. . . . Soon afterwards the duke of Lorraine joined the army [of Prince Charles], which now amounted to 70,000 men, and the arrival of the heavy artillery enabled the Austrians to commence the siege."—W. Coxe, *Hist. of the House of Austria*, ch. 102 (v. 3).—"To relieve the French at Prague, Marshal Maillebois was directed to advance with his army from Westphalia. At these tidings Prince Charles changed the siege of Prague to a blockade, and marching against his new opponents, checked their progress on the Bohemian frontier; the French, however, still occupying the town of Egra. It was under these circumstances that Belleisle made his masterly and renowned retreat from Prague. In the night of the 16th of December, he secretly left the city at the head of 11,000 foot and 3,000 horse, having deceived the Austrians' vigilance by the feint of a general forage in the opposite quarter; and pushed for Egra through a hostile country, destitute of resources and surrounded by superior enemies. His soldiers, with no other food than frozen bread, and compelled to sleep without covering on the snow and ice, perished in great numbers; but the gallant spirit of Belleisle triumphed over every obstacle; he struck through morasses almost untrodden before, offered battle to Prince Lobkowitz, who, however, declined engaging, and at length succeeded in reaching the other French army with the flower of his own. The remnant left at Prague, and amounting only to 6,000 men, seemed an easy prey; yet their threat of firing the city, and perishing beneath its ruins, and the recent proof of what despair can do, obtained for them honourable terms, and the permission of rejoining their comrades at Egra. But in spite of all this skill and courage in the French invaders, the final result to them was failure; nor had they attained a single permanent advantage beyond their own safety in retreat. Maillebois and De Broglie took up winter quarters in Bavaria, while Belleisle led back his division across the Rhine; and it was computed that, of the 35,000 men whom he had first conducted into Germany, not more than 8,000 returned beneath his banner."—Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713–1783, ch. 24 (v. 3).—"Thus, at the termination of the campaign, all Bohemia was regained, except Egra; and on the 12th of May, 1743, Maria Theresa was soon afterwards crowned at Prague, to the recovery of which, says her

great rival, her firmness had more contributed than the force of her arms. The only reverse which the Austrians experienced in the midst of their successes was the temporary loss of Bavaria, which, on the retreat of Kevenhüller, was occupied by marshal Seckendorf; and the Emperor made his entry into Munich on the 2d of October."—W. Coxe, *Hist. of the House of Austria*, ch. 103 (v. 3).

A. D. 1743.—England drawn into the conflict.—The Pragmatic Army.—The Battle of Dettingen.—"The cause of Maria Theresa had begun to excite a remarkable enthusiasm in England. . . . The convention of neutrality entered into by George II. in September 1741, and the extortion of his vote for the Elector of Bavaria, properly concerned that prince only as Elector of Hanover; yet, as he was also King of England, they were felt as a disgrace by the English people. The elections of that year went against Walpole, and in February 1742 he found himself compelled to resign. He was succeeded in the administration by Pulteney, Earl of Bath, though Lord Carteret was virtually prime minister. Carteret was an ardent supporter of the cause of Maria Theresa. His accession to office was immediately followed by a large increase of the army and navy; five millions were voted for carrying on the war, and a subsidy of £500,000 for the Queen of Hungary. The Earl of Stair, with an army of 16,000 men, afterwards reinforced by a large body of Hanoverians and Hessians in British pay, was despatched into the Netherlands to cooperate with the Dutch. But though the States-General, at the instance of the British Cabinet, voted Maria Theresa a subsidy, they were not yet prepared to take an active part in a war which might ultimately involve them in hostilities with France. The exertions of the English ministry in favour of the Queen of Hungary had therefore been confined during the year 1742 to diplomacy, and they had helped to bring about . . . the Peace of Breslau. In 1743 they were able to do more." In April, 1743, the Emperor, Charles VII., regained possession of Bavaria and returned to Munich, but only to be driven out again by the Austrians in June. The Bavarians were badly beaten at Simbach (May 9), and Munich was taken (June 12) after a short bombardment. "Charles VII. was now again obliged to fly, and took refuge at Augsburg. At his command, Seckendorf [his general] made a convention with the Austrians at the village of Niederschönfeld, by which he agreed to abandon to them Bavaria, on condition that Charles's troops should be allowed to occupy unmolested quarters between Franconia and Suabia. Maria Theresa seemed at first indisposed to ratify even terms so humiliating to the Emperor. She had become perhaps a little too much exalted by the rapid turn of fortune. She had caused herself to be crowned in Prague. She had received the homage of the Austrians, and entered Vienna in a sort of triumph. She now dreamt of nothing less than conquering Lorraine for herself, Alsace for the Empire; of hurling Charles VII. from the Imperial throne, and placing on it her own consort." She was persuaded, however, to consent at length to the terms of the Niederschönfeld convention. "Meanwhile the allied army of English and Germans, under the Earl of Stair, nearly 40,000 strong, which, from its destined object, had assumed the name of the 'Pragmatic

Army,' had crossed the Meuse and the Rhine in March and April, with a view to cut off the army of Bavaria from France. George II. had not concealed his intention of breaking the Treaty of Hanover of 1741, alleging as a ground that the duration of the neutrality stipulated in it had not been determined; and on June 19th he had joined the army in person. He found it in a most critical position. Lord Stair, who had never distinguished himself as a general, and was now falling into dotage, had led it into a narrow valley near Aschaffenburg, between Mount Spessart and the river Main; while Marshal Noailles [commanding the French], who had crossed the Rhine towards the end of April, by seizing the principal fords of the Main, both above and below the British position, had cut him off both from his magazines at Hanau, and from the supplies which he had expected to procure in Franconia. Nothing remained but for him to fight his way back to Hanau." In the battle of Dettingen, which followed (June 27), all the advantages of the French in position were thrown away by the ignorant impetuosity of the king's nephew, the Duke of Grammont, who commanded one division, and they suffered a severe defeat. "The French are said to have lost 6,000 men and the British half that number. It is the last action in which a king of England has fought in person. But George II., or rather Lord Stair, did not know how to profit by his victory. Although the Pragmatic Army was joined after the battle of Dettingen by 15,000 Dutch troops, under Prince Maurice of Nassau, nothing of importance was done during the remainder of the campaign."—T. H. Dyer, *Hist. of Modern Europe*, bk. 6, ch. 4 (v. 3).

A. D. 1743-1744.—The Prussian King strikes in again.—The Union of Frankfurt.—Siege and capture of Prague.—"Everywhere Austria was successful, and Frederick had reason to fear for himself unless the tide of conquest could be stayed. He explains in the 'Histoire de Mon Temps' that he feared lest France should abandon the cause of the Emperor, which would mean that the Austrians, who now boldly spoke of compensation for the war, would turn their arms against himself. . . . France was trembling, not for her conquests, but for her own territory. After the battle of Dettingen, the victorious Anglo-Hanoverian force was to cross the Rhine above Mayence and march into Alsace, while Prince Charles of Lorraine, with a strong Austrian army, was to pass near Basle and occupy Lorraine, taking up his winter quarters in Burgundy and Champagne. The English crossed without any check and moved on to Worms, but the Austrians failed in their attempt. Worms became a centre of intrigue, which Frederick afterwards called 'Cette abyme de mauvaise foi.' The Dutch were persuaded by Lord Carteret to join the English, and they did at last send 14,000 men, who were never of

the least use. Lord Carteret also detached Charles Emanuel, King of Sardinia, from his French leanings, and persuaded him to enter into the Austro-English alliance [by the treaty of Worms, Sept. 13, 1743, which conceded to the King of Sardinia Finale, the city of Placentia, with some other small districts and gave him command of the allied forces in Italy]. It was clear that action could not be long postponed, and Frederick began to recognize the necessity of a new war. His first anxiety was to guard himself against interference from his northern and eastern neighbours. He secured, as he hoped, the neutrality of Russia by marrying the young princess of Anhalt-Zerbst, afterwards the notorious Empress Catherine, with the Grand-Duke Peter of Russia, nephew and heir to the reigning Empress Elizabeth. . . . Thus strengthened, as he hoped, in his rear and flank, and having made the commencement of a German league called the Union of Frankfurt, by which Hesse and the Palatinate agreed to join Frederick and the Kaiser, he concluded on the 5th of June, 1744, a treaty which brought France also into this alliance. It was secretly agreed that Frederick was to invade Bohemia, conquer it for the Kaiser, and have the districts of Königgrätz, Bunzlau, and Leitmeritz to repay him for his trouble and costs; while France, which was all this time at war with Austria and England, should send an army against Prince Charles and the English. . . . The first stroke of the coming war was delivered by France. Louis XV. sent a large army into the Netherlands under two good leaders, Noailles and Maurice de Saxe. Urged by his mistress, the Duchesse de Châteauroux, he joined it himself early, and took the nominal command early in June. . . . The towns [Menin, Ypres, Fort Knoque, Furnes] rapidly fell before him, and Marshal Wade, with the Anglo-Dutch-Hanoverian army, sat still and looked at the success of the French. But on the night of the 30th June—1st July, Prince Charles crossed the Rhine by an operation which is worth the study of military students, and invaded Alsace, the French army of observation falling back before him. Louis XV. hurried back to interpose between the Austrians and Paris. . . . Maurice de Saxe was left in the Netherlands with 45,000 men. Thus the French army was paralysed, and the Austrian army in its turn was actually invading France. At this time Frederick struck in. He sent word to the King that, though all the terms of their arrangement had not yet been fulfilled, he would at once invade Bohemia, and deliver a stroke against Prague which would certainly cause the retreat of Prince Charles with his 70,000 men. If the French army would follow Prince Charles in his retreat, Frederick would attack him, and between France and Prussia the Austrian army would certainly be crushed, and Vienna be at their mercy. This was no doubt an excellent plan of campaign, but, like the previous operations concerted with Broglio, it depended for success upon the good faith of the French, and this turned out to be a broken reed. On the 7th of August the Prussian ambassador at Vienna gave notice of the Union of Frankfurt and withdrew from the court of Austria; and on the 15th the Prussian army was put in march upon Prague [opening what is called the Second Silesian War]. Frederick's forces moved in

three columns, the total strength being over 80,000. . . . Maria Theresa was now again in great danger, but as usual retained her high courage, and once more called forth the enthusiasm of her Hungarian subjects, who sent swarms of wild troops, horse and foot, to the seat of war. . . . On the 1st of September the three columns met before Prague, which had better defences than in the last campaign, and a garrison of some 16,000 men. . . . During the night of the 9th the bombardment commenced. . . . and on the 16th the garrison surrendered. Thus, one month after the commencement of the march Prague was captured, and the campaign opened with a brilliant feat of arms.—Col. C. B. Brackenbury, *Frederick the Great*, ch. 7.

ALSO IN: W. Russell, *Hist. of Modern Europe*, pt. 2, letter 28.—F. Von Raumer, *Contributions to Modern Hist.: Fredk. II. and his Times*, ch. 17-19.

A. D. 1744-1745.—Frederick's retreat and fresh triumph.—Austria recovers the imperial crown.—Saxony subdued.—The Peace of Dresden.—After the reduction of Prague, Frederick, "in deference to the opinion of Marshal Belleisle, but against his own judgment, advanced into the south of Bohemia with the view of threatening Vienna. He thus exposed himself to the risk of being cut off from Prague. Yet even so he would probably have been able to maintain himself if the French had fulfilled their engagements. But while he was conquering the districts of the Upper Moldau, the Austrian army returned unimpaired from Alsace. The French had allowed it to cross the Rhine un molested, and had not made the slightest attempt to harass its retreat [but applied themselves to the siege and capture of Freiburg]. They were only too glad to get rid of it themselves. In the ensuing operations Frederick was completely outmanoeuvred. Traun [the Austrian general], without risking a battle, forced him back towards the Silesian frontier. He had to choose between abandoning Prague and abandoning his communications with Silesia, and as the Saxons had cut off his retreat through the Electorate, there was really no choice in the matter. So he fell back on Silesia, abandoning Prague and his heavy artillery. The retreat was attended with considerable loss. Frederick was much struck with the skill displayed by Traun, and says, in his 'Histoire de mon Temps,' that he regarded this campaign as his school in the art of war and M. de Traun as his teacher. The campaign may have been an excellent lesson in the art of war, but in other respects it was very disastrous to Frederick. He had drawn upon himself the whole power of Austria, and had learnt how little the French were to be depended upon. His prestige was dimmed by failure, and even in his own army doubts were entertained of his capacity. But, bad as his position already was, it became far worse when the unhappy Emperor died [Jan. 20, 1745], worn out with disease and calamity. This event put an end to the Union of Frankfurt. Frederick could no longer claim to be acting in defence of his oppressed sovereign; the ground was cut from under his feet. Nor was there any longer much hope of preventing the Imperial Crown from reverting to Austria. The new Elector of Bavaria was a mere boy. In this altered state of affairs he sought to make peace. But Maria Theresa would not let him

off so easily. In order that she might use all her forces against him, she granted peace to Bavaria, and gave back to the young elector his hereditary dominions, on condition of his resigning all claim to hers and promising to vote for her husband as Emperor. While Frederick thus lost a friend in Bavaria, Saxony threw herself completely into the arms of his enemy, and united with Austria in a treaty [May 18] which had for its object, not the reconquest of Silesia merely, but the partition of Prussia and the reduction of the king to his ancient limits as Margrave of Brandenburg. Saxony was then much larger than it is now, but it was not only the number of troops it could send into the field that made its hostility dangerous. It was partly the geographical position of the country, which made it an excellent base for operations against Prussia, but still more the alliance that was known to subsist between the Elector (King Augustus III. of Poland) and the Russian Court. It was probable that a Prussian invasion of Saxony would be followed by a Russian invasion of Prussia. Towards the end of May, the Austrian and Saxon army, 75,000 strong, crossed the Giant Mountains and descended upon Silesia. The Austrians were again commanded by Prince Charles, but the wise head of Traun was no longer there to guide him. . . . The encounter took place at Hohenfriedberg [June 5], and resulted in a complete victory for Prussia. The Austrians and Saxons lost 9,000 killed and wounded, and 7,000 prisoners, besides 66 cannons and 73 flags and standards. Four days after the battle they were back again in Bohemia. Frederick followed, not with the intention of attacking them again, but in order to eat the country bare, so that it might afford no sustenance to the enemy during the winter. For his own part he was really anxious for peace. His resources were all but exhausted, while Austria was fed by a constant stream of English subsidies. As in the former war, England interposed with her good offices, but without effect; Maria Theresa was by no means disheartened by her defeat, and refused to hear of peace till she had tried the chances of battle once more. On Sept. 13 her husband was elected Emperor by seven votes out of nine, the dissentients being the King of Prussia and the Elector Palatine. This event raised the spirits of the Empress-Queen, as Maria Theresa was henceforward called, and opened a wider field for her ambition. She sent peremptory orders to Prince Charles to attack Frederick before he retired from Bohemia. A battle was accordingly fought at Sohr [Sept. 30], and again victory rested with the Prussians. The season was now far advanced, and Frederick returned home expecting that there would be no more fighting till after the winter. Such however, was far from being the intention of his enemies." A plan for the invasion of Brandenburg by three Austrian and Saxon armies, simultaneously, was secretly concerted; but Frederick had timely warning of it and it was frustrated by his activity and energy. On the 23d of November he surprised and defeated Prince Charles at Hennesdorf. "Some three weeks afterwards [Dec. 15] the Prince of Dessau defeated a second Saxon and Austrian army at Kesselsdorf, a few miles from Dresden. This victory completed the subjugation of Saxony and put an end to the war. Three days after Kesselsdorf, Frederick

entered Dresden, and astonished every one by the graciousness of his behaviour and by the moderation of his terms. From Saxony he exacted no cession of territory, but merely a contribution of 1,000,000 thalers (£150,000) towards the expenses of the war. From Austria he demanded a guarantee of the treaty of Breslau, in return for which he agreed to recognize Francis as Emperor. Peace was signed [at Dresden] on Christmas Day."—F. W. Longman, *Frederick the Great and the Seven Years War*, ch. 5.

A. D. 1765-1790.—Joseph II., the enthroned Philosopher.—"The prince who best sums up the spirit of the century is not Frederic [the Great, of Prussia], it is Joseph II. [the emperor]. Frederic was born a master, Joseph II. a disciple, and it is by disciples that we judge schools. The king of Prussia dammed up the waters, directed their flow, made use of the current; the emperor cast himself upon them and permitted himself to be carried. With Frederic the statesman always dominates, it is he who proposes and finally decides; the philosopher is subordinate. . . . With Joseph II. rational conception precedes political calculation and governs it. He had breadth of mind, but his mind was superficial; ideas slipped from it. He had a taste for generosity, a passion for grandeur; but there was nothing profound in him but ambition, and it was all counter-stroke and reflection. He wished to surpass Frederic: his entire conduct was but an awkward, imprudent and ill-advised imitation of this prince whom he had made his hero, whom history made his rival and whom he copied while detesting

him. The political genius of Frederic was born of good sense and moderation: there was nothing in Joseph II. but the immoderate. He was a man of systems: he had only great velleities. His education was mediocre, and, as to methods, entirely jesuitical. Into this contracted mould he cast confusedly notions hastily borrowed from the philosophers of France, from the economists especially. He thus formed a very vague ideal of political aspirations and an exaggerated sense of the power at his disposition to realize them. 'Since I ascended the throne and have worn the first crown of the world,' wrote he in 1781, 'I have made Philosophy the lawmaker of my empire. Her logical applications are going to transform Austria.' He undertakes reforms in every direction at once. History is null for him, traditions do not count, nor do facts acquired. There is no race, nor period, nor surrounding circumstances: there is the State which is everything and can do everything. He writes in 1782, to the bishop of Strasbourg: 'In a kingdom governed conformably to my principles, prejudice, fanaticism, bondage of mind must disappear, and each of my subjects must be reinstated in the possession of his natural rights.' He must have unity, and, as a first condition, the rejection of all previous ideas. Chance makes him operate on a soil the most heterogeneous, the most incoherent, the most cut up, parceled out and traversed by barriers, that there is in Europe. Nothing in common among his subjects, neither language, nor traditions, nor interests. It is from this, according to him, that the defect of monarchy arises. 'The German language is the universal language of my empire. I am the emperor of Germany, the states which I possess are provinces which form but one body with the State of which I am the head. If the kingdom of Hungary were the most important of my possessions, I should not hesitate to impose its tongue on the other countries.' So he imposes the German language on the Hungarians, the Croats, the Tchêques, the Poles, on all the Slavs. He suppresses the ancient territorial divisions; they recall the successive agglomerations, the irregular alluvions which had formed the monarchy; he establishes thirteen governments and divides them into circles. The diets disappear; the government passes into the hands of intendants according to the French formula. In the cities the burgomaster appointed by the government becomes a functionary. The nobles lose the part, already much curtailed, that they still had, here and there, in the government. He taxes them, he taxes the ecclesiastics; he meditates establishing a tax proportional to incomes and reaching all classes. He protects the peasants, alleviates serfdom, diminishes the corvées, builds hospitals, schools above all, in which the state will form pupils to obey her. His ideal would be the equality of his subjects under the uniform sway of his government. He unifies the laws; he institutes courts of appeal with a supreme court for the entire empire. He makes regulations for manufactures, binds commerce to the most rigorous protective system. Finally he puts a high hand on the church and decrees tolerance. . . . This immense revolution was accomplished by means of decrees, in less than five years. If we compare the state of cohesion which the Bourbon government had brought about in France in 1789,

with the incoherence of the Austrian monarchy on the death of Maria Theresa in 1780, it will be seen that the revolution which caused the Constituent Assembly was a small matter compared with that which Joseph II. intended to effect."—A. A. D. 1790-1797.—Death of Joseph II. and Leopold II.—Accession of Francis II.—The Coalition against and war with revolutionary France, to the Peace of Campo Formio.—"It is a mistake to imagine that the European Powers attacked the Revolution in France. It was the Revolution which attacked them. The diplomatists of the 18th century viewed at first with cynical indifference the meeting of the States-General at Versailles. . . . The two points which occupied the attention of Europe in 1789 were the condition of Poland and the troubles in the East. The ambitious designs of Catherine and the assistance lent to them by Joseph threatened the existence of the Turkish Empire, irritated the Prussian Court, and awakened English apprehensions, always sensitive about the safety of Stamboul. Poland, the battle-field of cynical diplomacy, torn by long dissensions and ruined by a miserable constitution, was vainly endeavouring, under the jealous eyes of her great neighbours, to avert the doom impending, and to reassert her ancient claim to a place among the nations of the world. But Russia had long since determined that Poland must be a vassal State to her or cease to be a State at all, while Prussia, driven to face a hard necessity, realised that a strong Poland and a strong Prussia could not exist together, and that if Poland ever rose again to power, Prussia must bid good-bye to unity and greatness. These two questions to the States involved seemed to be of far more moment than any political reform in France, and engrossed the diplomatists of Europe until the summer of 1791. In February, 1790, a new influence was introduced into European politics by the death of the Emperor Joseph and the accession of his brother, Leopold II. Leopold was a man of remarkable ability, no enthusiast and no dreamer, thoroughly versed in the selfish traditions of Austrian policy and in some of the subtleties of Italian statecraft, discerning, temperate, resolute and clear-headed, quietly determined to have his own way, and generally skilful enough to secure it. Leopold found his new dominions in a state of the utmost confusion, with war and rebellion threatening him on every side. He speedily set about restoring order. He repealed the unpopular decrees of Joseph. He conciliated or repressed his discontented subjects. He gradually re-established the authority of the Crown. . . . Accordingly, the first eighteen months of Leopold's reign were occupied with his own immediate interests, and at the end of that time his success

was marked. Catherine's vast schemes in Turkey had been checked. War had been averted. Poland had been strengthened by internal changes. Prussia had been conciliated and outmanœuvred, and her influence had been impaired. At last, at the end of August, 1791, the Emperor was free to face the French problem, and he set out for the Castle of Pillnitz to meet the King of Prussia and the Emigrant leaders at the Saxon Elector's Court. For some time past the restlessness of the French Emigrants had been causing great perplexity in Europe. Received with open arms by the ecclesiastical princes of the Rhine, by the Electors of Mayence and Trèves, they proceeded to agitate busily for their own restoration. . . . The object of the Emigrants was to bring pressure to bear at the European Courts, with the view of inducing the Powers to intervene actively in their behalf. . . . After his escape from France, in June, 1790, the Comte de Provence established his Court at Coblenz, where he was joined by his brother the Comte d'Artois, and where, on the plea that Louis was a prisoner, he claimed the title of Regent, and assumed the authority of King. The Court of the two French princes at Coblenz represented faithfully the faults and follies of the Emigrant party. But a more satisfactory spectacle was offered by the camp at Worms, where Condé was bravely trying to organise an army to fight against the Revolution in France. To Condé's standard flocked the more patriotic Emigrants. . . . But the German Princes in the neighbourhood looked with disfavour on the Emigrant army. It caused confusion in their dominions, and it drew down on them the hostility of the French Government. The Emperor joined them in protesting against it. In February, 1792, Condé's army was compelled to abandon its camp at Worms, and to retire further into Germany. The Emperor was well aware of the reckless selfishness of the Emigrant princes. He had a little sympathy with them as his sister. He did not intend to listen to their demands. If he interfered in France at all, it would only be in a cautious and tentative manner, and in order to save Marie Antoinette and her husband. Certainly he would not undertake a war for the restoration of the Ancien Régime. . . . Accordingly, the interviews at Pillnitz came to nothing. . . . Early in March, 1792, Leopold suddenly died. His heir Francis, unrestrained by his father's tact and moderation, assumed a different tone and showed less patience. The chances of any effective pressure from the Powers declined, as the prospect of war rose on the horizon. Francis' language was sufficiently sharp to give the Assembly the pretext which it longed for, and on the 20th April, Louis, amid general enthusiasm, came down to the Assembly and declared war against Austria. The effects of that momentous step no comment can exaggerate. It ruined the best hopes of the Revolution, and prepared the way for a military despotism in the future."—C. E. Mallet, *The French Revolution*, ch. 7.—See FRANCE: A. A. D. 1798-1806.—Congress of Rastadt.—Second Coalition against France.—Peace of Luneville.—Third Coalition.—Ulm and Austerlitz.—Peace of Presburg.—Extinction of the Holy Roman Empire.—Birth of the Empire of Austria.—“When Bonaparte sailed for Egypt he had left a congress at Rastadt discussing means for the execution of certain articles in the treaty of Campo Formio which were to establish peace between France and the Empire. . . . Though openly undertaking to invite the Germans to a congress in order to settle a general peace on the basis of the integrity of the Empire, the Emperor agreed in secret articles to use his influence to procure for the Republic the left bank of the Rhine with the exception of the Prussian provinces, to join with France in obtaining compensation in Germany for those injured by this change, and to contribute no more than his necessary contingent if the war were prolonged. The ratification of these secret provisions had been extorted from the Congress by threats before Bonaparte had left; but the question of indemnification had progressed no farther than a decision to secularise the ecclesiastical states for the purpose, when extravagant demands from the French deputies brought negotiation to a deadlock. Meanwhile, another coalition war had been brewing. Paul I. of Russia had regarded with little pleasure the doings of the Revolution, and when his protégés, the knights of St. John of Jerusalem, had been deprived of Malta by Bonaparte on his way to Egypt, when the Directory established by force of arms a Helvetic republic in Switzerland, when it found occasion to carry off the Pope into exile and erect a Roman republic, he abandoned the cautious and self-seeking policy of Catherine, and cordially responded to Pitt's advances for an alliance. At the same time Turkey was compelled by the invitation of Egypt to ally itself for once with Russia. Austria, convinced that the French did not intend to pay a fair price for the treaty of Campo Formio, also determined to renew hostilities; and Naples, exasperated by the sacrilege of a republic at Rome, and alarmed by French aggressiveness, enrolled itself in the league. The Neapolitan king, indeed, opened the war with some success, before he could receive support from his allies; but he was soon vanquished by the French, and his dominions were converted into a Parthenopean republic. Austria, on the contrary, awaited the arrival of the Russian forces; and the general campaign began early in 1799. The French, fighting against such generals as the Archduke Charles and the Russian Suvaroff, without the supervision of Carnot or the strategy and enterprise of Bonaparte, suffered severe reverses and great privations. Towards the end the Russian army endured much hardship on account of the selfishness of the Austrian cabinet; and this caused the Tsar, who thought he had other reasons for discontent, to withdraw his troops from the field. When Bonaparte was made First Consul the

military position of France was, nevertheless, very precarious. . . . The Roman and Cisalpine republics had fallen. The very congress at Rastadt had been dispersed by the approach of the Austrians; and the French emissaries had been sabred by Austrian troopers, though how their insolence came to be thus foully punished has never been clearly explained. At this crisis France was rescued from foreign foes and domestic disorders by its most successful general. . . . In the campaign which followed, France obtained signal satisfaction for its chagrin. Leaving Moreau to carry the war into Germany, Bonaparte suddenly crossed the Alps, and defeated the Austrians on the plain of Marengo. The Austrians, though completely cowed, refrained from concluding a definite peace out of respect for their engagements with England; and armistices, expiring into desultory warfare, prolonged the contest till Moreau laid the way open to Vienna, by winning a splendid triumph at Hohenlinden. A treaty of peace was finally concluded at Lunéville, when Francis II. pledged the Empire to its provisions on the ground of the consents already given at Rastadt. In conformity with the treaty of Campo Formio, Austria retained the boundary of the Adige in Italy; France kept Belgium and the left bank of the Rhine; and the princes, dispossessed by the cessions, were promised compensation in Germany; while Tuscany was given to France to sell to Spain at the price of Parma, Louisiana, six ships of the line, and a sum of money. Shortly afterwards peace was extended to Naples on easy terms. . . . The time was now come for the Revolution to complete the ruin of the Holy Roman Empire. Pursuant to the treaty of Lunéville, the German Diet met at Regensburg to discuss a scheme of compensation for the dispossessed rulers. Virtually the meeting was a renewal of the congress of Rastadt. . . . At Rastadt the incoherence and disintegration of the venerable Empire had become painfully apparent. . . . When it was known that the head of the nation, who had guaranteed the integrity of the Empire in the preliminaries of Leoben, and had renewed the assurance when he convoked the assembly, had in truth betrayed to the stranger nearly all the left bank of the Rhine,—the German rulers greedily hastened to secure every possible trifle in the scramble of redistribution. The slow and wearisome debates were supplemented by intrigues of the most degraded nature. Conscious that the French Consul could give a casting vote on any disputed question, the princes found no indignity too shameful, no trick too base, to obtain his favour. . . . The First Consul, on his side, prosecuted with a duplicity and address, heretofore unequalled, the traditional policy of France in German affairs. . . . Feigning to take into his counsels the young Tsar, whose convenient friendship was thus easily obtained on account of his family connections with the German courts, he drew up a scheme of indemnification and presented it to the Diet for endorsement. In due time a servile assent was given to every point which concerned the two autocrats. By this settlement, Austria and Prussia were more equally balanced against one another, the former being deprived of influence in Western Germany, and the latter finding in more convenient situations a richer

recompense for its cessions on the Rhine: while the middle states, Bavaria, Baden, and Würtemberg, received very considerable accessions of territory. But if Bonaparte dislocated yet further the political structure of Germany, he was at least instrumental in removing the worst of the anachronisms which stifled the development of improved institutions among a large division of its people. The same measure which brought German separatism to a climax, also extinguished the ecclesiastical sovereignties and nearly all the free cities. That these strongholds of priestly obscurantism and bourgeois apathy would some day be invaded by their more ambitious and active neighbours, had long been apparent. . . . And war was declared when thousands of British subjects visiting France had already been ensnared and imprisoned. . . . Pitt had taken the conduct of the war out of the hands of Addington's feeble ministry. Possessing the confidence of the powers, he rapidly concluded offensive alliances with Russia, Sweden, and Austria, though Prussia obstinately remained neutral. Thus, by 1805, Napoleon had put to hazard all his lately won power in a conflict with the greater part of Europe. The battle of Cape Trafalgar crushed for good his maritime power, and rendered England safe from direct attack. The campaign on land, however, made him master of central Europe. Bringing the Austrian army in Germany to an inglorious capitulation at Ulm, he marched through Vienna, and, with inferior forces won in his best style the battle of Austerlitz against the troops of Francis and Alexander. The action was decisive. The allies thought not of renewing the war with the relays of troops which were hurrying up from North and South. Russian and Austrian alike wished to be rid of their ill-fated connection. The Emperor Alexander silently returned home, pursued only by Napoleon's flattering tokens of esteem; the Emperor Francis accepted the peace of Presburg, which deprived his house of the ill-gotten Venetian States, Tyrol, and its more distant possessions in Western Germany; the King of Prussia, who had been on the point of joining the coalition with a large army if his mediation were unsuccessful, was committed to an alliance with the conqueror by his terrified negotiator. And well did Napoleon appear to make the fruits of victory compensate France for its exertions. The empire was not made more unwieldy in bulk, but its dependents, Bavaria, Würtemberg, and Baden, received considerable accessions of territory, and the two first were raised to the rank of kingdoms; while the Emperor's Italian principality, which he had already turned into a kingdom of Italy to the great disgust of Austria, was increased by the addition of the ceded Venetian lands. But the full depth of Europe's humiliation was not experienced till the two following years. In 1806 an Act of Federation was signed by the kings of Bavaria and Würtemberg, the Elector of Baden, and thirteen minor princes, which united them into a league under the protection of the French Emperor. The objects of this confederacy, known as the Rheinbund were defence against foreign aggression and the exercise of complete autonomy at home. . . . Already the consequences of the Peace of Lunéville had induced the ruling Hapsburg to assure his equality with

the sovereigns of France and Russia by taking the imperial title in his own right; and before the Confederation of the Rhine was made public he formally renounced his office of elective Emperor of the Holy Roman Empire and released from allegiance to him all the states and princes of the Reich. The triumph of the German policy of the Consulate was complete."—A. Weir, *The Historical Basis of Modern Europe*, ch. 4.—See, also, FRANCE: A. D. 1798-1799, to 1805, and GERMANY: A. D. 1801-1803, to 1805-1806.

A. D. 1809-1814.—The second struggle with Napoleon and the second defeat.—The Marriage alliance.—The Germanic War of Liberation.—The final alliance and the overthrow of the Corsican.—"On the 12th of July, 1806, fourteen princes of the south and west of Germany united themselves into the confederation of the Rhine, and recognised Napoleon as their protector. On the 1st of August, they signified to the diet of Ratisbon their separation from the Germanic body. The Empire of Germany ceased to exist, and Francis II. abdicated the title by proclamation. By a convention signed at Vienna, on the 15th of December, Prussia exchanged the territories of Anspach, Cleves and Neufchâtel for the electorate of Hanover. Napoleon had all the west under his power. Absolute master of France and Italy, as emperor and king, he was also master of Spain, by the dependence of that court; of Naples and Holland, by his two brothers; of Switzerland, by the act of mediation; and in Germany he had at his disposal the kings of Bavaria and Wurtemberg, and the confederation of the Rhine against Austria and Prussia. . . . This encroaching progress gave rise to the fourth coalition. Prussia, neutral since the peace of Bâle, had, in the last campaign, been on the point of joining the Austro-Russian coalition. The rapidity of the emperor's victories had alone restrained her; but now, alarmed at the aggrandizement of the empire, and encouraged by the fine condition of her troops, she leagued with Russia to drive the French from Germany. . . . The campaign opened early in October. Napoleon, as usual, overwhelmed the coalition by the promptitude of his marches and the vigour of his measures. On the 14th of October, he destroyed at Jena the military monarchy of Prussia, by a decisive victory. . . . The campaign in Poland was less rapid, but as brilliant as that of Prussia. Russia, for the third time, measured its strength with France. Conquered at Zurich and Austerlitz, it was also defeated at Eylau and Friedland. After these memorable battles, the emperor Alexander entered into a negotiation, and concluded at Tilsit, on the 21st of June, 1807, an armistice which was followed by a definitive treaty on the 7th of July. The peace of Tilsit extended the French domination on the continent. Prussia was reduced to half its extent. In the south of Germany, Napoleon had instituted the two kingdoms of Bavaria and Wurtemberg against Austria; further to the north, he created the two feudatory kingdoms of Saxony and Westphalia against Prussia. . . . In order to obtain universal and uncontested supremacy, he made use of arms against the continent, and the cessation of commerce against England. But in forbidding to the continental states all communication with England, he was preparing new difficulties for himself, and soon added to the animosity of

opinion excited by his despotism, and the hatred of states produced by his conquering domination, the exasperation of private interests and commercial suffering occasioned by the blockade. . . . The expedition of Portugal in 1807, and the invasion of Spain in 1808, began for him and for Europe a new order of events. . . . The reaction manifested itself in three countries, hitherto allies of France, and it brought on the fifth coalition. The court of Rome was dissatisfied; the peninsula was wounded in its national pride by having imposed upon it a foreign king; in its usages, by the suppression of convents, of the Inquisition, and of the *grandees*; Holland suffered in its commerce from the blockade, and Austria supported impatiently its losses and subordinate condition. England, watching for an opportunity to revive the struggle on the continent, excited the resistance of Rome, the peninsula, and the cabinet of Vienna. . . . Austria . . . made a powerful effort, and raised 550,000 men, comprising the *Landwehr*, and took the field in the spring of 1809. The Tyrol rose, and King Jerome was driven from his capital by the Westphalians; Italy wavered; and Prussia only waited till Napoleon met with a reverse, to take arms; but the emperor was still at the height of his power and prosperity. He hastened from Madrid in the beginning of February, and directed the members of the confederation to keep their contingents in readiness. On the 12th of April he left Paris, passed the Rhine, plunged into Germany, gained the victories of Eckmühl and Essling, occupied Vienna a second time on the 15th of May, and overthrew this new coalition by the battle of Wagram, after a campaign of four months. . . . The peace of Vienna, of the 11th of October, 1809, deprived the house of Austria of several more provinces, and compelled it again to adopt the continental system. . . . Napoleon, who seemed to follow a rash but inflexible policy, deviated from his course about this time by a second marriage. He divorced Josephine that he might give an heir to the empire, and married, on the 1st of April, 1810, Marie-Louise, arch-duchess of Austria. This was a decided error. He quitted his position and his post as a parvenu and revolutionary monarch, opposing in France the ancient courts as the republic had opposed the ancient governments. He placed himself in a false situation with respect to Austria, which he ought either to have crushed after the victory of Wagram, or to have reinstated in its possessions after his marriage with the arch-duchess. . . . The birth, on the 20th of March, 1811, of a son, who received the title of king of Rome, seemed to consolidate the power of Napoleon, by securing to him a successor. The war in Spain was prosecuted with vigour during the years 1810 and 1811. . . . While the war was proceeding in the peninsula with advantage, but without any decided success, a new campaign was preparing in the north. Russia perceived the empire of Napoleon approaching its territories. . . . About the close of 1810, it increased its armies, renewed its commercial relations with Great Britain, and did not seem indisposed to a rupture. The year 1811 was spent in negotiations which led to nothing, and preparations for war were made on both sides. . . . On the 9th of March, Napoleon left Paris. . . . During several months he fixed his court at Dresden, where the emperor of

Austria, the king of Prussia, and all the sovereigns of Germany, came to bow before his high fortune. On the 22nd of June, war was declared against Russia. . . . Napoleon, who, according to his custom, wished to finish all in one campaign, advanced at once into the heart of Russia, instead of prudently organizing the Polish barrier against it. His army amounted to about 500,000 men. He passed the Niemen on the 24th of June; took Wilna, and Witepsk, defeated the Russians at Astrowno, Polotsk, Mohilow Smolensko, at the Moskowa, and on the 14th of September, made his entry into Moscow. . . . Moscow was burned by its governor. . . . The emperor ought to have seen that this war would not terminate as the others had done; yet, conqueror of the foe, and master of his capital, he conceived hopes of peace which the Russians skilfully encouraged. Winter was approaching, and Napoleon prolonged his stay at Moscow for six weeks. He delayed his movements on account of the deceptive negotiations of the Russians; and did not decide on a retreat till the 19th of October. This retreat was disastrous, and began the downfall of the empire. . . . The cabinet of Berlin began the defections. On the 1st of March, 1813, it joined Russia and England, which were forming the sixth coalition. Sweden acceded to it soon after; yet the emperor, whom the confederate power thought prostrated by the last disaster, opened the campaign with new victories. The battle of Lutzen, won by conscripts, on the 2nd of May, the occupation of Dresden; the victory of Bautzen, and the war carried to the Elbe, astonished the coalition. Austria, which, since 1810, had been on a footing of peace, was resuming arms, and already meditating a change of alliance. She now proposed herself as a mediatrix between the emperor and the confederates. Her mediation was accepted; an armistice was concluded at Plesswitz, on the 4th of June, and a congress assembled at Prague to negotiate peace. It was impossible to come to terms. . . . Austria joined the coalition, and war, the only means of settling this great contest, was resumed. The emperor had only 280,000 men against 520,000. . . . Victory seemed, at first, to second him. At Dresden he defeated the combined forces; but the defeats of his lieutenants deranged his plans. . . . The princes of the confederation of the Rhine chose this moment to desert the cause of the empire. A vast engagement having taken place at Leipsic between the two armies, the Saxons and Wurtembergers passed over to the enemy on the field of battle. This defection to the strength of the coalesced powers, who had learned a more compact and skilful mode of warfare, obliged Napoleon to retreat, after a struggle of three days. . . . The empire was invaded in all directions. The Austrians entered Italy; the English, having made themselves masters of the peninsula during the last two years, had passed the Bidassoa, under general Wellington, and appeared on the Pyrenees. Three armies pressed on France to the east and north. . . . Napoleon was . . . obliged to submit to the conditions of the allied powers; their pretensions increased with their power. . . . On the 11th of April, 1814, he renounced for himself and children the thrones of France and Italy, and received in exchange for his vast sovereignty, the limits of which had extended from Cadiz to the

Baltic Sea, the little island of Elba."—F. A. Mignet, *History of the French Revolution*, ch. 15. —See GERMANY: A. D. 1809 (JANUARY—JUNE), to 1813; RUSSIA: A. D. 1812; and FRANCE: A. D. 1810-1812 to 1814.

A. D. 1815-1835.—Emperor Francis, Prince Metternich, and "the system."—"After the treaty of Vienna in 1809, and still more conspicuously after the pacification of Europe, the political wisdom of the rulers of Austria inclined them ever more and more to the maintenance of that state of things which was known to friends and foes as the System. But what was the System? It was the organisation of do-nothing. It cannot even be said to have been reactionary: it was simply inactionary. . . . 'Mark time in place' was the word of command in every government office. The bureaucracy was engaged from morning to night in making work, but nothing ever came of it. Not even were the liberal innovations which had lasted through the reign of Leopold got rid of. Everything went on in the confused, unfinished, and ineffective state in which the great war had found it. Such was the famous System which was venerated by the ultra-Tories of every land, and most venerated where it was least understood. Two men dominate the history of Austria during this unhappy time—men who, though utterly unlike in character and intellect, were nevertheless admirably fitted to work together, and whose names will be long united in an unenviable notoriety. These were the Emperor Francis and Prince Metternich. The first was the evil genius of internal politics; the second exercised a hardly less baneful influence over foreign affairs. . . . For the external policy of Prince Metternich, the first and most necessary condition was, that Austria should give to Europe the impression of fixed adherence to the most extreme Conservative views. So for many years they worked together, Prince Metternich always declaring that he was a mere tool in the hands of his master, but in reality far more absolute in the direction of his own department than the emperor was in his. . . . Prince Metternich had the power of making the most of all he knew, and constantly left upon persons of real merit the impression that he was a man of lofty aspirations and liberal views, who forced himself to repress such tendencies in others because he thought that their repression was a *sine qua non* for Austria. The men of ability, who knew him intimately, thought less well of him. To them he appeared vain and superficial, with

much that recalled the French noblesse of the old régime in his way of looking at things, and emphatically wanting in every element of greatness. With the outbreak of the Greek insurrection in 1821, began a period of difficulty and complications for the statesmen of Austria. There were two things of which they were mortally afraid—Russia and the revolution. Now, if they assisted the Greeks, they would be playing into the hands of the second; and if they opposed the Greeks, they would be likely to embroil themselves with the first. The whole art of Prince Metternich was therefore exerted to keep things quiet in the Eastern Peninsula, and to postpone the intolerable 'question d'Orient.' Many were the shifts he tried, and sometimes, as just after the accession of Nicholas, his hopes rose very high. All was, however, in vain. England and Russia settled matters behind his back; and although the tone which the publicists in his pay adopted towards the Greeks became more favourable in 1826-7, the battle of Navarino was a sad surprise and mortification to the wily chancellor. Not less annoying was the commencement of hostilities on the Danube between Russia and the Porte. The reverses with which the great neighbour met in his first campaign cannot have been otherwise than pleasing at Vienna. But the unfortunate success which attended his arms in the second campaign soon turned ill-dissembled joy into ill-concealed sorrow, and the treaty of Adrianople at once lowered Austria's prestige in the East, and deposed Metternich from the commanding position which he had occupied in the councils of the Holy Allies. It became, indeed, ever more and more evident in the next few years that the age of Congress politics, during which he had been the observed of all observers, was past and gone, that the diplomatic period had vanished away, and that the military period had begun. The very form in which the highest international questions were debated was utterly changed. At Vienna, in 1814, the diplomatists had been really the primary, the sovereigns only secondary personages; while at the interview of Münchengratz, between Nicholas and the Emperor Francis, in 1833, the great autocrat appeared to look upon Prince Metternich as hardly more than a confidential clerk. The dull monotony of servitude which oppressed nearly the whole of the empire was varied by the agitations of one of its component parts. When the Hungarian Diet was dissolved in 1812, the emperor had solemnly promised that it should be called together again within three years. Up to 1815, accordingly, the nation went on giving extraordinary levies and supplies without much opposition. When, however, the appointed time was fulfilled, it began to murmur. . . . Year by year the agitation went on increasing, till at last the breaking out of the Greek revolution, and the threatening appearance of Eastern politics, induced Prince Metternich to join his entreaties to those of many other counsellors, who could not be suspected of the slightest leaning to constitutional views. At length the emperor yielded, and in 1825 Presburg was once more filled with the best blood and most active spirits of the land, assembled in parliament. Long and stormy were the debates which ensued. Bitter was, from time to time, the vexation of the emperor, and great was the excitement

throughout Hungary. In the end, however, the court of Vienna triumphed. Hardly any grievances were redressed, while its demands were fully conceded. The Diet of 1825 was, however, not without fruit. The discussion which took place advanced the political education of the people, who were brought back to the point where they stood at the death of Joseph II.—that is, before the long wars with France had come to distract their attention from their own affairs. . . . The slumbers of Austria were not yet over. The System dragged its slow length along. Little or nothing was done for the improvement of the country. Klebelsberg administered the finances in an easy and careless manner. Conspiracies and risings in Italy were easily checked, and batches of prisoners sent off from time to time to Mantua or Spielberg. Austrian influence rose ever higher and higher in all the petty courts of the Peninsula. . . . In other regions Russia or England might be willing to thwart him, but in Italy Prince Metternich might proudly reflect that Austria was indeed a 'great power.' The French Revolution of 1830 was at first alarming; but when it resulted in the enthronement of a dynasty which called to its aid a 'cabinet of repression,' all fears were stilled. The Emperor Francis continued to say, when any change was proposed, 'We must sleep upon it,' and died in 1835 in 'the abundance of peace.'—M. E. Grant Duff, *Studies in European Politics*, pp. 140-149.—See, also, GERMANY: A. D. 1819-1847.

A. D. 1815-1846.—Gains of the Hapsburg monarchy.—Its aggressive absolutism.—Death of Francis I.—Accession of Ferdinand I.—Suppression of revolt in Galicia.—Extinction and annexation of the Republic of Cracow.—"In the new partition of Europe, arranged in the Congress of Vienna [see VIENNA, THE CONGRESS OF], Austria received Lombardy and Venice under the title of a Lombardo-Venetian kingdom, the Illyrian provinces also as a kingdom, Venetian Dalmatia, the Tirol, Vorarlberg, Salzburg, the Innviertel and Hausrucksviertel, and the part of Galicia ceded by her at an earlier period. Thus, after three and twenty years of war, the monarchy had gained a considerable accession of strength, having obtained, in lieu of its remote and unprofitable possessions in the Netherlands, territories which consolidated its power in Italy, and made it as great in extent as it had been in the days of Charles VI., and far more compact and defensible. The grand duchies of Modena, Parma, and Placentia, were moreover restored to the collateral branches of the house of Hapsburg. . . . After the last fall of Napoleon . . . the great powers of the continent . . . constituted themselves the champions of the principle of absolute monarchy. The maintenance of that principle ultimately became the chief object of the so-called Holy Alliance established in 1816 between Russia, Austria and Prussia, and was pursued with remarkable steadfastness by the Emperor Francis and his minister, Prince Metternich [see HOLY ALLIANCE]. . . . Thenceforth it became the avowed policy of the chief sovereigns of Germany to maintain the rights of dynasties in an adverse sense to those of their subjects. The people, on the other hand, deeply resented the breach of those promises which had been so lavishly made to them on the general summons to the war of

liberation. Disaffection took the place of that enthusiastic loyalty with which they had bled and suffered for their native princes; the secret societies, formed with the concurrence of their rulers, for the purpose of throwing off the yoke of the foreigner, became ready instruments of sedition. . . . In the winter of 1819, a German federative congress assembled at Vienna. In May of the following year it published an act containing closer definitions of the Federative Act, having for their essential objects the exclusion of the various provincial Diets from all positive interference in the general affairs of Germany, and an increase of the power of the princes over their respective Diets, by a guarantee of aid on the part of the confederates" (see GERMANY: A. D. 1814-1820). During the next three years, the powers of the Holy Alliance, under the lead of Austria, and acting under a concert established at the successive congresses of Troppau, Laybach and Verona (see VERONA, CONGRESS OF), interfered to put down popular risings against the tyranny of government in Italy and Spain, while they discouraged the revolt of the Greeks (see ITALY: A. D. 1820-1821; and SPAIN: A. D. 1814-1827). "The commotions that pervaded Europe after the French Revolution of 1830 affected Austria only in her Italian dominions, and there but indirectly, for the imperial authority remained undisputed in the Lombardo-Venetian kingdom. But the duke of Modena and the archduke of Parma were obliged to quit those states, and a formidable insurrection broke out in the territory of the Church. An Austrian army of 18,000 men quickly put down the insurgents, who rose again, however, as soon as it was withdrawn. The pope again invoked the aid of Austria, whose troops entered Bologna in January, 1832, and established themselves there in garrison. Upon this, the French immediately sent a force to occupy Ancona, and for a while a renewal of the oft-repeated conflict between Austria and France on Italian ground seemed inevitable; but it soon appeared that France was not prepared to support the revolutionary party in the pope's dominions, and that danger passed away. The French remained for some years in Ancona, and the Austrians in Bologna and other towns of Romagna. This was the last important incident in the foreign affairs of Austria previous to the death of the Emperor Francis I. on the 2nd of March, 1835, after a reign of 43 years. . . . The Emperor Francis was succeeded by his son, Ferdinand I., whose accession occasioned no change in the political or administrative system of the empire. Incapacitated, by physical and mental infirmity, from labouring as his father had done in the business of the state, the new monarch left to Prince Metternich a much more unrestricted power than that minister had wielded in the preceding reign. . . . The province of Galicia began early in the new reign to occasion uneasiness to the government. The Congress of Vienna had constituted the city of Cracow an independent republic—a futile representative of that Polish nationality which had once extended from the Baltic to the Black Sea. After the failure of the Polish insurrection of 1831 against Russia, Cracow became the focus of fresh conspiracies, to put an end to which the city was occupied by a mixed force of Russians, Prussians, and Austrians; the two former were

soon withdrawn, but the latter remained until 1840. When they also had retired, the Polish propaganda was renewed with considerable effect. An insurrection broke out in Galicia in 1846, when the scantiness of the Austrian military force in the province seemed to promise it success. It failed, however, as all previous efforts of the Polish patriots had failed, because it rested on no basis of popular sympathy. The nationality for which they contended had ever been of an oligarchical pattern, hostile to the freedom of the middle and lower classes. The Galician peasants had no mind to exchange the yoke of Austria, which pressed lightly upon them, for the feudal oppression of the Polish nobles. They turned upon the insurgents and slew or took them prisoners, the police inciting them to the work by publicly offering a reward of five florins for every suspected person delivered up by them, alive or dead. Thus the agents of a civilized government became the avowed instigators of an inhuman 'jacquerie.' The houses of the landed proprietors were sacked by the peasants, their inmates were tortured and murdered, and bloody anarchy raged throughout the land in the prostituted name of loyalty. The Austrian troops at last restored order; but Szela, the leader of the sanguinary marauders, was thanked and highly rewarded in the name of his sovereign. In the same year the three protecting powers, Austria, Russia, and Prussia, took possession of Cracow, and, ignoring the right of the other parties to the treaty of Vienna to concern themselves about the fate of the republic, they announced that its independence was annulled, and that the city and territory of Cracow were annexed to, and forever incorporated with, the Austrian monarchy. From this time forth the political atmosphere of Europe became more and more loaded with the presages of the storm that burst in 1848."—W. K. Kelly, *Continuation of Cox's Hist. of the House of Austria*, ch. 5-6.

A. D. 1815-1849.—Arrangements in Italy of the Congress of Vienna.—Heaviness of the Austrian yoke.—The Italian risings.—"By the treaty of Vienna (1815), the . . . entire kingdom of Venetian-Lombardy was handed over to the Austrians; the duchies of Modena, Reggio, with Massa and Carrara, given to Austrian princes; Parma, Piacenza, and Guastalla to Napoleon's queen, Maria Luisa, because she was an Austrian princess; the grand-duchy of Tuscany to Ferdinand III. of Austria; the duchy of Lucca to a Bourbon. Rome and the Roman states were restored to the new Pope, Pius VII.; Sicily was united to Naples under the Bourbons, and later deprived of her constitution, despite the promised protection of England; the Canton Ticino, though strictly Italian, annexed to the Swiss Confederation; the little republic of St. Marino left intact, even as the principality of Monaco. England retained Malta; Corsica was left to France. Italy, so Metternich and Europe fondly hoped, was reduced to a geographical expression. Unjust, brutal, and treacherous as was that partition, at least it taught the Italians that 'who would be free himself must strike the blow.' It united them into one common hatred of Austria and Austrian satellites. By substituting papal, Austrian, and Bourbon despotism for the free institutions, codes, and constitutions of the Napoleonic era, it taught them the difference

between rule and mis-rule. Hence the demand of the Neapolitans during their first revolution (1820) was for a constitution; that of the Piedmontese and Lombards (1821) for a constitution and war against Austria. The Bourbon swore and foreswore, and the Austrians 'restored order' in Naples. The Piedmontese, who had not concerted their movement until Naples was crushed — after the abdication of Victor Emmanuel I., the granting of the constitution by the regent Charles Albert, and its abrogation by the new king Charles Felix — saw the Austrians enter Piedmont, while the leaders of the revolution went out into exile [see ITALY: A. D. 1820-1821]. But those revolutions and those failures were the beginning of the end. The will to be independent of all foreigners, the thirst for freedom, was universal; the very name of empire or of emperor, was rendered ridiculous, reduced to a parody — in the person of Ferdinand of Austria. But one illusion remained — in the liberating virtues of France and the French; this had to be dispelled by bitter experience, and for it substituted the new idea of one Italy for the Italians, a nation united, independent, free, governed by a president or by a king chosen by the sovereign people. The apostle of this idea, to which for fifty years victims and martyrs were sacrificed by thousands, was Joseph Mazzini; its champion, Joseph Garibaldi. By the genius of the former, the prowess of the latter, the abnegation, the constancy, the tenacity, the iron will of both, all the populations of Italy were subjugated by that idea: philosophers demonstrated it, poets sung it, pious Christian priests proclaimed it, statesmen found it confronting their negotiations, baffling their half-measures."—J. W. V. Mario, *Introduction to Autobiography of Garibaldi*.—See ITALY: A. D. 1830-1832, and 1848-1849.

A. D. 1848.—The Germanic revolutionary rising.—National Assembly at Frankfort.—Archduke John elected Administrator of Germany.—"When the third French Revolution broke out, its influence was immediately felt in Germany. The popular movement this time was very different from any the Governments had hitherto had to contend with. The people were evidently in earnest, and resolved to obtain, at whatever cost, their chief demands. . . . The Revolution was most serious in the two great German States, Prussia and Austria. . . . It was generally hoped that union as well as freedom was now to be achieved by Germany; but, as Prussia and Austria were in too much disorder to do anything, about 500 Germans from the various States met at Frankfurt, and on March 21 constituted themselves a provisional Parliament. An extreme party wished the assembly to declare itself permanent; but to this the majority would not agree. It was decided that a National Assembly should be elected forthwith by the German people. The Confederate Diet, knowing that the provisional Parliament was approved by the nation, recognized its authority. Through the Diet the various Governments were communicated with, and all of them agreed to make arrangements for the elections. . . . The National Assembly was opened in Frankfurt on

May 18, 1848. It elected the Archduke John of Austria as the head of a new provisional central Government. The choice was a happy one. The Archduke was at once acknowledged by the different governments, and on July 12 the President of the Confederate Diet formally made over to him the authority which had hitherto belonged to the Diet. The Diet then ceased to exist. The Archduke chose from the Assembly seven members, who formed a responsible ministry. The Assembly was divided into two parties, the Right and the Left. These again were broken up into various sections. Much time was lost in useless discussions, and it was soon suspected that the Assembly would not in the end prove equal to the great task it had undertaken."—J. Sime, *History of Germany*, ch. 19, sects. 8-11.—See GERMANY: A. D. 1848 (MARCH—SEPTEMBER).

A. D. 1848 (December).—Accession of the Emperor Francis Joseph I.

A. D. 1848-1849.—Revolutionary risings.—Bombardment of Prague and Vienna.—Abdication of the Emperor Ferdinand.—Accession of Francis Joseph.—The Hungarian struggle for independence.—"The rise of national feeling among the Hungarian, Slavonic, and Italian subjects of the House of Hapsburg was not the only difficulty of the Emperor Ferdinand I. Vienna was then the gayest and the dearest centre of fashion and luxury in Europe, but side by side with wealth there seethed a mass of wretched poverty; and the protective trade system of Austria so increased the price of the necessaries of life that bread-riots were frequent. . . . The university students were foremost in the demand for a constitution and for the removal of the rigid censorship of the press and of all books. So, when the news came of the flight of Louis Philippe from Paris [see FRANCE: A. D. 1841-1848, and 1848] the students as well as the artisans of Vienna rose in revolt (March 13, 1848), the latter breaking machinery and attacking the houses of unpopular employers. A deputation of citizens clamoured for the resignation of the hated Metternich: his house was burnt down, and he fled to England. A second outbreak of the excited populace (May 15, 1848), sent the Emperor Ferdinand in helpless flight to Innsprück in Tyrol; but he returned when they avowed their loyalty to his person, though they detested the old bureaucratic system. Far more complicated, however, were the race jealousies of the Empire. The Slavs of Bohemia . . . had demanded of Ferdinand the union of Bohemia, Moravia, and Austrian Silesia in Estates for those provinces, and that the Slavs should enjoy equal privileges with the Germans. After an unsatisfactory answer had been received, they convoked a Slavonic Congress at Prague. . . . But while this Babel of tongues was seeking for a means of fusion, Prince Windischgrätz was assembling Austrian troops around the Bohemian capital. Fights in the streets led to a bombardment of the city, which Windischgrätz soon entered in triumph. This has left a bitterness between the Tsechs or Bohemians and the Germans which still divides Bohemia socially and politically. . . . The exciting news of the spring of 1848 had made the hot Asiatic blood of the Magyars boil; yet even Kossuth and the democrats at first only demanded the abolition of Metternich's system in favour of a representative gov-

ernment. . . . Unfortunately Kossuth claimed that the Magyar laws and language must now be supreme, not only in Hungary proper, but also in the Hungarian 'crown lands' of Dalmatia, Croatia, and Slavonia, and the enthusiastic Magyars wished also to absorb the ancient principality of Transylvania; but this again was stoutly resisted by the Roumanians, Slavs, and Saxons of that little known corner of Europe, and their discontent was fanned by the court of Vienna. Jellachich, the Ban or Governor of Croatia, headed this movement, which aimed at making Agram the capital of the southern Slavs. Their revolt against the Hungarian ministry of Batthyanyi was at first disavowed in June, 1848, but in October was encouraged, by the perfidious government of Vienna. A conference between Batthyanyi and Jellachich ended with words of defiance: 'Then we must meet on the Drave,' said the Hungarian. 'No, on the Danube,' retorted the champion of the Slavs. The vacillating Ferdinand annulled his acceptance of the new Hungarian constitution and declared Jellachich dictator of Hungary. His tool was unfortunate. After crossing the Drave, the Slavs were defeated by the brave Hungarian 'honveds' (defenders); and as many as 9,000 were made prisoners. Unable to subdue Hungary, Jellachich turned aside towards Vienna to crush the popular party there. For the democrats, exasperated by the perfidious policy of the government, had, on October 6, 1848, risen a third time: the war-minister, Latour, had been hanged on a lamp-post, and the emperor again fled from his turbulent capital to the ever-faithful Tyrolese. But now Jellachich and Windischgrätz bombarded the rebellious capital. It was on the point of surrendering when the Hungarians appeared to aid the city; but the levies raised by the exertions of Kossuth were this time outmanœuvred [and defeated] by the imperialists at Schwechat (October 30, 1848), and on the next day Vienna surrendered. Blum, a delegate from Saxony [to the German Parliament of Frankfurt, who had come on a mission of mediation to Vienna, but who had taken a part in the fighting], and some other democrats, were shot. By this clever but unscrupulous use of race jealousy the Viennese Government seemed to have overcome Bohemians, Italians, Hungarians, and the citizens of its own capital in turn; while it had diverted the southern Slavonians from hostility to actual service on its side. . . . The weak health and vacillating spirit of Ferdinand did not satisfy the knot of courtiers of Vienna, who now, flushed by success, sought to concentrate all power in the Viennese Cabinet. Worn out by the excitements of the year and by the demands of these men, Ferdinand, on December 2, 1848, yielded up the crown, not to his rightful successor, his brother, but to his nephew, Francis Joseph. He, a youth of eighteen, ascended the throne so rudely shaken, and still, in spite of almost uniform disaster in war, holds sway over an empire larger and more powerful than he found it in 1848. The Hungarians refused to recognise the young sovereign thus forced upon them; and the fact that he was not crowned at Presburg with the sacred iron crown of St. Stephen showed that he did not intend to recognise the Hungarian constitution. Austrian troops under Windischgrätz entered Buda-Pesth, but the Hungarian patriots

withdrew from their capital to organize a national resistance; and when the Austrian Government proclaimed the Hungarian constitution abolished and the complete absorption of Hungary in the Austrian Empire, Kossuth and his colleagues retorted by a Declaration of Independence (April 24, 1849). The House of Hapsburg was declared banished from Hungary, which was to be a republic. Kossuth, the first governor of the new republic, and Görgei, its general, raised armies which soon showed their prowess." The first important battle of the war had been fought at Kapolna, on the right bank of the Theiss, on the 26th of February, 1849, Görgei and Dembinski commanding the Hungarians and Windischgrätz leading the Austrians. The latter won the victory, and the Hungarians retreated toward the Theiss. About the middle of March, Görgei resumed the offensive, advancing toward Pesth, and encountered the Austrians at Isaszeg, where he defeated them in a hard-fought battle, — or rather in two battles which are sometimes called by different names: viz., that of Tapio Bisccke fought April 4th, and that of Godolo, fought on the 5th. It was now the turn of the Austrians to fall back, and they concentrated behind the Rakos, to cover Pesth. The Hungarian general passed round their left, carried Waitzen by storm, forced them to evacuate Pesth and to retreat to Presburg, abandoning the whole of Hungary with the exception of a few fortresses, which they held. The most important of these fortresses, that of Buda, the "twin-city," opposite Pesth on the Danube, was besieged by the Hungarians and carried by storm on the 21st of May. "In Transylvania, too, the Hungarians, under the talented Polish general Bem, overcame the Austrians, Slavonians, and Roumanians in many brilliant encounters. But the proclamation of a republic had alienated those Hungarians who had only striven for their old constitutional rights, so quarrels arose between Görgei and the ardent democrat Kossuth. Worse still, the Czar Nicholas, dreading the formation of a republic near his Polish provinces sent the military aid which Francis Joseph in May 1849 implored. Soon 80,000 Russians under Paskiewitch poured over the northern Carpathians to help the beaten Austrians, while others overpowered the gallant Bem in Transylvania. Jellachich with his Croats again invaded South Hungary, and Haynau, the scourge of Lombardy, marched on the strongest Hungarian fortress, Komorn, on the Danube." The Hungarians, overpowered by the combination of Austrians and Russians against them, were defeated at Pered, June 21; at Acz, July 3; at Komorn, July 11; at Waitzen, July 16; at Tzombor, July 20; at Segesvar, July 31; at Debreczin, August 2; at Szegedin, August 4; at Temesvar, August 10. "In despair Kossuth handed over his dictatorship to his rival Görgei, who soon surrendered at Vilagos with all his forces to the Russians (August 13, 1849). About 5,000 men with Kossuth, Bem, and other leaders, escaped to Turkey. Even there Russia and Austria sought to drive them forth; but the Porte, upheld by the Western Powers, maintained its right to give sanctuary according to the Koran. Kossuth and many of his fellow-exiles finally sailed to England [and afterwards to America], where his majestic eloquence aroused deep sympathy for the afflicted country.

Many Hungarian patriots suffered death. All rebels had their property confiscated, and the country was for years ruled by armed force, and its old rights were abolished."—J. H. Rose, *A Century of Continental History*, ch. 31.

A. D. 1848-1850.—Failure of the movement for Germanic national unity.—End of the Frankfort Assembly.—"Frankfort had become the centre of the movement. The helpless Diet had acknowledged the necessity of a German parliament, and had summoned twelve men of confidence charged with drawing up a new imperial constitution. But it was unable to supply what was most wanted—a strong executive. . . . Instead of establishing before all a strong executive able to control and to realise its resolutions, the Assembly lost months in discussing the fundamental rights of the German people, and thus was overhauled by the events. In June, Prince Windischgrätz crushed the insurrection at Prague; and in November the anarchy which had prevailed during the whole summer at Berlin was put down, when Count Brandenburg became first minister. . . . Schwarzenberg [at Vienna] declared as soon as he had taken the reins, that his programme was to maintain the unity of the Austrian empire, and demanded that the whole of it should enter into the Germanic confederation. This was incompatible with the federal state as contemplated by the National Assembly, and therefore Gagern, who had become president of the imperial ministry [at Frankfort], answered Schwarzenberg's programme by declaring that the entering of the Austrian monarchy with a majority of non-German nationalities into the German federal state was an impossibility. Thus nothing was left but to place the king of Prussia at the head of the German state. But in order to win a majority for this plan Gagern found it necessary to make large concessions to the democratic party, amongst others universal suffrage. This was not calculated to make the offer of the imperial crown acceptable to Frederic William IV., but his principal reason for declining it was, that he would not exercise any pressure on the other German sovereigns, and that, notwithstanding Schwarzenberg's haughty demeanour, he could not make up his mind to exclude Austria from Germany. After the refusal of the crown by the king, the National Assembly was doomed; it had certainly committed great faults, but the decisive reason of its failure was the lack of a clear and resolute will in Prussia. History, however, teaches that great enterprises, such as it was to unify an empire dismembered for centuries, rarely succeed at the first attempt. The capital importance of the events of 1848 was that they had made the German unionist movement an historical fact; it could never be effaced from the annals, that all the German governments had publicly acknowledged that tendency as legitimate, the direction for the future was

given, and even at the time of failure it was certain, as Stockmar said, that the necessity of circumstances would bring forward the man who, profiting by the experiences of 1848, would fulfil the national aspirations."—F. H. Geffcken, *The Unity of Germany (English Historical Rev., April, 1891)*.—See GERMANY: A. D. 1848-1850.

A. D. 1849-1859.—The Return to pure Absolutism.—Bureaucracy triumphant.—"The two great gains which the moral earthquake of 1848 brought to Austria were, that through wide provinces of the Empire, and more especially in Hungary, it swept away the sort of semi-vassalage in which the peasantry had been left by the Urbarium of Maria Theresa [an edict which gave to the peasants the right of moving from place to place, and the right of bringing up their children as they wished, while it established in certain courts the trial of all suits to which they were parties], and other reforms akin to or founded upon it, and introduced modern in the place of middle-age relations between the two extremes of society. Secondly, it overthrew the policy of do-nothing—a surer guarantee for the continuance of abuses than even the determination, which soon manifested itself at headquarters, to make the head of the state more absolute than ever. After the taking of Vienna by Windischgrätz, the National Assembly had, on the 15th of November 1848, been removed from the capital to the small town of Kremsier, in Moravia. Here it prolonged an ineffective existence till March 1849, when the court camarilla felt itself strong enough to put an end to an inconvenient censor, and in March 1849 it ceased to exist. A constitution was at the same time promulgated which contained many good provisions, but which was never heartily approved by the ruling powers, or vigorously carried into effect—the proclamation of a state of siege in many cities, and other expedients of authority in a revolutionary period, easily enabling it to be set at naught. The successes of the reaction in other parts of Europe, and, above all, the coup d'état in Paris, emboldened Schwarzenberg to throw off the mask; and on the last day of 1851 Austria became once more a pure despotism. The young emperor had taken 'Viribus unitis' for his motto; and his advisers interpreted those words to mean that Austria was henceforward to be a state as highly centralised as France—a state in which the minister at Vienna was absolutely to govern everything from Salzburg to the Iron Gate. The hand of authority had been severely felt in the pre-revolutionary period, but now advantage was to be taken of the revolution to make it felt far more than ever. In Hungary, for example, . . . it was fondly imagined that there would be no more trouble. The old political division into counties was swept away; the whole land was divided into five provinces; and the courtiers might imagine that from henceforth the Magyars would be as easily led as the inhabitants of Upper Austria. These delusions soon became general, but they owed their origin partly to the enthusiastic ignorance of those who were at the head of the army, and partly to two men"—Prince Schwarzenberg and Alexander Bach. Of the latter, the "two leading ideas were to cover the whole empire with a German bureaucracy, and to draw closer the ties which connected the court of Vienna with that of Rome.

... If absolutism in Austria had a fair trial from the 31st of December 1851 to the Italian war, it is to Bach that it was owing; and if it utterly and ludicrously failed, it is he more than any other man who must bear the blame. Already, in 1849, the bureaucracy had been reorganised, but in 1852 new and stricter regulations were introduced. Everything was determined by precise rules—even the exact amount of hair which the employé was permitted to wear upon his face. Hardly any question was thought sufficiently insignificant to be decided upon the spot. The smallest matters had to be referred to Vienna. . . . We can hardly be surprised that the great ruin of the Italian war brought down with a crash the whole edifice of the reaction."—M. E. G. Duff, *Studies in European Politics*, ch. 3.

A. D. 1856-1859.—The war in Italy with Sardinia and France.—Reverses at Magenta and Solferino.—Peace of Villafranca.—Surrender of Lombardy.—"From the wars of 1848-9 the King of Sardinia was looked upon by the moderate party as the champion of Italian freedom. Charles Albert had failed: yet his son would not, and indeed could not, go back, though, when he began his reign, there were many things against him. . . . Great efforts were made to win him over to the Austrian party, but the King was neither cast down by defeat and distrust nor won over by soft words. He soon showed that, though he had been forced to make a treaty with Austria, yet he would not cast in his lot with the oppression of Italy. He made Massimo d'Azeglio his chief Minister, and Camillo Benso di Cavour his Minister of Commerce. With the help of these two men he honestly carried out the reforms which had been granted by his father, and set new ones on foot. . . . The quick progress of reform frightened Count Massimo d'Azeglio. He retired from office in 1853, and his place was taken by Count Cavour, who made a coalition with the democratic party in Piedmont headed by Urbano Rattazzi. The new chief Minister began to work not only for the good of Piedmont but for Italy at large. The Milanese still listened to the hopes which Mazzini held out, and could not quietly bear their subjection. Count Cavour indignantly remonstrated with Radetzky for his harsh government. . . . The division and slavery of Italy had shut her out from European politics. Cavour held that, if she was once looked upon as an useful ally, then her deliverance might be hastened by foreign interference. The Sardinian army had been brought into good order by Alfonso della Marmora; and was ready for action. In 1855, Sardinia made alliance with England and France, who were at war with Russia; for Cavour looked on that power as the great support of the system of despotism on the Continent, and held that it was necessary for Italian freedom that Russia should be humbled. The Sardinian army was therefore sent to the Crimea, under La Marmora, where it did good

service in the battle of Tchernaya. . . . The next year the Congress of Paris was held to arrange terms of peace between the allies and Russia, and Cavour took the opportunity of laying before the representatives of the European powers the unhappy state of his countrymen. . . . In December, 1851, Louis Napoleon Buonaparte, the President of the French Republic, seized the government, and the next year took the title of Emperor of the French. He was anxious to weaken the power of Austria, and at the beginning of 1859 it became evident that war would soon break out. As a sign of the friendly feeling of the French Emperor towards the Italian cause, his cousin, Napoleon Joseph, married Clotilda, the daughter of Victor Emmanuel. Count Cavour now declared that Sardinia would make war on Austria, unless a separate and national government was granted to Lombardy and Venetia, and unless Austria promised to meddle no more with the rest of Italy. On the other hand, Austria demanded the disarmament of Sardinia. The King would not listen to this demand, and France and Sardinia declared war against Austria. The Emperor Napoleon declared that he would free Italy from the Alps to the Adriatic. . . . The Austrian army crossed the Ticino, but was defeated by the King and General Cialdini. The French victory of Magenta, on June 4th forced the Austrians to retreat from Lombardy. . . . On June 24th the Austrians, who had crossed the Mincio, were defeated at Solferino by the allied armies of France and Sardinia. It seemed as though the French Emperor would keep his word. But he found that if he went further, Prussia would take up the cause of Austria, and that he would have to fight on the Rhine as well as on the Adige. When, therefore, the French army came before Verona, a meeting was arranged between the two Emperors. This took place at Villafranca, and there Buonaparte, without consulting his ally, agreed with Francis Joseph to favour the establishment of an Italian Confederation. . . . Austria gave up to the King of Sardinia Lombardy to the west of Mincio. But the Grand Duke of Tuscany and the Duke of Modena were to return to their States. The proposed Confederation was never made, for the people of Tuscany, Modena, Parma, and Romagna sent to the King to pray that they might be made part of his Kingdom, and Victor Emmanuel refused to enter on the scheme of the French Emperor. In return for allowing the Italians of Central Italy to shake off the yoke, Buonaparte asked for Savoy and Nizza. . . . The King . . . consented to give up the 'glorious cradle of his Monarchy' in exchange for Central Italy."—W. A. Hunt, *History of Italy*, ch. 11.

A. D. 1862-1866.—The Schleswig-Holstein question.—Quarrel with Prussia.—The humiliating Seven Weeks War.—Conflict with Prussia grew out of the complicated Schleswig-Holstein question, reopened in 1862 and provisionally settled by a delusive arrangement between Prussia and Austria, into which the latter was artfully drawn by Prince Bismarck. See SCANDINAVIAN STATES (DENMARK): A. D. 1848-1862, and GERMANY: A. D. 1861-1866. No sooner was the war

with Denmark over, than "Prussia showed that it was her intention to annex the newly acquired duchies to herself. This Austria could not endure, and accordingly, in 1866, war broke out between Austria and Prussia. Prussia sought alliance with Italy, which she stirred up to attack Austria in her Italian possessions. The Austrian army defeated the Italian at Eustazza [or Custoza (see ITALY: A. D. 1862-1866)]; but the fortunes of war were against them in Germany. Allied with the Austrians were the Saxons, the Bavarians, the Württembergers, Baden and Hesse, and Hanover. The Prussians advanced with their chief army into Bohemia with the utmost rapidity, dreading lest the Southern allies should march north to Hanover, and cut the kingdom in half, and push on to Berlin. The Prussians had three armies, which were to enter Bohemia and effect a junction. The Elbe army under the King, the first army under Prince Frederick Charles, and the second army under the Crown Prince. The Elbe army advanced across Saxony by Dresden. The first army was in Lusatia, at Reichenberg, and the second army in Silesia at Heisse. They were all to meet at Gitschin. The Austrian army under General Benedek was at Königgrätz, in Eastern Bohemia. . . . As in the wars with Napoleon, so was it now; the Austrian generals . . . never did the right thing at the right moment. Benedek did indeed march against the first army, but too late, and when he found it was already through the mountain door, he retreated, and so gave time for the three armies to concentrate upon him. The Elbe army and the first met at Münchengrätz, and defeated an Austrian army there, pushed on, and drove them back out of Gitschin on Königgrätz. . . . The Prussians pushed on, and now the Elbe army went to Smidar, and the first army to Horzitz, whilst the second army, under the Crown Prince, was pushing on, and had got to Gradlitz. The little river Bistritz is crossed by the high road to Königgrätz. It runs through swampy ground, and forms little marshy pools or lakes. To the north of Königgrätz a little stream of much the same character dribbles through bogs into the Elbe. . . . But about Chlum, Nedelist and Lipa is terraced high ground, and there Benedek planted his cannon. The Prussians advanced from Smidar against the left wing of the Austrians, from Horzitz against the centre, and the Crown Prince was to attack the right wing. The battle began on the 3d of July, at 7 o'clock in the morning, by the simultaneous advance of the Elbe and the first army upon the Bistritz. At Sadowa is a wood, and there the battle raged most fiercely. . . . Two things were against the Austrians; first, the incompetence of their general, and, secondly, the inferiority of their guns. The Prussians had what are called needle-guns, breach-loaders, which are fired by the prick of a needle, and for the rapidity with which they can be fired far surpassed the old-fashioned muzzle-loaders used by the Austrians. After this great battle, which is called by the French and English the battle of Königgrätz, the Prussians marched on Vienna, and reached the Marchfeld before the Emperor Francis Joseph would come to terms. At last, on the 23d of August, a peace which gave a crushing preponderance in Germany to

Prussia, was concluded at Prague."—S. Baring-Gould, *The Story of Germany*, pp. 390-394.—See GERMANY: A. D. 1866.

A. D. 1866.—The War in Italy.—Loss of Venetia. See ITALY: A. D. 1862-1866.

A. D. 1866-1867.—Concession of nationality to Hungary.—Formation of the dual Austro-Hungarian Empire.—"For twelve years the name of Hungary, as a State, was erased from the map of Europe. Bureaucratic Absolutism ruled supreme in Austria, and did its best to obliterate all Hungarian institutions. Germanisation was the order of the day, the German tongue being declared the exclusive language of official life as well as of the higher schools. Government was carried on by means of foreign, German, and Czech officials. No vestige was left, not only of the national independence, but either of Home Rule or of self-government of any sort; the country was divided into provinces without regard for historical traditions; in short, an attempt was made to wipe out every trace denoting the existence of a separate Hungary. All ranks and classes opposed a sullen passive resistance to these attacks against the existence of the nation; even the sections of the nationalities which had rebelled against the enactments of 1848, at the instigation of the reactionary Camarilla, were equally disaffected in consequence of the short-sighted policy of despotical centralisation. . . . Finally, after the collapse of the system of Absolutism in consequence of financial disasters and of the misfortunes of the Italian War of 1859, the Hungarian Parliament was again convoked; and after protracted negotiations, broken off and resumed again, the impracticability of a system of provincial Federalism having been proved in the meantime, and the defeat incurred in the Prussian War of 1866 having demonstrated the futility of any reconstruction of the Empire of Austria in which the national aspirations of Hungary were not taken into due consideration—an arrangement was concluded under the auspices of Francis Deák, Count Andrassy, and Count Beust, on the basis of the full acknowledgment of the separate national existence of Hungary, and of the continuity of its legal rights. The idea of a centralised Austrian Empire had to give way to the dual Austro-Hungarian monarchy, which is in fact an indissoluble federation of two equal States, under the common rule of a single sovereign, the Emperor of Austria and King of Hungary, each of the States having a constitution, government, and parliament of its own, Hungary especially retaining, with slight modifications, its ancient institutions remodelled in 1848. The administration of the foreign policy, the management of the army, and the disbursement of the expenditure necessary for these purposes, were settled upon as common affairs of the entire monarchy, for the management of which common ministers were instituted, responsible to the two delegations, co-equal committees of the parliaments of Hungary and of the Cisleithanian (Austrian) provinces. Elaborate provisions were framed for the smooth working of these common institutions, for giving weight to the constitutional influence, even in matters of common policy, of the separate Cisleithanian and Hungarian ministries, and for rendering their responsibility to the respective Parliaments an earnest and solid reality. The financial questions pending in the two inde-

pendent and equal States were settled by a compromise: measures were taken for the equitable arrangement of all matters which might arise in relation to interests touching both States, such as duties, commerce, and indirect taxation, all legislation on these subjects taking place by means of identical laws separately enacted by the Parliament of each State. . . . Simultaneously with these arrangements the political differences between Hungary and Croatia were compromised by granting provincial Home Rule to the latter. . . . Thus the organisation of the Austro-Hungarian monarchy on the basis of dualism, and the compromise entered into between the two halves composing it, whilst uniting for the purposes of defence the forces of two States of a moderate size and extent into those of a great empire, able to cope with the exigencies of an adequate position amongst the first-class Powers of Europe, restored also to Hungary its independence and its unfettered sovereignty in all internal matters."—A. Pulszky, *Hungary (National Life and Thought, lect. 3)*.—"The Ausgleich, or agreement with Hungary, was arranged by a committee of 67 members of the Hungarian diet, at the head of whom was the Franklin of Hungary, Francis Deak, the true patriot and inexorable legislator, who had taken no part in the revolutions, but who had never given up one of the smallest of the rights of his country. . . . On the 8th of June [1867], the emperor Francis Joseph was crowned with great pomp at Pesth. On the 28th of the following June, he approved the decisions of the diet, which settled the position of Hungary with regard to the other countries belonging to his majesty, and modified some portions of the laws of 1848. . . . Since the Ausgleich the empire has consisted of two parts. . . . For the sake of clearness, political language has been increased by the invention of two new terms, Cisleithania and Transleithania, to describe the two groups, separated a little below Vienna by a small affluent of the Danube, called the Leitha—a stream which never expected to become so celebrated."—L. Leger, *Hist. of Austro-Hungary*, ch. 35.

A. D. 1866-1887.—The Austro-Hungarian Empire.—Its new national life.—Its difficulties and promises.—Its ambitions and aims in Southeastern Europe.—"Peace politicians may say that a war always does more harm than good to the nations which engage in it. Perhaps it always does, at any rate, morally speaking, to the victors: but that it does not to the vanquished, Austria stands as a living evidence. Finally excluded from Italy and Germany by the campaign of 1866, she has cast aside her dreams of foreign domination, and has set herself manfully to the task of making a nation out of the various conflicting nationalities over which she presides. It does not require much insight to perceive that as long as she held her position in Germany this fusion was hopeless. The overwhelming preponderance of the German element made any approach to a reciprocity of interests impossible. The Germans always were regarded as sovereigns, the remaining nationalities as subjects; it was for these to command, for those to obey. In like manner, it

was impossible for the Austrian Government to establish a mutual understanding with a population which felt itself attracted—alike by the ties of race, language, and geographical position—to another political union. Nay more, as long as the occupation of the Italian provinces remained as a blot on the Imperial escutcheon, it was impossible for the Government to command any genuine sympathy from any of its subjects. But with the close of the war with Prussia these two difficulties—the relations with Germany and the relations with Italy—were swept away. From this time forward Austria could appear before the world as a Power binding together for the interests of all, a number of petty nationalities, each of which was too feeble to maintain a separate existence. In short, from the year 1866 Austria had a *raison d'être*, whereas before she had none. . . . Baron Beust, on the 7th of February, 1867, took office under Franz Joseph. His programme may be stated as follows. He saw that the day of centralism and imperial unity was gone past recall, and that the most liberal Constitution in the world would never reconcile the nationalities to their present position, as provinces under the always detested and now despised Empire. But then came the question—Granted that a certain disintegration is inevitable, how far is this disintegration to go? Beust proposed to disarm the opposition of the leading nationality by the gift of an almost complete independence, and, resting on the support thus obtained, to gain time for conciliating the remaining provinces by building up a new system of free government. It would be out of place to give a detailed account of the well-known measure which converted the 'Austrian empire' into the 'Austro-Hungarian monarchy.' It will be necessary, however, to describe the additions made to it by the political machinery. The Hungarian Reichstag was constructed on the same principle as the Austrian Reichsrath. It was to meet in Pesth, as the Reichsrath at Vienna, and was to have its own responsible ministers. From the members of the Reichsrath and Reichstag respectively were to be chosen annually sixty delegates to represent Cisleithanian and sixty to represent Hungarian interests—twenty being taken in each case from the Upper, forty from the Lower House. These two 'Delegations,' whose votes were to be taken, when necessary, collectively, though each Delegation sat in a distinct chamber, owing to the difference of language, formed the Supreme Imperial Assembly, and met alternate years at Vienna and Pesth. They were competent in matters of foreign policy, in military administration, and in Imperial finance. At their head stood three Imperial ministers—the Reichskanzler, who presided at the Foreign Office, and was ex officio Prime Minister, the Minister of War, and the Minister of Finance. These three ministers were independent of the Reichsrath and Reichstag, and could only be dismissed by a vote of want of confidence on the part of the Delegations. The 'Ausgleich' or scheme of federation with Hungary is, no doubt, much open to criticism, both as a whole and in its several parts. It must always be borne in mind that administratively and politically it was a retrogression. At a time in which all other European nations—notably North Germany—were simplifying and unifying their political

systems, Austria was found doing the very reverse. . . . The true answer to these objections is, that the measure of 1867 was constructed to meet a practical difficulty. Its end was not the formation of a symmetrical system of government, but the pacification of Hungary. . . . The internal history of the two halves of the empire flows in two different channels. Graf Andrassy, the Hungarian Premier, had a comparatively easy task before him. There were several reasons for this. In the first place, the predominance of the Magyars in Hungary was more assured than that of the Germans in Cisleithania. It is true that they numbered only 5,000,000 out of the 16,000,000 inhabitants; but in these 5,000,000 were included almost all the rank, wealth, and intelligence of the country. Hence they formed in the Reichstag a compact and homogeneous majority, under which the remaining Slovaks and Croats soon learnt to range themselves. In the second place, Hungary had the great advantage of starting in a certain degree afresh. Her government was not bound by the traditional policy of former Vienna ministries, and . . . it had managed to keep its financial credit unimpaired. In the third place, as those who are acquainted with Hungarian history well know, Parliamentary institutions had for a long time flourished in Hungary. Indeed the Magyars, who among their many virtues can hardly be credited with the virtue of humility, assert that the world is mistaken in ascribing to England the glory of having invented representative government, and claim this glory for themselves. Hence one of the main difficulties with which the Cisleithanian Government had to deal was already solved for Graf Andrassy and his colleagues."—*Austria since Sadova* (*Quarterly Review*, v. 131, pp. 90-95).—"It is difficult for any one except an Austro-Hungarian statesman to realise the difficulties of governing the Dual Monarchy. Cisleithania has, as is well-known, a Reichsrath and seventeen Provincial Diets. The two Austrias, Styria, Carinthia, and Salzburg present no difficulties, but causes of trouble are abundant in the other districts. The Emperor will probably end by getting himself crowned King of Bohemia, although it will be difficult for him to lend himself to a proscription of the German language by the Tsechs, as he has been forced by the Magyars to lend himself to the proscription in parts of Hungary of Rouman and of various Slavonic languages. But how far is this process to continue? The German Austrians are as unpopular in Istria and Dalmatia as in Bohemia; and Dalmatia is also an ancient kingdom. These territories were originally obtained by the election of the King of Hungary to the crown of the tripartite kingdom of Croatia, Slavonia, and Dalmatia. Is 'Ferencz Jozsef' to be crowned King of Dalmatia? And is Dalmatia to have its separate Ministry and its separate official language, and its completely separate laws? And what then of Fiume, the so-called Hungarian port? Then, again, Galicia is also an ancient kingdom, although it has at other times formed part of Poland; and the Emperor is King of Galicia, as he is King of Bohemia and Dalmatia. Is he to be crowned King of Galicia? And if so, is the separate existence of Galicia to be a Polish or a Ruthenian existence, or, indeed, a Jewish? for the Jews

are not only extraordinarily powerful and numerous there, but are gaining ground day by day. The Ruthenians complain as bitterly of being bullied by the Poles in Galicia as the Croats complain of the Magyars. Even here the difficulties are not ended. The Margraviate of Moravia contains a large Tsech population, and will have to be added to the Bohemian kingdom. Bukowina may go with Galicia or Transylvania, Austrian Silesia may be divided between the Tsechs of Bohemia and Moravia on the one part, and the Poles or Ruthenians or Jews of Galicia on the other. But what is to become of that which, with the most obstinate disregard of pedants, I intend to continue to call the Tyrol? Trieste must go with Austria and Salzburg, and the Northern Tyrol and Styria and Carinthia no doubt; but it is not difficult to show that Austria would actually be strengthened by giving up the Southern Tyrol, where the Italian people, or at least the Italian language, is gaining ground day by day. There really seems very little left of the integrity of the Austrian Empire at the conclusion of our survey of its constituent parts. Matters do not look much better if we turn to Trans-Leithania. Hungary has its Reichstag (which is also known by some terrible Magyar name), its House of Representatives, and its House of Magnates, and, although there are not so many Provincial Diets as in Austria, Slavonia and the Banat of Croatia possess a Common Diet with which the Magyars are far from popular; and the Principality of Transylvania also possessed separate local rights, for trying completely to suppress which the Magyars are at present highly unpopular. The Principality, although under Magyar rule, is divided between 'Saxons' and Roumans, who equally detest the Magyars, and the Croats and Slovenes who people the Banat are Slavs who also execrate their Ugrian rulers, inscriptions in whose language are defaced whenever seen. Croatia is under-represented at Pest, and says that she goes unheard, and the Croats, who have partial Home Rule without an executive, ask for a local executive as well, and demand Fiume and Dalmatia. If we look to the numbers of the various races, there are in Austria of Germans and Jews about 9,000,000 to about 13,000,000 Slavs and a few Italians and Roumans. There are in the lands of the Crown of Hungary 2,000,000 of Germans and Jews, of Roumans nearly 3,000,000, although the Magyars only acknowledge 2,500,000, and of Magyars and Slavs between five and six millions apiece. In the whole of the territories of the Dual Monarchy it will be seen that there are 18,000,000 of Slavs and only 17,000,000 of the ruling races—Germans, Jews, and Magyars—while between three and four millions of Roumans and Italians count along with the Slav majority as being hostile to the dominant nationalities. It is difficult to exaggerate the gravity for Austria of the state of things which these figures reveal."—*The Present Position of European Politics* (*Fortnightly Review*, April, 1887).—"In past times, when Austria had held France tight bound between Spain, Germany, and the Netherlands, she had aspired to a dominant position in Western Europe; and, so long as her eyes were turned in that direction, she naturally had every interest in preserving the Ottoman Empire intact, for she was thus

guaranteed against all attacks from the south. But, after the loss of her Italian possessions in 1805, and of part of Croatia in 1809, after the disasters of 1849, 1859 and 1866, she thought more and more seriously of indemnifying herself at the expense of Turkey. It was moreover evident that, in order to paralyse the damaging power of Hungary, it was essential for her to assimilate the primitive and scattered peoples of Turkey, accustomed to centuries of complete submission and obedience, and form thus a kind of iron band which should encircle Hungary and effectually prevent her from rising. If, in fact, we glance back at the position of Austria in 1860, and take the trouble carefully to study the change of ideas and interests which had then taken place in the policy of France and of Russia, the tendencies of the strongly constituted nations who were repugnant to the authority and influence of Austria, the basis of the power of that empire, and, finally, the internal ruin with which she was then threatened, we cannot but arrive at the conclusion that Austria, by the very instinct of self-preservation, was forced to turn eastwards and to consider how best she might devour some, at least, of the European provinces of Turkey. Austrian statesmen have been thoroughly convinced of this fact, and, impelled by the instinct above-mentioned, have not ceased carefully and consistently to prepare and follow out the policy here indicated. Their objects have already been partially attained by the practical annexation of Bosnia and Herzegovina in 1878 [see **TURKS**: A. D. 1878]; and it was striking to observe with what bitter feeling and resentment this measure was looked upon at the time by the Hungarian section of the empire. . . . Russia has never made any secret of her designs upon Turkey; she has, indeed, more than once openly made war in order to carry them out. But Austria

remains a fatal obstacle in her path. Even as things at present stand, Austria, by her geographical position, so commands and dominates the Russian line of operations that, once the Danube passed, the Russians are constantly menaced by Austria on the flank and rear. . . . And if this be true now, how much more true would it be were Austria to continue her march eastwards towards Salonica. That necessarily, at some time or other, that march must be continued may be taken for almost certain; but that Austria has it in her power to commence it for the present, cannot, I think, be admitted. She must further consolidate and make certain of what she has. Movement now would bring upon her a struggle for life or death—a struggle whose issue may fairly be said, in no unfriendly spirit to Austria, to be doubtful. With at home a bitterly discontented Croatia, strong Pan-slavistic tendencies in Bosnia, Herzegovina, and Dalmatia, a Greek population thoroughly disaffected, and a Hungary whose loyalty is doubtful, she would have to deal beyond her frontiers with the not contemptible armies, when combined, of Serbia, Bulgaria, and Greece, whose aspirations she would be asphyxiating for ever, with a bitterly hostile population in Macedonia, with the whole armed force of Turkey, and with the gigantic military power of Russia; whilst it is not fantastic to suppose that Germany would be hovering near, ready to pounce on her German provinces when the 'moment psychologique' should occur. With such a prospect before her, it would be worse than madness for Austria to move until the cards fell more favourably for her."—V. Caillard, *The Bulgarian Imbrolio* (*Fortnightly Review*, December, 1885).

AVARS, The.—The true Avars are represented to have been a powerful Turanian people who exercised in the sixth century a wide dominion in Central Asia. Among the tribes subject to them was one called the Ogors, or Ouigours, or Ouiars, or Ouar Khouni, or Varchonites (these diverse names have been given to the nation) which is supposed to have belonged to the national family of the Huns. Some time in the early half of the sixth century, the Turks, then a people who dwelt in the very center of Asia, at the foot of the Altai mountains, making their first appearance in history as conquerors, crushed and almost annihilated the Avars, there-

by becoming the lords of the Ouigours, or Ouar Khouni. But the latter found an opportunity to escape from the Turkish yoke. "Gathering together their wives and their children, their flocks and their herds, they turned their waggons towards the Setting Sun. This immense exodus comprised upwards of 200,000 persons. The terror which inspired their flight rendered them resistless in the onset; for the avenging Turk was behind their track. They overturned everything before them, even the Hunnic tribes of kindred origin, who had long hovered on the north-east frontiers of the Empire, and, driving out or enslaving the inhabitants, established themselves in the wide plains which stretch between the Volga and the Don. In that age of imperfect information they were naturally enough confounded with the greatest and most formidable tribe of the Turanian stock known to the nations of the West. The report that the Avars had broken loose from Asia, and were coming in irresistible force to overrun Europe, spread itself all along both banks of the Danube and penetrated to the Byzantine court. With true barbaric cunning, the Ouar Khouni availed themselves of the mistake, and by calling themselves Avars largely increased the terrors of their name and their chances of conquest." The pretended Avars were taken into the pay of the Empire by Justinian and employed against the Hun tribes north and east of the Black Sea. They presently

acquired a firm footing on both banks of the Danube, and turned their arms against the Empire. The important city of Sirmium was taken by them after an obstinate siege and its inhabitants put to the sword. Their ravages extended over central Europe to the Elbe, where they were beaten back by the warlike Franks, and, southwards, through Moesia, Illyria, Thrace, Macedonia and Greece, even to the Peloponnesus. Constantinople itself was threatened more than once, and in the summer of 626, it was desperately attacked by Avars and Persians in conjunction (see **ROME**: A. D. 565-628), with disastrous results to the assailants. But the seat of their Empire was the Dacian country—modern Roumania, Transylvania and part of Hungary—in which the Avars had helped the Lombards to crush and extinguish the Gepidæ. The Slavic tribes which, by this time, had moved in great numbers into central and south-eastern Europe, were largely in subjection to the Avars and did their bidding in war and peace. "These unfortunate creatures, of apparently an imperfect, or, at any rate, imperfectly cultivated intelligence, endured such frightful tyranny from their Avar conquerors, that their very name has passed into a synonyme for the most degraded servitude."—J. G. Sheppard, *Fall of Rome*, lect. 4.

ALSO IN: E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 42.

7th Century.—The Slavic Revolt.—The Empire of the Avars was shaken and much diminished in the Seventh Century by an extensive rising of their oppressed Slavic subjects, roused and led, it is said, by a Frank merchant, or adventurer, named Samo, who became their king. The first to throw off the yoke were a tribe called the Vendes, or Wendes, or Venedi, in Bohemia, who were reputed to be half-castes, resulting from intercourse between the Avar warriors and the women of their Slavic vassals. Under the lead of Samo, the Wendes and Slovenes or Slavonians drove the Avars to the east and north; and it seems to have been in connection with this revolution that the Emperor Heraclius induced the Serbs or Servians and Croats—Slavic tribes of the same race and region—to settle in depopulated Dalmatia. "'From the year 630 A. D.' writes M. Thierry, 'the Avar people are no longer mentioned in the annals of the East; the successors of Attila no longer figure beside the successors of Constantine. It required new wars in the West to bring upon the stage of history the khan and his people.' In these wars [of Pepin and Charlemagne] they were finally swept off from the roll of European nations."—J. G. Sheppard, *Fall of Rome*, lect. 4.

A. D. 791-805.—Conquest by Charlemagne.—"Hungary, now so called, was possessed by the Avars, who, joining with themselves a multitude of Hunnish tribes, accumulated the immense spoils which both they themselves and their equally barbarous predecessors had torn from the other nations of Europe. . . . They extended their limits towards Lombardy, and touched upon the very verge of Bavaria. . . . Much of their eastern frontier was now lost, almost without a struggle on their part, by the rise of other barbarous nations, especially the various tribes of Bulgarians." This was the position of the Avars at the time of Charlemagne, whom they provoked by forming an al-

liance with the ambitious Duke of Bavaria, Tassilo,—most obstinate of all who resisted the Frank king's imperious and imperial rule. In a series of vigorous campaigns, between 791 and 797 Charlemagne crushed the power of the Avars and took possession of their country. The royal "ring" or stronghold—believed to have been situated in the neighborhood of Tatar, between the Danube and the Theiss—was penetrated, and the vast treasure stored there was seized. Charlemagne distributed it with a generous hand to churches, to monasteries and to the poor, as well as to his own nobles, servants and soldiers, who are said to have been made rich. There were subsequent risings of the Avars and wars, until 805, when the remnant of that almost annihilated people obtained permission to settle on a tract of land between Sarwar and Haimburg, on the right bank of the Danube, where they would be protected from their Slavonian enemies. This was the end of the Avar nation.—G. P. R. James, *Hist. of Charlemagne*, bks. 9 and 11.

AVARS, The Rings of the.—The fortifications of the Avars were of a peculiar and effective construction and were called Hrrings, or Rings. "They seem to have been a series of eight or nine gigantic ramparts, constructed in concentric circles, the inner one of all being called the royal circle or camp, where was deposited all the valuable plunder which the warriors had collected in their expeditions. The method of constructing these ramparts was somewhat singular. Two parallel rows of gigantic piles were driven into the ground, some twenty feet apart. The intervening space was filled with stones, or a species of chalk, so compacted as to become a solid mass. The sides and summit were covered with soil, upon which were planted trees and shrubs, whose interlacing branches formed an impenetrable hedge."—J. G. Sheppard, *Fall of Rome*, lect. 9.

AVERNUS, Lake and Cavern.—A gloomy lake called Avernus, which filled the crater of an extinct volcano, situated a little to the north of the Bay of Naples, was the object of many superstitious imaginations among the ancients. "There was a place near Lake Avernus called the prophetic cavern. Persons were in attendance there who called up ghosts. Any one desiring it came thither, and, having killed a victim and poured out libations, summoned whatever ghost he wanted. The ghost came, very faint and doubtful to the sight."—Maximus Tyrius, quoted by C. C. Felton, in *Greece, Ancient and Modern*, c. 2, lect. 9.—See, also, **CUMÆ** and **BAIÆ**.

AZTEC. See MEXICO, ANCIENT; and A. D. 1325-1502; also, AMERICAN ABORIGINES: MAYAS.

AZTEC AND MAYA PICTURE-WRITING.—"No nation ever reduced it [pictography] more to a system. It was in constant use in the daily transactions of life. They [the Aztecs] manufactured for writing purposes a thick coarse paper from the leaves of the agave plant by a process of maceration and pressure. An Aztec book closely resembles one of our quarto volumes. It is made of a single sheet, 12 to 15 inches wide, and often 60 or 70 feet long, and is not rolled, but folded either in squares or zigzags in such a manner that on opening there are two pages exposed to view. Thin wooden boards are fastened to each of the outer leaves, so that the whole presents as neat an appearance, remarks Peter Martyr, as if it had come from the shop of a skilful book binder. They also covered buildings, tapestries and scrolls of parchment with these devices. . . . What is still more astonishing, there is reason to believe, in some instances, their figures were not painted, but actually printed with movable blocks of wood on which the symbols were carved in relief, though this was probably confined to those intended for ornament only. In these records we discern something higher than a mere symbolic notation. They contain the germ of a phonetic alphabet, and represent sounds of spoken language. The symbol is often not connected with the idea, but with the word. The mode in which this is done corresponds precisely to that of the rebus. It is a simple method, readily suggesting itself. In the middle ages it was much in vogue in Europe for the same purpose for which it was chiefly employed in Mexico at the same time—the writing of proper names. For example, the English family Bolton was known in heraldry by a 'tun' transfixed by a 'bolt.' Precisely so the Mexican Emperor Ixcoatl is mentioned in the Aztec manuscripts under the figure of a serpent, 'coatl,' pierced by obsidian knives, 'ixtli.' . . . As a syllable could be expressed by any object whose name commenced with it, as few words can be given the form of a rebus without some change, as the figures sometimes represent their full phonetic value, sometimes only that of their initial sound, and as universally the attention of the artist was directed less to the sound than to the idea, the didactic painting of the Mexicans, whatever it might have been to them, is a sealed book to us, and must remain so in great part. . . . Immense masses of such documents were stored in the imperial archives of ancient Mexico. Torquemada asserts that five cities alone yielded to the Spanish governor on one requisition no less than 16,000 volumes or scrolls! Every leaf was destroyed. Indeed, so thorough and wholesale was the destruction of these memorials, now so precious in our eyes, that hardly enough remain to whet the wits of antiquaries. In the libraries of Paris, Dresden, Pesth, and the Vatican are, however, a sufficient number to make us despair of deciphering them, had we for comparison all which the Spaniards destroyed. Beyond all others the Mayas, resident on the peninsula of Yucatan, would seem to have approached nearest a true phonetic system. They had a regular and well understood alphabet of 27 elementary sounds, the letters of which are totally different from those of any other nation, and evidently originated with themselves. But besides these they used a large number of purely conventional symbols, and moreover

were accustomed constantly to employ the ancient pictographic method in addition as a sort of commentary on the sound represented. . . . With the aid of this alphabet, which has fortunately been preserved, we are enabled to spell out a few words on the Yucatecan manuscripts and façades, but thus far with no positive

results. The loss of the ancient pronunciation is especially in the way of such studies. In South America, also, there is said to have been a nation who cultivated the art of picture-writing, the Panos, on the river Ucayale."—D. G. Brinton, *The Myths of the New World*, ch. 1.

B.

BÂB, The.—This title, signifying "gate" or "door," was given to a young religious reformer, named Mirza Ali Mohammed, who appeared in Persia about 1844, claiming to bring a divine message later and higher than those for which Jesus and Mohammed were sent. His teaching forbade polygamy and divorce, and his own life was pure. He won a large body of disciples, and the sect he founded is said to be still secretly spreading, notwithstanding continued persecution. The Bâb was himself put to death in 1851. —M. F. Wilson, *The Story of the Bâb* (*Contemporary Rev.*, Dec., 1885).

BABYLON: The City.—"The city stands on a broad plain, and is an exact square, a hundred and twenty furlongs in length each way, so that the entire circuit is four hundred and eighty furlongs. While such is its size, in magnificence there is no other city that approaches it. It is surrounded, in the first place, by a broad and deep moat, full of water, behind which rises a wall fifty royal cubits in width and two hundred in height. . . . On the top, along the edges of the wall, they constructed buildings of a single chamber facing one another, leaving between them room for a four-horse chariot to turn. In the circuit of the wall are a hundred gates, all of brass, with brazen lintels and side posts. The bitumen used in the work was brought to Babylon from the Is, a small stream which flows into the Euphrates at the point where the city of the same name stands, eight days' journey from Babylon. Lumps of bitumen are found in great abundance in this river. The city is divided into two portions by the river which runs through the midst of it. This river is the Euphrates. . . . The city wall is brought down on both sides to the edge of the stream; thence, from the corners of the wall, there is carried along each bank of the river a fence of burnt bricks. The houses are mostly three and four stories high; the streets all run in straight lines; not only those parallel to the river, but also the cross streets which lead down to the water side. At the river end of these cross streets are low gates in the fence that skirts the stream, which are, like the great gates in the outer wall, of brass, and open on the water. The outer wall is the main defence of the city. There is, however, a second inner wall, of less thickness than the first, but very little inferior to it in strength. The centre of each division of the town was occupied by a fortress. In the one stood the palace of the kings, surrounded by a wall of great strength and size: in the other was the sacred precinct of Jupiter Belus, a square enclosure, two furlongs each way, with gates of solid brass; which was

also remaining in my time. In the middle of the precinct there was a tower of solid masonry, a furlong in length and breadth, upon which was raised a second tower, and on that a third, and so on up to eight. The ascent to the top is on the outside, by a path which winds round all the towers. . . . On the topmost tower there is a spacious temple."—Herodotus, *Hist.*, trans. by G. Rawlinson, bk. 1, ch. 178–181.—According to Ctesias, the circuit of the walls of Babylon was but 360 furlongs. The historians of Alexander agreed nearly with this. As regards the height of the walls, "Strabo and the historians of Alexander substitute 50 for the 200 cubits of Herodotus, and it may therefore be suspected that the latter author referred to hands, four of which were equal to the cubit. The measure, indeed, of 50 fathoms or 200 royal cubits for the walls of a city in a plain is quite preposterous. . . . My own belief is that the height of the walls of Babylon did not exceed 60 or 70 English feet."—H. C. Rawlinson, *note to above*.—See, also, **BABYLONIA: B. C. 625–539.**

BABYLON OF THE CRUSADERS, The. See **CRUSADES: A. D. 1248–1254.**

BABYLONIA, Primitive.—(So much new knowledge of the ancient peoples in the East has been and is being brought to light by recent search and study, and the account of it in English historical literature is so meagre as yet, that there seems to be good reason for deferring the treatment of these subjects, for the most part, to a later volume of this work. The reader is referred, therefore, to the article "Semites," in the hope that, before its publication is reached, in the fourth or fifth volume, there will be later and better works to quote from on all the subjects embraced. Terrien de Lacouperie's interesting theory, which is introduced below, in this place, is questioned by many scholars; and Professor Sayce, whose writings have done much to popularize the new oriental studies, seems to go sometimes in advance of the sure ground.)—The Sumirians, inhabitants of the Shinar of the Old Testament narrative, and Accadians, who divided primitive Babylonia between them, "were overrun and conquered by the Semitic Babylonians of later history, Accad being apparently the first half of the country to fall under the sway of the new comers. It is possible that Casdim, the Hebrew word translated Chaldees or Chaldeans in the authorized version, is the Babylonian 'casidi' or conquerors, a title which continued to cling to them in consequence of their conquest. The Accadians had been the inventors of the pictorial hieroglyphics which afterwards developed into the cuneiform or wedge-shaped writing; they had founded the great cities of Chaldea, and had attained to a high degree of culture and civilization. Their cities possessed libraries, stocked with books, written partly on papyrus, partly on clay, which was, while still

soft, impressed with characters by means of a metal stylus. The books were numerous, and related to a variety of subjects. . . . In course of time, however, the two dialects of Sumir and Accad ceased to be spoken; but the necessity for learning them still remained, and we find, accordingly, that down to the latest days of both Assyria and Babylonia, the educated classes were taught the old extinct Accadian, just as in modern Europe they are taught Latin."—A. H. Sayce, *Fresh Light from the Ancient Monuments*, ch. 2. —"Since Sumir, the Shinar of the Bible, was the first part of the country occupied by the invading Semites, while Accad long continued to be regarded as the seat of an alien race, the language and population of primitive Chaldea have been named Accadian by the majority of Assyrian scholars. The part played by these Accadians in the intellectual history of mankind is highly important. They were the earliest civilizers of Western Asia, and it is to them that we have to trace the arts and sciences, the religious traditions and the philosophy not only of the Assyrians, but also of the Phœnicians, the Arameans, and even the Hebrews themselves. It was, too, from Chaldea that the germs of Greek art and of much of the Greek pantheon and mythology originally came. Columnar architecture reached its first and highest development in Babylonia; the lions that still guard the main entrance of Mykenæ are distinctly Assyrian in character; and the Greek Herakles with his twelve labours finds his prototype in the hero of the great Chaldean epic. It is difficult to say how much of our present culture is not owed to the stunted, oblique-eyed people of ancient Babylonia; Jerusalem and Athens are the sacred cities of our modern life; and both Jerusalem and Athens were profoundly influenced by the ideas which had their first starting-point in primeval Accad. The Semite has ever been a trader and an intermediary, and his earliest work was the precious trade in spiritual and mental wares. Babylonia was the home and mother of Semitic culture and Semitic inspiration; the Phœnicians never forgot that they were a colony from the Persian Gulf, while the Israelite recounted that his father Abraham had been born in Ur of the Chaldees. Almost the whole of the Assyrian literature was derived from Accad, and translated from the dead language of primitive Chaldea."—A. H. Sayce, *Babylonian Literature*, pp. 6-7.—The same, *Ancient Empires of the East*, app. 2.—"The place of China in the past and future is not that which it was long supposed to be. Recent researches have disclosed that its civilization, like ours, was variously derived from the same old focus of culture of south-western Asia. . . . It was my good fortune to be able to show, in an uninterrupted series of a score or so of papers in periodicals, of communications to the Royal Asiatic Society and elsewhere, published and unpublished, and of contributions to several works since April 1880, downwards, that the writing and some knowledge of arts, science and government of the early Chinese, more or less enumerated below, were derived from the old civilization of Babylonia, through the secondary focus of Susiana, and that this derivation was a social fact, resulting not from scientific teaching but from practical intercourse of some length between the Susian confederation and the future civilizers of the Chinese, the Bak tribes, who, from their neighbouring

settlements in the N., moved eastwards at the time of the great rising of the XXIII. century B. C. Coming again in the field, Dr. J. Edkins has joined me on the same line."—Terrien de Lacouperie, *Babylonia and China* (*Academy*, Aug. 7, 1880).—"We could enumerate a long series of affinities between Chaldean culture and Chinese civilization, although the last was not borrowed directly. From what evidence we have, it seems highly probable that a certain number of families or of tribes, without any apparent generic name, but among which the Kutta filled an important position, came to China about the year 2500 B. C. These tribes, which came from the West, were obliged to quit the neighbourhood, probably north of the Susiana, and were comprised in the feudal agglomeration of that region, where they must have been influenced by the Akkado-Chaldean culture."—Terrien de Lacouperie, *Early Hist. of Chinese Civilization*, p. 32.

—See, also, CHINA: THE ORIGIN OF THE PEOPLE.

The early (Chaldean) monarchy.—"Our earliest glimpse of the political condition of Chaldea shows us the country divided into numerous small states, each headed by a great city, made famous and powerful by the sanctuary or temple of some particular deity, and ruled by a patesi, a title which is now thought to mean priest-king, i. e., priest and king in one. There can be little doubt that the beginning of the city was every where the temple, with its college of ministering priests, and that the surrounding settlement was gradually formed by pilgrims and worshippers. That royalty developed out of the priesthood is also more than probable. . . . There comes a time when for the title of patesi is substituted that of king. . . . It is noticeable that the distinction between the Semitic newcomers and the indigenous Shumiro-Accadians continues long to be traceable in the names of the royal temple-builders, even after the new Semitic idiom, which we call the Assyrian, had entirely ousted the old language. . . . Furthermore, even superficial observation shows that the old language and the old names survive longest in Shumir,—the South. From this fact it is to be inferred with little chance of mistake that the North,—the land of Accad,—was earlier Semitized, that the Semitic immigrants established their first headquarters in that part of the country, that their power and influence thence spread to the South. Fully in accordance with these indications, the first grand historical figure that meets us at the threshold of Chaldean history, dim with the mists of ages and fabulous traditions, yet unmistakably real, is that of the Semite Sharrukin, king of Accad, or Agade, as the great Northern city came to be called—more generally known in history under the corrupt modern reading of Sargon, and called Sargon I., 'the First,' to distinguish him from a very famous Assyrian monarch of the same name who reigned many centuries later. As to the city of Agade, it is no other than the city of Accad mentioned in Genesis x. 10. It was situated close to the Euphrates on a wide canal just opposite Sippar, so that in time the two cities came to be considered as one double city, and the Hebrews always called it 'the two Sippars'—Sepharvaim, which is often spoken of in the Bible. . . . The tremendously ancient date of 3800 B. C. is now generally accepted for Sargon of Agade—perhaps the remotest

authentic date yet arrived at in history."—Z. A. Ragozin, *Story of Chaldea*, ch. 4.—"A horde of Cassites or Kossians swept down from the mountains of Northern Elam under their leader, Khammuragas; Accad was conquered, a foreign dynasty established in the land, and the capital transferred from Agade to Babylon. Babylon now became a city of importance for the first time; the rank assigned to it in the mythical age was but a reflection of the position it held after the Cassite conquest. The Cassite dynasty is probably the Arabian dynasty of Berossos. . . . A newly-found inscription of Nabonidos makes the date [of its advent] B. C. 3750 [*foot-note*]. . . . The first care of Khammuragas, after establishing himself in Accad, was to extend his sway over the southern kingdom of Sumer as well. . . . Khammuragas became king of the whole of Babylonia. From this time onward the country remained a united monarchy. The Cassite dynasty must have lasted for several centuries, and probably included more than one line of kings. . . . It was under the Cassite dynasty that the kingdom of Assyria first took its rise,—partly, perhaps, in consequence of the Asiatic conquests of the Egyptian monarchs of the eighteenth dynasty. . . . In B. C. 1400 the Cassite king married an Assyrian princess. Her son, Kara-Murdas, was murdered by the party opposed to Assyrian influence, but the usurper, Nazi-bugas, was quickly overthrown by the Assyrians, who placed a vassal-prince on the throne. This event may be considered the turning-point in the history of the kingdoms of the Tigris and Euphrates; Assyria henceforth takes the place of the worn-out monarchy of Babylonia, and plays the chief part in the affairs of Western Asia until the day of its final fall. In little more than a hundred years later the Assyrians were again in Babylonia, but this time as avowed enemies to all parties alike; Babylon was captured by the Assyrian monarch Tiglath-Adar in B. C. 1270, and the rule of the Cassite dynasty came to an end."—A. H. Sayce, *Ancient Empires of the East*, app. 2.

ALSO IN: G. Rawlinson, *Five Great Monarchies: Chaldea*, ch. 8.—See, also, ASSYRIA.

B. C. 625-539.—The later Empire.—For more than six centuries after the conquest of B. C. 1270, Babylonia was obscured by Assyria. During most of that long period, the Chaldean kingdom was subject to its northern neighbor and governed by Assyrian viceroys. There were frequent revolts and some intervals of independence; but they were brief, and the political life of Babylonia as a distinct power may be said to have been suspended from 1270 until 625 B. C., when Nabopolassar, who ruled first as the viceroy of the Assyrian monarch, threw off his yoke, took the attributes of sovereignty to himself, and joined the Medes in extinguishing the glory of Nineveh. "The Assyrian Empire was now shared between Media and Babylon. Nabucudur-utser, or Nebuchadrezzar, Nabopolassar's eldest son, was the real founder of the Babylonian empire. The attempt of Pharaoh Necho to win for Egypt the inheritance of Assyria was overthrown at the battle of Carchemish, and when Nebuchadrezzar succeeded his father in B. C. 604, he found himself the undisputed lord of Western Asia. Palestine was coerced in 602, and the destruction of Jerusalem in 587 laid a way open for the invasion of Egypt, which took

place twenty years later. Tyre also underwent a long siege of thirteen years, but it is doubtful whether it was taken after all. Babylon was now enriched with the spoils of foreign conquest. It owed as much to Nebuchadrezzar as Rome owed to Augustus. The buildings and walls with which it was adorned were worthy of the metropolis of the world. The palace, now represented by the Kasr mound, was built in fifteen days, and the outermost of its three walls was seven miles in circuit. Hanging gardens were constructed for Queen Amytis, the daughter of the Median prince, and the great temple of Bel was roofed with cedar and overlaid with gold. The temple of the Seven Lights, dedicated to Nebo at Borsippa by an early king, who had raised it to a height of forty-two cubits, was completed, and various other temples were erected on a sumptuous scale, both in Babylon and in the neighbouring cities, while new libraries were established there. After a reign of forty-two years, six months and twenty-one days, Nebuchadrezzar died (B. C. 562), and left the crown to his son Evil-Merodach, who had a short and inactive reign of three years and thirty-four days, when he was murdered by his brother-in-law, Nergal-sharezer, the Neriglissar of the Greeks. . . . The chief event of his reign of four years and four months was the construction of a new palace. His son, who succeeded him, was a mere boy, and was murdered after a brief reign of four months. The power now passed from the house of Nabopolassar,—Nabu-nahid or Nabonidos, who was raised to the throne, being of another family. His reign lasted seventeen years and five months, and witnessed the end of the Babylonian empire,"—which was overthrown by Cyrus the Great (or Kyros), B. C. 539—see PERSIA: B. C. 549-521.—A. H. Sayce, *Ancient Empires of the East*, app. 2.—See, also, SEMITES; EDUCATION, ANCIENT; LIBRARIES, ANCIENT; MEDICAL SCIENCE, BABYLONIAN; MONEY AND BANKING; TRADE.

BACTRIA.—"Where the edge [of the table-land of Iran] rises to the lofty Hindu Kush, there lies on its northern slope a favored district in the region of the Upper Oxus. . . . On the banks of the river, which flows in a north-westerly direction, extend broad mountain pastures, where support is found in the fresh mountain air for numerous herds of horses and sheep, and beneath the wooded hills are blooming valleys. On these slopes of the Hindu Kush, the middle stage between the table-land and the

deep plain of the Caspian Sea, lay the Bactrians—the Bakhtri of the Achaemenids, the Bakhddhi of the Avesta. . . . In ancient times the Bactrians were hardly distinguished from nomads; but their land was extensive and produced fruits of all kinds, with the exception of the vine. The fertility of the land enabled the Hellenic princes to make great conquests.”—M. Duncker, *Hist. of Antiquity*, bk. 6. ch. 2.—The Bactrians were among the people subjugated by Cyrus the Great and their country formed part of the Persian Empire until the latter was overthrown by Alexander (see MACEDONIA, &c.: B. C. 330–323). In the division of the Macedonian conquests, after Alexander's death, Bactria, with all the farther east, fell to the share of Seleucus Nicator and formed part of what came to be called the kingdom of Syria. About 256 B. C. the Bactrian province, being then governed by an ambitious Greek satrap named Diodotus, was led by him into revolt against the Syrian monarchy, and easily gained its independence, with Diodotus for its king (see SELEUCIDÆ: B. C. 281–224). “The authority of Diodotus was confirmed and riveted on his subjects by an undisturbed reign of eighteen years before a Syrian army even showed itself in his neighbourhood. . . . The Bactrian Kingdom was, at any rate at its commencement, as thoroughly Greek as that of the Seleucidæ.” “From B. C. 206 to about B. C. 185 was the most flourishing period of the Bactrian monarchy, which expanded during that space from a small kingdom to a considerable empire”—extending over the greater part of modern Afghanistan and across the Indus into the Punjab. But meantime the neighboring Parthians, who threw off the Seleucid yoke soon after the Bactrians had done so, were growing in power and they soon passed from rivalry to mastery. The Bactrian kingdom was practically extinguished about 150 B. C. by the conquests of the Parthian Mithridates I., “although Greek monarchs of the Bactrian series continued masters of Cabul and Western India till about B. C. 126.”—G. Rawlinson, *Sixth Great Oriental Monarchy*, ch. 3–5.

BAGAUDS, Insurrection of the (A. D. 287).

—The peasants of Gaul, whose condition had become very wretched during the distractions and misgovernment of the third century, were provoked to an insurrection, A. D. 287, which was general and alarming. It was a rising which seems to have been much like those that occurred in France and England eleven centuries later. The rebel peasants were called Bagauds, —a name which some writers derive from the Celtic word “bagad” or “bagat,” signifying “tumultuous assemblage.” They sacked and ruined several cities,—taking Autun after a siege of seven months,—and committed many terrible atrocities. The Emperor Maximian—colleague of Diocletian,—succeeded, at last, in suppressing the general outbreak, but not in extinguishing it every where. There were traces of it surviving long afterwards.—P. Godwin, *Hist. of France*, v. 1: *Ancient Gaul*, bk. 2, ch. 6.

A. D. 1258.—The Fall of the Caliphate.—Destruction of the city by the Mongols.—In 1252, on the accession of Mangu Khan, grandson of Jingis Khan, to the sovereignty of the Mongol Empire [see MONGOLS], a great Kuriltai or council was held, at which it was decided to send an expedition into the West, for two purposes: (1), to exterminate the Ismaileans or Assassins, who still maintained their power in northern Persia; (2), to reduce the Caliph of Bagdad to submission to the Mongol supremacy. The command of the expedition was given to Mangu's brother Khulagu, or Houlagou, who performed his appointed tasks with thoroughness and unmerciful resolution. In 1257 he made an end of the Assassins, to the great relief of the whole eastern world, Mahometan and Christian. In 1258 he passed on to Bagdad, preceded by an embassy which summoned the Caliph to submit, to raze the walls of Bagdad, to give up his vain pretensions to the sovereignty of the Moslem world, and to acknowledge the Great Khan for his lord. The feeble caliph and his treacherous and incapable ministers neither submitted nor made vigorous preparations for defence. As a consequence, Bagdad was taken after a siege which only excited the ferocity of the Mongols. They fired the city and slaughtered its people, excepting some Christians, who are

said to have been spared through the influence of one of Khulagu's wives, who was a Nestorian. The sack of Bagdad lasted seven days. The number of the dead, we are told by Raschid, was 800,000. The caliph, Mostassem, with all his family, was put to death.—H. H. Howorth, *Hist. of the Mongols*, v. 1, pp. 193–201.—For a considerable period before this final catastrophe, in the decline of the Seljuk Empire, the Caliphate at Bagdad had become once more “an independent temporal state, though, instead of ruling in the three quarters of the globe, the caliphs ruled only over the province of Irak Arabi. Their position was not unlike that of the Popes in recent times, whom they also resembled in assuming a new name, of a pious character, at their inauguration. Both the Christian and the Moslem pontiff was the real temporal sovereign of a small state; each claimed to be spiritual sovereign over the whole of the Faithful; each was recognized as such by a large body, but rejected by others. But in truth the spiritual recognition of the Abbasside caliphs was more nearly universal in their last age than it had ever been before.” With the fall of Bagdad fell the caliphate as a temporal sovereignty; but it survived, or was resurrected, in its spiritual functions, to become merged, a little later, in the supremacy of the sultan of the Ottoman Turks. “A certain Ahmed, a real or pretended Abbasside, fled [from Bagdad] to Egypt, where he was proclaimed caliph by the title of Al Mostanser Billah, under the protection of the then Sultan Bibars. He and his successors were deemed, in spiritual things, Commanders of the Faithful, and they were found to be a convenient instrument both by the Mameluke sultans and by other Mahometan princes. From one of them, Bajazet the Thunderbolt received the title of Sultan; from another, Selim the Inflexible procured the cession of his claims, and obtained the right to deem himself the shadow of God upon earth. Since then, the Ottoman Padishah has been held to inherit the rights of Omar and of Haroun, rights which if strictly pressed, might be terrible alike to enemies, neutrals, and allies.”—E. A. Freeman, *Hist. and Conq. of the Saracens*, lect. 4.

BAGLIONI, The.—“The Baglioni first came into notice during the wars they carried on with the Oddi of Perugia in the 14th and 15th centuries. This was one of those duels to the death, like that of the Visconti with the Torrensi of Milan, on which the fate of so many Italian cities of the middle ages hung. The nobles fought; the townsfolk assisted like a Greek chorus, sharing the passions of the actors, but contributing little to the catastrophe. The piazza was the theatre on which the tragedy was played. In this contest the Baglioni proved the stronger, and began to sway the state of Perugia after the irregular fashion of Italian despots. They had no legal right over the city, no hereditary magistracy, no title of princely authority. The Church was reckoned the supreme administrator of the Perugian common-

wealth. But in reality no man could set foot on the Umbrian plain without permission from the Baglioni. They elected the officers of state. The lives and goods of the citizens were at their discretion. When a Papal legate showed his face, they made the town too hot to hold him. . . . It was in vain that from time to time the people rose against them, massacring Pandolfo Baglioni on the public square in 1393, and joining with Ridolfo and Braccio of the dominant house to assassinate another Pandolfo with his son Niccolo in 1460. The more they were cut down, the more they flourished. The wealth they derived from their lordships in the duchy of Spoleto and the Umbrian hill-cities, and the treasures they accumulated in the service of the Italian republics, made them omnipotent in their native town. . . . From father to son they were warriors, and we have records of few Italian houses, except perhaps the Malatesti of Rimini, who equalled them in hardihood and fierceness. Especially were they noted for the remorseless vendette which they carried on among themselves, cousin tracking cousin to death with the ferocity and craft of sleuth-hounds. Had they restrained these fratricidal passions, they might, perhaps, by following some common policy, like that of the Medici in Florence or the Bentivogli in Bologna, have successfully resisted the Papal authority, and secured dynastic sovereignty. It is not until 1495 that the history of the Baglioni becomes dramatic, possibly because till then they lacked the pen of Matarazzo. But from this year forward to their final extinction, every detail of their doings has a picturesque and awful interest. Domestic furies, like the revel descried by Cassandra above the palace of Mycenae, seem to take possession of the fated house; and the doom which has fallen on them is worked out with pitiless exactitude to the last generation.”—J. A. Symonds, *Sketches in Italy and Greece*, pp. 70–72.

BAIÆ.—Baiæ, in Campania, opposite Puteoli on a small bay near Naples, was the favorite watering place of the ancient Romans. “As soon as the reviving heats of April gave token of advancing summer, the noble and the rich hurried from Rome to this choice retreat; and here, till the raging dogstar forbade the toils even of amusement, they disported themselves on shore or on sea, in the thick groves or on the placid lakes, in litters and chariots, in gilded boats with painted sails, lulled by day and night with the sweetest symphonies of song and music, or gazing indolently on the wanton measures of male and female dancers. The bath, elsewhere their relaxation, was here the business of the day; . . . they turned the pools of Avernus and Lucrinus into tanks for swimming; and in these pleasant waters both sexes met familiarly together, and conversed amidst the roses sprinkled lavishly on their surface.”—C. Merivale, *Hist. of the Romans*, ch. 40.

BALIA OF FLORENCE, The.—The chief instrument employed by the Medici to establish their power in Florence was "the pernicious system of the Parlamento and Balia, by means of which the people, assembled from time to time in the public square, and intimidated by the reigning faction, entrusted full powers to a select committee nominated in private by the chiefs of the great house. . . . Segni says: 'The Parlamento is a meeting of the Florentine people on the Piazza of the Signory. When the Signory has taken its place to address the meeting, the piazza is guarded by armed men, and then the people are asked whether they wish to give absolute power (Balìa) and authority to the citizens named, for their good. When the answer, yes, prompted partly by inclination and partly by compulsion, is returned, the Signory immediately retires into the palace. This is all that is meant by this parlamento, which thus gives away the full power of effecting a change in the state.'—J. A. Symonds, *Renaissance in Italy: Age of the Despots*, p. 164, and foot-note.—See, also, FLORENCE: A. D. 1378-1427, and 1458-1469.

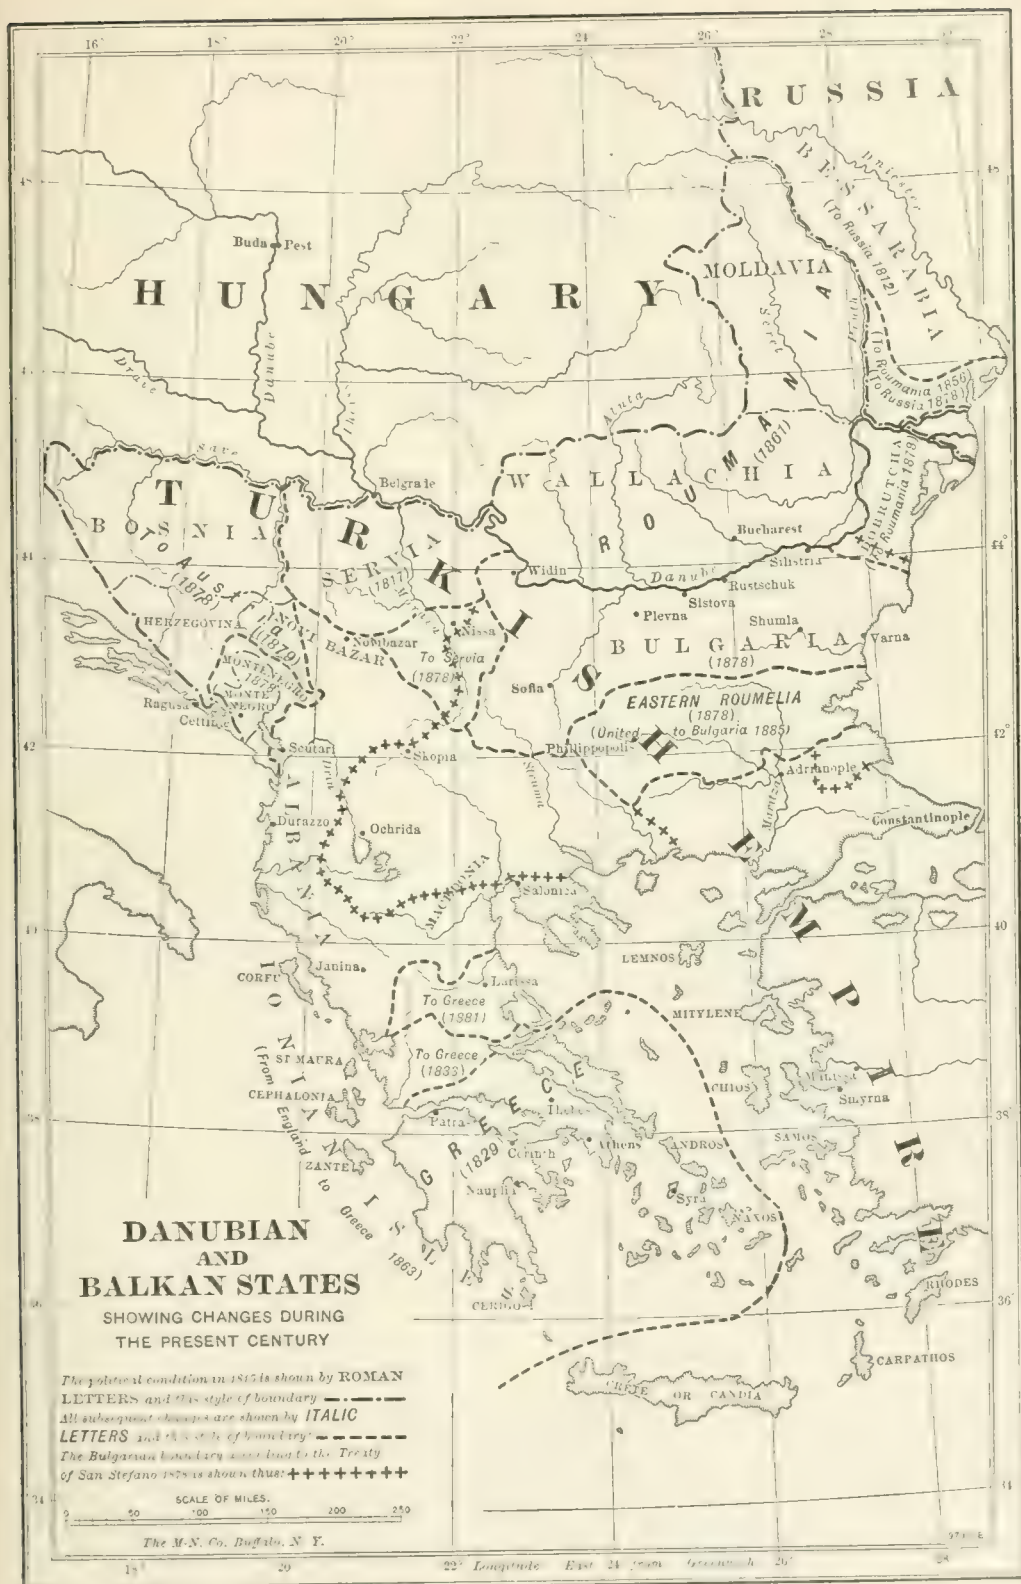

BALKAN AND DANUBIAN STATES.*

Ancient History.—The States of south-eastern Europe, lately emancipated, for the most part, from the rule of the Turks, are so associated by a common history, although remarkably diverse in race, that it seems expedient to bring them for discussion together. They occupy mainly the regions known in Roman times as MOESIA, DACIA and ILLYRICUM, to which names the reader is referred for some account of the scanty incidents of their early history.—See, also, AVARS.

Races existing.—"In no part of Western Europe do we find districts inhabited by men differing in speech and national feeling, lying in distinct patches here and there over a large country. A district like one of our larger counties in which one parish, perhaps one hundred, spoke Welsh, another Latin, another English, another Danish, another Old French, another the tongue of more modern settlers, Flemings, Huguenots or Palatines, is something which we find hard to conceive, and which, as applied to our own land or to any other Western land, sounds absurd on the face of it. When we pass into South-eastern Europe, this state of things, the very idea of which seems absurd in the West, is found to be perfectly real. All the races which we find dwelling there at the beginning of recorded history, together with several races which have come in since, all remain, not as mere fragments or survivals, but as nations, each with its national language and national feelings, and each having its greater or less share of practical importance in the politics of the present moment. Setting aside races which have simply passed through the country without occupying it, we may say that all the races

which have ever settled in the country are there still as distinct races. And, though each race has its own particular region where it forms the whole people or the great majority of the people, still there are large districts where different races really live side by side in the very way which seems so absurd when we try to conceive it in any Western country. We cannot conceive a Welsh, an English, and a Norman village side by side; but a Greek, a Bulgarian, and a Turkish village side by side is a thing which may be seen in many parts of Thrace. The oldest races in those lands, those which answer to Basques and Bretons in Western Europe, hold quite another position from that of Basques and Bretons in Western Europe. They form three living and vigorous nations, Greek, Albanian, and Rouman. They stand as nations alongside of the Slaves who came in later, and who answer roughly to the Teutons in the West, while all alike are under the rule of the Turk, who has nothing answering to him in the West. . . . When the Romans conquered the South-eastern lands, they found there three great races, the Greek, the Illyrian, and the Thracian. Those three races are all there still. The Greeks speak for themselves. The Illyrians are represented by the modern Albanians. The Thracians are represented, there seems every reason to believe, by the modern Roumans. Now had the whole of the South-eastern lands been inhabited by Illyrians and Thracians, those lands would doubtless have become as thoroughly Roman as the Western lands became. . . . But the position of the Greek nation, its long history and its high civilization, hindered this. The Greeks could not become Romans in any but the most

* See Appendices B and C, vol. 5.

purely political sense. Like other subjects of the Roman Empire, they gradually took the Roman name; but they kept their own language, literature, and civilization. In short we may say that the Roman Empire in the East became Greek, and that the Greek nation became Roman. The Eastern Empire and the Greek-speaking lands became nearly coextensive. Greek became the one language of the Eastern Roman Empire, while those that spoke it still called themselves Romans. Till quite lately, that is till the modern ideas of nationality began to spread, the Greek-speaking subjects of the Turk called themselves by no name but that of Romans. . . . While the Greeks thus took the Roman name without adopting the Latin language, another people in the Eastern peninsula adopted both name and language, exactly as the nations of the West did. If, as there is good reason to believe, the modern Roumans represent the old Thracians, that nation came under the general law, exactly like the Western nations. The Thracians became thoroughly Roman in speech, as they have ever since kept the Roman name. They form in fact one of the Romance nations, just as much as the people of Gaul or Spain. . . . In short, the existence of a highly civilized people like the Greeks hindered in every way the influence of Rome from being so thorough in the East as it was in the West. The Greek nation lived on, and alongside of itself, it preserved the other two ancient nations of the peninsula. Thus all three have lived on to the present as distinct nations. Two of them, the Greeks and the Illyrians, still keep their own languages, while the third, the old Thracians, speak a Romance language and call themselves Roumans. . . . The Slavonic nations hold in the East a place answering to that which is held by the Teutonic nations in the West. . . . But though the Slaves in the East thus answer in many ways to the Teutons in the West, their position with regard to the Eastern Empire was not quite the same as that of the Teutons towards the Western Empire. . . . They learned much from the half Roman, half Greek power with which they had to do; but they did not themselves become either Greek or Roman, in the way in which the Teutonic conquerors in the Western Empire became Roman. . . . Thus, while in the West everything except a few survivals of earlier nations, is either Roman or Teutonic, in the East, Greeks, Illyrians, Thracians or Roumans, and Slaves, all stood side by side as distinct nations when the next set of invaders came, and they remain as distinct nations still. . . . There came among them, in the form of the Ottoman Turk, a people with whom union was not only hard but impossible, a people who were kept distinct, not by special circumstances, but by the inherent nature of the case. Had the Turk been other than what he really was, he might simply have become a new nation alongside of the other South-eastern nations. Being what he was the Turk could not do this. . . . The original Turks did not belong to the Aryan branch of mankind, and their original speech is not an Aryan speech. The Turks and their speech belong to altogether another class of nations and languages. . . . Long before the Turks came into Europe, the Magyars or Hungarians had come; and, before the Magyars came, the Bulgarians had come. Both the Magyars

and the Bulgarians were in their origin Turanian nations, nations as foreign to the Aryan people of Europe as the Ottoman Turks themselves. But their history shows that a Turanian nation settling in Europe may either be assimilated with an existing European nation or may sit down as an European nation alongside of others. The Bulgarians have done one of these things; the Magyars have done the other; the Ottoman Turks have done neither. So much has been heard lately of the Bulgarians as being in our times the special victims of the Turk that some people may find it strange to hear who the original Bulgarians were. They were a people more or less nearly akin to the Turks, and they came into Europe as barbarian conquerors who were as much dreaded by the nations of South-eastern Europe as the Turks themselves were afterwards. The old Bulgarians were a Turanian people, who settled in a large part of the South-eastern peninsula, in lands which had been already occupied by Slaves. They came in as barbarian conquerors; but, exactly as happened to so many conquerors in Western Europe, they were presently assimilated by their Slavonic subjects and neighbours. They learned the Slavonic speech; they gradually lost all traces of their foreign origin. Those whom we now call Bulgarians are a Slavonic people speaking a Slavonic tongue, and they have nothing Turanian about them except the name which they borrowed from their Turanian masters. . . . The Bulgarians entered the Empire in the seventh century, and embraced Christianity in the ninth. They rose to great power in the South-eastern lands, and played a great part in their history. But all their later history, from a comparatively short time after the first Bulgarian conquest, has been that of a Slavonic and not that of a Turanian people. The history of the Bulgarians therefore shows that it is quite possible, if circumstances are favourable, for a Turanian people to settle among the Aryans of Europe and to be thoroughly assimilated by the Aryan nation among whom they settled."—E. A. Freeman, *The Ottoman Power in Europe*, ch. 2.

Also in: R. G. Latham, *The Nationalities of Europe*.

7th Century.—(Serbia, Croatia, Bosnia, Dalmatia and Montenegro).—The Slavonic settlement.—"No country on the face of our unfortunate planet has been oftener ravaged, no land so often soaked with the blood of its inhabitants. At the dawn of history Bosnia formed part of Illyria. It was said to have been already peopled by Slav tribes. Rome conquered all this region as far as the Danube, and annexed it to Dalmatia. Two provinces were formed, 'Dalmatia maritima,' and 'Dalmatia interna,' or 'Illyris barbara.' Order reigned, and as the interior communicated with the coast, the whole country flourished. Important ports grew upon the littoral. . . . At the fall of the Empire came the Goths, then the Avars, who, for two centuries, burned and massacred, and turned the whole country into a desert. . . . In 630 the Croats began to occupy the present Croatia, Slavonia, and the north of Bosnia, and in 640 the Servians, of the same race and language, exterminated the Avars and peopled Serbia, Southern Bosnia, Montenegro and Dalmatia. The ethnic situation which exists to-day dates

from this epoch."—E. de Laveleye, *The Balkan Peninsula*, ch. 3.—"Heraclius [who occupied the throne of the Eastern Empire at Constantinople from 610 to 642] appears to have formed the plan of establishing a permanent barrier in Europe against the encroachments of the Avars and Slavonians. . . . To accomplish this object, Heraclius induced the Serbs, or Western Slavonians, who occupied the country about the Carpathian mountains, and who had successfully opposed the extension of the Avar empire in that direction, to abandon their ancient seats, and move down to the South into the provinces between the Adriatic and the Danube. The Roman and Greek population of these provinces had been driven towards the seacoast by the continual incursions of the northern tribes, and the desolate plains of the interior had been occupied by a few Slavonian subjects and vassals of the Avars. The most important of the western Slavonian tribes who moved southward at the invitation of Heraclius were the Servians and Croats, who settled in the countries still peopled by their descendants. Their original settlements were formed in consequence of friendly arrangements, and, doubtless, under the sanction of an express treaty; for the Slavonian people of Illyria and Dalmatia long regarded themselves as bound to pay a certain degree of territorial allegiance to the Eastern Empire. . . . These colonies, unlike the earlier invaders of the Empire, were composed of agricultural communities. . . . Unlike the military races of Goths, Huns, and Avars, who had preceded them, the Servian nations increased and flourished in the lands which they had colonized; and by the absorption of every relic of the ancient population, they formed political communities and independent states, which offered a firm barrier to the Avars and other hostile nations. . . . The states which they constituted were of considerable weight in the history of Europe; and the kingdoms or bannats of Croatia, Servia, Bosnia, Rascia and Dalmatia, occupied for some centuries a political position very similar to that now held by the secondary monarchical states of the present day."—G. Finlay, *Greece under the Romans*, ch. 4, sect. 6.—See, also, **AVARS: THE BREAKING OF THEIR DOMINION; and SLAVONIC NATIONS: 6TH AND 7TH CENTURIES.**

7th-8th Centuries (Bulgaria).—Vassalage to the Khazars. See **KHAZARS.**

9th Century (Servia).—Rise of the Kingdom.—"At the period alluded to [the latter part of the ninth century] the Servians did not, like the rest of the Slavonians, constitute a distinct state, but acknowledged the supremacy of the Eastern Roman Emperor: in fact the country they inhabited had, from ancient times, formed part of the Roman territory; and it still remained part of the Eastern Empire when the Western Empire was re-established, at the time of Charlemagne. The Servians, at the same period, embraced the Christian faith; but in doing so they did not subject themselves entirely, either to the empire or church of the Greeks. . . . The Emperor . . . permitted the Servians to be ruled by native chiefs, solely of their own election, who preserved a patriarchal form of government. . . . In the eleventh century, the Greeks, despite of the stipulations they had entered into, attempted to take Servia under their immediate control, and to subject it to their financial sys-

tem." The attempt met with a defeat which was decisive. "Not only did it put a speedy termination to the encroachment of the Court of Constantinople in imposing a direct government, but it also firmly established the princely power of the Grand Shupanes; whose existence depended on the preservation of the national independence. . . . Pope Gregory VII. was the first who saluted a Grand Shupane as King."—L. Von Ranke, *Hist. of Servia*, ch. 1.

9th-16th Centuries (Bosnia, Servia, Croatia, Dalmatia).—Conversion to Christianity.—The Bogomiles.—Hungarian crusades.—Turkish conquest.—After the Slavonic settlement of Servia, Bosnia, Croatia and Dalmatia, for a time "the sovereignty of Byzantium was acknowledged. But the conversion of these tribes, of identical race, to two different Christian rites, created an antagonism which still exists. The Croats were converted first by missionaries from Rome; they thus adopted Latin letters and Latin ritual; the Servians, on the contrary, and consequently part of the inhabitants of Bosnia, were brought to Christianity by Cyril and Methodius, who, coming from Thessalonica, brought the characters and rites of the Eastern Church. About 860 Cyril translated the Bible into Slav, inventing an alphabet which bears his name, and which is still in use. . . . In 874 Budimir, the first Christian King of Bosnia, Croatia and Dalmatia, called a diet upon the plain of Dalminium, where he tried to establish a regular organization. It was about this time that the name Bosnia appeared for the first time. It is said to be derived from a Slav tribe coming originally from Thrace. In 905 Branimir, King of Servia, annexed Croatia and Bosnia; but this union did not last long. The sovereignty of Byzantium ceased in these parts after the year 1000. It was gained by Ladislaus, King of Hungary, about 1091. In 1103 Coloman, King of Hungary, added the titles of 'Rex Ramæ' (Herzegovina), then of 'Rex Bosniæ.' Since then Bosnia has always been a dependence of the crown of Saint Stephen. . . . About this time some Albigenes came to Bosnia, who converted to their beliefs a large number of the people who were called Catars, in German Patariens. In Bosnia they received and adopted the name of Bogomile, which means 'loving God.' Nothing is more tragic than the history of this heresy. . . . They [the Bogomiles] became in Bosnia a chief factor, both of its history and its present situation. . . . The Hungarian Kings, in obedience to the Pope, ceaselessly endeavoured to extirpate them, and their frequent wars of extermination provoked the hatred of the Bosnians. . . . In 1238 the first great crusade was organized by Bela IV. of Hungary, in obedience to Pope Gregory VII. The whole country was devastated, and the Bogomiles nearly all massacred, except a number who escaped to the forests and mountains. In 1245 the Hungarian Bishop of Kalocsa himself led a second crusade. In 1280 a third crusade was undertaken by Ladislaus IV., King of Hungary, in order to regain the Pope's favour. . . . About the year 1300 Paul of Brebir, 'Banus Croatorum et Bosniæ dominus,' finally added Herzegovina to Bosnia. Under the Ban Stephen IV., the Emperor of Servia, the great Dushan, occupied Bosnia, but it soon regained its independence (1355), and under Stephen Tvartko, who took

the title of king, the country enjoyed a last period of peace and prosperity. . . . Before his death the Turks appeared on the frontiers. At the memorable and decisive battle of Kossovo [see **TURKS**: A. D. 1360-1389], which gave them Serbia, 30,000 Bosnians were engaged, and, though retreating stopped the conqueror. Under Tvartko II., the second king, who was a Bogomile, Bosnia enjoyed some years' peace (1326-1443). Then followed [see **TURKS**: A. D. 1402-1451] a bloody interlude of civil war," which invited the Turks and prepared the way for them. "Mohammed II., who had just taken Constantinople (1453), advanced with a formidable army of 150,000 men, which nothing could resist. The country was laid waste: 30,000 young men were circumcised and enrolled amongst the janissaries; 200,000 prisoners were made slaves; the towns which resisted were burned; the churches turned into mosques, and the land confiscated by the conquerors (1463). . . . A period of struggle lasted from 1463 till the definite conquest in 1527 [see **TURKS**: A. D. 1451-1481]. . . . When the battle of Mohacz (August 29, 1526) gave Hungary to the Ottomans [see **HUNGARY**: A. D. 1487-1526] Jaitche, the last rampart of Bosnia, whose defence had inspired acts of legendary courage, fell in its turn in 1527. A strange circumstance facilitated the Mussulman conquest. To save their wealth, the greater number of magnates, and almost all the Bogomiles, who were exasperated by the cruel persecutions directed against them, went over to Islamism. From that time they became the most ardent followers of Mohammedanism, whilst keeping the language and names of their ancestors. They fought everywhere in the forefront of the battles which gained Hungary for the Turks." Within the present century the Bosnian Mussulmans have risen in arms "against all the reforms that Europe, in the name of modern principles, wrested from the Porte."—E. de Laveleye, *The Balkan Peninsula*, ch. 3.

10th-11th Centuries (Bulgaria).—The First Bulgarian Kingdom and its overthrow by Basil II.—"The glory of the Bulgarians was confined to a narrow scope both of time and place. In the 9th and 10th centuries they reigned to the south of the Danube, but the more powerful nations that had followed their emigration repelled all return to the north and all progress to the west. . . . In the beginning of the 11th century, the Second Basil [Byzantine or Greek Emperor, A. D. 976-1025] who was born in the purple, deserved the appellation of conqueror of the Bulgarians [subdued by his predecessor, John Zimisce, but still rebellious]. His avarice was in some measure gratified by a treasure of 400,000 pounds sterling (10,000 pounds' weight of gold) which he found in the palace of Lychnidus. His cruelty inflicted a cool and exquisite vengeance on 15,000 captives who had been guilty of the defence of their country. They were deprived of sight, but to one of each hundred a single eye was left, that he might conduct his blind country to the presence of their king. Their king is said to have expired of grief and horror; the nation was awed by this terrible example; the Bulgarians were swept away from their settlements, and circumcised within a narrow province; the surviving chiefs bequeathed to their children the advice of patience

and the duty of revenge."—E. Gibbon, *Decline and fall of the Roman Empire*, ch. 55.

A. D. 1096 (Bulgaria).—Hostilities with the First Crusaders. See **CRUSADES**: A. D. 1096-1099.

12th Century (Bulgaria).—The Second Bulgarian or Wallachian Kingdom.—"The reign of Isaac II. [Byzantine or Greek Emperor, A. D. 1185-1195] is filled with a series of revolts, caused by his incapable administration and financial rapacity. The most important of these was the great rebellion of the Vallachian and Bulgarian population which occupied the country between Mount Hæmus and the Danube. The immense population of this extensive country now separated itself finally from the government of the Eastern Empire, and its political destinies ceased to be united with those of the Greeks. A new European monarchy, called the Vallachian, or Second Bulgarian kingdom, was formed, which for some time acted an important part in the affairs of the Byzantine Empire, and contributed powerfully to the depression of the Greek race. The sudden importance assumed by the Vallachian population in this revolution, and the great extent of country then occupied by a people who had previously acted no prominent part in the political events of the East, render it necessary to give some account of their previous history. Four different countries are spoken of under the name of Vallachia by the Byzantine writers: Great Vallachia, which was the country round the plain of Thessaly, particularly the southern and south-western part. White Vallachia, or the modern Bulgaria, which formed the Vallachio-Bulgarian kingdom that revolted from Isaac II.; Black Vallachia, Mavro-Vallachia, or Karabogdon, which is Moldavia; and Hungarovallachia, or the Vallachia of the present day, comprising a part of Transylvania. . . . The question remains undecided whether these Vallachians are the lineal descendants of the Thracian race, who, Strabo tells us, extended as far south as Thessaly, and as far north as to the borders of Pannonia; for of the Thracian language we know nothing."—G. Finlay, *Hist. of the Byzantine and Greek Empires*, from 716 to 1453, bk. 3, ch. 3, sect. 1.—"Whether they were of Slavic origin or of Gaelic or Welsh origin, whether they were the aboriginal inhabitants of the country who had come under the influence of the elder Rome, and had acquired so many Latin words as to overlay their language and to retain little more than the grammatical forms and mould of their own language, or whether they were the descendants of the Latin colonists of Dacia [see **DACIA**: **TRAJAN'S CONQUEST**] with a large mixture of other peoples, are all questions which have been much controverted. It is remarkable that while no people living on the south of the Balkans appear to be mentioned as Wallachs until the tenth century, when Anna Comnena mentions a village called Ezeban, near Mount Kissavo, occupied by them, almost suddenly we hear of them as a great nation to the south of the Balkans. They spoke a language which differed little from Latin. Thessaly, during the twelfth century is usually called Great Wallachia. . . . Besides the Wallachs in Thessaly, whose descendants are now

called Kutzo-Wallachs, there were the Wallachs in Dacia, the ancestors of the present Roumanians, and Mavro-Wallachs in Dalmatia. Indeed, according to the Hungarian and Byzantine writers, there were during the twelfth century a series of Wallachian peoples, extending from the Theiss to the Dniester. . . . The word Wallach is used by the Byzantine writers as equivalent to shepherd, and it may be that the common use of a dialect of Latin by all the Wallachs is the only bond of union among the peoples bearing that name. They were all occasionally spoken of by the Byzantine writers as descendants of the Romans."—E. Pears, *The Fall of Constantinople*, ch. 3.—"The classical type of feature, so often met with among Roumanian peasants, pleads strongly for the theory of Roman extraction, and if just now I compared the Saxon peasants to Noah's ark figures rudely carved out of the coarsest wood, the Roumanians as often remind me of a type of face chiefly to be seen on cameo ornaments, or ancient signet rings. Take at random a score of individuals from any Roumanian village, and, like a handful of antique gems which have been strewn broadcast over the land, you will there surely find a good choice of classical profiles worthy to be immortalized on agate, onyx, or jasper. An air of plaintive melancholy generally characterizes the Roumanian peasant: it is the melancholy of a long-subjected and oppressed race. . . . Perhaps no other race possesses in such marked degree the blind and immovable sense of nationality which characterizes the Roumanians. They hardly ever mingle with the surrounding races, far less adopt manners and customs foreign to their own. This singular tenacity of the Roumanians to their own dress, manners and customs is probably due to the influence of their religion [the Greek church], which teaches that any divergence from their own established rules is sinful."—E. Gérard, *Transylvanian Peoples* (Contemp. Rev., March, 1887).

A. D. 1341-1356 (Serbia).—The Empire of Stephan Dushan.—"In 1341, when John Cantacuzenus assumed the purple [at Constantinople], important prospects were opened to the Servians. Cantacuzenus . . . went up the mountains and prevailed upon Stephan Dushan, the powerful king of the Servians, whom he found in a country palace at Pristina, to join his cause." As the result of this connection, and by favor of the opportunities which the civil war and general decline in the Greek Empire afforded him, Stephan Dushan extended his dominions over Epirus, Thessaly, Macedonia, and a part of Thrace. "The Shkypetares in Albania followed his standard; Arta and Joannina were in his possession. From these points his Voivodes [Palatines], whose districts may easily be traced, spread themselves over the whole of the Roumelian territory on the Vardar and the Marizza, as far as Bulgaria, which he also regarded as a province of his kingdom. Being in the possession of so extensive a dominion, he now ventured to assume a title which was still in dispute between the Eastern and Western Empires, and could not rightly be claimed by either. As a Servian Krale, he could neither ask nor expect the obedience of the Greeks: therefore he called himself Emperor of the Roumelians—the Macedonian Christ-loving Czar—and began to wear the tiara. . . . Stephan Dushan died [Dec. 2, 1356] before he had completed the Empire of

which he had laid the foundation, and ere he had strengthened his power by the bulwark of national institutions."—L. Von Ranke, *Hist. of Serbia*, ch. 1-2.

14th-18th Centuries (Roumania, or Wallachia, and Moldavia).—Four Centuries of Conflict with Hungarians and Turks.—"The Wallacho-Bulgarian monarchy, whatever may have been its limits, was annihilated by a horde of Tartars about A. D. 1250. The same race committed great havoc in Hungary, conquered the Kumani, overran Moldavia, Transylvania, &c., and held their ground there until about the middle of the 14th century, when they were driven northward by the Hungarian, Saxon, and other settlers in Transylvania; and with their exit we have done with the barbarians. . . . Until recently the historians of Roumania have had little to guide them concerning the events of the period beyond traditions which, though very interesting, are now gradually giving place to recorded and authenticated facts. . . . It is admitted that the plains and slopes of the Carpathians were inhabited by communities ruled over by chieftains of varying power and influence. Some were banates, as that of Craiova, which long remained a semi-independent State; then there were petty voivodes or princes . . . ; and besides these there were Khanates, . . . some of which were petty principalities, whilst others were merely the governorships of villages or groups of them. . . . Mircea, one of the heroes of Roumanian history, not only secured the independent sovereignty, and called himself Voivode of Wallachia 'by the grace of God,' but in 1389 he formed an alliance with Poland, and assumed other titles by the right of conquest. This alliance . . . had for its objects the extension of his dominions, as well as protection against Hungary on the one hand, and the Ottoman power on the other; for the . . . Turkish armies had overrun Bulgaria, and about the year 1391 they first made their appearance north of the Danube. At first the bravery of Mircea was successful in stemming the tide of invasion;" but after a year or two, "finding himself between two powerful enemies, the King of Hungary and the Sultan, Mircea elected to form an alliance with the latter, and concluded a treaty with him at Nicopolis (1393), known as the First Capitulation, by which Wallachia retained its autonomy, but agreed to pay an annual tribute and to acknowledge the suzerainty of the Sultan. . . . According to several historians Mircea did not adhere to it long, for he is said to have been in command of a contingent in the army of the crusaders, and to have been present at the battle of Nicopolis (1396), in which the flower of the French nobility fell, and, when he found their cause to be hopeless, once more to have deserted them and joined the victorious arms of Bajazet. Of the continued wars and dissensions in Wallachia during the reign of Mircea it is unnecessary to speak. He ruled with varying fortunes until 1418 A. D." A Second Capitulation was concluded, at Adrianople, with the Turks, in

1460, by a later Wallachian voivode, named Vlad. It increased the tribute to the Porte, but made no other important change in the terms of suzerainty. Meantime, in the neighbouring Moldavian principality, events were beginning to shape themselves into some historical distinctness. "For a century after the foundation of Moldavia, or, as it was at first called, Bogdania, by Bogdan Dragosch [a legendary hero], the history of the country is shrouded in darkness. Kings or princes are named, one or more of whom were Lithuanians. . . . At length a prince more powerful than the rest ascended the throne. . . . This was Stephen, sometimes called the 'Great' or 'Good.' . . . He came to the throne about 1456 or 1458, and reigned until 1504, and his whole life was spent in wars against Transylvania, Wallachia, . . . the Turks, and Tartars. . . . In 1475 he was at war with the Turks, whom he defeated on the river Birlad. . . . In that year also Stephen . . . completely overran Wallachia. Having reduced it to submission, he placed a native boyard on the throne as his viceroy, who showed his gratitude to Stephen by rebelling and liberating the country from his rule; but he was in his turn murdered by his Wallachian subjects. In 1476 Stephen sustained a terrible defeat at the hands of the Ottomans at Valea Alba (the White Valley), but eight years afterwards, allied with the Poles, he again encountered [and defeated] this terrible enemy. . . . After the battle of Mohacs [see HUNGARY: A. D. 1487-1526] the Turks began to encroach more openly upon Roumanian (Moldo-Wallachian) territory. They occupied and fortified Braila, Giurgevo, and Galatz; interfered in the election of the princes . . . adding to their own influence, and rendering the princes more and more subservient to their will. This state of things lasted until the end of the 16th century, when another hero, Michael the Brave of Wallachia, restored tranquility and independence to the Principalities, and raised them for a season in the esteem of surrounding nations." Michael, who mounted the throne in 1593, formed an alliance with the Prince of Siebenbürgen (Transylvania) and the voivode of Moldavia, against the Turks. He began his warfare, November, 1594, by a wholesale massacre of the Turks in Bucharest and Jassy. He then took Giurgevo by storm and defeated the Ottoman forces in a battle at Rustchuk. In 1595, Giurgevo was the scene of two bloody battles, in both of which Michael came off victor, with famous laurels. The Turks were effectually driven from the country. The ambition of the victorious Michael was now excited, and he invaded Transylvania (1599) desiring to add it to his dominions. In a battle "which is called by some the battle of Schellenberg, and by others of Hermanstadt," he defeated the reigning prince, Cardinal Andreas, and Transylvania was at his feet. He subdued Moldavia with equal ease, and the whole of ancient Dacia became subject to his rule. The Emperor Rudolph, as suzerain of Transylvania, recognized his authority. But his reign was brief. Before the close of the year 1600 a rising occurred in Transylvania, and Michael was defeated in a battle fought at Miriszlo. He escaped to the mountains and became a fugitive for some months, while even his Wallachian throne was occupied by a brother of the Moldavian voivode. At length he made

terms with the Emperor Rudolph, whose authority had been slighted by the Transylvanian insurgents, and procured men and money with which he returned in force, crushed his opponents at Goroszló, and reigned again as viceroy. But he quarreled soon with the commander of the imperial troops, General Basta, and the latter caused him to be assassinated, some time in August, 1601. . . . The history of Moldo-Wallachia during the 17th century . . . possesses little interest for English readers." At the end of the 17th century "another great Power [Russia] was drawing nearer and nearer to Roumania, which was eventually to exercise a grave influence upon her destiny. . . . In the beginning of the 18th century there ruled two voivodes, Constantine Brancovano, in Wallachia, and Demetrius Cantemir in Moldavia, both of whom had been appointed in the usual manner under the suzerainty of the Porte; but these princes, independently of each other, had entered into negotiations with Peter the Great after the defeat of Charles XII. at Pultawa (1709), to assist them against the Sultan, their suzerain, stipulating for their own independence under the protection of the Czar." Peter was induced to enter the country with a considerable army [1711], but soon found himself in a position from which there appeared little chance of escape. He was extricated only by the cleverness of the Czarina, who bribed the Turkish commander with her jewels—see SCANDINAVIAN STATES (SWEDEN): A. D. 1707-1718. The Moldavian Voivode escaped with the Russians. The Wallachian, Brancovano, was seized, taken to Constantinople, and put to death, along with his four sons. "Stephen Cantacuzene, the son of his accusers, was made Voivode of Wallachia, but like his predecessors he only enjoyed the honour for a brief term, and two years afterwards he was deposed, ordered to Constantinople, imprisoned, and decapitated; and with him terminated the rule of the native princes, who were followed, both in Wallachia and Moldavia, by the so-called Phanariote governors [see PHANARIOTES] or farmers-general of the Porte." —J. Samuelson, *Roumania, Past and Present*, pt. 2, ch. 11-13.

14th-19th Centuries: (Montenegro) The new Serbia.—"The people that inhabit the two territories known on the map as Serbia and Montenegro are one and the same. If you ask a Montenegrin what language he speaks, he replies 'Serb.' The last of the Serb Czars fell gloriously fighting at Kossovo in 1389 [see TURKS: A. D. 1360-1389]. To this day the Montenegrin wears a strip of black silk upon his headgear in memory of that fatal day. . . . The brave Serbs who escaped from Kossovo found a sanctuary in the mountains that overlook the Bay of Cattaro. Their leader, Ivo, surnamed Tsernoi (Black), gave the name of Tzrnogora (Montenegro) to these desert rocks. . . . Serbia having become a Turkish province, her colonists created in Montenegro a new and independent Serbia [see TURKS: A. D. 1451-1481]. The memory of Ivo the Black is still green in the country. Springs, ruins, and caverns are called after him, and the people look forward to the day when he will reappear as a political Messiah. But Ivo's descendants proved unworthy of him; they committed the unpardonable sin of marrying aliens, and early

in the 16th century the last descendant of Ivo the Black retired to Venice. From 1516 to 1697 Montenegro was ruled by elective Vladikas or Bishops; from 1697 to 1851 by hereditary Vladikas. For the Montenegrins the 16th, 17th and 18th centuries formed a period of incessant warfare. . . . Up till 1703 the Serbs of the mountain were no more absolutely independent of the Sultan than their enslaved kinsmen of the plain. The Havatch or Sultan's slipper tax was levied on the mountaineers. In 1703 Danilo Petrovitch celebrated his consecration as a Christian Bishop by ordering the slaughter of every Mussulman who refused to be baptised. This massacre took place on Christmas Eve 1703. . . . The 17th and 18th centuries were for Montenegro a struggle for existence. In the 19th century began their struggle for an outlet to the sea. The fall of Venice would naturally have given the mountaineers the bay of Cattaro, had not the French stepped in and annexed Dalmatia." In 1813, the Vladika, Peter I., "with the aid of the British fleet . . . took Cattaro from the French, but (pursuant to an arrangement between Russia and Austria) was compelled subsequently to relinquish it to the latter power. . . . Peter I. of Montenegro . . . died in 1830, at the age of 80. . . . His nephew Peter II. was a wise ruler. . . . On the death of Peter II., Prince Danilo, the uncle of the present Prince, went to Russia to be consecrated Bishop of Montenegro. The czar seems to have laughed him out of this ancient practice; and the late Prince instead of converting himself into monk and bishop returned to his own country and married [1851]. . . . Prince Danilo was assassinated at Cattaro (1860). . . . He was succeeded by his nephew Nicholas."—J. G. C. Minchin, *Serbia and Montenegro (National Life and Thought, lect. 19)*.—"The present form of government in Montenegro is at once the most despotic and the most popular in Europe—despotic, because the will of the Prince is the law of the land; and popular, because the personal rule of the Prince meets all the wants and wishes of the people. No Sovereign in Europe sits so firmly on his throne as the Prince of this little State, and no Sovereign is so absolute. The Montenegrins have no army; they are themselves a standing army."—J. G. C. Minchin, *The Growth of Freedom in the Balkan Peninsula, ch. 1*.—A. A. Paton, *Researches on the Danube and the Adriatic, bk. 2, ch. 7 (v. 1)*.—L. Von Ranke, *Hist. of Serbia, &c.: Slave Provinces of Turkey, ch. 2-6*.—"Montenegro is an extremely curious instance of the way in which favourable geographical conditions may aid a small people to achieve a fame and a place in the world quite out of proportion to their numbers. The Black Mountain is the one place where a South Slavonic community maintained themselves in independence, sometimes seeing their territory overrun by the Turks, but never acknowledging Turkish authority de jure from the time of the Turkish Conquest of the 15th century down to the Treaty of Berlin. Montenegro could not have done that but for her geographical structure. She is a high mass of limestone; you cannot call it a plateau, because it is seamed by many valleys, and rises into many sharp mountain-peaks. Still, it is a mountain mass, the average height of which is rather more than 2,000 feet above the sea, with summits reaching 5,000. It is bare

limestone, so that there is hardly anything grown on it, only grass—and very good grass—in spots, with little patches of corn and potatoes, and it has scarcely any water. Its upland is covered with snow in winter, while in summer the invaders have to carry their water with them, a serious difficulty when there were no roads, and active mountaineers fired from behind every rock, a difficulty which becomes more serious the larger the invading force. Consequently it is one of the most impracticable regions imaginable for an invading army. It is owing to those circumstances that this handful of people—because the Montenegrins of the 17th century did not number more than 40,000 or 50,000—have maintained their independence. That they did maintain it is a fact most important in the history of the Balkan Peninsula, and may have great consequences yet to come."—J. Bryce, *Relations of History and Geography (Contemp. Rev., Mar., 1886)*.

14th-19th Centuries.—(Serbia): The long oppression of the Turk.—Struggle for freedom under Kara Georg and Milosch.—Independence achieved.—The Obrenovitch dynasty.—"The brilliant victories of Stephan Dushan were a misfortune to Christendom. They shattered the Greek empire, the last feeble bulwark of Europe, and paved the way for those ultimate successes of the Asiatic conquerors which a timely union of strength might have prevented. Stephan Dushan conquered, but did not consolidate: and his scourging wars were insufficiently balanced by the advantage of the code of laws to which he gave his name. His son Urosh, being a weak and incapable prince, was murdered by one of the generals of the army, and thus ended the Neman dynasty, after having subsisted 212 years, and produced eight kings and two emperors. The crown now devolved on Knes, or Prince Lasar, a connexion of the house of Neman. . . . Of all the ancient rulers of the country, his memory is held the dearest by the Servians of the present day." Knes Lasar perished in the fatal battle of Kosovo, and with him fell the Serbian monarchy (see TURKS: A. D. 1360-1389, 1402-1451, and 1459; also MONTENEGRO). "The Turkish conquest was followed by the gradual dispersion or disappearance of the native nobility of Serbia, the last of whom, the Brankovitch, lived as 'despots' in the castle of Semendria up to the beginning of the 18th century. . . . The period preceding the second siege of Vienna was the spring-tide of Islam conquest. After this event, in 1684, began the ebb. Hungary was lost to the Porte, and six years afterwards 37,000 Serbian families emigrated into that kingdom; this first led the way to contact with the civilization of Germany. . . . Serbia Proper, for a short time wrested from the Porte by the victories of Prince Eugene, again became a part of the dominions of the Sultan [see RUSSIA: A. D. 1739]. But a turbulent militia overawed the government and tyrannized over the Rayahs. Pasvan Oglou and his bands at Widdin were, at the end of the last century, in open revolt against the Porte. Other chiefs had followed his example; and for the first time the Divan thought of associating Christian Rayahs with the spahis, to put down these rebels. The Dahis, as these brigand-chiefs were called, resolved to anticipate the approaching struggle by a massacre of the

most influential Christians. This atrocious massacre was carried out with indescribable horrors. . . . Kara Georg [Black George], a peasant, born at Topola about the year 1767, getting timely information that his name was in the list of the doomed, fled into the woods, and gradually organized a formidable force. In the name of the Porte he combated the Duhis, who had usurped local authority in defiance of the Pasha of Belgrade. The Divan, little anticipating the ultimate issue of the struggle in Serbia, was at first delighted at the success of Kara Georg; but soon saw with consternation that the rising of the Serbian peasants grew into a formidable rebellion, and ordered the Pashas of Bosnia and Scodra to assemble all their disposable forces and invade Serbia. Between 40,000 and 50,000 Bosniacs burst into Serbia on the west, in the spring of 1806, cutting to pieces all who refused to receive Turkish authority. Kara Georg undauntedly met the storm," defeating the Turkish forces near Tchoupria, September, 1804, and more severely two years later (August, 1806) at Shabatz. In December of the same year he surprised and took Belgrade. "The succeeding years were passed in the vicissitudes of a guerilla warfare, neither party obtaining any marked success; and an auxiliary corps of Russians assisted in preventing the Turks from making the re-conquest of Serbia. . . . Kara Georg was now a Russian lieutenant-general, and exercised an almost unlimited power in Serbia; the revolution, after a struggle of eight years, appeared to be successful, but the momentous events then passing in Europe completely altered the aspect of affairs. Russia, in 1812, on the approach of the countless legions of Napoleon, precipitately concluded the treaty of Bucharest, the eighth article of which formally assured a separate administration to the Servians. Next year, however, was fatal to Kara Georg. In 1813, the vigour of the Ottoman empire . . . was now concentrated on the resubjugation of Serbia. A general panic seemed to seize the nation; and Kara Georg and his companions in arms sought a retreat on the Austrian territory, and thence passed into Wallachia. In 1814, 300 Christians were impaled at Belgrade by the Pasha, and every valley in Serbia presented the spectacle of infuriated Turkish spahis avenging on the Servians the blood, exile and confiscation of the ten preceding years. At this period, Milosh Obrenovitch appears prominently on the political tapis. He spent his youth in herding the famed swine of Serbia; and during the revolution was employed by Kara Georg to watch the passes of the Balkans. . . . He now saw that a favourable conjuncture had come for his advancement from the position of chieftain to that of chief; he therefore lost no time in making terms with the Turks, offering to collect the tribute, to serve them faithfully, and to aid them in the resubjugation of the people. . . . He now displayed singular activity in the extirpation of all the other popular chiefs," until he found reason to suspect that the Turks were only using him to destroy him in the end. Then, in 1815, he turned upon them and raised the standard of revolt. The movement which he headed was so formidable that the Porte made haste to treat, and Milosh made favourable terms for himself, being reinstated as tribute-collector. "Many of the chiefs, impatient at the speedy submission of Milosh, wished to fight

the matter out, and Kara Georg, in order to give effect to their plans, landed in Serbia. Milosh pretended to be friendly to his designs, but secretly betrayed his place of concealment to the governor, whose men broke into the cottage where he slept, and put him to death."—A. A. Paton, *Researches on the Danube and the Adriatic*, bk. 1, ch. 3.—"In 1817 Milosh was proclaimed hereditary Prince of Serbia by the National Assembly. . . . In 1830 the autonomy of Serbia was at length solemnly recognized by the Porte, and Milosh proclaimed 'the father of the Fatherland.' . . . If asked why the descendants of Milosh still rule over Serbia, and not the descendants of Kara George, my answer is that every step in Serbian progress is connected with the Obrenovitch dynasty. The liberation of the country, the creation of a peasant proprietary, the final withdrawal of the Turkish troops from Belgrade in 1862, the independence of the country, the extension of its territory, and the making of its railways,—all of these are among the results of Obrenovitch rule. The founder of the dynasty had in 1830 a great opportunity of making his people free as well as independent. But Milosh had lived too long with Turks to be a lover of freedom. . . . In 1839 Milosh abdicated. The reason for this step was that he refused to accept a constitution which Russia and Turkey concocted for him. This charter vested the actual government of the country in a Senate composed of Milosh's rivals, and entirely independent of that Prince. . . . It was anti-democratic, no less than anti-dynastic. Milosh was succeeded first by his son Milan, and on Milan's death by Michael. Michael was too gentle for the troubled times in which he lived, and after a two years' reign he too started upon his travels. . . . When Michael crossed the Save, Alexander Kara Georgevitch was elected Prince of Serbia. From 1842 to 1858 the son of Black George lived—he can scarcely be said to have reigned—in Belgrade. During these 17 years this feeble son of a strong man did absolutely nothing for his country. . . . Late in 1858 he fled from Serbia, and Milosh ruled in his stead. Milosh is the Grand Old Man of Serb history. His mere presence in Serbia checked the intrigues of foreign powers. He died peacefully in his bed. . . . Michael succeeded his father. . . . Prince Michael was murdered by convicts in the park at Topschidera near Belgrade." He "was succeeded (1868) by Milan, the grandson of Zephrem, the brother of Milosh. As Milan was barely fourteen years of age, a Regency of three was appointed."—J. G. C. Minchin, *Serbia and Montenegro* (*National Life and Thought*, lect. 19).

19th Century (Roumania and Serbia).—Awakening of a National Spirit.—The effect of historical teaching.—"No political fact is of more importance and interest in modern continental history than the tenacity with which the smaller nations of Europe preserve their pride of nationality in the face of the growing tendency

towards the formation of large, strongly concentrated empires, supported by powerful armies. Why should Portugal utterly refuse to unite with Spain? Why do Holland and Belgium cling to their existence as separate States, in spite of all the efforts of statesmen to join them? Why do the people of Bohemia and Croatia, of Finland, and of Poland, refuse to coalesce with the rest of the population of the empires of which they form but small sections? Why, finally, do the new kingdoms of Roumania and Servia show such astonishing vitality? The arguments as to distinctive race or distinctive language fail to answer all these questions. . . . This rekindling of the national spirit is the result chiefly of the development of the new historical school all over the Continent. Instead of remaining in ignorance of their past history, or, at best, regarding a mass of legends as containing the true tale of their countries' achievements, these small nations have now learnt from the works of their great historians what the story of their fatherlands really is, and what title they have to be proud of their ancestors. These great historians—Herculano, Palacky, Széchenyi, and the rest—who made it their aim to tell the truth and not to show off the beauties of a fine literary style, all belonged to the generation which had its interest aroused in the history of the past by the novels of Sir Walter Scott and the productions of the Romantic School, and they all learnt how history was to be studied, and then written, from Niebuhr, Von Ranke and their disciples and followers. From these masters they learnt that their histories were not to be made interesting at the expense of truth. . . . The vitality of the new historical school in Roumania is particularly remarkable, for in the Danubian provinces, which form that kingdom, even more strenuous efforts had been made to stamp out the national spirit than in Bohemia. The extraordinary rapidity with which the Roumanian people has reasserted itself in recent years, is one of the most remarkable facts in modern European history, and it is largely due to the labours of its historians. Up till 1822 the Roumanian language was vigorously proscribed; the rulers of the Danubian provinces permitted instruction to the upper classes in the language of the rulers only, and while Slavonic, and in the days of the Phanariots Greek, was the official and fashionable language, used in educating the nobility and bourgeois, the peasants were left in ignorance. Four men, whose names deserve record, first endeavoured to raise the Roumanian language to a literary level, and not only studied Roumanian history, but tried to teach the Roumanian people something of their own early history. Of these four, George Schinkai was by far the most remarkable. He was an inhabitant of Transylvania, a Roumanian province which still remains subject to Hungary, and he first thought of trying to revive the Roumanian nationality by teaching the people their history. He arranged the annals of his country from A. D. 86 to A. D. 1739 with indefatigable labour, during the last half of the 18th century, and, according to Edgar Quinet, in such a truly modern manner, after such careful weighing of original authorities, and with such critical power, that he deserves to be ranked with the creators of the modern historical school. It need hardly be said that Schinkai's History was not allowed to be printed by the Hungarian

authorities, who had no desire to see the Roumanian nationality re-assert itself, and the censor marked on it 'opus igne, auctor patibulo dignus.' It was not published until 1853, more than forty years after its completion, and then only at Jassy, for the Hungarians still proscribed it in Transylvania. Schinkai's friend, Peter Major, was more fortunate in his work, a 'History of the Origin of the Roumanians in Dacia,' which, as it did not touch on modern society, was passed by the Hungarian censorship, and printed at Buda Pesth in 1813. The two men who first taught Roumanian history in the provinces which now form the kingdom of Roumania were not such learned men as Schinkai and Peter Major, but their work was of more practical importance. In 1813 George Asaky got leave to open a Roumanian class at the Greek Academy of Jassy, under the pretext that it was necessary to teach surveying in the Roumanian tongue, because of the questions which constantly arose in that profession, in which it would be necessary to speak to the peasants in their own language, and in his lectures he carefully inserted lessons in Roumanian history, and tried to arouse the spirit of the people. George Lazarus imitated him at Bucharest in 1816, and the fruit of this instruction was seen when the Roumanians partially regained their freedom. The Moldo-Wallachian princes encouraged the teaching of Roumanian history, as they encouraged the growth of the spirit of Roumanian independence, and when the Roumanian Academy was founded, an historical section was formed with the special mission of studying and publishing documents connected with Roumanian history. The modern scientific spirit has spread widely throughout the kingdom."—H. Morse Stephens, *Modern Historians and Small Nationalities* (*Contemp. Rev.*, July, 1887).

A. D. 1875–1878.—The Breaking of the Turkish yoke.—Bulgarian atrocities.—Russo-Turkish War.—In 1875, a revolt broke out in Herzegovina. "The efforts made to suppress the growing revolt strained the already weakened resources of the Porte, until they could bear up against it no longer, and the Herzegovinese rebellion proved the last straw which broke the back of Turkish solvency. . . . The hopes of the insurgents were of course quickened by this catastrophe, which, as they saw, would alienate much sympathy from the Turks. The advisers of the Sultan, therefore, thought it necessary to be conciliatory, and . . . they induced him to issue an *Irâdê*, or circular note, promising the remission of taxes, and economical and social reforms. . . . Europe, however, had grown tired of the Porte's promises of amendment, and for some time the Imperial Powers had been laying their heads together, and the result of their con-

sultations was the Andrassy Note. The date of this document was December 30th, 1875, and it was sent to those of the Western Powers who had signed the treaties of 1856. It declared that although the spirit of the suggested reforms was good, there was some doubt whether the Porte had the strength to carry them out; Count Andrassy, therefore, proposed that the execution of the necessary measures should be placed under the care of a special commission, half the members of which should be Mussulmans and half Christians. . . . It concluded with a serious warning, that if the war was not gone with the snow, 'the Governments of Serbia and Montenegro, which have had great difficulty in keeping aloof from the movement, will be unable to resist the current.' . . . It was evident, however, that this note would have but little or no effect; it contained no coercive precautions, and accordingly the Porte quietly allowed the question to drop, and contented himself with profuse promises. . . . So affairs drifted on; the little war continued to sputter on the frontier; reinforced by Servians and Montenegrins, the Herzegovinese succeeded in keeping their enemy at bay, and, instigated, it is said, by Russian emissaries, put forward demands which the Porte was unable to accept. . . . The Powers, in no wise disconcerted by the failure of their first attempt to settle the difficulties between the Sultan and his rebellious subjects, had published a sequel to the Andrassy Note. There was an informal conference of the three Imperial Chancellors, Prince Bismarck, Prince Gortschakoff, and Count Andrassy, at Berlin, in May. . . . Then on May 18th the Ambassadors of England, France, and Italy were invited to Prince Bismarck's house, and the text of the famous Berlin Memorandum was laid before them. . . . While the three Chancellors were forging their diplomatic thunderbolt, a catastrophe of such a terrible nature had occurred in the interior of Turkey that all talk of armistices and mixed commissions had become stale and unprofitable. The Berlin Memorandum was not even presented to the Porte; for a rumour, though carefully suppressed by Turkish officials, was beginning to leak out that there had been an insurrection of the Christian population of Bulgaria, and that the most horrible atrocities had been committed by the Turkish irregular troops in its suppression. It was communicated to Lord Derby by Sir Henry Elliot on the 4th of May. . . . On June 16th a letter was received from him at the Foreign Office, saying, 'The Bulgarian insurrection appears to be unquestionably put down, although I regret to say, with cruelty, and, in some places, with brutality.' . . . A week afterwards the Constantinople correspondent of the Daily News . . . gave the estimates of Bulgarians slain as varying from 18,000 to 30,000, and the number of villages destroyed at about a hundred. . . . That there was much truth in the statements of the newspaper correspondents was . . . demonstrated beyond possibility of denial as soon as Sir Henry Elliot's despatches were made public. . . . 'I am satisfied,' wrote Sir Henry Elliot, 'that, while great atrocities have been committed, both by Turks upon Christians and Christians upon Turks, the former have been by far the greatest, although the Christians were undoubtedly the first to commence them.' . . . Meanwhile, the Daily News had resolved on sending out a special commissioner to make an investi-

gation independent of official reports. Mr. J. A. MacGahan, an American, who had been one of that journal's correspondents during the Franco-German War, was the person selected. He started in company with Mr. Eugene Schuyler, the great authority on the Central Asian question, who, in the capacity of Consul-General, was about to prepare a similar statement for the Hon. Horace Maynard, the United States Minister at Constantinople. They arrived at Philippopolis on the 25th of July, where Mr. Walter Baring, one of the Secretaries of the British Legation at Constantinople, was already engaged in collecting information. The first of Mr. MacGahan's letters was dated July the 28th, and its publication in this country revived in a moment the half-extinct excitement of the populace. . . . Perhaps the passage which was most frequently in men's mouths at the time was that in which he described the appearance of the mountain village of Batak. 'We entered the town. On every side were skulls and skeletons charred among the ruins, or lying entire where they fell in their clothing. There were skeletons of girls and women, with long brown hair hanging to their skulls. We approached the church. There these remains were more frequent, until the ground was literally covered by skeletons, skulls, and putrefying bodies in clothing. Between the church and school there were heaps. The stench was fearful. We entered the churchyard. The sight was more dreadful. The whole churchyard, for three feet deep, was festering with dead bodies, partly covered; hands, legs, arms, and heads projecting in ghastly confusion. I saw many little hands, heads, and feet of children three years of age, and girls with heads covered with beautiful hair. The church was still worse. The floor was covered with rotting bodies quite uncovered. I never imagined anything so fearful. . . . The town had 9,000 inhabitants. There now remain 1,200. Many who had escaped had returned recently, weeping and moaning over their ruined homes. Their sorrowful wailing could be heard half a mile off. Some were digging out the skeletons of loved ones. A woman was sitting moaning over three small skulls, with hair clinging to them, which she had in her lap. The man who did this, Achmed Agra, has been promoted, and is still governor of the district.' An exceeding bitter cry of horror and disgust arose throughout the country on the receipt of this terrible news. Mr. Anderson at once asked for information on the subject, and Mr. Bourke was entrusted with the difficult duty of replying. He could only read a letter from Mr. Baring, in which he said that, as far as he had been able to discover, the proportion of the numbers of the slain was about 12,000 Bulgarians to 500 Turks, and that 60 villages had been wholly or partially burnt. . . . Mr. Schuyler's opinions were, as might be expected from the circumstance that his investigations had been shorter than those of Mr. Baring, and that he was ignorant of the Turkish language—which is that chiefly spoken in Bulgaria—and was therefore at the mercy of his interpreter, the more highly coloured. He totally rejected Lord Beaconsfield's idea that there had been a civil war, and that cruelties had been committed on both sides. On the contrary he asserted that 'the insurgent villages made little or no resistance. In many

cases they surrendered their arms on the first demand. . . . No Turkish women or children were killed in cold blood. No Mussulman women were violated. No Mussulmans were tortured. No purely Turkish village was attacked or burnt. No Mosque was desecrated or destroyed. The Bashi-Bazouks, on the other hand, had burnt about 65 villages, and killed at least 15,000 Bulgarians.' The terrible story of the destruction of Batak was told in language of precisely similar import to that of Mr. MacGahan, whose narrative the American Consul had never seen, though there was a slight difference in the numbers of the massacred. 'Of the 8,000 inhabitants,' he said, 'not 2,000 are known to survive'. . . . Abdul Aziz had let loose the hordes of Bashi-Bazouks on defenceless Bulgaria, but Murad seemed utterly unable to rectify the fatal error; the province fell into a state of complete anarchy. . . . As Lord Derby remarked, it was impossible to effect much with an imbecile monarch and bankrupt treasury. One thing, at any rate, the Turks were strong enough to do, and that was to defeat the Servians, who declared war on Turkey on July 1st. . . . Up to the last Prince Milan declared that his intentions were purely pacific; but the increasing troubles of the Porte enabled him, with some small chance of success, to avail himself of the anti-Turkish spirit of his people and to declare war. His example was followed by Prince Nikita of Montenegro, who set out with his brave little army from Cettigne on July 2nd. At first it appeared as if the principalities would have the better of the struggle. The Turkish generals showed their usual dilatoriness in attacking Serbia, and Tcherniaeff, who was a man of considerable military talent, gave them the good-bye, and cut them off from their base of operations. This success was, however, transitory; Abdul Kerim, the Turkish Commander-in-Chief, drove back the enemy by mere force of numbers, and by the end of the month he was over the border. Meanwhile, the hardy Montenegrins had been considerably more fortunate; but their victories over Mukhtar Pasha were not sufficiently important to effect a diversion. The Servians fell back from all their positions of defence, and on September 1st received a most disastrous beating before the walls of Alexinatz. . . . On September 16th the Porte agreed to a suspension of hostilities until the 25th. It must be acknowledged that the Servians used this period of grace exceedingly ill. Prince Milan was proclaimed by General Tcherniaeff, in his absence and against his will, King of Serbia and Bosnia; and though, on the remonstrance of the Powers, he readily consented to waive the obnoxious title, the evil effect of the declaration remained. Lord Derby's proposals for peace, which were made on September 21st, were nevertheless accepted by the Sultan when he saw that unanimity prevailed among the Powers, and he offered in addition to prolong the formal suspension of hostilities to October 2nd. This offer the Servians, relying on the Russian volunteers who were flocking to join Tcherniaeff, rejected with some contempt, and hostilities were resumed. They paid dearly for their temerity. Tcherniaeff's position before Alexinatz was forced by the Turks after three days' severe fighting; position after position yielded to them, on October 31st Alexinatz was taken,

and Deligrad was occupied on November 1st. Nothing remained between the outpost of the crescent and Belgrade, and it seemed as if the new Kingdom of Serbia must perish in the throes of its birth." Russia now invoked the intervention of the powers, and brought about a conference at Constantinople, which effected nothing, the Porte rejecting all the proposals submitted. On the 24th of April, 1877, Russia declared war and entered upon a conflict with the Turks, which had for its result the readjustment of affairs in South-eastern Europe by the Congress and Treaty of Berlin.—*Cassell's Illustrated History of England*, v. 10, ch. 22-23.—See **TURKS: A. D. 1877-1878**, and 1878.

A. D. 1878.—Treaty of Berlin.—Transfer of Bosnia to Austria.—Independence of Serbia, Montenegro and Roumania.—Division and semi-independence of Bulgaria.—" (1) Bosnia, including Herzegovina, was assigned to Austria for permanent occupation. Thus Turkey lost a great province of nearly 1,250,000 inhabitants. Of these about 500,000 were Christians of the Greek Church, 450,000 were Mohammedans, mainly in the towns, who offered a stout resistance to the Austrian troops, and 200,000 Roman Catholics. By the occupation of the Novi-Bazar district Austria wedged in her forces between Montenegro and Serbia, and was also able to keep watch over the turbulent province of Macedonia. (2) Montenegro received less than the San Stefano terms had promised her, but secured the seaports of Antivari and Dulcigno. It needed a demonstration of the European fleets off the latter port, and a threat to seize Smyrna, to make the Turks yield Dulcigno to the Montenegrins (who alone of all the Christian races of the peninsula had never been conquered by the Turks). (3) Serbia was proclaimed an independent Principality, and received the district of Old Serbia on the upper valley of the Morava. (4) Roumania also gained her independence and ceased to pay any tribute to the Porte, but had to give up to her Russian benefactors the slice acquired from Russia in 1856 between the Pruth and the northern mouth of the Danube. In return for this sacrifice she gained the large but marshy Dobrudscha district from Bulgaria, and so acquired the port of Kustendje on the Black Sea. (5) Bulgaria, which, according to the San Stefano terms, would have been an independent State as large as Roumania, was by the Berlin Treaty subjected to the suzerainty of the sultan, divided into two parts, and confined within much narrower limits. Besides the Dobrudscha, it lost the northern or Bulgarian part of Macedonia, and the Bulgarians who dwelt between the Balkans and Adrianople were separated from their kinsfolk on the north of the Balkans, in a province called Eastern Roumelia, with Philippopolis as capital. The latter province was to remain Turkish, under a Christian governor nominated by the Porte with the consent of the Powers. Turkey was allowed to occupy the passes of the Balkans in time of war. — *J. H. Russell, A Concise and Accurate History of the World*, ch. 42. — See **TURKS: A. D. 1878**.

A. D. 1878-1891.—Proposed Balkan Confederation and its aims.—"During the reaction against Russia which followed the great war of 1878, negotiations were actually set on foot with a view to forming a combination of the Balkan

States for the purpose of resisting Russian aggression. . . . Prince Alexander always favoured the idea of a Balkan Confederation which was to include Turkey; and even listened to proposals on the part of Greece, defining the Bulgarian and Greek spheres of influence in Macedonia. But the revolt of Eastern Roumelia, followed by the Servo-Bulgarian war and the chastisement of Greece by the Powers, provoked so much bitterness of feeling among the rival races that for many years nothing more was heard of a Balkan Confederation. The idea has lately been revived under different auspices and with somewhat different aims. During the past six years the Triple Alliance, with England, has, despite the indifference of Prince Bismarck, protected the Balkan States in general, and Bulgaria in particular from the armed intervention of Russia. It has also acted the part of policeman in preserving the peace throughout the Peninsula, and in deterring the young nations from any dangerous indulgence in their angry passions. The most remarkable feature in the history of this period has been the extraordinary progress made by Bulgaria. Since the revolt of Eastern Roumelia, Bulgaria has been treated by Dame Europa as a naughty child. But the Bulgarians have been shrewd enough to see that the Central Powers and England have an interest in their national independence and consolidation; they have recognised the truth that fortune favours those who help themselves, and they have boldly taken their own course, while carefully avoiding any breach of the proprieties such as might again bring them under the censure of the European Arcopagus. They ventured, indeed, to elect a Prince of their own choosing without the sanction of that august conclave; the wiseacres shook their heads, and prophesied that Prince Ferdinand's days in Bulgaria might, perhaps, be as many as Prince Alexander's years. Yet Prince Ferdinand remains on the throne, and is now engaged in celebrating the fourth anniversary of his accession; the internal development of the country proceeds apace, and the progress of the Bulgarian sentiment outside the country—in other words, the Macedonian propaganda—is not a whit behind. The Bulgarians have made their greatest strides in Macedonia since the fall of Prince Bismarck, who was always ready to humour Russia at the expense of Bulgaria. . . . What happened after the great war of 1878? A portion of the Bulgarian race was given a nominal freedom which was never expected to be a reality; Russia pounced on Bessarabia, England on Cyprus, Austria on Bosnia and Herzegovina. France got something elsewhere, but that is another matter. The Bulgarians have never forgiven Lord Beaconsfield for the division of their race, and I have seen some bitter poems upon the great Israelite in the Bulgarian tongue which many Englishmen would not care to hear translated. The Greeks have hated us since our occupation of Cyprus, and firmly believe that we mean to take Crete as well. The Servians have not forgotten how Russia, after instigating them to two disastrous wars, dealt with their claims at San Stefano; they cannot forgive Austria for her occupation of Bosnia and Herzegovina, and every Servian peasant, as he pays his heavy taxes, or reluctantly gives a big price for some worthless imported article, feels the galling yoke of her fiscal and commercial tyranny. Need it be

said how outraged Bulgaria scowls at Russia, or how Roumania, who won Plevna for her heartless ally, weeps for her Bessarabian children, and will not be comforted? It is evident that the Balkan peoples have no reason to expect much benefit from the next great war, from the European Conference which will follow it, or from the sympathy of the Christian Powers. . . . What, then, do the authors of the proposed Confederation suggest as its ultimate aim and object? The Balkan States are to act independently of the foreign Powers, and in concert with one another. The Sick Man's inheritance lies before them, and they are to take it when an opportunity presents itself. They must not wait for the great Armageddon, for then all may be lost. If the Central Powers come victorious out of the conflict, Austria, it is believed, will go to Salonika; if Russia conquers, she will plant her standard at Stamboul, and practically annex the Peninsula. In either case the hopes of the young nations will be destroyed forever. It is, therefore, sought to extricate a portion at least of the Eastern Question from the tangled web of European politics, to isolate it, to deal with it as a matter which solely concerns the Sick Man and his immediate successors. It is hoped that the Sick Man may be induced by the determined attitude of his expectant heirs to make over to them their several portions in his lifetime; should he refuse, they must act in concert, and provide euthanasia for the moribund owner of Macedonia, Crete, and Thrace. In other words, it is believed that the Balkan States, if once they could come to an understanding as regards their claims to what is left of the Ottoman Empire in Europe, might conjointly, and without the aid of any foreign Power, bring such pressure to bear upon Turkey as to induce her to surrender peaceably her European possessions, and to content herself henceforth with the position of an Asiatic Power." —J. D. Bouchier, *A Balkan Confederation* (*Fortnightly Review*, Sept., 1891).

A. D. 1878-1886 (Bulgaria): Reunion of the two Bulgarias.—Hostility of Russia.—Victorious war with Servia.—Abduction and abdication of Prince Alexander.—"The Berlin Treaty, by cutting Bulgaria into three pieces, contrary to the desire of her inhabitants, and with utter disregard of both geographical and ethnical fitness, had prepared the ground from which a crop of never-ending agitation was inevitably bound to spring—a crop which the Treaty of San Stefano would have ended in preventing. On either side of the Balkans, both in Bulgaria and in Roumelia, the same desire for union existed. Both parties were agreed as to this, and only differed as to the means by which the end should be attained. The Liberals were of opinion that the course of events ought to be awaited; the unionists, on the other hand, maintained that they should be challenged. It was a few individuals belonging to the latter party and acting with M. Karaveloff, the head of the Bulgarian Cabinet, who prepared and successfully carried out the revolution of September 18, 1885. So unanimously was this movement supported by the whole population, including even the Mussulmans, that it was accomplished and the union proclaimed without the least resistance being encountered, and without the shedding of one drop of blood! Prince Alexander was in no way made aware of what was in preparation;

but he knew very well that it would be his duty to place himself at the head of any national movement, and in a proclamation dated the 19th of September, and addressed from Tirnova, the ancient capital, he recommended union and assumed the title of Prince of North and South Bulgaria. The Porte protested in a circular, dated the 23rd of September, and called upon the Powers who had signed the Treaty of Berlin, to enforce the observance of its stipulations. On the 13th of October, the Powers collectively declare 'that they condemn this violation of the Treaty, and are sure that the Sultan will do all that he can, consistently with his sovereign rights, before resorting to the force which he has at his disposal.' From the moment when there was opposition to the use of force, which even the Porte did not seem in a hurry to employ, the union of the two Bulgarias necessarily became an accomplished fact. . . . Whilst England and Austria both accepted the union of the two Bulgarias as being rendered necessary by the position of affairs, whilst even the Porte (although protesting) was resigned, the Emperor of Russia displayed a passionate hostility to it, not at all in accord with the feelings of the Russian nation. . . . In Russia they had reckoned upon all the liberties guaranteed by the Constitution of Tirnova becoming so many causes of disorder and anarchy, instead of which the Bulgarians were growing accustomed to freedom. Schools were being endowed, the country was progressing in every way, and thus the Bulgarians were becoming less and less fitted for transformation into Russian subjects. Their lot was a preferable one, by far, to that of the people of Russia—henceforth they would refuse to accept the Russian yoke! . . . If, then, Russia wanted to maintain her high-handed policy in Bulgaria, she must oppose the union and hinder the consolidation of Bulgarian nationality by every means in her power; this she has done without scruple of any sort or kind, as will be shown by a brief epitome of what has happened recently. Serbia, hoping to extend her territory in the direction of Tru and Widdin, and, pleading regard for the Treaty of Berlin and the theory of the balance of power, attacks Bulgaria. On November 14th [17th to 19th?] 1885, Prince Alexander defends the Slivnitsa positions [in a three days' battle] with admirable courage and strategic skill. The Roumelian militia, coming in by forced marches of unheard-of length, perform prodigies of valour in the field. Within eight days, i. e., from the 20th to the 28th of November, the Servian army, far greater in numbers, is driven back into its own territory: the Dragoman Pass is crossed; Pirot is taken by assault; and Prince Alexander is marching on Nisch, when his victorious progress is arrested by the Austrian Minister, under threats of an armed intervention on the part of that country! On December 21st, an armistice is concluded, afterwards made into a treaty of peace, and signed at Bucharest on March 3rd by M. Miyatovitch on behalf of Serbia, by M. Guechoff on behalf of Bulgaria, and by Madgid Pascha for the Sultan. Prince Alexander did all he could to bring about a reconciliation with the Czar and even went so far as to attribute to Russian instructors all the merit of the victories he had just won. The Czar would not yield. Then the Prince turned to the Sultan, and with

him succeeded in coming to a direct understanding. The Prince was to be nominated Governor-General of Roumelia; a mixed Commission was to meet and modify the Roumelian statutes; more than this, the Porte was bound to place troops at his disposal, in the event of his being attacked. . . . From that date the Czar swore that he would cause Prince Alexander's downfall. It was said that Prince Alexander of Battenberg had changed into a sword the sceptre which Russia had given him and was going to turn it against his benefactor. Nothing could be more untrue. Up to the very last moment, he did everything he could to disarm the anger of the Czar, but what was wanted from him was this—that he should make Bulgaria an obedient satellite of Russia, and rather than consent to do so he left Sofia. The story of the Prince's dethronement by Russian influence, or, as Lord Salisbury said, by Russian gold, is well known. A handful of malcontent officers, a few cadets of the École Militaire, and some of Zankoff's adherents, banding themselves together, broke into the palace during the night of the 21st of August, seized the Prince, and had him carried off, without escort, to Rahova on the Danube, from thence to Reni in Bessarabia, where he was handed over to the Russians! The conspirators endeavoured to form a government, but the whole country rose against them, in spite of the support openly given them by M. Bogdanoff the Russian diplomatic agent. On the 3rd of September, a few days after these occurrences, Prince Alexander returned to his capital, welcomed home by the acclamations of the whole people; but in answer to a respectful, not to say too humble, telegram in which he offered to replace his Crown in the hands of the Czar, that potentate replied that he ceased to have any relations with Bulgaria as long as Prince Alexander remained there. Owing to advice which came, no doubt, from Berlin, Prince Alexander decided to abdicate; he did so because of the demands of the Czar and in the interests of Bulgaria."—E. de Laveleye, *The Balkan Peninsula*, *Introd.*

A. D. 1879-1880 (Serbia).—Quarrels and divorce of King Milan and Queen Natalia.—Abdication of the King.—“In October, 1875. . . . Milan, then but twenty-one years old, married Natalia Kechko, herself but sixteen. The present Queen was the daughter of a Russian officer and of the Princess Pulcherie Stourdza. She, as little as her husband, had been born with a likelihood to sit upon the throne, and a quiet burgher education had been hers at Odessa. But even here her great beauty attracted notice, as also her abilities, her ambition and her wealth. . . . At first all went well, to outward appearance at least, for Milan was deeply enamoured of his beautiful wife, who soon became the idol of the Servians, on account of her beauty and her amiability. This affection was but increased when, a year after her marriage, she presented her subjects with an heir. But from that hour the domestic discord began. The Queen had been ill long and seriously after her boy's birth; Milan had sought distractions elsewhere. Scenes of jealousy and recrimination

grow frequent. Further, Servia was then passing through a difficult political crisis: the Turkish war was in full swing. Milan, little beloved ever since he began to reign, brought home no wreaths from this conflict, although his subjects distinguished themselves by their valour. Then followed in 1882 the raising of the principality into a kingdom—a fact which left the Servians very indifferent, and in which they merely beheld the prospect of increased taxes, a provision that was realized. As time went on, and troubles increased, King Milan became somewhat of a despot, who was sustained solely by the army, itself undermined by factious intrigues. Meantime the Queen, now grown somewhat callous to her husband's infidelities, aspired to comfort herself by assuming a political rôle, for which she believed herself to have great aptitude. . . . As she could not influence the decisions of the Prince, the lady entered into opposition to him, and made it her aim to oppose all his projects. The quarrel spread throughout the entire Palace, and two inimical factions were formed, that of the King and that of the Queen. . . . Meantime Milan got deeper and deeper into debt, so that after a time he had almost mortgaged his territory. . . . While the husband and wife were thus quarrelling and going their own ways, grave events were maturing in neighbouring Bulgaria. The coup d'état of Fillippopoli, which annexed Eastern Roumelia to the principality, enlarged it in such wise that Servia henceforth had to cut a sorry figure in the Balkans. Milan roused himself, or pretended to rouse himself, and war was declared against Bulgaria. . . . There followed the crushing defeat of Slivitza, in which Prince Alexander of Battenberg carried off such laurels, and the Servians had to beat a disgraceful and precipitate retreat. Far from proving himself the hero Nathalie had dreamed, Milan . . . telegraphed to the Queen, busied with tending the wounded, that he intended to abdicate forthwith. This cowardly conduct gave the death blow to any

feeling the Queen might have retained for the King. Henceforth she despised him, and took no pains to hide the fact. . . . In 1887 the pair parted without outward scandals, the Queen taking with her the Crown Prince. . . . Florence was the goal of the Queen's wanderings, and here she spent a quiet winter. . . . The winter ended, Nathalie desired to return to Belgrade. Milan would not hear of it. . . . The Queen went to Wiesbaden in consequence. While residing there Milan professed to be suddenly taken with a paternal craving to see his son. . . . And to the shame of the German Government, be it said, they lent their hand to abducting an only child from his mother. . . . Before ever the excitement about this act could subside in Europe, Milan . . . petitioned the Servian Synod for a divorce, on the ground of 'irreconcilable mutual antipathy.' Neither by canonical or civil law was this possible, and the Queen refused her consent. . . . Nor could the divorce have been obtained but for the servile complaisance of the Servian Metropolitan Theodore. . . . Quick vengeance, however, was in store for Milan. The international affairs of Servia had grown more and more disturbed. . . . The King, perplexed, afraid, storm-tossed between divided counsels, highly irritable, and deeply impressed by Rudolph of Hapsburg's recent suicide, suddenly announced his intention to abdicate in favour of his son. . . . Without regret his people saw depart from among them a man who at thirty-five years of age was already decrepit. . . . After kneeling down before his son and swearing fidelity to him as a subject (March, 1889), Milan betook himself off to tour through Europe. . . . Three Regents are appointed to aid the King during his minority."—"Politikos," *The Sovereigns*, pp. 353-363.

A. D. 1893.—Royal Coup d'État.—In April, 1893, the young king, Alexander, then seventeen years old, by a sudden coup d'état, dismissed the regents, and took the reins into his own hands.

BALKH.—Destruction by Jingsis Khan (A. D. 1221).—From his conquest of the region beyond the Oxus, Jingsis Khan moved southward with his vast horde of Mongols, in pursuit of the fugitive Khahrezmian prince, in 1220 or 1221, and invested the great city of Balkh,—which is thought in the east to be the oldest city of the world, and which may not improbably have been one of the capitals of the primitive Aryan race. "Some idea of its extent and riches [at that time] may possibly be formed from the statement that it contained 1,200 large mosques, without including chapels, and 200 public baths for the use of foreign merchants and travellers—though it has been suggested that the more correct reading would be 200 mosques and 1,200 baths. Anxious to avert the horrors of storm and pillage, the citizens at once offered to capitulate; but Chinghiz, distrusting the sincerity of their submission so long as Sultan Mohammed Shah was yet alive, preferred to carry the place by force of arms—an achievement of no great difficulty. A horrible butchery ensued, and the 'Tabernacle of Islam'—as the pious town was called—was razed to the ground. In the words of the Persian poet, quoted by Major Price, 'The noble city he laid as smooth as the palm of his hand—its spacious and lofty structures he

levelled in the dust.'"—J. Hutton, *Central Asia*, ch. 4.

BALOCHISTAN, OR BALUCHISTAN.

—"Balochistan, in the modern acceptation of the term may be said, in a general sense, to include all that tract of country which has for its northern and north-eastern boundary the large kingdom of Afghanistan, its eastern frontier being limited by the British province of Sindh, and its western by the Persian State, while the Arabian Sea washes its southern base for a distance of nearly six hundred miles. . . . In area Balochistan had long been supposed to cover in its entirety quite 160,000 square miles, but the latest estimates do not raise it higher than 140,000 square miles, of which 60,000 are said to belong to what is termed Persian Balochistan, and the remaining 80,000 to Kalati Balochistan, or that portion which is more or less directly under the rule of the Brahui Khan of Kalat. . . . Balochistan may be said to be inhabited chiefly by the Baloch tribe, the most numerous in the country, and this name was given to the tract they occupy by the great Persian monarch, Nadir Shah, who, as St. John remarks, after driving the Afghan invaders from Persia, made himself master in his turn of the whole country west of the Indus, and placed a native chief over the new province, formed out of the districts bounded on the north and south by the Halmand valley and the sea, and stretching from Karman on the west to Sindh on the east. This newly-formed province he called Balochistan, or, the country of the Baloch, from the name of the most widely spread and numerous, though not the dominant, tribe. According to Masson, who, it must be admitted, had more ample opportunities of obtaining correct information on this subject than any other European, the Balochis are divided into three great classes, viz., (1) the Brahuïs; (2) the Rinds; and (3) the Lumris (or Numris); but this must be taken more in the sense of inhabitants of Balochistan than as divisions of a tribe, since the Brahuïs are of a different race and language, and call the true Balochis 'Nharuis,' in contradistinction to themselves as 'Brahuïs.' . . . The origin of the word 'Baloch' is evidently involved in some obscurity, and has given rise to many different interpretations. Professor Rawlinson supposes it to be derived from Belus, king of Babylon, the Nimrod of Holy Writ, and that from 'Kush,' the father of Nimrod, comes the name of the Kalati eastern district, 'Kachh.' Pottinger believes the Balochis to be of Turkoman lineage, and this from a similarity in their institutions, habits, religion—in short, in everything but their language, for which latter anomaly, however, he has an explanation to offer. But be this as it may, the very tribe themselves ascribe their origin to the

earliest Muhammadan invaders of Persia, and are extremely desirous of being supposed to be of Arab extraction. They reject with scorn all idea of being of the same stock as the Afghan. They may possibly be of Iranian descent, and the affinity of their language, the Balochki, to the Persian, bears out this supposition; but the proper derivation of the word 'Baloch' still remains an open question. . . . The Brahuïs, who, as a race, are very numerous in Balochistan, Pottinger considers to be a nation of Tartar mountaineers, who settled at a very early period in the southern parts of Asia, where they led an ambulatory life in Khels, or societies, headed and governed by their own chiefs and laws for many centuries, till at length they became incorporated and attained their present footing at Kalat and throughout Balochistan generally. Masson supposes that the word 'Brahui' is a corruption of Ba-roh-i, meaning, literally, of the waste; and that that race entered Balochistan originally from the west. . . . The country may be considered as divided into two portions—the one, Kalati Balochistan, or that either really or nominally under the rule of the Khan of Kalat; and the other as Persian Balochistan, or that part which is more or less directly under the domination of the Shah of Persia. Of the government of this latter territory, it will suffice to say that it is at present administered by the Governor of Bam-Narmashir, a deputy of the Kerman Governor; but the only district that is directly under Persian rule is that of Banpur—the rest of the country, says St. John, is left in charge of the native chiefs, who, in their turn, interfere but little with the heads of villages and tribes. . . . It would . . . appear that the supremacy of the Shah over a very large portion of the immense area (60,000 square miles) known as Persian Balochistan is more nominal than real, and that the greater number of the chiefs only pay revenue to their suzerain when compelled to do so. As regards Kalati Balochistan, the government is, so to speak, vested hereditarily in the Brahui Khan of Kalat, but his sovereignty in the remote portions of his extensive territory (80,000 square miles), though even in former times more nominal than real, is at the present moment still more so, owing to the almost constant altercations and quarrels which take place between the reigning Khan and his Sardars, or chiefs. . . . In . . . the modern history of Kalati Balochistan under the present dynasty, extending from about the commencement of the 18th century, when Abdula Khan was ruler, down to the present time; a period of, say, nearly 180 years, there is not much to call for remark. Undoubtedly the Augustan age of Balochistan was the reign of the first Nasir Khan [1755-1795], the Great Nasir, as he is to this day called by the Balochis. Of his predecessors little seems to be known; they were indeed simply successful robbers on a large scale, with but few traces of any enlightened policy to gild over a long succession of deeds of lawlessness, rapine, and bloodshed. . . . Had his successors been of the same stamp and metal as himself, the Kalati kingdom of to-day would not perhaps show that anarchy and confusion which are now its most striking characteristics."—A. W. Hughes, *The Country of Balochistan*, pp. 248, and 335.—By treaty, in 1854, the Khan of Kalat, or Khelat, received a subsidy from the British government in India,

BALOCHISTAN.

and was brought under its influence. In 1876, the subsidy was increased and the British obtained practical possession of the district of Quetta. Since that time, by successive arrangements with the Khan, they have extended their administrative control over the districts of Bolan and Khetran, and established their authority in the country between Zhob valley and Gumal Pass. An important part of Balochistan has thus become practically British territory, attached to the British empire in India. This region has been fortified, has been and is being intersected with railways, and is a portion of the defensive frontier of India on the east.

BAN.—BANAT.—"Ban is Duke (Dux), and Banat is Duchy. The territory [Hungarian] east of the Carpathians is the Banat of Severin, and that of the west the Banat of Temesvar. . . . The Banat is the cornucopia, not only of Hungary, but of the whole Austrian Empire."—A. A. Paton, *Researches on the Danube and the Adriatic*, v. 2, p. 28.—Among the Croats, "after the king, the most important officers of the state were the bans. At first there was but one ban, who was a kind of lieutenant-general; but later on there were seven of them, each known by the name of the province he governed, as the ban of Sirmia, ban of Dalmatia, etc. To this day the royal lieutenant of Croatia (or 'governor-general,' if that title be preferred) is called the ban."—L. Leger, *Hist. of Austro-Hungary*, p. 55.

BAPTISTS.—"The name 'Baptist' was not a self-chosen one. In the early Reformation time those who withdrew from the dominant churches because of the failure of these churches to discriminate between the church and the world, between the regenerate and the unregenerate, and who sought to organize churches of believers only, laid much stress on the lack of Scriptural warrant for the baptism of infants and on the incompatibility of infant baptism with regenerate membership. Following what they believed to be apostolic precept and example, they made baptism on a profession of faith a condition of church-fellowship. This rejection of infant baptism and this insistence on believers' baptism were so distinctive of these Christians that they were stigmatized as 'Anabaptists,' 'Catabaptists,' and sometimes as simply 'Baptists'; that is to say, they were declared to be 'rebaptizers,' 'perverters of baptism,' or, as unduly magnifying baptism and making it the occasion of schism, simply 'baptizers.' These party names they earnestly repudiated, preferring to call themselves Brethren, Christians, Disciples of Christ, Believers, etc. . . . Baptists have, for the most part, been at one with the Roman Catholic, the Greek Catholic, and most Protestant communions in accepting for substance the so-called Apostles', Nicene, and Athanasian creeds, not, however, because they are venerable or because of the decisions of ecclesiastical councils, but because, and only in so far as, they have appeared to them to be in accord with Scripture. . . . As regards the set of doctrines on which Augustin differed from his theological predecessors, and modern Calvinists from Arminians, Baptists have always been divided. . . . The great majority of the Baptists of today hold to what may be called moderate Calvinism, or Calvinism tempered with the evangelical anti-Augustinianism which came through the Moravian Brethren to Wesley and by him was brought powerfully to bear on all bodies of evangelical Christians. Baptists are at one with the great Congregational body and with most of the minor denominations as regards church government."—A. H. Newman, *A History of the Baptist Churches in the U. S.*, introd.—"Baptist principles are discoverable in New England from the very earliest colonial settlements. The Puritans of Plymouth had mingled with the Dutch Baptists during the ten years of their sojourn in Holland, and some of them seem to have brought over Baptist tendencies even in the Mayflower. Dutch Baptists had emigrated to England and extended their principles there; and from time to time a persecuted Baptist in England sought refuge in America, and, planted here, brought forth fruit after his kind. But as every offshoot of these principles here was so speedily and vigor-

ously beaten down by persecution, and especially as, after the banishment of Roger Williams, there was an asylum a few miles distant, just over Narraganset Bay, where every persecuted man could find liberty of conscience, Baptist principles made little progress in the New England colonies, except Rhode Island, for the first hundred and twenty years. [On the banishment of Roger Williams from Massachusetts, the founding of Rhode Island, and the organization of the first Baptist Church in that colony, see MASSACHUSETTS: A. D. 1636, and RHODE ISLAND, A. D. 1631-1636 to 1639.] A little church of Welsh Baptists was founded in Rehoboth, near the Rhode Island line, in 1663, and shortly afterwards was compelled by civil force to remove to Swanzea, where, as it was distant from the centres of settlement, it was suffered to live without very much molestation. It still exists, the oldest Baptist church in the State. In 1665, the first Baptist Church in Boston was organized, and, alone, for almost a century, withstood the fire of persecution, — ever in the flames, yet never quite consumed. In 1693, a second church was constituted in Swanzea, not as a Regular, but as a Six-Principle, Baptist Church. In 1705, a Baptist church was formed in Groton, Connecticut. These four churches, three Regular and one Six-Principle, having in the aggregate probably less than two hundred members, were all the Baptist churches in New England outside of Rhode Island previous to the Great Awakening. — D. Weston, *Early Baptists in Mass. The Baptists and the National Centenary*, pp. 12-13. — "The representative Baptists of London and vicinity, who in 1689 put forth the Confession of Faith which was afterward adopted by the Philadelphia Association, and is therefore known in this country as the Philadelphia Confession, copied the Westminster Confession word for word, wherever their convictions would permit, and declared that they would thus show wherein they were at one with their brethren, and what convictions of truth made impossible a complete union. And wherever Baptists appeared, however or by whomsoever they were opposed, the ground of complaint against them was their principles. Some of these principles were sharply antagonistic to those of existing churches, and also to those on which the civil governments were administered. They were widely disseminated, especially in Holland, England, and Wales, and there were separate churches formed. From purely doctrinal causes also came divisions among 'the Baptized churches' themselves. The most notable one was that in

England between the General or Arminian Baptists, and the Particular or Calvinistic Baptists. With the latter division do the Regular Baptists of America hold lineal connection. . . . The churches of Philadelphia and vicinity kept the closest connection with the mother country, and were most affected by it. In New England, in 'the Great Reformation' under the lead of Jonathan Edwards, there was made from within the Congregational churches a most vigorous assault against their own 'half-way Covenant' in the interest of a pure church. Along his lines of thought he started multitudes who could not stop where he himself remained and would fain have detained them. They separated from the Congregational churches, and were hence called Separates. A large proportion of them became Baptists, and formed themselves into Baptist churches. Through the labors of earnest men who went from them to Carolina and Virginia, their principles were widely disseminated in those and the neighboring colonies, and, in consequence, many churches came into existence." — G. D. B. Pepper, *Doctrinal Hist. and Position (The same)*, pp. 51-52.

A. D. 1505-1510.—Spanish conquests on the coast.—Oran.—Bugia.—Algiers.—Tripoli.—In 1505, a Spanish expedition, planned and urged by Cardinal Ximenes, captured Mazarquivar, an

"important port, and formidable nest of pirates, on the Barbary coast, nearly opposite Carthage." In 1509, the same energetic prelate led personally an expedition of 4,000 horse and 10,000 foot, with a fleet of 10 galleys and 80 smaller vessels, for the conquest of Oran. "This place, situated about a league from the former, was one of the most considerable of the Moslem possessions in the Mediterranean, being a principal mart for the trade of the Levant," and maintained a swarm of cruisers, which swept the Mediterranean "and made fearful depredations on its populous borders." Oran was taken by

storm. "No mercy was shown; no respect for age or sex; and the soldiery abandoned themselves to all the brutal license and ferocity which seem to stain religious wars above every other. . . . No less than 4,000 Moors were said to have fallen in the battle, and from 5,000 to 8,000 were made prisoners. The loss of the Christians was inconsiderable." Recalled to Spain by King Ferdinand, Ximenes left the army in Africa under the command of Count Pedro Navarro. Navarro's "first enterprise was against Bugia (Jan. 18th, 1510), whose king, at the head of a powerful army, he routed in two pitched battles, and got possession of his flourishing capital (Jan. 31st). Algiers, Teunis, Tremecine, and other cities on the Barbary coast, submitted one after another to the Spanish arms. The inhabitants were received as vassals of the Catholic king. . . . They guaranteed, moreover, the liberation of all Christian captives in their dominions; for which the Algerines, however, took care to indemnify themselves, by extorting the full ransom from their Jewish residents. . . . On the 26th of July, 1510, the ancient city of Tripoli, after a most bloody and desperate defence, surrendered to the arms of the victorious general, whose name had now become terrible along the whole northern borders of Africa. In the following month, however (Aug. 28th), he met with a serious discomfiture in the island of Gelves, where 4,000 of his men were slain or made prisoners. This check in the brilliant career of Count Navarro put a final stop to the progress of the Castilian arms in Africa under Ferdinand. The results obtained, however, were of great importance. . . . Most of the new conquests escaped from the Spanish crown in later times, through the imbecility or indolence of Ferdinand's successors. The conquests of Ximenes, however, were placed in so strong a posture of defence as to resist every attempt for their recovery by the enemy, and to remain permanently incorporated with the Spanish empire."—W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella*, ch. 21 (p. 3).

A. D. 1516-1535.—Piratical dominion of the Barbarossas in Algiers. — Establishment of Turkish sovereignty. — Seizure of Tunis by the Corsairs and its conquest by Charles V. —"About the beginning of the 16th century, a sudden revolution happened, which, by rendering the states of Barbary formidable to the Europeans, hath made their history worthy of more attention. This revolution was brought about by persons born in a rank of life which entitled them to act no such illustrious part. Horuc and Hayradin, the sons of a potter in the isle of Lisbos, prompted by a restless and enterprising spirit, forsook their father's trade, ran to sea, and joined a crew of pirates. They soon distinguished themselves by their valor and activity, and, becoming masters of a small brigantine, carried on their infamous trade with such conduct and success that they assembled a fleet of 12 galleys, besides many vessels of smaller force. Of this fleet Horuc, the elder brother, called Barbarossa from the red color of his beard, was admiral, and Hayradin second in command, but with almost equal authority. They called themselves the friends of the sea, and the enemies of all who sail upon it; and their names soon became terrible from the Straits of the Dardanelles to those of Gibraltar. . . . They often

carried the prizes which they took on the coasts of Spain and Italy into the ports of Barbary, and, enriching the inhabitants by the sale of their booty, and the thoughtless prodigality of their crews, were welcome guests in every place at which they touched. The convenient situation of these harbours, lying so near the greatest commercial states at that time in Christendom, made the brothers wish for an establishment in that country. An opportunity of accomplishing this quickly presented itself [1516], which they did not suffer to pass unimproved." Invited by Entemi, king of Algiers, to assist him in taking a Spanish fort which had been built in his neighbourhood, Barbarossa was able to murder his too confiding employer, master the Algerine kingdom and usurp its crown. "Not satisfied with the throne which he had acquired, he attacked the neighbouring king of Tremecine, and, having vanquished him in battle, added his dominions to those of Algiers. At the same time, he continued to infest the coasts of Spain and Italy with fleets which resembled the armaments of a great monarch, rather than the light squadrons of a corsair. Their frequent cruel devastations obliged Charles [the Fifth—the great Emperor and King of Spain: 1519-1555], about the beginning of his reign, to furnish the Marquis de Comares, governor of Oran, with troops sufficient to attack him." Barbarossa was defeated in the ensuing war, driven from Tremecine, and slain [1518]. "His brother Hayradin, known likewise by the name of Barbarossa, assumed the sceptre of Algiers with the same ambition and abilities, but with better fortune. His reign being undisturbed by the arms of the Spaniards, which had full occupation in the wars among the European powers, he regulated with admirable prudence the interior police of his kingdom, carried on his naval operations with great vigour, and extended his conquests on the continent of Africa. But perceiving that the Moors and Arabs submitted to his government with reluctance, and being afraid that his continual depredations would one day draw upon him the arms of the Christians, he put his dominions under the protection of the Grand Seignior [1519], and received from him [with the title of Bey, or Beylerbey] a body of Turkish soldiers sufficient for his domestic as well as foreign enemies. At last, the fame of his exploits daily increasing, Solyman offered him the command of the Turkish fleet. . . . Barbarossa repaired to Constantinople, and . . . gained the entire confidence both of the sultan and his vizier. To them he communicated a scheme which he had formed of making himself master of Tunis, the most flourishing kingdom at that time on the coast of Africa; and this being approved of by them, he obtained whatever he demanded for carrying it into execution. His hopes of success in this undertaking were founded on the intestine divisions in the kingdom of Tunis." The last king of that country, having 34 sons by different wives, had established one of the younger sons on the throne as his successor. This young king attempted to put all of his brothers to death; but Alraschid, who was one of the eldest, escaped and fled to Algiers. Barbarossa now proposed to the Turkish sultan to attack Tunis on the pretence of vindicating the rights of Alraschid. His proposal was adopted and carried out; but even

before the Turkish expedition sailed, Alraschid himself disappeared — a prisoner, shut up in the *Seraglio* — and was never heard of again. The use of his name, however, enabled Barbarossa to enter Tunis in triumph, and the betrayed inhabitants discovered too late that he came as a viceroy, to make them the subjects of the sultan. "Being now possessed of such extensive territories, he carried on his depredations against the Christian states to a greater extent and with more destructive violence than ever. Daily complaints of the outrages committed by his cruisers were brought to the emperor by his subjects, both in Spain and Italy. All Christendom seemed to expect from him, as its greatest and most fortunate prince, that he would put an end to this new and odious species of oppression. At the same time Muley-Hascen, the exiled king of Tunis, . . . applied to Charles as the only person who could assert his rights in opposition to such a formidable usurper." The Emperor, accordingly, in 1535, prepared a great expedition against Tunis, drawing men and ships from every part of his wide dominions — from Spain, Italy, Germany and the Netherlands. "On the 16th of July the fleet, consisting of near 500 vessels, having on board above 30,000 regular troops, set sail from Cagliari, and, after a prosperous navigation, landed within sight of Tunis." The fort of Goletta, commanding the bay, was invested and taken; the corsair's fleet surrendered, and Barbarossa, advancing boldly from Tunis to attack the invaders, was overwhelmingly beaten, and fled, abandoning his capital. Charles's soldiers rushed into the unfortunate town, escaping all restraint, and making it a scene of indescribable horrors. "Above 30,000 of the innocent inhabitants perished on that unhappy day, and 10,000 were carried away as slaves. Muley-Hascen took possession of a throne surrounded with carnage, abhorred by his subjects, on whom he had brought such calamities." Before quitting the country, Charles concluded a treaty with Muley-Hascen, under which the latter acknowledged that he held his kingdom in fee of the crown of Spain, doing homage to the Emperor as his liege, and maintaining a Spanish garrison in the Goletta. He also released, without ransom, all the Christian slaves in his dominions, 20,000 in number, and promised to detain in servitude no subject of the Emperor thereafter. He opened his kingdom to the Christian religion, and to free trade, and pledged himself to exclude Turkish corsairs from his ports.—W. Robertson, *Hist. of the Reign of Charles V.*, bk. 5 (c. 2).

A. D. 1541.—The disastrous expedition of Charles V. against Algiers.—Encouraged, and deceived, by his easy success at Tunis, the emperor, Charles V., determined, in 1541, to undertake the reduction of Algiers, and to wholly exterminate the freebooters of the north African coast. Before his preparations were completed, "the season unfortunately was far advanced, on which account the Pope entreated, and Doria conjured him not to expose his whole armament to a destruction almost unavoidable on a wild shore during the violence of the autumnal gales. Adhering, however, to his plan with determined obstinacy, he embarked at Porto Venere. . . . The force . . . which he had collected . . . consisted of 20,000 foot and 2,000 horse, mostly veterans, together with 3,300 volunteers. . . .

Besides these there had joined his standard 1,000 soldiers sent by the Order of St. John, and led by 100 of its most valiant knights. Landing near Algiers without opposition, Charles immediately advanced towards the town. To oppose the invaders, Hassan had only 800 Turks, and 5,000 Moors, partly natives of Africa, and partly refugees from Spain. When summoned to surrender he, nevertheless, returned a fierce and haughty answer. But with such a handful of troops, neither his desperate courage nor consummate skill in war could have long resisted forces superior to those which had formerly defeated Barbarossa at the head of 60,000 men." He was speedily relieved from danger, however, by an opportune storm, which burst upon the region during the second day after Charles's debarkation. The Spanish camp was flooded; the soldiers drenched, chilled, sleepless and dispirited. In this condition they were attacked by the Moors at dawn, and narrowly escaped a rout. "But all feeling of this disaster was soon obliterated by a more affecting spectacle. As the tempest continued with unabated violence, the full light of day showed the ships, on which alone their safety depended, driving from their anchors, dashing against one another, and many of them forced on the rocks, or sinking in the waters. In less than an hour, 15 ships of war and 140 transports, with 8,000 men, perished before their eyes; and such of the unhappy sailors as escaped the fury of the sea, were murdered by the Arabs as soon as they reached land." With such ships as he could save, Doria sought shelter behind Cape Matafuz, sending a message to the emperor, advising that he follow with the army to that point. Charles could not do otherwise than act according to the suggestion; but his army suffered horribly in the retreat, which occupied three days. "Many perished by famine, as the whole army subsisted chiefly on roots and berries, or on the flesh of horses, killed for that purpose by the emperor's orders; numbers were drowned in the swollen brooks; and not a few were slain by the enemy." Even after the army had regained the fleet, and was reembarked, it was scattered by a second storm, and several weeks passed before the emperor reached his Spanish dominions, a wiser and a sadder man.—M. Russell, *Hist. of the Barbary States*, ch. 8.

A. D. 1543-1560.—The pirate Dragut and his exploits.—Turkish capture of Tripoli.—Disastrous Christian attempt to recover the place.—Dragut, or Torghüd, a native of the Caramanian coast, opposite the island of Rhodes, began his career as a Mediterranean corsair some time before the last of the Barbarossas quitted the scene and was advanced by the favor of the Algerine. In 1540 he fell into the hands of one of the Dorias and was bound to the oar as a galley-slave for three years,—which did not sweeten his temper toward the Christian world. In 1543 he was ransomed, and resumed his piracies, with more energy than before. "Dragut's lair was at the island of Jerba [called Gelves, by the Spaniards]. . . . Not content with the rich spoils of Europe, Dragut took the Spanish outposts in Africa, one by one—Susa, Sfax, Monastir; and finally set forth to conquer Africa." It is not uncommon in Arabic to call

a country and its capital by the same name. . . . 'Africa' meant to the Arabs the province of Carthage or Tunis and its capital, which was not at first Tunis but successively Kairawan and Mahdiya. Throughout the later middle ages the name 'Africa' is applied by Christian writers to the latter city. . . . This was the city which Dragut took without a blow in the spring of 1550. Mahdiya was then in an anarchic state, ruled by a council of chiefs, each ready to betray the other, and none owing the smallest allegiance to any king, least of all the despised king of Tunis, Hamid, who had deposed and blinded his father, Hasan, Charles V.'s protégé. One of these chiefs let Dragut and his merry men into the city by night. . . . So easy a triumph roused the emulation of Christendom. . . . Don Garcia de Toledo dreamed of outshining the Corsair's glory. His father, the Viceroy of Naples, the Pope, and others, promised their aid, and old Andrea Doria took the command. After much delay and consultation a large body of troops was conveyed to Mahdiya and disembarked on June 28, 1550. Dragut, though aware of the project, was at sea, devastating the Gulf of Genoa, and paying himself in advance for any loss the Christians might inflict in Africa: his nephew Hisar Reis commanded in the city. When Dragut returned, the siege had gone on for a month," but he failed in attempting to raise it and retired to Jerba. Mahdiya was carried by assault on the 8th of September. "Next year, 1551, Dragut's place was with the Ottoman navy, then commanded by Sinan Pasha. . . . With nearly 150 galleys or galleots, 10,000 soldiers, and numerous siege-guns, Sinan and Dragut sailed out of the Dardanelles—whither bound no Christian could tell. They ravaged, as usual, the Straits of Messina, and then revealed the point of attack by making direct for Malta." But the demonstration made against the strong fortifications of the Knights of St. John was ill-planned and feebly executed; it was easily repelled. To wipe out his defeat, Sinan "sailed straight for Tripoli, some 64 leagues away. Tripoli was the natural antidote to Malta: for Tripoli, too, belonged to the Knights of St. John—much against their will—inasmuch as the Emperor had made their defence of this easternmost Barbary state a condition of their tenure of Malta." But the fortifications of Tripoli were not strong enough to resist the Turkish bombardment, and Gaspard de Villiers, the commandant, was forced to surrender (August 15th), "on terms, as he believed, identical with those which Suleyman granted to the Knights of Rhodes. But Sinan was no Suleyman; moreover, he was in a furious rage with the whole Order. He put the garrison—all save a few—in chains and carried them off to grace his triumph at Stambol. Thus did Tripoli fall once more into the hands of the Moslems. . . . The misfortunes of the Christians did not end here. Year after year the Ottoman fleet appeared in Italian waters. . . . Unable as they felt themselves to cope with the Turks at sea, the powers of Southern Europe resolved to strike one more blow on land, and recover Tripoli. A fleet of nearly 100 galleys and ships, gathered from Spain, Genoa, 'the Religion,' the Pope, from all quarters, with the Duke de Medina-Celi at their head, assembled at Messina. . . . Five times the expedition put to sea, five times was it driven

back by contrary winds. At last, on February 10, 1560, it was fairly away for the African coast. Here fresh troubles awaited it. Long delays in crowded vessels had produced their disastrous effects: fevers and scurvy and dysentery were working their terrible ravages among the crews, and 2,000 corpses were flung into the sea. It was impossible to lay siege to Tripoli with a diseased army, and when actually in sight of their object the admirals gave orders to return to Jerba. A sudden descent quickly gave them the command of the beautiful island. . . . In two months a strong castle was built, with all scientific earthworks, and the admiral prepared to carry home such troops as were not needed for its defence. Unhappily for him, he had lingered too long. . . . He was about to prepare for departure when news came that the Turkish fleet had been seen at Goza. Instantly all was panic. Valiant gentlemen forgot their valour, forgot their coolness. . . . Before they could make out of the strait . . . the dread Corsair [Dragut] himself, and Ochiali, and Piali Pasha were upon them. Then ensued a scene of confusion that baffles description. Despairing of weathering the north side of Jerba the panic-stricken Christians ran their ships ashore and deserted them, never stopping even to set them on fire. . . . On rowed the Turks; galleys and galleons to the number of 56 fell into their hands; 18,000 Christians bowed down before their scimitars; the beach on that memorable 11th of May, 1560, was a confused medley of stranded ships, helpless prisoners, Turks busy in looting men and galleys—and a hideous heap of mangled bodies. The fleet and the army which had sailed from Messina . . . were absolutely lost."—S. Lane-Poole, *Story of the Barbary Corsairs*.

A. D. 1563-1565.—Repulse of the Moors from Oran and Mazarquivier.—Capture of Penon de Velez.—In the spring of 1563 a most determined and formidable attempt was made by Hassem, the dey of Algiers, to drive the Spaniards from Oran and Mazarquivier, which they had held since the African conquests of Cardinal Ximenes. The siege was fierce and desperate; the defence most heroic. The beleaguered garrisons held their ground until a relieving expedition from Spain came in sight, on the 8th of June, when the Moors retreated hastily. In the summer of the next year the Spaniards took the strong island fortress of Penon de Velez, breaking up one more nest of piracy and strengthening their footing on the Barbary coast. In the course of the year following they blocked the mouth of the river Tetuan, which was a place of refuge for the marauders.—W. H. Prescott, *Hist. of the Reign of Philip II.*, bk. 4, ch. 1 (v. 2).

A. D. 1664-1684.—Wars of France against the piratical powers.—Destructive bombardments of Algiers.—“The ancient alliance of the crown of France with the Ottoman Porte, always unpopular, and less necessary since France had become so strong, was at this moment [early in the reign of Louis XIV.] well-nigh broken, to the great satisfaction both of the Christian nations of the South and of the Austrian empire. . . . Divers plans were proposed in the King's council for attacking the Ottoman power on the Moorish coasts, and for repressing the pirates, who were the terror of the merchant-shipping and maritime provinces. Colbert induced the king to attempt a military settlement among the Moors as the best means of holding them in check. A squadron commanded by the Duke de Beaufort . . . landed 5,000 picked soldiers before Jijeli (or Djigelli), a small Algerine port between Bougiah and Bona. They took possession of Jijeli without difficulty (July 22, 1664); but discord arose between Beaufort and his officers; they did not work actively enough to fortify themselves,” and before the end of September they were obliged to evacuate the place precipitately. “The success of Beaufort's squadron, commanded under the duke by the celebrated Chevalier Paul, ere long effaced the impression of this reverse: two Algerine flotillas were destroyed in the course of 1665.” The Dey of Algiers sent one of his French captives, an officer named Du Babinais, to France with proposals of peace, making him swear to return if his mission failed. The proposals were rejected; Du Babinais was loyal to his oath and returned—to suffer death, as he expected, at the hands of the furious barbarian. “The devotion of this Breton Regulus was not lost: despondency soon took the place of anger in the heart of the Moorish chiefs. Tunis yielded first to the guns of the French squadron, brought to bear on it from the Bay of Goletta. The Pacha and the Divan of Tunis obligated themselves to restore all the French slaves they possessed, to respect French ships, and thenceforth to release all Frenchmen whom they should capture on foreign ships. . . . Rights of aubaine, and of admiralty and shipwreck, were suppressed as regarded Frenchmen (November 25, 1665). The station at Cape Negro was restored to France. . . . Algiers submitted, six months after, to nearly the same conditions imposed on it by Louis XIV.: one of the articles stipulated that French merchants should be treated as favorably as any foreign nation, and even more so (May 17, 1666). More than 3,000 French slaves were set at liberty.” Between 1669 and 1672, Louis XIV. was seriously meditating a great war of conquest with the Turks and their dependencies, but preferred, finally, to enter upon his war with Holland, which brought the other project to naught. France and the Ottoman empire then remained on tolerably good terms until 1681, when a “squadron of Tripolitan corsairs having carried off a French ship on the coast of Provence, Duquesne, at the head of seven vessels, pursued the pirates into the waters of Greece. They took refuge in the harbor of Scio. Duquesne summoned the Pacha of Scio to expel them. The Pacha refused, and fired on the French

squadron, when Duquesne cannonaded both the pirates and the town with such violence that the Pacha, terrified, asked for a truce, in order to refer the matter to the Sultan (July 23, 1681). Duquesne converted the attack into a blockade. At the news of this violation of the Ottoman territory, the Sultan, Mahomet IV., fell into a rage . . . and dispatched the Captain-Pacha to Scio with 32 galleys. Duquesne allowed the Turkish galleys to enter the harbor, then blockaded them with the pirates, and declared that he would burn the whole if satisfaction were not had of the Tripolitans. The Divan hesitated. War was about to recommence with the Emperor; it was not the moment to kindle it against France.” In the end there was a compromise, and the Tripolitans gave up the French vessel and the slaves they had captured, promising, also, to receive a French consul at Tripoli. “During this time another squadron, commanded by Château-Renault, blockaded the coasts of Morocco, the men of Maghreb having rivalled in depredations the vassals of Turkey. The powerful Emperor of Morocco, Muley Ismael, sent the governor of Tetuan to France to solicit peace of Louis XIV. The treaty was signed at Saint-Germain, January 29, 1682, on advantageous conditions,” including restitution of French slaves. “Affairs did not terminate so amicably with Algiers. From this piratical centre had proceeded the gravest offenses. A captain of the royal navy was held in slavery there, with many other Frenchmen. It was resolved to inflict a terrible punishment on the Algerines. The thought of conquering Algeria had more than once presented itself to the king and Colbert, and they appreciated the value of this conquest; the Jijeli expedition had been formerly a first attempt. They did not, however, deem it incumbent on them to embark in such an enterprise; a descent, a siege, would have required too great preparations; they had recourse to another means of attack. The regenerator of the art of naval construction, Petit-Renau, invented bomb-ketches expressly for the purpose. . . . July 23, 1682, Duquesne anchored before Algiers, with 11 ships, 15 galleys, 5 bomb-ketches, and Petit-Renau to guide them. After five weeks' delay caused by bad weather, then by a fire on one of the bomb-ketches, the thorough trial took place during the night of August 30. The effect was terrible: a part of the great mosque fell on the crowd that had taken refuge there. During the night of September 3-4, the Algerines attempted to capture the bomb-ketches moored at the entrance of their harbor; they were repulsed, and the bombardment continued. The Dey wished to negotiate; the people, exasperated, prevented him. The wind shifting to the northwest presaged the equinoctial storm; Duquesne set sail again, September 12. The expedition had not been decisive. It was begun anew. June 18, 1683, Duquesne reappeared in the road of Algiers; he had, this time, seven bomb-ketches instead of five. These instruments of extermination had been perfected in the interval. The nights of June 26-27 witnessed the overthrow of a great number of houses, several mosques, and the palace of the Dey. A thousand men perished in the harbor and the town.” The Dey opened negotiations, giving up 700 French slaves, but was killed by his Janizaries, and one Hadgi-Hussein

proclaimed in his stead. "The bombardment was resumed with increasing violence. . . . The Algerines avenged themselves by binding to the muzzles of their guns a number of Frenchmen who remained in their hands. . . . The fury of the Algerines drew upon them redoubled calamities. . . . The bombs rained almost without intermission. The harbor was strewn with the wrecks of vessels. The city was . . . a heap of bloody ruins." But "the bomb-ketches had exhausted their ammunition. September was approaching. Duquesne again departed; but a strong blockading force was kept up, during the whole winter, as a standing threat of the return of the 'infernal vessels.' The Algerines finally bowed their head, and, April 25, 1684, peace was accorded by Tourville, the commander of the blockade, to the Pacha, Dey, Divan, and troops of Algiers. The Algerines restored 320 French slaves remaining in their power, and 180 other Christians claimed by the King; the janizaries only which had been taken from them were restored; they engaged to make no prizes within ten leagues of the coast of France, nor to assist the other Moorish corsairs at war with France; to recognize the precedence of the flag of France over all other flags, &c., &c.; lastly, they sent an embassy to carry their submission to Louis XIV.; they did not, however, pay the damages which Duquesne had wished to exact of them."—H. Martin, *Hist. of France: Age of Louis XIV.*, v. 1, ch. 4 and 7.

A. D. 1785-1801.—Piratical depredations upon American commerce.—Humiliating treaties and tribute.—The example of resistance given by the United States.—"It is difficult for us to realize that only 70 years ago the Mediterranean was so unsafe that the merchant ships of every nation stood in danger of being captured by pirates, unless they were protected either by an armed convoy or by tribute paid to the petty Barbary powers. Yet we can scarcely open a book of travels during the last century without mention being made of the immense risks to which every one was exposed who ventured by sea from Marseilles to Naples. . . . The European states, in order to protect their commerce, had the choice either of paying certain sums per head for each captive, which in reality was a premium on capture, or of buying entire freedom for their commerce by the expenditure of large sums yearly. The treaty renewed by France, in 1788, with Algiers, was for fifty years, and it was agreed to pay \$200,000 annually, besides large presents distributed according to custom every ten years, and a great sum given down. The peace of Spain with Algiers is said to have cost from three to five millions of dollars. There is reason to believe that at the same time England was paying an annual tribute of about \$280,000. England was the only power sufficiently strong on the sea to put down these pirates; but in order to keep her own position as mistress of the seas she preferred to leave them in existence in order to be a scourge to the commerce of other European powers, and even to support them by paying a sum so great that other states might find it difficult to make peace with them. When the Revolution broke out, we [of the United States of America] no longer had the safeguards for our commerce that had been given to us by England, and it was therefore that in our very first negotiations for a treaty with France we

desired to have an article inserted into the treaty, that the king of France should secure the inhabitants of the United States, and their vessels and effects, against all attacks or depredations from any of the Barbary powers. It was found impossible to insert this article in the treaty of 1778, and instead of that the king agreed to 'employ his good offices and interposition in order to provide as fully and efficaciously as possible for the benefit, convenience and safety of the United States against the princes and the states of Barbary or their subjects.'"—Direct negotiations between the United States and the piratical powers were opened in 1785, by a call which Mr. Adams made upon the Tripolitan ambassador. The latter announced to Mr. Adams that "'Turkey, Tripoli, Tunis, Algiers, and Morocco were the sovereigns of the Mediterranean; and that no nation could navigate that sea without a treaty of peace with them.' . . . The ambassador demanded as the lowest price for a perpetual peace 30,000 guineas for his employers and £3,000 for himself; that Tunis would probably treat on the same terms; but he could not answer for Algiers or Morocco. Peace with all four powers would cost at least \$1,000,000, and Congress had appropriated only \$80,000. . . . Mr. Adams was strongly opposed to war, on account of the expense, and preferred the payment of tribute. . . . Mr. Jefferson quite as decidedly preferred war." The opinion in favor of a trial of pacific negotiations prevailed, and a treaty with the Emperor of Morocco was concluded in 1787. An attempt at the same time to make terms with the Dey of Algiers and to redeem a number of American captives in his hands, came to nothing. "For the sake of saving a few thousand dollars, fourteen men were allowed to remain in imprisonment for ten years. . . . In November, 1793, the number of [American] prisoners at Algiers amounted to 115 men, among whom there remained only ten of the original captives of 1785." At last, the nation began to realize the intolerable shame of the matter, and, "on January 2, 1794, the House of Representatives resolved that a 'naval force adequate for the protection of the commerce of the United States against the Algerine forces ought to be provided.' In the same year authority was given to build six frigates, and to procure ten smaller vessels to be equipped as galleys. Negotiations, however, continued to go on," and in September, 1795, a treaty with the Dey was concluded. "In making this treaty, however, we had been obliged to follow the usage of European powers—not only pay a large sum for the purpose of obtaining peace, but an annual tribute, in order to keep our vessels from being captured in the future. The total cost of fulfilling the treaty was estimated at \$992,463.25."—E. Schuyler, *American Diplomacy*, pt. 4.—"The first treaty of 1795, with Algiers, which was negotiated during Washington's administration, cost the United States, for the ransom of American captives, and the Dey's forbearance, a round \$1,000,000, in addition to which an annuity was promised. Treaties with other Barbary States followed, one of which purchased peace from Tripoli by the payment of a gross sum. Nearly \$2,000,000 had been squandered thus far in bribing these powers to respect our flag, and President Adams complained in 1800 that the United States had to pay three times the tribute imposed upon Sweden and Denmark.

But this temporizing policy only made matters worse. Captain Bainbridge arrived at Algiers in 1800, bearing the annual tribute money for the Dey in a national frigate, and the Dey ordered him to proceed to Constantinople to deliver Algerine dispatches. 'English, French, and Spanish ships of war have done the same,' said the Dey, insolently, when Bainbridge and the American consul remonstrated. 'You pay me tribute because you are my slaves.' Bainbridge had to obey. . . . The lesser Barbary States were still more exasperating. The Bashaw of Tripoli had threatened to seize American vessels unless President Adams sent him a present like that bestowed upon Algiers. The Bashaw of Tunis made a similar demand upon the new President [Jefferson]. . . . Jefferson had, while in Washington's cabinet, expressed his detestation of the method hitherto favored for pacifying these pests of commerce; and, availing himself of the present favorable opportunity, he sent out Commodore Dale with a squadron of three frigates and a sloop of war, to make a naval demonstration on the coast of Barbary. . . . Commodore Dale, upon arriving at Gibraltar [July, 1801], found two Tripolitan cruisers watching for American vessels; for, as had been suspected, Tripoli already meditated war. The frigate Philadelphia blockaded these vessels, while Bainbridge, with the frigate Essex, convoyed American vessels in the Mediterranean. Dale, in the frigate President, proceeded to cruise off Tripoli, followed by the schooner Experiment, which presently captured a Tripolitan cruiser of 14 guns after a spirited action. The Barbary powers were for a time overawed, and the United States thus set the first example among Christian nations of making reprisals instead of ransom the rule of security against these commercial marauders. In this respect Jefferson's conduct was applauded at home by men of all parties."—J. Schouler, *Hist. of the U. S.*, ch. 5, sect. 1 (v. 2).

ALSO IN: R. L. Playfair, *The Source of Christendom*, ch. 16.

A. D. 1803-1805.—American War with the pirates of Tripoli.—"The war with Tripoli dragged tediously along, and seemed no nearer its end at the close of 1803 than 18 months before. Commodore Morris, whom the President sent to command the Mediterranean squadron, cruised from port to port between May, 1802, and August, 1803, convoying merchant vessels from Gibraltar to Leghorn and Malta, or lay in harbor and repaired his ships, but neither blockaded nor molested Tripoli; until at length, June 21, 1803, the President called him home and dismissed him from the service. His successor was Commodore Preble, who Sept. 12, 1803, reached Gibraltar with the relief-squadron which Secretary Gallatin thought unnecessarily strong. . . . He found Morocco taking part with Tripoli. Captain Bainbridge, who reached Gibraltar in the 'Philadelphia' August 24, some three weeks before Preble arrived, caught in the neighborhood a Moorish cruiser of 22 guns with an American brig in its clutches. Another American brig had just been seized at Mogador. Determined to stop this peril at the outset, Preble united to his own squadron the ships which he had come to relieve, and with this combined force, . . . sending the 'Philadelphia' to blockade Tripoli, he crossed to Tangiers October 6, and brought the Emperor of Morocco

to reason. On both sides prizes and prisoners were restored, and the old treaty was renewed. This affair consumed time; and when at length Preble got the 'Constitution' under way for the Tripolitan coast, he spoke a British frigate off the Island of Sardinia, which reported that the 'Philadelphia' had been captured October 21, more than three weeks before. Bainbridge, cruising off Tripoli, had chased a Tripolitan cruiser into shoal water, and was hauling off, when the frigate struck on a reef at the mouth of the harbor. Every effort was made without success to float her; but at last she was surrounded by Tripolitan gunboats, and Bainbridge struck his flag. The Tripolitans, after a few days work, floated the frigate, and brought her under the guns of the castle. The officers became prisoners of war, and the crew, in number 300 or more, were put to hard labor. The affair was in no way discreditable to the squadron. . . . The Tripolitans gained nothing except the prisoners; for at Bainbridge's suggestion Preble, some time afterward, ordered Stephen Decatur, a young lieutenant in command of the 'Enterprise,' to take a captured Tripolitan craft renamed the 'Intrepid,' and with a crew of 75 men to sail from Syracuse, enter the harbor of Tripoli by night, board the 'Philadelphia,' and burn her under the castle guns. The order was literally obeyed. Decatur ran into the harbor at ten o'clock in the night of Feb. 16, 1804, boarded the frigate within half gun-shot of the Pacha's castle, drove the Tripolitan crew overboard, set the ship on fire, remained alongside until the flames were beyond control, and then withdrew without losing a man."—H. Adams, *Hist. of the U. S.: Administration of Jefferson*, v. 2, ch. 7.—"Commodore Preble, in the meantime, hurried his preparations for more serious work, and on July 25th arrived off Tripoli with a squadron, consisting of the frigate Constitution, three brigs, three schooners, six gunboats, and two bomb vessels. Opposed to him were arrayed over a hundred guns mounted on shore batteries, nineteen gunboats, one ten-gun brig, two schooners mounting eight guns each, and twelve galleys. Between August 3rd and September 3rd five attacks were made, and though the town was never reduced, substantial damage was inflicted, and the subsequent satisfactory peace rendered possible. Preble was relieved by Barron in September, not because of any loss of confidence in his ability, but from exigencies of the service, which forbade the Government sending out an officer junior to him in the relief squadron which reinforced his own. Upon his return to the United States he was presented with a gold medal, and the thanks of Congress were tendered him, his officers, and men, for gallant and faithful services. The blockade was maintained vigorously, and in 1805 an attack was made upon the Tripolitan town of Derna, by a combined land and naval force; the former being under command of Consul-General Eaton, who had been a captain in the American army, and of Lieutenant O'Bannon of the Marines. The enemy made a spirited though disorganized defence, but the shells of the war-ships drove them from point to point, and finally their principal work was carried by the force under O'Bannon and Midshipman Mann. Eaton was eager to press forward, but he was denied reinforcements and military stores, and much of his

advantage was lost. All further operations were, however, discontinued in June, 1805, when, after the usual intrigues, delays, and provarications, a treaty was signed by the Pasha, which provided that no further tribute should be exacted, and that American vessels should be forever free of his rovers. Satisfactory as was this conclusion, the uncomfortable fact remains that tribute entered into the settlement. After all the prisoners had been exchanged man for man, the Tripolitan Government demanded, and the United States paid, the handsome sum of sixty thousand dollars to close the contract. This treaty, however, awakened the conscience of Europe, and from the day it was signed the power of the Barbary Corsairs began to wane. The older countries saw their duty more clearly, and ceased to legalize robbery on the high seas."—S. Lane-Poole, *Story of the Barbary Corsairs*, ch. 20.

ALSO IN: J. F. Cooper, *Hist. of the U. S. Navy*, c. 1, ch. 18 and c. 2, ch. 1-7. —The same, *Life of Preble*.—A. S. Mackenzie, *Life of Decatur*, ch. 3-7.

A. D. 1815.—Final War of Algiers with the United States.—Death-blow to Algerine piracy.—"Just as the late war with Great Britain broke out, the Dey of Algiers, taking offense at not having received from America the precise articles in the way of tribute demanded, had unceremoniously dismissed Lear, the consul, had declared war, and had since captured an American vessel, and reduced her crew to slavery. Immediately after the ratification of the treaty with England, this declaration had been reciprocated. Efforts had been at once made to fit out ships, new and old, including several small ones lately purchased for the proposed squadrons of Porter and Perry, and before many weeks Decatur sailed from New York with the *Guerrière*, *Macedonian*, and *Constellation* frigates, now released from blockade; the *Ontario*, new sloop of war, four brigs, and two schooners. Two days after passing Gibraltar, he fell in with and captured an Algerine frigate of 44 guns, the largest ship in the Algerine navy, which struck to the *Guerrière* after a running fight of twenty-five minutes. A day or two after, an Algerine brig was chased into shoal water on the Spanish coast, and captured by the smaller vessels. Decatur having appeared off Algiers, the terrified Dey at once consented to a treaty, which he submitted to sign on Decatur's quarter deck, surrendering all prisoners on hand, making certain pecuniary indemnities, renouncing all future claim to any American tribute or presents, and the practice, also, of reducing prisoners of war to slavery. Decatur then proceeded to Tunis and Tripoli, and obtained from both indemnity for certain American vessels captured under the guns of their forts by British cruisers during the late war. The Bey of Tripoli being short of cash, Decatur agreed to accept in part payment the restoration of liberty to eight Danes and two Neapolitans held as slaves."—R. Hildreth, *Hist. of the U. S.*, *Second Series*, ch. 30 (v. 3).

A. D. 1816.—Bombardment of Algiers by Lord Exmouth.—Relinquishment of Christian slavery in Algiers, Tripolis and Tunis.—"The corsairs of Barbary still scoured the Mediter-

anean; the captives, whom they had taken from Christian vessels, still languished in captivity in Algiers; and, to the disgrace of the civilized world, a piratical state was suffered to exist in its very centre. . . . The conclusion of the war [of the Coalition against Napoleon and France] made the continuance of these ravages utterly intolerable. In the interests of civilization it was essential that piracy should be put down; Britain was mistress of the seas, and it therefore devolved upon her to do the work. . . . Happily for this country the Mediterranean command was held by an officer [Lord Exmouth] whose bravery and skill were fully equal to the dangers before him. . . . Early in 1816 Exmouth was instructed to proceed to the several states of Barbary; to require them to recognize the cession of the Ionian Islands to Britain; to conclude peace with the kingdoms of Sardinia and Naples; and to abolish Christian slavery. The Dey of Algiers readily assented to the two first of these conditions; the Beys of Tripolis and Tunis followed the example of the Dey of Algiers, and in addition consented to refrain in future from treating prisoners of war as slaves. Exmouth thereupon returned to Algiers, and endeavoured to obtain a similar concession from the Dey. The Dey pleaded that Algiers was subject to the Ottoman Porte," and obtained a truce of three months in order to confer with the Sultan. But meantime the Algerines made an unprovoked attack upon a neighbouring coral fishery, which was protected by the British flag, massacring the fishermen and destroying the flag. This brought Exmouth back to Algiers in great haste, with an ultimatum which he delivered on the 27th of August. No answer to it was returned, and the fleet (which had been joined by some vessels of the Dutch navy) sailed into battle range that same afternoon. "The Algerines permitted the ships to move into their stations. The British reserved their fire till they could deliver it with good effect. A crowd of spectators watched the ships from the shore; and Exmouth waved his hat to them to move and save themselves from the fire. They had not the prudence to avail themselves of his timely warning. A signal shot was fired by the Algerines from the mole. The 'Queen Charlotte' replied by delivering her entire broadside. Five hundred men were struck down by the first discharge. . . . The battle, which had thus begun at two o'clock in the afternoon, continued till ten o'clock in the evening. By that time half Algiers had been destroyed; the whole of the Algerine navy had been burned; and, though a few of the enemy's batteries still maintained a casual fire, their principal fortifications were crumbling ruins; the majority of their guns were dismounted." The Dey humbled himself to the terms proposed by the British commander. "On the first day of September Exmouth had the satisfaction of acquainting his government with the liberation of all the slaves in the city of Algiers, and the restitution of the money paid since the commencement of the year by the Neapolitan and Sardinian Governments for the redemption of slaves." He had also extorted from the piratical Dey a solemn declaration that he would, in future wars, treat all prisoners according to the usages of European nations. In the battle which won these important results, "128 men were killed and 690 wounded on

board the British fleet; the Dutch lost 13 killed and 52 wounded."—S. Walpole, *Hist. of Eng.* from 1815, *ch.* 2 *cc.* 16.

A. D. 1830.—French conquest of Algiers.—

"During the Napoleonic wars, the Dey of Algiers supplied grain for the use of the French armies; it was bought by merchants of Marseilles, and there was a dispute about the matter which was unsettled as late as 1829. Several instalments had been paid; the dey demanded payment in full according to his own figures, while the French government, believing the demand excessive, required an investigation. In one of the numerous debates on the subject, Hussein Pasha, the reigning dey, became very angry, struck the consul with a fan, and ordered him out of the house. He refused all reparation for the insult, even on the formal demand of the French government, and consequently there was no alternative but war." The expedition launched from the port of Toulon, for the chastisement of the insolent Algerine, "comprised 37,500 men, 3,000 horses, and 180 pieces of artillery. . . . The sea-forces included 11 ships of the line, 23 frigates, 70 smaller vessels, 377 transports, and 230 boats for landing troops. General Bourmont, Minister of War, commanded the expedition, which appeared in front of Algiers on the 18th of June, 1830." Hussein Pasha "had previously asked for aid from the Sultan of Turkey, but that wily ruler had blankly refused. The beys of Tunis and Tripoli had also declined to meddle with the affair." The landing of the French was effected safely and without serious opposition, at Sidi-Ferruch, about 16 miles west of Algiers. The Algerine army, 40,000 to 50,000 strong, commanded by Aga Ibrahim, son-in-law of the dey, took its position on the table-land of Staoueli, overlooking the French, where it waited while their landing was made. On the 19th General Bourmont was ready to advance. His antagonist, instead of adhering to the waiting attitude, and forcing the French to attack him, on his own ground, now went out to meet them, and flung his disorderly mob against their disciplined battalions, with the result that seldom fails. "The Arab loss in killed and wounded was about 3,000, . . . while the French loss was less than 500. In little more than an hour the battle was over, and the Osmanlis were in full and disorderly retreat." General Bourmont took possession of the Algerine camp at Staoueli, where he was again attacked on the 24th of June, with a similar disastrous result to the Arabs. He then advanced upon the city of Algiers, established his army in position behind the city, constructed batteries, and opened, on the 4th of July, a bombardment so terrific that the dey hoisted the white flag in a few hours. "Hussein Pasha hoped to the last moment to retain his country and its independence by making liberal concessions in the way of indemnity for the expenses of the war, and offered to liberate all Christian slaves in addition to paying them for their services and sufferings. The English consul tried to mediate on this basis, but his offers of mediation were politely declined. . . . It was finally agreed that the dey should surrender Algiers with all its forts and military stores, and be permitted to retire wherever he chose with

his wives, children, and personal belongings, but he was not to remain in the country under any circumstances. On the 5th of July the French entered Algiers in great pomp and took possession of the city. . . . The spoils of war were such as rarely fall to the lot of a conquering army, when its numbers and the circumstances of the campaign are considered. In the treasury was found a large room filled with gold and silver coins heaped together indiscriminately, the fruits of three centuries of piracy; they were the coins of all the nations that had suffered from the depredations of the Algerines, and the variety in the dates showed very clearly that the accumulation had been the work of two or three hundred years. How much money was contained in this vast pile is not known; certain it is that nearly 50,000,000 francs, or £2,000,000 sterling, actually reached the French treasury. . . . The cost of the war was much more than covered by the captured property. . . . Many slaves were liberated. . . . The Algerine power was forever broken, and from that day Algeria has been a prosperous colony of France. Hussein Pasha embarked on the 10th of July with a suite of 110 persons, of whom 55 were women. He proceeded to Naples, where he remained for a time, went afterwards to Leghorn, and finally to Egypt." In Egypt he died, under circumstances which indicated poison.—T. W. Knox, *Desire Battles Since Waterloo*, *ch.* 5.

A. D. 1830-1846.—The French war of Subjugation in Algeria with Abd-el-Kader.—

"When Louis Philippe ascended the throne [of France, A. D. 1830] the generals of his predecessor had overrun the country [of Algiers]—though they did not effectually subdue it; their absolute dominion not extending far round Algiers—from Bona, on the east, in lat. 36° 53' N., long. 7° 46' W., to Oran, on the west—nearly the entire extent of the ancient Libya. . . . There was always a party in the chamber of deputies opposed to the conquest who deprecated the colonisation of Algeria, and who steadily opposed any grants of either men or money to be devoted to the African enterprise. The natural result followed. Ten thousand men could not effect the work for which 40,000 were required; and, whilst the young colony languished, the natives became emboldened, and encouraged to make that resistance which cost the French so dear. Marshal Clausel, when entrusted with the government of the colony, and the supreme command of the troops . . . established a series of fortified posts, which were adequately garrisoned; and roads were opened to enable the garrisons promptly to communicate with each other. These positions, rapidly acquired, he was unable to maintain, in consequence of the home government recalling the greater part of his force. To recruit his army he resolved to enlist some corps of the natives; and, in October, 1830, the first regiment of zouaves was raised." . . . In 1833 we "first hear of Abd-el-Kader. This chief was the son of a marabout, or priest, in the province of Oran. He united consummate ability with great valour; was a devout Mohammedan; and when he raised the standard of the prophet, he called the Arabs around him, with the fullest confidence of success. His countrymen obeyed his

call in great numbers; and, encouraged by the enthusiasm they displayed, he first, at the close of 1833, proclaimed himself emir of Tlemsen (the former name of Oran), and then seized on the port of Arzew, on the west side of the gulf of that name; and the port of Mostaganem, on the opposite coast. The province of Mascara, lying at the foot of the Atlas, was also under his rule. At that time general Desmichels commanded at Oran. He had not a very large force, but he acted promptly. Marching against Abd-el-Kader, he defeated him in two pitched battles; retook Arzew and Mostaganem; and, on the 26th of February, 1834, entered into a treaty with the emir, by which both parties were bound to keep the peace towards each other. During that year the terms were observed; but, in 1835, the Arab chief again commenced hostilities. He marched to the east, entered the French territories, and took possession of Medeah, being received with the utmost joy by the inhabitants. On the 26th of June, general Trezel, with only 2,300 men, marched against him. Abd-el-Kader had 8,000 Arabs under his command; and a sanguinary combat took place in the defiles of Mouley-Ismael. After a severe combat, the French forced the passage, but with considerable loss. . . . The French general, finding his position untenable, commenced a retrograde movement on the 28th of June. In his retreat he was pursued by the Arabs; and before he reached Oran, on the 4th of July, he lost all his waggons, train, and baggage; besides having ten officers, and 252 sous-officers and rank-and-file killed, and 308 wounded. The heads of many of the killed were displayed in triumph by the victors. This was a severe blow to the French, and the cause of great rejoicing to the Arabs. The former called for marshal Clausel to be restored to his command, and the government at home complied; at the same time issuing a proclamation, declaring that Algeria should not be abandoned, but that the honour of the French arms should be maintained. The marshal left France on the 28th of July; and as soon as he landed, he organised an expedition against Mascara, which was Abd-el-Kader's capital. . . . The Arab chieftain advanced to meet the enemy; but, being twice defeated, he resolved to abandon his capital, which the French entered on the 6th of December, and found completely deserted. The streets and houses were alike empty and desolate; and the only living creature they encountered was an old woman, lying on some mats, who could not move of herself, and had been either forgotten or abandoned. The French set fire to the deserted houses; and having effected the destruction of Mascara, they marched to Mostaganem, which Clausel determined to make the centre of French power in that district."—Thos. Wright, *History of France*, v. 3, pp. 633-635.—“A camp was established on the Taafna in April 1836, and an action took place there on the 25th, when the Tableau states that 3,000 French engaged 10,000 natives; and some of the enemies being troops of Morocco, an explanation was required of Muley-Abd-er-Rachman, the emperor, who said that the assistance was given to the Algerines without his knowledge. On July 6th, 1836, Abd-el-Kader suffered a disastrous defeat on the river Sikkak, near Tlemsen, at the hands of Marshal Bugeaud. November 1836, the first expedition was formed against Constantina. . . . After the failure of Clauzel,

General Damrémont was appointed governor, Feb. 12th, 1837; and on the 30th of May the treaty of the Taafna between General Bugeaud and Abd-el-Kader left the French government at liberty to direct all their attention against Constantina, a camp being formed at Medjoy-el-Ahmar in that direction. An army of 10,000 men set out thence on the 1st of October, 1837, for Constantina. On the 6th it arrived before Constantina; and on the 13th the town was taken with a severe loss, including Damrémont. Marshal Vallée succeeded Damrémont as governor. The fall of Constantina destroyed the last relic of the old Turkish government. . . . By the 27th January, 1838, 100 tribes had submitted to the French. A road was cleared in April by General Negrier from Constantina to Stora on the sea. This road, passing by the camps of Smendou and the Arrouch, was 22 leagues in length. The coast of the Bay of Stora, on the site of the ancient Rusicada, became covered with French settlers; and Philippeville was founded Oct. 1838, threatening to supplant Bona. Abd-el-Kader advancing in December 1837 to the province of Constantina, the French advanced also to observe him; then both retired, without coming to blows. A misunderstanding which arose respecting the second article of the treaty of Taafna was settled in the beginning of 1838. . . . When Abd-el-Kader assumed the royal title of Sultan and the command of a numerous army, the French, with republican charity and fraternal sympathy, sought to infringe the Taafna treaty, and embroil the Arab hero, in order to ruin his rising empire, and found their own on its ashes. The Emir had been recognised by the whole country, from the gates of Ouchda to the river Mijerda. . . . The war was resumed, and many French razzias took place. They once marched a large force from Algiers on Milianah to surprise the sultan's camp. They failed in their chief object, but nearly captured the sultan himself. He was surrounded in the middle of a French square, which thought itself sure of the reward of 100,000 francs (£4,000) offered for him; but uttering his favourite ‘*en-shallah*’ (with the will of God), he gave his white horse the spur, and came over their bayonets unwounded. He lost, however, thirty of his bodyguard and friends, but killed six Frenchmen with his own hand. Still, notwithstanding his successes, Abd-el-Kader had been losing all his former power, as his Arabs, though brave, could not match 80,000 French troops, with artillery and all the other ornaments of civilised warfare. Seven actions were fought at the Col de Mouzaia, where the Arabs were overthrown by the royal dukes, in 1841; and at the Oued Foddha, where Changarnier, with a handful of troops, defeated a whole population in a frightful gorge. It was on this occasion that, having no guns, he launched his Chasseurs d’Afrique against the fort, saying, ‘*Voilà mon artillerie!*’ Abd-el-Kader had then only two chances,—the support of Muley-Abd-er-Rahman, Emperor of Morocco; or the peace that the latter might conclude with France for him. General Bugeaud, who had replaced Marshal Vallée, organised a plan of campaign by movable columns radiating from Algiers, Oran, and Constantina; and having 100,000 excellent soldiers at his disposal, the results as against the Emir were slowly but surely effective. General Negrier at Constantina, Changarnier amongst the Hadjouts about Medeah and Milianah, Cavaignac

and Lamoricière in Oran,—carried out the commander-in-chief's instructions with untiring energy and perseverance; and in the spring of 1843 the Duc d'Aumale, in company with General Changarnier, surprised the Emir's camp in the absence of the greatest part of his force, and it was with difficulty that he himself escaped. Not long afterwards he took refuge in Morocco, excited the fanatical passions of the populace of that empire, and thereby forced its ruler, Muley-Abd-er-Rahman, much against his own inclination, into a war with France; a war very speedily terminated by General Bugeaud's victory of Isly, with some slight assistance from the bombardment of Tangier and Mogador by the Prince de Joinville. In 1845 the struggle was maintained amidst the hills by the partisans of Abd-el-Kader; but our limits prevent us from dwelling on its particulars, save in one instance. . . . On the night of the 12th of June, 1845, about three months before Marshal Bugeaud left Algeria, Colonels Pelissier and St. Arnaud, at the head of a considerable force, attempted a razzia upon the tribe of the Beni-Ouled-Riah, numbering, in men, women, and children, about 700 persons. This was in the Dahra. The Arabs escaped the first clutch of their pursuers; and when hard pressed, as they soon were, took refuge in the cave of Khartani, which had some odour of sanctity about it; some holy man or marabout had lived and died there, we believe. The French troops came up quickly to the entrance, and the Arabs were summoned to surrender. They made no reply. Possibly they did not hear the summons. . . . As there was no other outlet from the cave than that by which the Arabs entered, a few hours' patience must have been rewarded by the unconditional surrender of the imprisoned tribe. Colonels Pelissier and St. Arnaud were desirous of a speedier result; and by their order an immense fire was kindled at the mouth of the cave, and fed sedulously during the summer night with wood, grass, reeds, anything that would help to keep up the volume of smoke and

flame which the wind drove, in roaring, whirling eddies, into the mouth of the cavern. It was too late now for the unfortunate Arabs to offer to surrender; the discharge of a cannon would not have been heard in the roar of that huge blast-furnace, much less smoke-strangled cries of human agony. The fire was kept up throughout the night; and when the day had fully dawned, the then expiring embers were kicked aside, and as soon as a sufficient time had elapsed to render the air of the silent cave breathable, some soldiers were directed to ascertain how matters were within. They were gone but a few minutes; and they came back, we are told, pale, trembling, terrified, hardly daring, it seemed, to confront the light of day. No wonder they trembled and looked pale. They had found all the Arabs dead—men, women, children. . . . St. Arnaud and Pelissier were rewarded by the French minister; and Marshal Soult observed, that 'what would be a crime against civilisation in Europe might be a justifiable necessity in Africa.' . . . A taste of French bayonets at Isly, and the booming of French guns at Mogador, had brought Morocco to reason. . . . Morocco sided with France, and threatened Abd-el-Kader, who cut one of their corps to pieces, and was in June on the point of coming to blows with Muley-Abd-el-Rahman, the emperor. But the Emperor of Morocco took vigorous measures to oppose him, nearly exterminating the tribes friendly to him; which drew off many partisans from the Emir, who tried to pacify the emperor, but unsuccessfully." In December, 1846, "he asked to negotiate, offered to surrender; and after 24 hours' discussion he came to Sidi Brahim, the scene of his last exploits against the French, where he was received with military honours, and conducted to the Duke of Aumale at Nemours. France has been severely abused for the detention of Abd-el-Kader in Ham."—J. R. Morell, *Algeria*, ch. 22.

12th-16th Centuries.—Commercial prosperity and municipal freedom.—"The city of Barcelona, which originally gave its name to the county of which it was the capital, was distinguished from a very early period by ample municipal privileges. After the union with Aragon in the 12th century, the monarchs of the latter kingdom extended towards it the same liberal legislation; so that, by the 13th, Barcelona had reached a degree of commercial prosperity rivaling that of any of the Italian republics. She divided with them the lucrative commerce with Alexandria; and her port, thronged with foreigners from every nation, became a principal emporium in the Mediterranean for the spices, drugs, perfumes, and other rich commodities of the East, whence they were diffused over the in-

terior of Spain and the European continent. Her consuls, and her commercial factories, were established in every considerable port in the Mediterranean and in the north of Europe. The natural products of her soil, and her various domestic fabrics, supplied her with abundant articles of export. Fine wool was imported by her in considerable quantities from England in the 14th and 15th centuries, and returned there manufactured into cloth; an exchange of commodities the reverse of that existing between the two nations at the present day. Barcelona claims the merit of having established the first bank of exchange and deposit in Europe, in 1401; it was devoted to the accommodation of foreigners as well as of her own citizens. She claims the glory, too, of having compiled the most ancient written code, among the moderns, of maritime law now extant, digested from the usages of commercial nations, and which formed the basis of the mercantile jurisprudence of Europe during the Middle Ages. The wealth which flowed in upon Barcelona, as the result of her activity and enterprise, was evinced by her numerous public works, her docks, arsenal, warehouses, exchange, hospitals, and other constructions of general utility. Strangers, who visited Spain in the 14th and 15th centuries, expatiate on the magnificence of this

city, its commodious private edifices, the cleanliness of its streets and public squares (a virtue by no means usual in that day), and on the amenity of its gardens and cultivated environs. But the peculiar glory of Barcelona was the freedom of her municipal institutions. Her government consisted of a senate or council of one hundred, and a body of regidores or counsellors, as they were styled, varying at times from four to six in number; the former intrusted with the legislative, the latter with the executive functions of administration. A large proportion of these bodies were selected from the merchants, tradesmen, and mechanics of the city. They were invested not merely with municipal authority, but with many of the rights of sovereignty. They entered into commercial treaties with foreign powers; superintended the defence of the city in time of war; provided for the security of trade; granted letters of reprisal against any nation who might violate it; and raised and appropriated the public moneys for the construction of useful works, or the encouragement of such commercial adventures as were too hazardous or expensive for individual enterprise. The counsellors, who presided over the municipality, were complimented with certain honorary privileges, not even accorded to the nobility. They were addressed by the title of magnificos; were seated, with their heads covered, in the presence of royalty; were preceded by mace-bearers, or lictors, in their progress through the country; and deputies from their body to the court were admitted on the footing and received the honors of foreign ambassadors. These, it will be recollected, were plebeians,—merchants and mechanics. Trade never was esteemed a degradation in Catalonia, as it came to be in Castile.”—W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella, introduct., sect. 2.*

BARMECIDES, OR BARMEKIDES, The.—The Barmecides, or Barmekides, famous in the history of the Caliphate at Bagdad, and made familiar to all the world by the stories of the “Arabian Nights,” were a family which rose to great power and wealth under the Caliph Haroun Alraschid. It took its name from one Khaled ibn Barmek, a Persian, whose father had been the “Barmek” or custodian of one of the most celebrated temples of the Zoroastrian faith. Khaled accepted Mahometanism and became one of the ablest agents of the conspiracy which overthrew the Ommiad Caliphs and raised the Abbasides to the throne. The first of the Abbasside Caliphs recognized his ability and made him vizier. His son Yahya succeeded to his power and was the first vizier of the famous Haroun Alraschid. But it was Jaafar, one of the sons of Yahya, who became the prime favorite of Haroun and who raised the family of the Barmecides to its acme of splendor. So much greatness in a Persian house excited wide jealousy, however, among the Arabs, and, in the end, the capricious lord and master of the all powerful vizier Jaafar turned his heart against him, and against all his house. The fall of the Barmecides was made as cruel as their advancement had been unscrupulous. Jaafar was beheaded without a moment’s warning; his father and brother were imprisoned, and a thousand members of the family are said to have been slain.—R. D. Osborn, *Islam under the Khalifs of Bagdad*, pt. 2, ch. 2.

BARNET, Battle of (A. D. 1471).—The decisive battle, and the last but one fought, in the “Wars of the Roses.” Edward IV., having been driven out of England and Henry VI. reinstated by Warwick, “the King-maker,” the former returned before six months had passed and made his way to London. Warwick hastened to meet him with an army of Lancastrians and the two forces came together on Easter Sunday, April 14, 1471, near Barnet, only ten miles from London. The victory, long doubtful, was won for the white rose of York and it was very bloodily achieved. The Earl of Warwick was among the slain. See ENGLAND: A. D. 1455-1471.

BARNEVELDT, John of, The religious persecution and death of. See NETHERLANDS: A. D. 1603-1619.

BARON.—"The title of baron, unlike that of Earl, is a creation of the [Norman] Conquest. The word, in its origin equivalent to 'homo,' receives under feudal institutions, like 'homo' itself, the meaning of vassal. Homage (hominium) is the ceremony by which the vassal becomes the man of his lord; and the homines of the king are barons. Possibly the king's thegn of Anglo-Saxon times may answer to the Norman baron."—W. Stubbs, *Const. Hist. of Eng.*, ch. 11, sect. 124.

BARON, Court. See **MANORS**.

BARONET.—"One approaches with reluctance the modern title of baronet. . . . Grammatically, the term is clear enough; it is the diminutive of baron; but baron is emphatically a man, the liege vassal of the king; and baronet, therefore, etymologically would seem to imply a doubt. Degrees of honor admit of no diminution; a 'damoiseil' and a 'donzello' are grammatical diminutives, but they do not lessen the rank of the bearer; for, on the contrary, they denote the heir to the larger honor, being attributed to none but the sons of the prince or nobleman, who bore the paramount title. They did not degrade, even in their etymological signification, which baronet appears to do, and no act of parliament can remove this radical defect. . . . Independently of these considerations, the title arose from the expedient of a needy monarch [James I.] to raise money, and was offered for sale. Any man, provided he were of good birth, might, 'for a consideration,' canton his family shield with the red hand of Ulster."—R. T. Hampson, *Origines Patriciæ*, pp. 368-369.

BASHI BOZOUKS, OR BAZOUKS.—For the suppression of the revolt of 1875-77 in the Christian provinces of the Turkish dominions (see **TURKS**: 1861-1876), "besides the regular forces engaged against the Bulgarians, great

numbers of the Moslem part of the local population had been armed by the Government and turned loose to fight the insurgents in their own way. These irregular warriors are called Bashi Bozouks, or Rottenheads. The term alludes to their being sent out without regular organization and without officers at their head."—H. O. Dwight, *Turkish Life in War Time*, p. 15.

BASIL I. (called the Macedonian), Emperor in the East (Byzantine, or Greek), A. D. 867-886. . . . **Basil, or Vassili, I., Grand Duke of Volodimir,** A. D. 1272-1276. . . . **Basil II., Emperor in the East (Byzantine, or Greek),** A. D. 963-1025. . . . **Basil, or Vassili, II., Grand Prince of Moscow,** A. D. 1389-1425. . . . **Basil III. (The Blind), Grand Prince of Moscow,** A. D. 1425-1462. . . . **Basil IV., Czar of Russia,** A. D. 1505-1533.

BASILEUS.—"From the earliest period of history, the sovereigns of Asia had been celebrated in the Greek language by the title of Basileus, or King; and since it was considered as the first distinction among men, it was soon employed by the servile provincials of the east in their humble address to the Roman throne."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 13.

BASILIAN DYNASTY, The. See **BYZANTINE EMPIRE**: A. D. 820-1057.

BASILICÆ.—"Among the buildings appropriated to the public service at Rome, none were more important than the Basilicæ. Although their name is Greek, yet they were essentially a Roman creation, and were used for practical purposes peculiarly Roman,—the administration of law and the transaction of merchants' business. Historically, considerable interest attaches to them from their connection with the first Christian churches. The name of Basilica was applied by the Romans equally to all large buildings intended for the special needs of public business. . . . Generally, however, they took the form most adapted to their purposes—a semi-circular apse or tribunal for legal trials and a central nave, with arcades and galleries on each side for the transaction of business. They existed not only as separate buildings, but also as reception rooms attached to the great mansions of Rome. . . . It is the opinion of some writers that these private basilicæ, and not the public edifices, served as the model for the Christian Basilica."—R. Burn, *Rome and the Campagna*, introd.

BASILIKA, The.—A compilation or codification of the imperial laws of the Byzantine Empire promulgated A. D. 884, in the reign of Basil I. and afterwards revised and amplified by his son, Leo VI.—G. Finlay, *Hist. of the Byzantine Empire, from 716 to 1057*, bk. 2, ch. 1, sect. 1.

BASING HOUSE, The Storming and Destruction of.—"Basing House [mansion of the Marquis of Winchester, near Basingstoke, in Hampshire], an immense fortress, with a feudal castle and a Tudor palace within its ramparts, had long been a thorn in the side of the Parliament. Four years it had held out, with an army within, well provisioned for years, and blocked the road to the west. At last it was resolved to take it; and Cromwell was directly commissioned by Parliament to the work. Its capture is one of the most terrible and stirring incidents of the

war. After six days' constant cannonade, the storm began at six o'clock in the morning of the 14th of October [A. D. 1645]. After some hours of desperate fighting, one after another its defences were taken and its garrison put to the sword or taken. The plunder was prodigious; the destruction of property unsparing. It was gutted, burnt, and the very ruins carted away."

—F. Harrison, *Oliver Cromwell*, ch. 5.

BASOCHÉ.—BASOCHIENS.—"The Basoche was an association of the 'clercs du Parlement' [Parliament of Paris]. The etymology of the name is uncertain. . . . The Basoche is supposed to have been instituted in 1302, by Philippe-le-Bel, who gave it the title of 'Royaume de la Basoche,' and ordered that it should form a tribunal for judging, without appeal, all civil and criminal matters that might arise among the clerks and all actions brought against them. He likewise ordered that the president should be called 'Roi de la Basoche,' and that the king and his subjects should have an annual 'montre' or review. . . . Under the reign of Henry III. the number of subjects of the roi de la Basoche amounted to nearly 10,000. . . . The members of the Basoche took upon themselves to exhibit plays in the 'Palais,' in which they censured the public manners; indeed they may be said to have been the first comic authors and actors that appeared in Paris. . . . At the commencement of the Revolution, the Basochiens formed a troop, the uniform of which was red, with epaulettes and silver buttons; but they were afterwards disbanded by a decree of the National Assembly." —*Hist. of Paris* (London: G. B. Whittaker, 1827), v. 2, p. 106.

BASQUES, The.—"The western extremity of the Pyrenees, where France and Spain join, gives us a locality . . . where, although the towns, like Bayonne, Pampeluna, and Bilbao, are French or Spanish, the country people are Basques or Biscayans — Basques or Biscayans not only in the provinces of Biscay, but in Alava, Upper Navarre, and the French districts of Labourd and Soule. Their name is Spanish (the word having originated in that of the ancient Vascones), and it is not the one by which they designate themselves; though possibly it is indirectly connected with it. The native name is derived from the root Eusk-, which becomes Euskara when the language, Euskerria when the country, and Euskaldunac when the people are spoken of." —R. G. Latham, *Ethnology of Europe*, ch. 2.

BASTARNÆ, The. See PEUCINI.

BASTILLE, The.—"The name of Bastille or Bastel was, in ancient times, given to any

kind of erection calculated to withstand a military force; and thus, formerly in England and on the borders of Scotland, the term Bastel-house was usually applied to places of strength and fancied security. Of the many Bastilles in France that of Paris, . . . which at first was called the Bastille St-Antoine, from being erected near the suburb of St-Antoine, retained the name longest. This fortress, of melancholy celebrity, was erected under the following circumstances: In the year 1356, when the English, then at war with France, were in the neighbourhood of Paris, it was considered necessary by the inhabitants of the French capital to repair the bulwarks of their city. Stephen Marcel, provost of the merchants, undertook this task, and, amongst other defences, added to the fortifications at the eastern entrance of the town a gate flanked with a tower on each side." This was the beginning of the constructions of the Bastille. They were enlarged in 1369 by Hugh Aubriot, provost of Paris under Charles V. He "added two towers, which, being placed opposite to those already existing on each side of the gate, made of the Bastille a square fort, with a tower at each of the four angles." After the death of Charles V., Aubriot, who had many enemies, was prosecuted for alleged crimes, "was condemned to perpetual confinement, and placed in the Bastille, of which, according to some historians, he was the first prisoner. After some time, he was removed thence to Fort l'Evêque, another prison," from which he was liberated in 1381, by the insurrection of the Maillotins (see PARIS: A. D. 1381). "After the insurrection of the Maillotins, in 1382, the young king, Charles VI., still further enlarged the Bastille by adding four towers to it, thus giving it, instead of the square form it formerly possessed, the shape of an oblong or parallelogram. The fortress now consisted of eight towers, each 100 feet high, and, like the wall which united them, nine feet thick. Four of these towers looked on the city, and four on the suburb of St-Antoine. To increase its strength, the Bastille was surrounded by a ditch 25 feet deep and 120 feet wide. The road which formerly passed through it was turned on one side. . . . The Bastille was now completed (1383), and though additions were subsequently made to it, the body of the fortress underwent no important change. . . . Both as a place of military defence, and as a state prison of great strength, the Bastille was, even at an early period, very formidable." —*Hist. of the Bastille* (Chambers's Miscellany, no. 132, v. 17).—For an account of the taking and destruction of the Bastille by the people, in 1789, see FRANCE: A. D. 1789 (JULY).

BATAVIAN REPUBLIC, The. See FRANCE: A. D. 1794–1795 (OCTOBER–MAY).

BATAVIANS, OR BATAVI, The.—"The Germanic Batavi had been peacefully united with the [Roman] Empire, not by Cæsar, but not long afterwards, perhaps by Drusus. They were settled in the Rhine delta, that is on the left bank of the Rhine and on the islands formed

by its arms, upwards as far at least as the Old Rhine, and so nearly from Antwerp to Utrecht and Leyden in Zealand and southern Holland, on territory originally Celtic—at least the local names are predominantly Celtic; their name is still borne by the Betuwe, the lowland between the Waal and the Leck with the capital Noviomagus, now Nimeguen. They were, especially compared with the restless and refractory Celts, obedient and useful subjects, and hence occupied a distinctive position in the aggregate, and particularly in the military system of the Roman Empire. They remained quite free from taxation, but were on the other hand drawn upon more largely than any other canton in the recruiting; this one canton furnished to the army 1,000 horsemen and 9,000 foot soldiers; besides, the men of the imperial body-guard were taken especially from them. The command of these Batavian divisions was conferred exclusively on native Batavi. The Batavi were accounted indisputably not merely as the best riders and swimmers of the army, but also as the model of true soldiers.”—T. Mommsen, *Hist. of Rome*, bk. 8, ch. 4.—“When the Cimbri and their associates, about a century before our era, made their memorable onslaught upon Rome, the early inhabitants of the Rhine island of Batavia, who were probably Celts, joined in the expedition. A recent and tremendous inundation had swept away their miserable homes. . . . The island was deserted of its population. At about the same period a civil dissension among the Chatti—a powerful German race within the Hercynian forest—resulted in the expatriation of a portion of the people. The exiles sought a new home in the empty Rhine island, called it ‘Bet-auw,’ or ‘good meadow,’ and were themselves called, thenceforward, Batavi, or Batavians.”—J. L. Motley, *Rise of the Dutch Republic*, introd., sect. 2.

A. D. 69.—Revolt of Civilis.—“Galba [Roman Emperor], succeeding to the purple upon the suicide of Nero, dismissed the Batavian life-guards to whom he owed his elevation. He is murdered, Otho and Vitellius contend for the succession, while all eyes are turned upon the eight Batavian regiments. In their hands the scales of Empire seem to rest. They declare for Vitellius and the civil war begins. Otho is defeated; Vitellius acknowledged by Senate and people. Fearing, like his predecessors, the imperious turbulence of the Batavian legions, he, too, sends them into Germany. It was the signal for a long and extensive revolt, which had well-nigh overturned the Roman power in Gaul and Lower Germany. Claudius Civilis was a Batavian of noble race, who had served twenty-five years in the Roman armies. His Teutonic name has perished. . . . After a quarter of a century’s service he was sent in chains to Rome and his brother executed, both falsely charged with conspiracy. . . . Desire to avenge his own wrongs was mingled with loftier motives in his breast. He knew that the sceptre was in the gift of the Batavian soldiery. . . . By his courage, eloquence and talent for political combinations, Civilis effected a general confederation of all the Netherland tribes, both Celtic and German. For a brief moment there was a united people, a Batavian commonwealth. . . . The details of the revolt [A. D. 69] have been carefully preserved by Tacitus, and form

one of his grandest and most elaborate pictures. . . . The battles, the sieges, the defeats, the indomitable spirit of Civilis, still flaming most brightly when the clouds were darkest around him, have been described by the great historian in his most powerful manner. . . . The struggle was an unsuccessful one. After many victories and many overthrows, Civilis was left alone. . . . He accepted the offer of negotiation from Cerialis [the Roman commander]. . . . A colloquy was agreed upon. The bridge across the Nabalia was broken asunder in the middle and Cerialis and Civilis met upon the severed sides. . . . Here the story abruptly terminates. The remainder of the Roman’s narrative is lost, and upon that broken bridge the form of the Batavian hero disappears forever.”—J. L. Motley, *Rise of the Dutch Republic*, introd., sects. 3-4.

ALSO IN: Tacitus, *History*, bks. 4-5.

BATH, The Order of the.—“The present Military Order of the Bath, founded by King George I. in the year 1725, differs so essentially from the Knighthood of the Bath, or the custom of making Knights with various rites and ceremonies, of which one was Bathing, that it may almost be considered a distinct and new fraternity of chivalry. The last Knights of the Bath, made according to the ancient forms, were at the coronation of King Charles II.; and from that period until the reign of the first George, the old institution fell into total oblivion. At the latter epoch, however, it was determined to revive, as it was termed, The Order of the Bath, by erecting it ‘into a regular Military Order’; and on the 25th May, 1725, Letters Patent were issued for that purpose. By the Statutes then promulgated, the number of Knights, independent of the Sovereign, a Prince of the Blood Royal, and a Great Master, was restricted to 35.” It has since been greatly increased, and the Order divided into three classes: First Class, consisting of “Knights Grand Cross,” not to exceed 50 for military and 25 for civil service; Second Class, consisting of “Knights Commanders,” not to exceed 102 for military and 50 for civil service; Third Class, “Companions,” not to exceed 525 for military and 200 for civil service.—Sir B. Burke, *Book of Orders of Knighthood*, p. 104.

BAUX, Lords of; Gothic Origin of the.—The illustrious Visigothic race of the "Balthi" or "Baltha" ("the bold"), from which sprang Alaric, "continued to flourish in France in the Gothic province of Septimania, or Languedoc, under the corrupted appellation of Baux, and a branch of that family afterwards settled in the kingdom of Naples."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 80, note.

BAVARIA: The name.—Bavaria derived its name from the Boii.—R. G. Latham, *The Germania of Tacitus; Epilegomena*, sect. 20.—See, also, BOIANS.

The Ethnology of.—"Bavaria . . . falls into two divisions; the Bavaria of the Rhine, and the Bavaria of the Danube. In Rhenish Bavaria the descent is from the ancient Vangiones and Nemetes, either Germanized Gauls or Gallicized Germans, with Roman superadditions. Afterwards, an extension of the Alemannic and Suevic populations from the right bank of the Upper Rhine completes the evolution of their present Germanic character. Danubian Bavaria falls into two subdivisions. North of the Danube the valley of the Naab, at least, was originally Slavonic, containing an extension of the Slavonic population of Bohemia. But disturbance and displacement began early. . . . In the third and fourth centuries, the Suevi and Alemanni extended themselves from the Upper Rhine. . . . The northwestern parts of Bavaria were probably German from the beginning. South of the Danube the ethnology changes. In the first place the Roman elements increase; since Vindelicia was a Roman province. . . . Its present character has arisen from an extension of the Germans of the Upper Rhine."—R. G. Latham, *Ethnology of Europe*, ch. 8.

A. D. 547.—Subjection of the Bavarians to the Franks.—"It is about this period [A. D. 547] that the Bavarians first become known in history as tributaries of the Franks; but at what time they became so is matter of dispute. From the previous silence of the annalists respecting this people, we may perhaps infer that both they and the Suabians remained independent until the fall of the Ostrogothic Empire in Italy. The Gothic dominions were bounded on the north by Rætia and Noricum; and between these countries and the Thuringians, who lived still further to the north, was the country of the Bavarians and Suabians. Thuringia had long been possessed by the Franks, Rætia was ceded by Vitiges, king of Italy, and Venetia was conquered by Theudebert [the Austrasian Frank king]. The Bavarians were therefore, at this

period, almost surrounded by the Frankish territories. . . . Whenever they may have first submitted to the yoke, it is certain that at the time of Theudebert's death [A. D. 547], or shortly after that event, both Bavarians and Suabians (or Alemanni), had become subjects of the Merovingian kings."—W. C. Perry, *The Franks*, ch. 3.

A. D. 1180-1356.—The House of Wittelsbach.—Its acquisition of Bavaria and the Palatinate of the Rhine.—Loss of the Electoral Vote by Bavaria.—When, in 1180, the dominions of Henry the Lion, under the ban of the Empire, were stripped from him (see SAXONY: A. D. 1178-1183), by the imperial sentence of forfeiture, and were divided and conferred upon others by Frederick Barbarossa, the Duchy of Bavaria was given to Otto, Count Palatine of Wittelsbach. "As he claimed a descent from an ancient royal family of Bavaria, it was alleged that, in obtaining the sovereignty of that state, he had only in some measure regained those rights which in former times belonged to his ancestors."—Sir A. Halliday, *Annals of the House of Hanover*, v. 1, p. 276. "Otto . . . was a descendant of that Duke Luitpold who fell in combat with the Hungarians, and whose sons and grandsons had already worn the ducal cap of Bavaria. No princely race in Europe is of such ancient extraction. . . . Bavaria was as yet destitute of towns: Landshutt and Munich first rose into consideration in the course of the 13th century; Ratisbon, already a flourishing town, was regarded as the capital and residence of the Dukes of Bavaria. . . . A further accession of dignity and power awaited the family in 1214 in the acquisition of the Palatinate of the Rhine. Duke Ludwig was now the most powerful prince of Southern Germany. . . . His son Otto the Illustrious, remaining . . . true to the imperial house, died excommunicate, and his dominions were placed for several years under an interdict. . . . Upon the death of Otto a partition of the inheritance took place. This partition became to the family an hereditary evil, a fatal source of quarrel and of secret or open enmity. . . . In [the] dark and dreadful period of interregnum [see GERMANY: A. D. 1250-1272], when all men waited for the final dissolution of the empire, nothing appears concerning the Wittelsbach family. . . . Finally in 1273 Rudolf, the first of the Habsburgs, ascended the long-unoccupied throne. . . . He won over the Bavarian princes by bestowing his daughters upon them in

marriage. Louis remained faithful and rendered him good service, but the turbulent Henry, who had already made war upon his brother for the possession of the electoral vote, deserted him, and for this Bavaria was punished by the loss of the vote, and of the territory above the Enns." Afterwards, for a time, the Duke of Bavaria and the Count Palatine exercised the right of the electoral vote alternately; but in 1356 by the Golden Bull of Charles IV. [see GERMANY: A. D. 1347-1493], the vote was given wholly to the Count Palatine, and lost to Bavaria for nearly 300 years.—J. I. von Döllinger, *The House of Wittelsbach* (*Studies in European History*, ch. 2).

A. D. 1777-1779.—The Succession question.—With the death of Maximilian Joseph, of Bavaria (30 December, 1777), the younger branch of the house of Wittelsbach became extinct, and the electorate of Bavaria . . . came to an end. By virtue of the original partition in 1310, the duchy of Bavaria ought to pass to the elder branch of the family, represented by Charles Theodore, the Elector Palatine. But Joseph [the Second, the Emperor], saw the possibility of securing valuable additions to Austria which would round off the frontier on the west. The Austrian claims were legally worthless. They were based chiefly upon a gift of the Straubingen territory which Sigismund was said to have made in 1426 to his son-in-law, Albert of Austria, but which had never taken effect and had since been utterly forgotten. It would be impossible to induce the diet to recognise such claims, but it might be possible to come to an understanding with the aged Charles Theodore, who had no legitimate children and was not likely to feel any very keen interest in his new inheritance. Without much difficulty the elector was half frightened, half induced to sign a treaty (3 January, 1778), by which he recognised the claims put forward by Austria, while the rest of Bavaria was guaranteed to him and his successors. Austrian troops were at once despatched to occupy the ceded districts. The condition of Europe seemed to assure the success of Joseph's bold venture. . . . There was only one quarter from which opposition was to be expected, Prussia. Frederick promptly appealed to the fundamental laws of the Empire, and declared his intention of upholding them with arms. But he could find no supporters except those who were immediately interested, the elector of Saxony, whose mother, as a sister of the late elector of Bavaria, had a legal claim to his allodial property, and Charles of Zweibrücken, the heir apparent of the childless Charles Theodore. . . . Frederick, left to himself, despatched an army into Bohemia, where the Austrian troops had been joined by the emperor in person. But nothing came of the threatened hostilities. Frederick was unable to force on a battle, and the so-called war was little more than an armed negotiation. . . . France and Russia undertook to mediate, and negotiations were opened in 1779 at Teschen, where peace was signed on the 13th of May. Austria withdrew the claims which had been recognised in the treaty with the Elector Palatine, and received the 'quarter of the Inn,' i. e., the district from Passau to Wildshut. Frederick's eventual claims to the succession in the Franconian principalities of Anspach and Baireuth, which Austria had every interest in opposing, were recognised by the treaty. The claims of Saxony were bought off by a payment of 4,000,000 thalers. The most unsatisfactory part of the treaty was that it was guaranteed by France and Russia. . . . On the whole, it was a great triumph for Frederick and an equal humiliation for Joseph II. His schemes of aggrandisement had been foiled."—R. Lodge, *Hist. of Modern Europe*, ch. 20, sect. 3.

BAYEUX TAPESTRY.—A remarkable roll of mediæval tapestry, 214 feet long and 20 inches wide, preserved for centuries in the cathedral at Bayeux, Normandy, on which a pictorial history of the Norman invasion and conquest of England is represented, with more or less of names and explanatory inscriptions. Mr. E. A. Freeman (*Norman Conquest*, c. 3, note A) says: "It will be seen that, throughout this volume, I accept the witness of the Bayeux Tapestry as one of my highest authorities. I do not hesitate to say that I look on it as holding the first place among the authorities on the Norman side. That it is a contemporary work I entertain no doubt whatever, and I entertain just as little doubt as to its being a work fully entitled to our general confidence. I believe the tapestry to have been made for Bishop Odo, and to have been most probably designed by him as an ornament for his newly rebuilt cathedral church of Bayeux." The precious tapestry is now preserved in the public library at Bayeux.

BEC, Abbey of.—One of the most famous abbeys and ecclesiastical schools of the middle ages. Its name was derived from the little beck or rivulet of a valley in Normandy, on the banks of which a pious knight, Herlouin, retiring from the world, had fixed his hermitage. The renown of the piety of Herlouin drew others around him and resulted in the formation of a religious community with himself at its head. Among those attracted to Herlouin's retreat were a noble Lombard scholar, Lanfranc of Pavia, who afterwards became the great Norman archbishop of Canterbury, and Anselm of Aosta, another Italian, who succeeded Lanfranc at Canterbury with still more fame. The teaching of Lanfranc at Bec raised it, says Mr. Green in his *Short History of the English People*, into the most famous school of Christendom; it was, in fact, the first wave of the intellectual movement which was spreading from Italy to the ruder countries of the West. The fabric of the canon law and of mediæval scholasticism, with the philosophical skepticism which first awoke under its influence, all trace their origin to Bec. "The glory of Bec would have been as transitory as that of other monastic houses, but for the appearance of one illustrious man [Lanfranc] who came to be enrolled as a private member of the brotherhood, and who gave Bec for a while a special and honorable character with which hardly any other monastery in Christendom could

compare."—E. A. Freeman, *Norman Conquest*.

BED OF JUSTICE.—"The ceremony by which the French kings compelled the registration of their edicts by the Parliament was called a 'lit de justice' [bed of justice]. The monarch proceeded in state to the Grand Chambre, and the chancellor, having taken his pleasure, announced that the king required such and such a decree to be entered on their records in his presence. It was held that this personal interference of the sovereign suspended for the time being the functions of all inferior magistrates, and the edict was accordingly registered without a word of objection. The form of registration was as follows: 'Le roi séant en son lit de justice a ordonné et ordonne que les présents édits seront enregistrés;' and at the end of the decree, 'Fait en Parlement, le roi y séant en son lit de justice.'"—*Students' Hist. of France, note to ch. 19.*

—See, also, **PARLIAMENT OF PARIS.**—"The origin of this term ['bed of justice'] has been much discussed. The wits complained it was so styled because there justice was put to sleep. The term was probably derived from the arrangement of the throne on which the king sat. The back and sides were made of bolsters and it was called a bed."—J. B. Perkins, *France under Mazarin, v. 1, p. 388, foot-note.*—An elaborate and entertaining account of a notable Bed of Justice held under the Regency, in the early part of the reign of Louis XV., will be found in the *Memoirs of the Duke de Saint Simon*, abridged translation of St. John, v. 4, ch. 5-7.

BEGUINES, OR BEGHINES.—**BEGHARDS.**—Weaving Brothers.—Lollards.—Brethren of the Free Spirit.—Fratricelli.—Bizochi.—Turlupins.—"In the year 1180 there lived in Liege a certain kindly, stammering priest, known from his infirmity as Lambert le Bègue. This man took pity on the destitute widows of the town. Despite the impediment in his speech, he was, as often happens, a man of a certain power and eloquence in preaching. . . .

This Lambert so moved the hearts of his hearers that gold and silver poured in on him, given to relieve such of the destitute women of Liege as were still of good and pious life. With the moneys thus collected, Lambert built a little square of cottages, with a church in the middle and a hospital, and at the side a cemetery. Here he housed these homeless widows, one or two in each little house, and then he drew up a half monastic rule which was to guide their lives. The rule was very simple, quite informal: no vows, no great renunciation bound the 'Swestrones Brod dorch Got.' A certain time of the day was set apart for prayer and pious meditation; the other hours they spent in spinning or sewing, in keeping their houses clean, or they went as nurses in time of sickness into the homes of the townspeople. . . . Thus these women, though pious and sequestered, were still in the world and of the world. . . . Soon we find the name 'Swestrones Brod dorch Got' set aside for the more usual title of Beguines or Beghines. Different authorities give different origins of this word. . . . Some have thought it was taken in memory of the founder, the charitable Lambert le Bègue. Others think that, even as the Mystics or Mutterers, the Lollards or Hummers, the Popelhards or Babbler, so the Beguines or Stammerers were thus nicknamed from their continual murmuring in prayer. This is plausible; but not so plausible as the suggestion of Dr. Mosheim and M. Auguste Jundt, who derive the word Beguine from the Flemish word 'beggen,' to beg. For we know that these pious women had been veritable beggars; and beggars should they again become. With surprising swiftness the new order spread through the Netherlands and into France and Germany. . . . Lambert may have lived to see a beguinage in every great town within his ken; but we hear no more of him. The Beguines are no longer for Liege, but for all the world. Each city possessed its quiet congregation; and at any sick-bed you might meet a woman clad in a simple smock and a great veil-like mantle, who lived only to pray and do deeds of mercy. . . . The success of the Beguines had made them an example. . . . Before St. Francis and St. Dominic instituted the mendicant orders, there had silently grown up in every town of the Netherlands a spirit of fraternity, not imposed by any rule, but the natural impulse of a people. The weavers seated all day long alone at their rattling looms, the armourers beating out their thoughts in iron, the cross-legged tailors and busy cobblers thinking and stitching together—these men silent, pious, thoughtful, joined themselves in a fraternity modelled on that of the Beguines. They were called the Weaving Brothers. Bound by no vows and fettered by no rule, they still lived the worldly life and plied their trade for hire. Only in their leisure they met together and prayed and dreamed and thought. . . . Such were the founders of the great fraternity of 'Fratres Textores,' or Beghards as in later years the people more generally called them."—A. M. F. Robinson, *The End of the Middle Ages, 1.*—"The Lollards differed from the Beghards less in reality than in name. We are informed respecting them that, at their origin in Antwerp, shortly after 1300, they associated together for the purpose of waiting upon patients dangerously sick, and burying the dead. . . . Very

early, however, an element of a different kind began to work in those fellowships. Even about the close of the 13th century irregularities and extravagances are laid to their charge. . . . The charges brought against the later Beghards and Lollards, in connection, on the one hand, with the fanatical Franciscans, who were violently contending with the Church, and on the other, with the Brethren and Sisters of the Free Spirit, relate to three particulars, viz., an aversion to all useful industry, conjoined with a propensity to mendicancy and idleness, an intemperate spirit of opposition to the Church, and a skeptical and more or less pantheistical mysticism. . . . They . . . declared that the time of Antichrist was come, and on all hands endeavoured to embroil the people with their spiritual guides. Their own professed object was to restore the pure primeval state, the divine life of freedom, innocence, and nature. The idea they formed of that state was, that man, being in and of himself one with God, requires only to act in the consciousness of this unity, and to follow unrestrained the divinely implanted impulses and inclinations of his nature, in order to be good and godly."—C. Ullmann, *Reformers before the Reformation*, v. 2, pp. 14–16.—"The names of beghards and beguines came not unnaturally to be used for devotees who, without being members of any regular monastic society, made a profession of religious strictness; and thus the applications of the names to some kinds of sectaries was easy—more especially as many of these found it convenient to assume the outward appearance of beghards, in the hope of disguising their differences from the church. But on the other hand, this drew on the orthodox beghards frequent persecutions, and many of them, for the sake of safety, were glad to connect themselves as tertiaries with the great mendicant orders. . . . In the 14th century, the popes dealt hardly with the beghards; yet orthodox societies under this name still remained in Germany; and in Belgium, the country of their origin, sisterhoods of beguines flourish to the present day. . . . Matthias of Janow, the Bohemian reformer, in the end of the 14th century, says that all who act differently from the profane vulgar are called beghardi or turlupini, or by other blasphemous names. . . . Among those who were confounded with the beghards—partly because, like them, they abounded along the Rhine—were the brethren and sisters of the Free Spirit. These appear in various places under various names. They wore a peculiarly simple dress, professed to give themselves to contemplation, and, holding that labour is a hindrance to contemplation and to the elevation of the soul to God, they lived by beggary. Their doctrines were mystical and almost pantheistic. . . . The brethren and sisters of the Free Spirit were much persecuted, and probably formed a large proportion of those who were burnt under the name of beghards."—J. C. Robertson, *Hist. of Christian Church*, bk. 7, ch. 7 (v. 6).—"Near the close of this century [the 13th] originated in Italy the Fratricelli and Bizochi, parties that in Germany and France were denominated Beguards; and which, first Boniface VIII., and afterwards other pontiffs condemned, and wished to see persecuted by the Inquisition and exterminated in every possible way. The Fratricelli, who also called themselves in Latin 'Fratres parvi'

(Little Brethren), or 'Fratriculi de paupere vita' (Little Brothers of the Poor Life), were Franciscan monks, but detached from the great family of Franciscans; who wished to observe the regulations prescribed by their founder St. Francis more perfectly than the others, and therefore possessed no property, either individually or collectively, but obtained their necessary food from day to day by begging. . . . They predicted a reformation and purification of the church. . . . They extolled Celestine V. as the legal founder of their sect; but Boniface and the succeeding pontiffs, who opposed the Fratricelli, they denied to be true pontiffs. As the great Franciscan family had its associates and dependents, who observed the third rule prescribed by St. Francis [which required only certain pious observances, such as fasts, prayers, continence, a coarse, cheap dress, gravity of manners, &c., but did not prohibit private property, marriage, public offices, and worldly occupations], and who were usually called Tertiarii, so also the sect of the Fratricelli . . . had numerous Tertiarii of its own. These were called, in Italy, Bizochi and Bocasoti; in France Beguini; and in Germany Beghardi, by which name all the Tertiarii were commonly designated. These differed from the Fratricelli . . . only in their mode of life. The Fratricelli were real monks, living under the rule of St. Francis; but the Bizochi or Beguini lived in the manner of other people. . . . Totally different from these austere Beguini and Beguine, were the German and Belgic Beguine, who did not indeed originate in this century, but now first came into notice. . . . Concerning the Turlupins, many have written; but none accurately. . . . The origin of the name, I know not; but I am able to prove from substantial documents, that the Turlupins who were burned at Paris, and in other parts of France were no other than the Brethren of the Free Spirit whom the pontiffs and councils condemned."—J. L. Von Mosheim, *Inst's of Ecclesiastical Hist.*, bk. 3, century 13, pt. 2, ch. 2, sect. 39–41, and ch. 5, sect. 9, foot-note.

BEHISTUN, Rock of.—"This remarkable spot, lying on the direct route between Babylon and Ecbatana, and presenting the unusual combination of a copious fountain, a rich plain and a rock suitable for sculpture, must have early attracted the attention of the great monarchs who marched their armies through the Zagros range, as a place where they might conveniently set up memorials of their exploits. . . . The tablet and inscriptions of Darius, which have made Behistun famous in modern times, are in a recess to the right of the scarped face of the rock, and at a considerable elevation."—G. Rawlinson, *Five Great Monarchies: Media*, ch. 1.—The mountain or rock of Behistun fixes the location of the district known to the Greeks as Bagistana. "It lies southwest of Elvend, between that mountain and the Zagrus in the valley of the Choaspes, and is the district now known as Kirmenshah."—M. Duncker, *Hist. of Antiquity*, bk. 8, ch. 1.

BELGÆ, The.—“This Belgian confederation included the people of all the country north of the Seine and Marne, bounded by the Atlantic on the west and the Rhine on the north and east, except the Mediomatrici and Treviri. . . . The old divisions of France before the great revolution of 1789 corresponded in some degree to the divisions of the country in the time of Cæsar, and the names of the people are still retained with little alteration in the names of the chief towns or the names of the ante-revolutionary divisions of France. In the country of the Remi between the Marne and the Aisne there is the town of Reims. In the territory of the Suessiones between the Marne and the Aisne there is Soissons on the Aisne. The Bellovaci were west of the Oise (Isara) a branch of the Seine: their chief town, which at some time received the name of Cæsaromagus, is now Beauvais. The Nervii were between and on the Sambre and the Schelde. The Atrebatas were north of the Bellovaci between the Somme and the upper Schelde: their chief place was Nemetacum or Nemetocenna, now Arras in the old division of Artois. The Ambiani were on the Somme (Samara): their name is represented by Amiens (Samarobriva). The Morini, or sea-coast men extended from Boulogne towards Dunkerque. The Menapii bordered on the northern Morini and were on both sides of the lower Rhine (B. G. iv., 4). The Caleti were north of the lower Seine along the coast in the Pays de Caux. The Velocasses were east of the Caleti on the north side of the Seine as far as the Oise; their chief town was Rotomagus (Rouen) and their country was afterwards Vexin Normand and Vexin Français. The Veromandui were north of the Suessiones: their chief town under the Roman dominion, Augusta Veromanduorum, is now St. Quentin. The Aduatuci were on the lower Maas. The Condrusi and the others included under the name of Germani were on the Maas, or between the Maas and the Rhine. The Eburones had the country about Tongern and Spa, and were the immediate neighbours of the Menapii on the Rhine.”—G. Long, *Decline of the Roman Republic*, v. 4, ch. 3.—“Cæsar . . . informs us that, in their own estimation, they [the Belgæ] were principally descended from a German stock, the offspring of some early migration across the Rhine. . . . Strabo . . . by no means concurred in Cæsar's view of the origin of this . . . race, which he believed to be Gaulish and not German, though differing widely from the Galli, or Gauls of the central region.”—C. Merivale, *Hist. of the Romans*, ch. 5.

ALSO IN: E. Guest, *Origines Celticae*, v. 1, ch. 12.

B. C. 57.—Cæsar's campaign against the confederacy.—In the second year of Cæsar's command in Gaul, B. C. 57, he led his legions against the Belgæ, whom he characterized in his

Commentaries as the bravest of all the people of Gaul. The many tribes of the Belgian country had joined themselves in a great league to oppose the advancing Roman power, and were able to bring into the field no less than 290,000 men. The tribe of the Remi alone refused to join the confederacy and placed themselves on the Roman side. Cæsar who had quartered his army during the winter in the country of the Sequani, marched boldly, with eight legions, into the midst of these swarming enemies. In his first encounter with them on the banks of the Aisne, the Belgic barbarians were terribly cut to pieces and were so disheartened that tribe after tribe made submission to the proconsul as he advanced. But the Nervii, who boasted a Germanic descent, together with the Aduatuci, the Atrebatas and the Veromandui, rallied their forces for a struggle to the death. The Nervii succeeded in surprising the Romans, while the latter were preparing their camp on the banks of the Sambre, and very nearly swept Cæsar and his veterans off the field, by their furious and tremendous charge. But the energy and personal influence of the one, with the steady discipline of the other, prevailed in the end over the untrained valour of the Nervii, and the proud nation was not only defeated but annihilated. “Their eulogy is preserved in the written testimony of their conqueror; and the Romans long remembered, and never failed to signalize their formidable valour. But this recollection of their ancient prowess became from that day the principal monument of their name and history, for the defeat they now sustained well nigh annihilated the nation. Their combatants were cut off almost to a man. The elders and the women, who had been left in secure retreats, came forth of their own accord to solicit the conqueror's clemency. . . . ‘Of 600 senators,’ they said, ‘we have lost all but three; of 60,000 fighting men 500 only remain.’ Cæsar treated the survivors with compassion.”—C. Merivale, *Hist. of the Romans*, ch. 7.

BELGRADE: Origin.—During the attacks of the Avars upon the territory of the Eastern Empire, in the last years of the 6th century, the city of Singidunum, at the junction of the Save with the Danube, was taken and totally destroyed. The advantageous site of the extinct town soon attracted a colony of Slavonians, who raised out of the ruins a new and strongly fortified city—the Belgrade, or the White City of later times. “The Slavonic name of Belgrade is mentioned in the 10th century by Constantine Porphyrogenitus: the Latin appellation of Alba Græca is used by the Franks in the beginning of the 9th.”—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 46, note.

BENARES. Benares "may even date from the time when the Aryan race first spread itself over Northern India. . . . It is certain that the city is regarded by all Hindus as coeval with the birth of Hinduism, a notion derived both from tradition and from their own writings. Allusions to Benares are exceedingly abundant in ancient Sanskrit literature; and perhaps there is no city in all Hindustan more frequently referred to. By reason of some subtle and mysterious charm, it has linked itself with the religious sympathies of the Hindus through every century of its existence. For the sanctity of its inhabitants—of its temples and reservoirs—of its wells and streams—of the very soil that is trodden—of the very air that is breathed—and of everything in and around it, Benares has been famed for thousands of years. . . . Previously to the introduction of the Buddhist faith into India, she was already the sacred city of the land,—the centre of Hinduism, and chief seat of its authority. Judging from the strong feelings

of veneration and affection with which the native community regard her in the present day, and bearing in mind that the founder of Buddhism commenced his ministry at this spot, it seems indisputable that, in those early times preceding the Buddhist reformation, the city must have exerted a powerful and wide-spread religious influence over the land. Throughout the Buddhist period in India—a period extending from 700 to 1,000 years—she gave the same support to Buddhism which she had previously given to the Hindu faith. Buddhist works of that era . . . clearly establish the fact that the Buddhists of those days regarded the city with much the same kind of veneration as the Hindu does now."—M. A. Sherring, *The Sacred City of the Hindus*, ch. 1.—For an account of the English annexation of Benares, see **INDIA**: A. D. 1773-1785.

BENEDICTINE ORDERS.—The rule of St. Benedict.—"There were many monasteries in the West before the time of St. Benedict of Nursia (A. D. 480); but he has been rightly considered the father of Western monasticism; for he not only founded an order to which many religious houses became attached, but he established a rule for their government which, in its main features, was adopted as the rule of monastic life by all the orders for more than five centuries, or until the time of St. Dominic and St. Francis of Assisi. Benedict was first a hermit, living in the mountains of Southern Italy, and in that region he afterwards established in succession twelve monasteries, each with twelve monks and a superior. In the year 520 he founded the great monastery of Monte Casino as the mother-house of his order, a house which became the most celebrated and powerful monastery, according to Montalembert, in the Catholic universe, celebrated especially because there Benedict prepared his rule and formed the type which was to serve as a model to the innumerable communities submitting to that sovereign code. . . . Neither in the East nor in the West were the monks originally ecclesiastics; and it was not until the eighth century that they became priests, called regulars, in contrast with the ordinary parish clergy, who were called seculars. . . . As missionaries, they proved the most powerful instruments in extending the authority and the boundaries of the church. The monk had no individual property; even his dress belonged to the monastery. . . . To enable him to work efficiently, it was necessary to feed him well; and such was the injunction of Benedict, as opposed to the former practice of strict asceticism."—C. J. Stillé, *Studies in Mediæval Hist.*, ch. 12.—"Benedict would not have the monks limit themselves to spiritual

labour, to the action of the soul upon itself; he made external labour, manual or literary, a strict obligation of his rule. . . . In order to banish indolence, which he called the enemy of the soul, he regulated minutely the employment of every hour of the day according to the seasons, and ordained that, after having celebrated the praises of God seven times a-day, seven hours a-day should be given to manual labour, and two hours to reading. . . . Those who are skilled in the practice of an art or trade, could only exercise it by the permission of the abbot, in all humility; and if any one prided himself on his talent, or the profit which resulted from it to the house, he was to have his occupation changed until he had humbled himself. . . . Obedience is also to his eyes a work, *obedientiae laborem*, the most meritorious and essential of all. A monk entered into monastic life only to make the sacrifice of self. This sacrifice implied especially that of the will. . . . Thus the rule pursued pride into its most secret hiding-place. Submission had to be prompt, perfect, and absolute. The monk must obey always, without reserve, and without murmur, even in those things which seemed impossible and above his strength, trusting in the succour of God, if a humble and reasonable remonstrance, the only thing permitted to him, was not accepted by his superiors."—The Count de Montalembert, *The Monks of the West*, bk. 4, sect. 2 (v. 2).

BENEFICIUM.—COMMENDATION.—Feudalism "had grown up from two great sources—the beneficium, and the practice of commendation, and had been specially fostered on Gallic soil by the existence of a subject population which admitted of any amount of extension in the methods of dependence. The beneficiary system originated partly in gifts of land made by the kings out of their own estates to their kinsmen and servants, with a special undertaking to be faithful; partly in the surrender by landowners of their estates to churches or powerful men, to be received back again and held by them as tenants for rent or service. By the latter arrangement the weaker man obtained the protection of the stronger, and he who felt himself insecure placed his title under the defence of the Church. By the practice of commendation, on the other hand, the inferior put himself under the personal care of a lord, but without altering his title or divesting himself of his right to his estate; he became a vassal and did homage. The placing of his hands between those of his lord was the typical act by which the connexion was formed."—W. Stubbs, *Const. Hist. of Eng.*, ch. 9, sect. 93.

ALSO IN: H. Hallam, *The Middle Ages*, ch. 2, pt. 1.—See, also, SCOTLAND: 10TH–11TH CENTURIES.

BENEFIT OF CLERGY.—"Among the most important and dearly-prized privileges of the church was that which conferred on its members immunity from the operation of secular law, and relieved them from the jurisdiction of secular tribunals. . . . So priceless a

prerogative was not obtained without a long and resolute struggle. . . . To ask that a monk or priest guilty of crime should not be subject to the ordinary tribunals, and that civil suits between laymen and ecclesiastics should be referred exclusively to courts composed of the latter, was a claim too repugnant to the common sense of mankind to be lightly accorded. . . . The persistence of the church, backed up by the unfailing resource of excommunication, finally triumphed, and the sacred immunity of the priesthood was acknowledged, sooner or later, in the laws of every nation of Europe." In England, when Henry II. in 1164, "endeavored, in the Constitutions of Clarendon, to set bounds to the privileges of the church, he therefore especially attacked the benefit of clergy. . . . The disastrous result of the quarrel between the King and the archbishop [Becket] rendered it necessary to abandon all such schemes of reform. . . . As time passed on, the benefit of clergy gradually extended itself. That the laity were illiterate and the clergy educated was taken for granted, and the test of churchmanship came to be the ability to read, so that the privilege became in fact a free pardon on a first offence for all who knew their letters. . . . Under Elizabeth, certain heinous offences were declared felonies without benefit of clergy. . . . Much legislation ensued from time to time, effecting the limitation of the privilege in various offences. . . . Early in the reign of Anne the benefit of clergy was extended to all malefactors by abrogating the reading test, thus placing the unlettered felon on a par with his better educated fellows, and it was not until the present century was well advanced that this remnant of mediæval ecclesiastical prerogative was abolished by 7 and 8 Geo. iv. c. 28."—H. C. Lea, *Studies in Church Hist.*, pt. 2.

BENEVENTUM: The Lombard Duchy.—The Duchy of Benevento was a Lombard fief of the 8th and 9th centuries, in southern Italy, which survived the fall of the Lombard kingdom in northern Italy. It covered nearly the territory of the modern kingdom of Naples. Charlemagne reduced the Duchy to submission with considerable difficulty, after he had extinguished the Lombard kingdom. It was afterwards divided into the minor principalities of Benevento, Salerno and Capua, and became part of the Norman conquest.—See ITALY (SOUTHERN): A. D. 800–1016; and 1000–1090; also, LOMBARDS: A. D. 573–774, and AMALFI.

BENEVENTUM, Battle of (B. C. 275). See ROME: B. C. 282–275.

BENEVOLENCES.—"The collection of benevolences, regarded even at the time [England, reign of Edward IV.] as an innovation, was perhaps a resuscitated form of some of the worst measures of Edward II. and Richard II., but the attention which it aroused under Edward IV. shows how strange it had become under the intervening kings. . . . Such evidence as exists shows us Edward IV. canvassing by word of mouth or by letter for direct gifts of money from his subjects. Henry III. had thus

begged for new year's gifts. Edward IV. requested and extorted 'free-will offerings' from every one who could not say no to the pleadings of such a king.—W. Stubbs, *Const. Hist. of Eng.*, ch. 18, sect. 696.—See ENGLAND: A. D. 1471-1485.

BERMUDAS, or Somers Islands.—This group of small islands, situated in the western Atlantic, nearly 600 miles eastward of Cape Hatteras, was discovered in 1515 by a Spanish mariner, Juan Bermudes, and was well known throughout the next century, but never occupied. The region bore a bad reputation for storms. By the wrecking of the English ship "Sea Venture," with Admiral Sir George Somers on board, in 1609 (see VIRGINIA: A. D. 1609-1616), the islands were brought into relations with the Virginia colony, and were soon afterwards included in the grant to the Virginia Company, but sold presently to another colonizing company. An important British naval station has been established in the islands since 1810. "In the Atlantic they are to some extent what Mauritius is in the Indian Ocean, but far more of a fortress."—C. P. Lucas, *Hist. Geog. of the British Colonies*, v. 2, sect. 1.

BERSERKER. — BÆRSÆRK. — "The word Bærsærk is variously spelt, and stated to be derived from 'bar' and 'særk,' or 'bareshirt.' The men to whom the title was applied [among the Northmen] . . . were stated to be in the habit of fighting without armour, and wearing only a shirt of skins, or at times naked. In Iceland they were sometimes called Ulfrhedin, i. e., wolfskin. The derivation of Bærsærk has been questioned, as in philology is not uncommon. The habit of their wearing bear (björn) skins, is said to afford the meaning of the word. In philology, to agree to differ is best. The Bærsærks, according to the sagas, appear to have been men of unusual physical development and savagery. They were, moreover, liable to what was called Bærsærkegang, or a state of excitement in which they exhibited superhuman strength, and then spared neither friend nor foe. . . . After an attack of Bærsærk frenzy, it was

believed that the superhuman influence or spirit left the Berserk's body as a 'ham,' or cast off shape or form, with the result that the Berserk suffered great exhaustion, his natural forces being used up."—J. F. Vicary, *Saga Time*, ch. 3.

ALSO IN: P. B. Du Chaillu, *The Viking Age*, v. 2, ch. 26.

BERWICK-UPON-TWEED: A. D. 1293-1333.—Conquest by the English.—At the beginning, in 1293, of the struggle of the Scottish nation to cast off the feudal yoke which Edward I. had laid upon it, the English king, marching angrily northwards, made his first assault upon Berwick. The citizens, whose only rampart was a wooden stockade, foolishly aggravated his wrath by gibes and taunts. "The stockade was stormed with the loss of a single knight, and nearly 8,000 of the citizens were mown down in a ruthless carnage, while a handful of Flemish traders who held the town-hall stoutly against all assailants were burned alive in it. . . . The town was ruined forever, and the great merchant city of the North sank from that time into a petty seaport." Subsequently recovered by the Scotch, Berwick was held by them in 1333 when Edward III. attempted to seat Edward Balliol, as his vassal, on the Scottish throne. The English laid siege to the place, and an army under the regent Douglas came to its relief. The battle of Halidon Hill, in which the Scotch were utterly routed, decided the fate of Berwick. "From that time the town remained the one part of Edward's conquests which was preserved by the English crown. Fragment as it was, it was viewed as legally representing the realm of which it had once formed a part. As Scotland, it had its chancellor, chamberlain, and other officers of state; and the peculiar heading of acts of Parliament enacted for England 'and the town of Berwick-upon-Tweed' still preserves the memory of its peculiar position."—J. R. Green, *Short Hist. of the English People*, ch. 4, sect. 3 and 6.

BESSI, The.—The Bessi were an ancient Thracian tribe who occupied the mountain range of Hæmus (the Balkan) and the upper valley of the Hebrus. They were subdued by Lucullus, brother of the conqueror of Mithridates.—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 18, sect. 6.

BESSIN, The.—The district of Bayeux. See SAXONS OF BAYEUX.

BETH-HORON, Battles of.—The victory of Joshua over "the five kings of the Amorites" who laid siege to Gibeon; the decisive battle of the Jewish conquest of Canaan. "The battle of Beth-horon or Gibeon is one of the most important in the history of the world; and yet so profound has been the indifference, first of the religious world, and then (through their example or influence) of the common world, to the historical study of the Hebrew annals, that the very name of this great battle is far less known to most of us than that of Marathon or Cannæ."—Dean Stanley, *Lects. on the Hist. of the Jewish Church*, lect. 11.—In the Maccabean war, Beth-horon was the scene of two of the brilliant victories of Judas Maccabeus, in B. C. 167 and 162.—Josephus, *Antiq. of the Jews*, bk. 12.—Later, at the time of the Jewish revolt against the Romans, it witnessed the disastrous retreat of the Roman general Cestius.

BETHSHEMESH, Battle of.—Fought by Joash, king of Israel, with Amaziah, king of Judah, defeating the latter and causing part of the walls of Jerusalem to be thrown down.—2 *Chronicles*, xcv.

BETH-ZACHARIAH, Battle of.—A defeat suffered (B. C. 163) by the Jewish patriot, Judas Maccabæus, at the hands of the Syrian monarch Antiochus Eupator; the youngest of the Maccabees being slain.—Josephus, *Antiq. of the Jews*, bk. 12, ch. 9.

BETHZUR, Battle of.—Defeat of an army sent by Antiochus, against Judas Maccabæus, the Jewish patriot, B. C. 165, Josephus, *Antiq. of the Jews*, bk. 12, ch. 7.

BEVERHOLT, Battle of (1381). See FLANDERS: A. D. 1379-1381.

BEY.—BEYLERBEY.—PACHA.—PAD-ISCHAH.—"The administration of the [Turkish] provinces was in the time of Mahomet II. [the Sultan, A. D. 1451-1481, whose legislation organized the Ottoman government] principally intrusted to the Beys and Beylerbeys. These were the natural chiefs of the class of feudatories [Spahis], whom their tenure of office obliged to serve on horseback in time of war. They mustered under the Sanjak, the banner of the chief of their district, and the districts themselves were thence called Sanjaks, and their rulers Sanjak-beys. The title of Pacha, so familiar to us when speaking of a Turkish provincial ruler, is not strictly a term implying territorial jurisdiction, or even military authority. It is a title of honour, meaning literally the Shah's or sovereign's foot, and implying that the person to whom that title was given was one whom the sovereign employed. . . . The title of Pacha was not at first applied among the Ottomans exclusively to those officers who commanded armies or ruled provinces or cities. Of the five first Pachas, that are mentioned by Ottoman writers, three were literary men. By degrees this honorary title was appropriated to those whom the Sultan employed in war and set over districts and important

towns; so that the word Pacha became almost synonymous with the word governor. The title Padischah, which the Sultan himself bears, and which the Turkish diplomatists have been very jealous in allowing to Christian Sovereigns, is an entirely different word, and means the great, the imperial Schah or Sovereign. In the time of Mahomet II. the Ottoman Empire contained in Europe alone thirty-six Sanjaks, or banners, around each of which assembled about 400 cavaliers."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 6.

BITHYNIANS, THYNIANS.—"Along the coast of the Euxine, from the Thracian Bosphorus eastward to the river Halys, dwelt Bithynians or Thynians, Mariandynians and Paphlagonians,—all recognized branches of the widely extended Thracian race. The Bithynians especially, in the northwestern portion of this territory, and reaching from the Euxine to the Propontis, are often spoken of as Asiatic Thracians,—while on the other hand various tribes among the Thracians of Europe are denominated Thyni or Thynians,—so little difference was there in the population on the two sides of the Bosphorus, alike brave, predatory, and sanguinary. The Bithynians of Asia are also sometimes called Bebrykians, under which denomination they extend as far southward as the gulf of Kios in the Propontis."—G. Grote, *Hist. of Greece*, pt. 2, ch. 16.—The Bithynians were among the people in Asia Minor subjugated by Croesus, king of Lydia, and fell, with his fall, under the Persian rule. But, in some way not clearly understood, an independent kingdom of Bithynia was formed, about the middle of the 5th century B. C. which resisted the Persians, successfully resisted Alexander the Great and his successors in Asia Minor, resisted Mithridates of Pontus, and existed until B. C. 74, when its last king Nicomedes III. bequeathed his kingdom to Rome and it was made a Roman province.

BLACK DEATH, The.—"The Black Death appears to have had its origin in the centre of China, in or about the year 1333. It is said that it was accompanied at its outbreak by various terrestrial and atmospheric phenomena of a novel and most destructive character, phenomena similar to those which characterized the first appearance of the Asiatic Cholera, of the Influenza, and even in more remote times of the Athenian Plague. It is a singular fact that all epidemics of an unusually destructive character have had their homes in the farthest East, and have travelled slowly from those regions towards Europe. It appears, too, that the disease exhausted itself in the place of its origin at about the same time in which it made its appearance in Europe. . . . The disease still exists under the name of the Levant or Oriental Plague, and is endemic in Asia Minor, in parts of Turkey, and in Egypt. It is specifically a disease in which the blood is poisoned, in which the system seeks to relieve itself by suppuration of the glands, and in which, the tissues becoming dis-

organized, and the blood thereupon being infiltrated into them, dark blotches appear on the skin. Hence the earliest name by which the Plague was described. The storm burst on the Island of Cyprus at the end of the year 1347, and was accompanied, we are told, by remarkable physical phenomena, as convulsions of the earth, and a total change in the atmosphere. Many persons affected died instantly. The Black Death seemed, not only to the frightened imagination of the people, but even to the more sober observation of the few men of science of the time, to move forward with measured steps from the desolated East, under the form of a dark and fetid mist. It is very likely that consequent upon the great physical convulsions which had rent the earth and preceded the disease, foreign substances of a deleterious character had been projected into the atmosphere. . . . The Black Death appeared at Avignon in January 1348, visited Florence by the middle of April, and had thoroughly penetrated France and Germany by August. It entered Poland in 1349, reached Sweden in the winter of that year, and Norway by infection from England at about the same time. It spread even to Iceland and Greenland. . . . It made its appearance in Russia in 1351, after it had well-nigh exhausted itself in Europe. It thus took the circuit of the Mediterranean, and unlike most plagues which have penetrated from the Eastern to the Western world, was checked, it would seem, by the barrier of the Caucasus. . . . Hecker calculates the loss to Europe as amounting to 25,000,000." —J. E. T. Rogers, *Hist. of Agriculture and Prices*, v. 1, ch. 15.

BLACK ROD.—"The gentleman whose duty it is to preserve decorum in the House of Lords, just as it is the duty of the Sergeant-at-Arms to maintain order in the House of Commons. These officials are bound to execute the commands of their respective chambers, even though the task involves the forcible ejection of an obstreperous member. . . . His [Black Rod's] most disturbing occupation, now-a-days, is when he conveys a message from the Lords to the Commons. . . . No sooner do the policemen herald his approach from the lobbies than the doors of the Lower Chamber are closed against him, and he is compelled to ask for admission with becoming humility and humbleness. After this has been granted, he advances to the bar,

bows to the chair, and then—with repeated acts of obeisance—walks slowly to the table, where his request is made for the Speaker's attendance in the Upper House. The object may be to listen to the Queen's speech, or it may simply be to hear the Royal assent given to various bills. . . . The consequence is nearly always the same. The Sergeant-at-Arms shoulders the mace, the Speaker joins Black Rod, the members fall in behind, and a more or less orderly procession then starts on its way to the Peer's Chamber. . . . No matter what the subject under consideration, Black Rod's appearance necessitates a check . . . till the journey to the Lords has been completed. The annoyance thus caused has often found expression during recent sessions."—*Popular Account of Parliamentary Procedure*, p. 11.

BLUE-LIGHT FEDERALISTS.—"An incident, real or imaginary, which had lately [in 1813] occurred at New London [Connecticut] was seized upon as additional proof of collusion between the Federalists and the enemy. [See UNITED STATES OF AM.: A. D. 1812.] As the winter approached, Decatur had expected to get to sea with his two frigates. Vexed to find himself thwarted in every attempt by the watchfulness of the enemy, he wrote to the Navy Department in a fit of disgust, that, beyond all doubt, the British had, by signals or otherwise, instantaneous information of all his movements; and as proof of it, he stated that, after several nights of favorable weather, the report circulating in the town that an attempt was to be made to get out, 'in the course of the evening two blue lights were burned on both points of the harbor's mouth.' These 'signals to the enemy,' for such he unhesitatingly pronounced them, had been repeated, so he wrote, and had been seen by twenty persons at least of the squadron, though it does not appear that Decatur himself was one of the number. . . . Such a clamor was raised about it, that one of the Connecticut members of Congress moved for a committee of investigation. . . . The inquiry was . . . quashed; but the story spread and grew, and the more vehement opponents of the war began to be stigmatized as 'blue-light Federalists.'"—R. Hildreth, *Hist. of the U. BÆOTIA. — BÆOTIANS.—"Between Phokis and Lokris on one side, and Attica (from which it is divided by the mountains Kithærôn and Parnes) on the other, we find the important territory called Bæotia, with its ten or twelve autonomous cities, forming a sort of confederacy under the presidency of Thebes, the most powerful among them. Even of this territory, destined during the second period of this history to play a part so conspicuous and effective, we know nothing during the first two centuries after 776 B. C. We first acquire some insight into it on occasion of the disputes between Thebes and Platea, about the year 520 B. C."—G. Grote, *Hist. of Greece*, pt. 2, ch. 3.—In the Greek legendary period one part of this territory, subsequently Bæotian—the Copaic valley in the north—was occupied by the enterprising people called the Minyi, whose chief city was Orchomenus. Their neighbors were the Cadmeians of Thebes, who are "rich," as Grote expresses it, "in legendary antiquities." The reputed founder of Thebes was Cadmus, bringer of letters to Hellas, from Phœnicia or from Egypt, according to different representations. Dionysus (Bacchus) and Hēraklēs were both supposed to recognize the Cadmeian city as their birth-place. The terrible legends of Œdipus and his unhappy family connect themselves with the same place, and the incident wars between Thebes and Argos—the assaults of the seven Argive chiefs and of their sons, the Epigoni—were, perhaps, real causes of a real destruction of the power of some race for whom the Cadmeians stand. They and their neighbors, the Minyi of Orchomenus, appear to have given way before another people, from Thessaly, who gave the name Bæotia to the country of both and who were the inhabitants of the Thebes of historic times.—G. Grote, *Hist. of Greece*, pt. 1, ch. 14.—E. Curtius, *Hist. of Greece*, bk. 1, ch. 4.—"That the Bæotia of history should never have attained to a significance corresponding to the natural advantages of the locality, and to the prosperity of the district in the pre-Homeric age, is due above all to one principal cause. The immigration of the Thessalian Bæotians, from which the country derived its name and the beginnings of its connected history, destroyed the earlier civilization of the land, without succeeding in establishing a new civilization capable of conducting the entire district to a prosperous and harmonious development. It cannot be said that the ancient germs of culture were suppressed, or that barbarous times supervened. The ancient seats of the gods and oracles continued to be

honoured and the ancient festivals of the Muses on Mount Helicon, and of the Charites at Orchomenus, to be celebrated. In Bœotia too the beneficent influence of Delphi was at work, and the poetic school of Hesiod, connected as it was with Delphi, long maintained itself here. And a yet stronger inclination was displayed by the Æolian immigrants towards music and lyric poetry. The cultivation of the music of the flute was encouraged by the excellent reeds of the Copaic morasses. This was the genuinely national species of music in Bœotia. . . . And yet the Bœotians lacked the capacity for attracting to themselves the earlier elements of population in such a way as to bring about a happy amalgamation. . . . The Bœotian lords were not much preferable to the Thessalian; nor was there any region far or near, inhabited by Greek tribes, which presented a harsher contrast in culture or manners, than the district where the road led from the Attic side of Mount Parnes across to the Bœotian."—E. Curtius, *Hist. of Greece*, bk. 6, ch. 1.—See, also, GREECE: THE MIGRATIONS.

BEOTIAN LEAGUE.—"The old Bœotian League, as far as its outward forms went, seems to have been fairly entitled to the name of a Federal Government, but in its whole history we trace little more than the gradual advance of Thebes to a practical supremacy over the other cities. . . . The common government was carried on in the name of the whole Bœotian nation. Its most important magistrates bore the title of Bœotarchs; their exact number, 11 or 13, is a disputed point. . . . Thebes chose two Bœotarchs and each of the other cities one."—E. A. Freeman, *Hist. of Federal Govt.*, ch. 4, sect. 2.

BOGOMILIANS, The.—A religious sect which arose among the Slavonians of Thrace and Bulgaria, in the eleventh century, and suffered persecution from the orthodox of the Greek church. They sympathized with the Iconoclasts of former times, were hostile to the adoration of the Virgin and saints, and took more or less from the heretical doctrines of the Paulicians. Their name is derived by some from the two Slavonian words, "Bog," signifying God, and "milui," "have mercy." Others say that "Bogumil," meaning "one beloved by God," was the correct designation. Basilios, the leader of the Bogomilians, was burned by the Emperor Alexius Comnenos, in the hippodrome, at Constantinople, A. D. 1118.—G. Finlay, *Hist. of the Byzantine and Greek Empires*, 716-1453, bk. 3, ch. 2, sect. 1.—See BALKAN AND DANUBIAN STATES: 9TH-16TH CENTURIES (BOSNIA, ETC.)

BOHEMIA, Derivation of the name. See BOIANS.

Its people and their early history.—"Whatever may be the inferences from the fact of Bohemia having been politically connected with the empire of the Germanic Marcomanni, whatever may be those from the element Boio-

as connecting its population with the Boii of Gaul and Bavaria (Baiovarii), the doctrine that the present Slavonic population of that kingdom—Tshekhs [or Czekhs] as they call themselves—is either recent in origin or secondary to any German or Keltic aborigines, is wholly unsupported by history. In other words, at the beginning of the historical period Bohemia was as Slavonic as it is now. From A. D. 526 to A. D. 550, Bohemia belonged to the great Thuringian Empire. The notion that it was then Germanic (except in its political relations) is gratuitous. Nevertheless, Schaffarik's account is, that the ancestors of the present Tshekhs came, probably, from White Croatia: which was either north of the Carpathians, or each side of them. According to other writers, however, the parts above the river Kulpa in Croatia sent them forth. In Bohemian the verb 'ceti'='to begin,' from which Dobrowsky derives the name Czekhs=the beginners, the foremost, i. e., the first Slavonians who passed westwards. The powerful Samo, the just Krok, and his daughter, the wise Libussa, the founder of Prague, begin the uncertain list of Bohemian kings, A. D. 624-700. About A. D. 722, a number of petty chiefs become united under Premysl the husband of Libussa. Under his son Nezamysl occurs the first Constitutional Assembly at Wysegrad; and in A. D. 845, Christianity was introduced. But it took no sure footing till about A. D. 966. Till A. D. 1471 the names of the Bohemian kings and heroes are Tshekh—Wenceslaus, Ottokar, Ziska, Podiebrad. In A. D. 1564, the Austrian connexion and the process of Germanizing began. . . . The history and ethnology of Moravia is nearly that of Bohemia, except that the Marcomannic Germans, the Turks, Huns, Avars, and other less important populations may have effected a greater amount of intermixture. Both populations are Tshekh, speaking the Tshekh language—the language, probably, of the ancient Quadi."—R. G. Latham, *Ethnology of Europe*, ch. 11.

A. D. 1405-1415.—John Hus, and the movement of Religious Reformation.—"Some sparks of the fire which Wiclif had lighted [see ENGLAND: A. D. 1360-1414], blown over half Europe, as far as remote Bohemia, quickened into stronger activity a flame which for long years burned and scorched and consumed, defying all efforts to extinguish it. But for all this, it was not Wiclif who kindled the Bohemian fires. His writing did much to fan and feed them; while the assumed and in part erroneously assumed, identity of his teaching with that of Hus contributed not a little to shape the tragic issues of the Bohemian reformer's life. But the Bohemian movement was an independent and eminently a national one. If we look for the proper forerunners of Hus, his true spiritual ancestors, we shall find them in his own land, in a succession of earnest and faithful preachers. . . . John Hus (b. 1369, d. 1415), the central figure of the Bohemian Reformation, took in the year 1394 his degree as Bachelor of Theology in that University of Prague, upon the fortunes of which he was destined to exercise so lasting an influence; and four years later, in 1398, he began to deliver lectures there. . . . He soon signalized himself by his diligence in breaking the bread of life to hungering souls, and his boldness in rebuking vice in high places as in low. So long as he confined himself to reproving the sins of the laity, leaving those of the Clergy and monks unassailed, he found little opposition, nay, rather support and applause from these. But when [1405] he brought them also within the circle of his condemnation, and began to upbraid them for their covetousness, their ambition, their luxury, their sloth, and for other vices, they turned angrily upon him, and sought to undermine his authority, everywhere spreading reports of the unsoundness of his teaching. . . . While matters were in this strained condition, events took place at Prague which are too closely connected with the story that we are telling, exercised too great an influence in bringing about the issues that lie before us, to allow us to pass them by. . . . The University of Prague, though recently founded—it only dated back to the year 1348—was now, next after those of Paris and Oxford, the most illustrious in Europe. . . . This University, like that of Paris, on the pattern of which it had been modelled, was divided into four 'nations'—four groups, that is, or families of scholars—each of these having in academical affairs a single collective vote. These nations were the Bavarian, the Saxon, the Polish, and the Bohemian. This does not appear at first an unfair division—two German and two Slavonic; but in practical working the Polish was so largely recruited from Silesia, and other German or half-German lands, that its vote was in fact German also. The Teutonic votes were thus as three to one, and the Bohemians in their own land and their own University on every

important matter hopelessly outvoted. When, by aid of this preponderance, the University was made to condemn the teaching of Wiclif . . . matters came to a crisis. Urged by Hus, who as a stout patriot, and an earnest lover of the Bohemian language and literature, had more than a theological interest in the matter,—by Jerome [of Prague],—by a large number of the Bohemian nobility,—King Wenzel published an edict whereby the relations of natives and foreigners were completely reversed. There should be henceforth three votes for the Bohemian nation, and only one for the three others. Such a shifting of the weights certainly appears as a redressing of one inequality by creating another. At all events it was so earnestly resented by the Germans, by professors and students alike, that they quitted the University in a body, some say of five, and some of thirty thousand, and founded the rival University of Leipsic, leaving no more than two thousand students at Prague. Full of indignation against Hus, whom they regarded as the prime author of this affront and wrong, they spread throughout all Germany the most unfavourable reports of him and of his teaching. This exodus of the foreigners had left Hus, who was now Rector of the University, with a freer field than before. But Church matters at Prague did not mend; they became more confused and threatening every day; until presently the shameful outrage against all Christian morality which a century later did a still more effectual work, served to put Hus into open opposition to the corrupt hierarchy of his time. Pope John XXIII., having a quarrel with the King of Naples, proclaimed a crusade against him, with what had become a constant accompaniment of this,—Indulgences to match. But to denounce Indulgences, as Hus with fierce and righteous indignation did now, was to wound Rome in her most sensitive part. He was excommunicated at once, and every place which should harbour him stricken with an interdict. While matters were in this frame the Council of Constance [see PAPACY: A. D. 1414-1418] was opened, which should appease all the troubles of Christendom, and correct whatever was amiss. The Bohemian difficulty could not be omitted, and Hus was summoned to make answer at Constance for himself. He had not been there four weeks when he was required to appear before the Pope and Cardinals (Nov. 18, 1414). After a brief informal hearing he was committed to harsh durance from which he never issued as a free man again. Sigismund, the German King and Emperor Elect, who had furnished Hus with a safe-conduct which should protect him, 'going to the Council, tarrying at the Council, returning from the Council,' was absent from Constance at the time, and heard with real displeasure how lightly regarded this promise and pledge of his had been. Some big words too he spoke, threatening to come himself and release the prisoner by force; but, being waited on by a deputation from the Council, who represented to him that he, as a layman, in giving such a safe-conduct had exceeded his powers, and intruded into a region which was not his, Sigismund was convinced, or affected to be convinced. . . . More than seven months elapsed before Hus could obtain a hearing before the Council. This was granted to him at last. Thrice heard (June 5, 7, 8, 1415),—if indeed such tumultuary sittings,

where the man speaking for his life, and for much more than his life, was continually interrupted and overborne by hostile voices, by loud cries of 'Recant,' 'Recant,' may be reckoned as hearings at all,—he bore himself, by the confession of all, with courage, meekness and dignity." He refused to recant. Some of the articles brought against him, he said, "charged him with teaching things which he had never taught, and he could not, by this formal act of retraction, admit that he had taught them." He was condemned, sentenced to the stake, and burned, on the 6th of July, 1415. His friend, Jerome, of Prague, suffered the same fate in the following May.—R. C. Trench, *Lects. on Mediaeval Church History*, lect. 22.

A. D. 1410.—Election of King Sigismund to the imperial throne. See GERMANY: A. D. 1347-1493.

A. D. 1419-1434.—The Hussite Wars.—The Reformation checked.—"The fate of Huss and Jerome created an instant and fierce excitement among the Bohemians. An address, defending them against the charge of heresy and protesting against the injustice and barbarity of the Council, was signed by 400 or 500 nobles and forwarded to Constance. The only result was that the Council decreed that no safe-conduct could be allowed to protect a heretic, that the University of Prague must be reorganized, and the strongest measures applied to suppress the Hussite doctrines in Bohemia. This was a defiance which the Bohemians courageously accepted. Men of all classes united in proclaiming that the doctrines of Huss should be freely taught, and that no Interdict of the Church should be enforced: the University, and even Wenzel's queen, Sophia, favored this movement, which soon became so powerful that all priests who refused to administer the sacrament 'in both forms' were driven from the churches. . . . When the Council of Constance was dissolved [1418], Sigismund [the Emperor] hastened to Hungary to carry on a new war with the Turks, who were already extending their conquests along the Danube. The Hussites in Bohemia employed this opportunity to organize themselves for resistance; 40,000 of them, in July, 1419, assembled on a mountain to which they gave the name of Tabor, and chose as their leader a nobleman who was surnamed Ziska, 'the one-eyed.' The excitement soon rose to such a pitch that several monasteries were stormed and plundered. King Wenzel arrested some of the ringleaders, but this only inflamed the spirit of the people. They formed a procession in Prague, marched through the city, carrying the sacramental cup at their head, and took forcible possession of several churches. When they halted before the city-hall, to demand the release of their imprisoned brethren, stones were thrown at them from the windows, whereupon they broke into the building and hurled the Burgomaster and six other officials upon the upheld spears of those below. . . . The Hussites were already divided into two parties, one moderate in its demands, called the Calixtines, from the Latin 'calix,' a chalice, which was their symbol [referring to their demand for the administration of the eucharistic cup to the laity,

or communion 'sub utraque specie'—whence they were also called 'Utraquists']; the other radical and fanatic, called the 'Taborites,' who proclaimed their separation from the Church of Rome and a new system of brotherly equality through which they expected to establish the Millennium upon earth. The exigencies of their situation obliged these two parties to unite in common defence against the forces of the Church and the Empire, during the sixteen years of war which followed; but they always remained separated in their religious views, and mutually intolerant. Ziska, who called himself 'John Ziska of the Chalice, commander in the hope of God of the Taborites,' had been a friend and was an ardent follower of Huss. He was an old man, bald-headed, short, broad-shouldered, with a deep furrow across his brow, an enormous aquiline nose, and a short red moustache. In his genius for military operations, he ranks among the great commanders of the world; his quickness, energy and inventive talent were marvellous, but at the same time he knew neither tolerance nor mercy. . . . Sigismund does not seem to have been aware of the formidable character of the movement, until the end of his war with the Turks, some months afterwards, and he then persuaded the Pope to summon all Christendom to a crusade against Bohemia. During the year 1420 a force of 100,000 soldiers was collected, and Sigismund marched at their head to Prague. The Hussites met him with the demand for the acceptance of the following articles: 1.—The word of God to be freely preached; 2.—The sacrament to be administered in both forms; 3.—The clergy to possess no property or temporal authority; 4.—All sins to be punished by the proper authorities. Sigismund was ready to accept these articles as the price of their submission, but the Papal Legate forbade the agreement, and war followed. On the 1st of November, 1420, the Crusaders were totally defeated by Ziska, and all Bohemia was soon relieved of their presence. The dispute between the moderates and the radicals broke out again; the idea of a community of property began to prevail among the Taborites, and most of the Bohemian nobles refused to act with them. Ziska left Prague with his troops and for a time devoted himself to the task of suppressing all opposition through the country, with fire and sword. He burned no less than 550 convents and monasteries, slaying the priests and monks who refused to accept the new doctrines. . . . While besieging the town of Raby, an arrow destroyed his remaining eye, yet he continued to plan battles and sieges as before. The very name of the blind warrior became a terror throughout Germany. In September, 1421, a second Crusade of 200,000 men, commanded by five German Electors, entered Bohemia from the west. . . . But the blind Ziska, nothing daunted, led his wagons, his flail-men, and mace-wielders against the Electors, whose troops began to fly before them. No battle was fought; the 200,000 Crusaders were scattered in all directions, and lost heavily during their retreat. Then Ziska wheeled about and marched against Sigismund, who was late in making his appearance. The two armies met on the 8th of January, 1422 [at Deutschbrod], and the Hussite victory was so complete that the Emperor narrowly escaped falling into their hands. . . . A third Crusade

was arranged and Frederick of Brandenburg (the Hohenzollern) selected to command it, but the plan failed from lack of support. The dissensions among the Hussites became fiercer than ever; Ziska was at one time on the point of attacking Prague, but the leaders of the moderate party succeeded in coming to an understanding with him, and he entered the city in triumph. In October, 1424, while marching against Duke Albert of Austria, who had invaded Moravia, he fell a victim to the plague. Even after death he continued to terrify the German soldiers, who believed that his skin had been made into a drum, and still called the Hussites to battle. A majority of the Taborites elected a priest, called Procopius the Great, as their commander in Ziska's stead; the others who thenceforth styled themselves 'Orphans,' united under another priest, Procopius the Little. The approach of another Imperial army, in 1426, compelled them to forget their differences, and the result was a splendid victory over their enemies. Procopius the Great then invaded Austria and Silesia, which he laid waste without mercy. The Pope called a fourth Crusade, which met the same fate as the former ones: the united armies of the Archbishop of Treves, the Elector Frederick of Brandenburg and the Duke of Saxony, 200,000 strong, were utterly defeated, and fled in disorder, leaving an enormous quantity of stores and munitions of war in the hands of the Bohemians. Procopius, who was almost the equal of Ziska as a military leader, made several unsuccessful attempts to unite the Hussites in one religious body. In order to prevent their dissensions from becoming dangerous to the common cause, he kept the soldiers of all sects under his command, and undertook fierce invasions into Bavaria, Saxony and Brandenburg, which made the Hussite name a terror to all Germany. During these expeditions one hundred towns were destroyed, more than 1,500 villages burned, tens of thousands of the inhabitants slain, and such quantities of plunder collected that it was impossible to transport the whole of it to Bohemia. Frederick of Brandenburg and several other princes were compelled to pay heavy tributes to the Hussites: the Empire was thoroughly humiliated, the people weary of slaughter, yet the Pope refused even to call a Council for the discussion of the difficulty. . . . The German princes made a last and desperate effort: an army of 130,000 men, 40,000 of whom were cavalry, was brought together, under the command of Frederick of Brandenburg, while Albert of Austria was to support it by invading Bohemia from the south. Procopius and his dauntless Hussites met the Crusaders on the 14th of August, 1431, at a place called Thauss, and won another of their marvellous victories. The Imperial army was literally cut to pieces, 8,000 wagons, filled with provisions and munitions of war, and 150 cannons, were left upon the field. The Hussites marched northward to the Baltic, and eastward into Hungary, burning, slaying, and plundering as they went. Even the Pope now yielded, and the Hussites were invited to attend the Council at Basel, with the most solemn stipulations in regard to personal safety and a fair discussion of their demands. . . . In 1433, finally 300 Hussites, headed by Procopius, appeared in Basel. They demanded nothing more than the acceptance of

the four articles upon which they had united in 1420; but after seven weeks of talk, during which the Council agreed upon nothing and promised nothing, they marched away, after stating that any further negotiation must be carried on in Prague. This course compelled the Council to act; an embassy was appointed, which proceeded to Prague, and on the 30th of November, the same year, concluded a treaty with the Hussites. The four demands were granted, but each with a condition attached which gave the Church a chance to regain its lost power. For this reason, the Taborites and 'Orphans' refused to accept the compact; the moderate party united with the nobles and undertook to suppress the former by force. A fierce internal war followed, but it was of short duration. In 1434, the Taborites were defeated [at Lipan, May 30], their fortified mountain taken, Procopius the Great and the Little were both slain, and the members of the sect dispersed. The Bohemian Reformation was never again dangerous to the Church of Rome."—B. Taylor, *Hist. of Germany*, ch. 22.

A. D. 1434-1457.—Organization of the Utraquist National Church.—Minority of Ladislaus Posthumus.—Regency of George Podiebrad.—Origin of the Unitas Fratrum.—"The battle of Lipan was a turning point in the history of the Hussites. It put Bohemia and Moravia into the hands of the Utraquists, and enabled them to carry out their plans unhindered. The man who was foremost in shaping events and who became more and more prominent, until he exercised a commanding influence, was John of Rokycana. . . . At the diet of 1435 he was unanimously elected archbishop. . . . Meantime Sigismund endeavored to regain his kingdom. The Diet made demands which were stringent and humiliating; but he pledged himself to fulfill them, and on the 5th of July, 1436, at a meeting held with great pomp and solemnity, in the market-place of Iglau, was formally acknowledged as King of Bohemia. On the same occasion, the Compactata were anew ratified and the Bohemians readmitted to the fellowship of the mother church. But scarcely had Sigismund reached his capital when he began so serious a reaction in favor of Rome that Rokycana secretly left the city and retired to a castle near Pardubitz (1437). The king's treachery was, however, cut short by the hand of death, on the 9th of December, of the same year, at Znaim, while on his way to Hungary; and his successor and son-in-law, Albert of Austria, followed him to the grave in 1439, in the midst of a campaign against the Turks. Bohemia was left without a ruler, for Albert had no children except a posthumous son [Ladislaus Posthumus. —See HUNGARY: A. D. 1301-1442, and 1442-1458]. A time of anarchy began and various leagues arose, the most powerful of which stood under Baron Ptacek. . . . He . . . called an ecclesiastical convention at Kuttenberg (October 4th). This convention brought about far-reaching results. . . . Rokycana was acknowledged as Archbishop elect, the supreme direction of ecclesiastical affairs was committed into his hands,

the priests promised him obedience, and 24 doctrinal and constitutional articles were adopted which laid the foundation of the Utraquist Church as the National Church of Bohemia. But the Taborites stood aloof. . . . At last a disputation was agreed upon," as the result of which the Taborites were condemned by the Diet. "They lost all prestige; their towns, with the exception of Tabor, passed out of their hands; their membership was scattered and a large part of it joined the National Church. In the following summer Ptacek died and George Podiebrad succeeded him as the head of the league. Although a young man of only 24 years, he displayed the sagacity of an experienced statesman and was distinguished by the virtues of a patriot. In 1448 a bold stroke made him master of Prague and constituted him practically Regent of all Bohemia; four years later his regency was formally acknowledged. He was a warm friend of Rokycana, whose consecration he endeavored to bring about." When it was found that Rome could not be reconciled, there were thoughts of cutting loose altogether from the Roman Catholic and uniting with the Greek Church. "Negotiations were actually begun in 1452, but came to an abrupt close in the following year, in consequence of the fall of Constantinople. About the same time Ladislaus Posthumus, Albert's son, assumed the crown, Podiebrad remaining Regent. The latter continued the friend of Rokycana; the former, who was a Catholic, conceived a strong dislike to him. As soon as Rokycana had given up the hope of conciliating Rome, he began to preach, with great power and eloquence, against its corruptions." It was at this time that a movement arose among certain of his followers which resulted in the formation of the remarkable religious body which called itself *Unitas Fratrum*. The leading spirit in this movement was Rokycana's nephew, commonly called Gregory the Patriarch. The teaching and influence which shaped it was that of Peter Chelcicky. Gregory and his companions, wishing to dwell together, in the Christian unity of which they had formed an ideal in their minds, found a retreat at the secluded village of Kunwald, on the estate of George Podiebrad. "The name which they chose was 'Brethren of the Law of Christ'—*Fratres Legis Christi*"; inasmuch, however, as this name gave rise to the idea that they were a new order of Monks, they changed it simply into 'Brethren.' When the organization of their Church had been completed, they assumed the additional title of '*Jednota Bratska*,' or *Unitas Fratrum*, that is, the Unity of the Brethren, which has remained the official and significant appellation of the Church to the present day. . . . It was often abbreviated into 'The Unity.' Another name by which the Church called itself was 'The Bohemian Brethren.' It related to all the Brethren, whether they belonged to Bohemia, Moravia, Prussia or Poland. To call them The Bohemian-Moravian Brethren, or the Moravian Brethren, is historically incorrect. The name Moravian arose in the time of the Renewed Brethren's Church, because the men by whom it was renewed came from Moravia. . . . The organization of the *Unitas Fratrum* took place in the year 1457."—E. De Senweinitz, *Hist. of the Church known as Unitas Fratrum*, ch. 10-12.

A. D. 1458.—Election of George Podiebrad to the throne. See HUNGARY: A. D. 1442-1458.

A. D. 1458-1471.—Papal excommunication and deposition of the king, George Podiebrad.—A crusade.—War with the Emperor and Matthias of Hungary.—Death of Podiebrad and election of Ladislaus of Poland.—"George Podiebrad had scarcely ascended the throne before the Catholics, at the instigation of the pope, required him to fulfil his coronation oath, by expelling all heretics from the kingdom. He complied with their request, banished the Taborites, Picards, Adamites, and all other religious sects who did not profess the Catholic doctrines, and issued a decree that all his subjects should become members of the Catholic church, as communicants under one or both kinds. The Catholics, however, were not satisfied; considering the Calixtins as heretics, they entreated him to annul the compacts, or to obtain a new ratification of them from the new pope. To gratify their wishes he sent an embassy to Rome, requesting a confirmation of the compacts; but Pius, under the pretence that the compacts gave occasion to heresy, refused his ratification, and sent Fantino della Valle, as legate, to Prague, for the purpose of persuading the king to prohibit the administration of the communion under both kinds. In consequence of this legation the king called a diet, at which the legate and the bishops of Olmutz and Breslau were present. The ill success of the embassy to Rome having been announced, he said, 'I am astonished, and cannot divine the intentions of the pope. The compacts were the only means of terminating the dreadful commotions in Bohemia, and if they are annulled, the kingdom will again relapse into the former disorders. The council of Basle, which was composed of the most learned men in Europe, approved and granted them to the Bohemians, and pope Eugenius confirmed them. They contain no heresy, and are in all respects conformable to the doctrines of the holy church. I and my wife have followed them from our childhood, and I am determined to maintain them till my death.' . . . Fantino replying in a long and virulent invective, the king ordered him to quit the assembly, and imprisoned him in the castle of Podiebrad, allowing him no other sustenance except bread and water. The pope, irritated by this insult, annulled the compacts, in 1463, and fulminated a sentence of excommunication against the king, unless he appeared at Rome within a certain time to justify his conduct. This bull occasioned a great ferment among the Catholics; Podiebrad was induced to liberate the legate, and made an apology to the offended pontiff; while Frederic, grateful for the assistance which he had recently received from the king of Bohemia, when besieged by his brother Albert, interposed his mediation with the pope, and procured the suspension of the sentence of excommunication. Pius dying on the 14th of August, 1464, the new pope, Paul II., persecuted the king of Bohemia with increasing acrimony. He sent his legate to Breslau to excite commotions among the Catholics, endeavoured without effect to gain Casimir, king of Poland, by the offer of the Bohemian crown, and applied with the same ill success to the states of Germany. He at length overcame the gratitude of the emperor by threats and promises, and at the diet of Nuremberg in 1467, the proposal of his legate Fantino, to form a crusade against the

heretic king of Bohemia, was supported by the imperial ambassadors. Although this proposal was rejected by the diet, the pope published a sentence of deposition against Podiebrad, and his emissaries were allowed to preach the crusade throughout Germany, and in every part of the Austrian territories. The conduct of Frederic drew from the king of Bohemia, in 1468, a violent invective against his ingratitude, and a formal declaration of war; he followed this declaration by an irruption into Austria, spreading devastation as far as the Danube. Frederic in vain applied to the princes of the empire for assistance: and at length excited Matthias king of Hungary against his father-in-law, by offering to invest him with the kingdom of Bohemia. Matthias, forgetting his obligations to Podiebrad, to whom he owed his life and crown, was dazzled by the offer, and being assisted by bodies of German marauders, who had assumed the cross, invaded Bohemia. At the same time the intrigues of the pope exciting the Catholics to insurrection, the country again became a prey to the dreadful evils of a civil and religious war. The vigour and activity of George Podiebrad suppressed the internal commotions, and repelled the invasion of the Hungarians; an armistice was concluded, and the two kings, on the 4th of April, 1469, held an amicable conference at Sternberg, in Moravia, where they entered into a treaty of peace. But Matthias, influenced by the perfidious maxim, that no compact should be kept with heretics, was persuaded by the papal legate to resume hostilities. After overrunning Moravia and Silesia, he held a mock diet at Olmutz with some of the Catholic party, where he was chosen king of Bohemia, and solemnly crowned by the legate. . . . Podiebrad, in order to baffle the designs both of the emperor and Matthias, summoned a diet at Prague, and proposed to the states as his successor, Ladislaus, eldest son of Casimir, king of Poland, by Elizabeth, second daughter of the emperor Albert. The proposal was warmly approved by the nation, . . . as the Catholics were desirous of living under a prince of their own communion, and the Calixtines anxious to prevent the accession of Frederic or Matthias, both of whom were hostile to their doctrines. The states accordingly assented without hesitation, and Ladislaus was unanimously nominated successor to the throne. The indignation of Matthias was inflamed by his disappointment, and hostilities were continued with increasing fury. The two armies, conducted by their respective sovereigns, the ablest generals of the age, for some time kept each other in check; till at length both parties, wearied by the devastation of their respective countries, concluded a kind of armistice, on the 22nd of July, 1470, which put a period to hostilities. On the death of Podiebrad, in the ensuing year, Frederic again presenting himself as a candidate, was supported by still fewer adherents than on the former occasion; a more numerous party espoused the interests of Matthias; but the majority declaring for Ladislaus, he was re-elected, and proclaimed king. Frederic supported Ladislaus in preference to Matthias, and by fomenting the troubles in Hungary, as well as by his intrigues with the king of Poland, endeavoured not only to dispossess Matthias of the throne of Bohemia, but even to drive him from that of Hungary."—W.

A. D. 1516-1576.—Accession of the House of Austria.—The Reformation and its strength.—Alternating toleration and persecution.—In 1489 Vladislav "was elected to the throne of Hungary after the death of Mathias Corvinus. He died in 1516, and was succeeded on the throne of Bohemia and Hungary by his minor son, Louis, who perished in 1526 at the battle of Mohacz against the Turks [see HUNGARY: A. D. 1487-1526]. An equality of rights was maintained between the Hussites and the Roman Catholics during these two reigns. Louis left no children, and was succeeded on the throne of Hungary and Bohemia by Ferdinand of Austria [see, also, AUSTRIA: A. D. 1496-1526], brother of the Emperor Charles V., and married to the sister of Louis, a prince of a bigoted and despotic character. The doctrines of Luther had already found a speedy echo amongst the Calixtines under the preceding reign; and Protestantism gained so much ground under that of Ferdinand, that the Bohemians refused to take part in the war against the Protestant league of Smalkalden, and formed a union for the defence of the national and religious liberties, which were menaced by Ferdinand. The defeat of the Protestants at the battle of Muhlberg, in 1547, by Charles V., which laid prostrate their cause in Germany, produced a severe reaction in Bohemia. Several leaders of the union were executed, others imprisoned or banished; the property of many nobles was confiscated, the towns were heavily fined, deprived of several privileges, and subjected to new taxes. These measures were carried into execution with the assistance of German, Spanish, and Hungarian soldiers, and legalized by an assembly known under the name of the Bloody Diet. . . . The Jesuits were also introduced during that reign into Bohemia. The privileges of the Calixtine, or, as it was officially called, the Utraquist Church, were not abolished; and Ferdinand, who had succeeded to the imperial crown after the abdication of his brother Charles V., softened, during the latter years of his reign, his harsh and despotic character. . . . He died in 1564, sincerely regretting, it is said, the acts of oppression which he had committed against his Bohemian subjects. He was succeeded by his son, the Emperor Maximilian II., a man of noble character and tolerant disposition, which led to the belief that he himself inclined towards the doctrines of the Reformation. He died in 1576, leaving a name venerated by all parties. . . . Maximilian's son, the Emperor Rudolph, was educated at the court of his cousin, Philip II. of Spain, and could not be but adverse to Protestantism, which had, however, become too strong, not only in Bohemia, but also in Austria proper, to be easily suppressed; but several indirect means were adopted, in order gradually to effect this object."—V. Krasinski, *Lects. on the Religious Hist. of the Slavonic Nations*, lect. 2.

A. D. 1576-1604.—Persecution of Protestants by Rudolph. See HUNGARY: A. D. 1567-1604.

A. D. 1611-1618.—The Letter of Majesty, or Royal Charter, and Matthias's violation of it.—Ferdinand of Styria forced upon the nation as king by hereditary right.—The throwing of the Royal Counsellors from the window.—Beginning of the Thirty Years War.—In 1611, the Emperor Rodolph was forced to surrender the crown of Bohemia to his brother Matthias. The next year he died, and Matthias succeeded him as Emperor also. "The tranquillity which Rodolph II.'s Letter of Majesty [see GERMANY: A. D. 1608-1618] had established in Bohemia lasted for some time, under the administration of Matthias, till the nomination of a new heir to this kingdom in the person of Ferdinand of Gratz [Styria]. This prince, whom we shall afterwards become better acquainted with under the title of Ferdinand II., Emperor of Germany, had, by the violent extirpation of the Protestant religion within his hereditary dominions, announced himself as an inexorable zealot for popery, and was consequently looked upon by the Roman Catholic part of Bohemia as the future pillar of their church. The declining health of the Emperor brought on this hour rapidly; and, relying on so powerful a supporter, the Bohemian Papists began to treat the Protestants with little moderation. The Protestant vassals of Roman Catholic nobles, in particular, experienced the harshest treatment. At length several of the former were incautious enough to speak somewhat loudly of their hopes, and by threatening hints to awaken among the Protestants a suspicion of their future sovereign. But this mistrust would never have broken out into actual violence, had the Roman Catholics confined themselves to general expressions, and not by attacks on individuals furnished the discontent of the people with enterprising leaders. Henry Matthias, Count Thurn, not a native of Bohemia, but proprietor of some estates in that kingdom, had, by his zeal for the Protestant cause, and an enthusiastic attachment to his newly adopted country, gained the entire confidence of the Utraquists, which opened him the way to the most important posts. . . . Of a hot and impetuous disposition, which loved tumult because his talents shone in it—rash and thoughtless enough to undertake things which cold prudence and a calmer temper would not have ventured upon—unscrupulous enough, where the gratification of his passions was concerned, to sport with the fate of thousands, and at the same time politic enough to hold in leading-strings such a people as the Bohemians then were. He had already taken an active part in the troubles under Rodolph's administration; and the Letter of Majesty which the States had extorted from that Emperor, was chiefly to be laid to his merit. The court had intrusted to him, as burgrave or castellan of Calstein, the custody of the Bohemian crown, and of the national charter. But the nation had placed in his hands something far more important—itself—with the office of defender or protector of the faith. The aristocracy by which the Emperor was ruled, imprudently deprived him of this harmless guardianship of the dead, to leave him his full influence over the living. They took from him his office of burgrave, or constable of the castle, which had rendered him dependent on the court, thereby opening his eyes to the importance of the other which remained, and

wounded his vanity, which yet was the thing that made his ambition harmless. From this moment he was actuated solely by a desire of revenge; and the opportunity of gratifying it was not long wanting. In the Royal Letter which the Bohemians had extorted from Rodolph II., as well as in the German religious treaty, one material article remained undetermined. All the privileges granted by the latter to the Protestants, were conceived in favour of the Estates or governing bodies, not of the subjects; for only to those of ecclesiastical states had a toleration, and that precarious, been conceded. The Bohemian Letter of Majesty, in the same manner, spoke only of the Estates and the imperial towns, the magistrates of which had contrived to obtain equal privileges with the former. These alone were free to erect churches and schools, and openly to celebrate their Protestant worship: in all other towns, it was left entirely to the government to which they belonged, to determine the religion of the inhabitants. The Estates of the Empire had availed themselves of this privilege in its fullest extent; the secular indeed without opposition; while the ecclesiastical, in whose case the declaration of Ferdinand had limited this privilege, disputed, not without reason, the validity of that limitation. What was a disputed point in the religious treaty, was left still more doubtful in the Letter of Majesty. . . . In the little town of Klostergrab, subject to the Archbishop of Prague; and in Braunau, which belonged to the abbot of that monastery, churches were founded by the Protestants, and completed notwithstanding the opposition of their superiors, and the disapprobation of the Emperor. . . . By the Emperor's orders, the church at Klostergrab was pulled down; that at Braunau forcibly shut up, and the most turbulent of the citizens thrown into prison. A general commotion among the Protestants was the consequence of this measure; a loud outcry was everywhere raised at this violation of the Letter of Majesty; and Count Thurn, animated by revenge, and particularly called upon by his office of defender, showed himself not a little busy in inflaming the minds of the people. At his instigation deputies were summoned to Prague from every circle in the empire, to concert the necessary measures against the common danger. It was resolved to petition the Emperor to press for the liberation of the prisoners. The answer of the Emperor, already offensive to the states, from its being addressed, not to them, but to his viceroy, denounced their conduct as illegal and rebellious, justified what had been done at Klostergrab and Braunau as the result of an imperial mandate, and contained some passages that might be construed into threats. Count Thurn did not fail to augment the unfavourable impression which this imperial edict made upon the assembled Estates. . . . He held it . . . advisable first to direct their indignation against the Emperor's counsellors; and for that purpose circulated a report, that the imperial proclamation had been drawn up by the government at Prague and only signed in Vienna. Among the imperial delegates, the chief objects of the popular hatred, were the President of the Chamber, Slawata, and Baron Martinitz, who had been elected in place of Count Thurn, Burgrave of Calstein. . . . Against two characters so unpopular the public indignation was easily ex-

cited, and they were marked out for a sacrifice to the general indignation. On the 23rd of May, 1618, the deputies appeared armed, and in great numbers, at the royal palace, and forced their way into the hall where the Commissioners Sternberg, Martinitz, Lobkowitz, and Slawata were assembled. In a threatening tone they demanded to know from each of them, whether he had taken any part, or had consented to, the imperial proclamation. Sternberg received them with composure, Martinitz and Slawata with defiance. This decided their fate; Sternberg and Lobkowitz, less hated, and more feared, were led by the arm out of the room; Martinitz and Slawata were seized, dragged to a window, and precipitated from a height of 80 feet, into the castle trench. Their creature, the secretary Fabricius, was thrown after them. This singular mode of execution naturally excited the surprise of civilized nations. The Bohemians justified it as a national custom, and saw nothing remarkable in the whole affair, excepting that any one should have got up again safe and sound after such a fall. A dunghill, on which the imperial commissioners chanced to be deposited, had saved them from injury. [The incident of the flinging of the obnoxious ministers from the window is often referred to as 'the defenestration at Prague.'] . . . By this brutal act of self-redress, no room was left for irresolution or repentance, and it seemed as if a single crime could be absolved only by a series of violences. As the deed itself could not be undone, nothing was left but to disarm the hand of punishment. Thirty directors were appointed to organize a regular insurrection. They seized upon all the offices of state, and all the imperial revenues, took into their own service the royal functionaries and the soldiers, and summoned the whole Bohemian nation to avenge the common cause."—F. Schiller, *Hist. of the Thirty Years' War*, bk. 1, pp. 51-55.

A. D. 1621-1648.—The Reign of Terror.—Death, banishment, confiscation, dragoonades.—The country a desert.—Protestantism crushed, but not slain.—"In June, 1621, a fearful reign of terror began in Bohemia, with the execution of 27 of the most distinguished heretics. For years the unhappy people bled under it; thousands were banished, and yet Protestantism was not fully exterminated. The charter was cut into shreds by the Emperor himself; there could be no forbearance towards 'such acknowledged rebels.' As a matter of course, the Lutheran preaching was forbidden under the heaviest penalties; heretical works, Bibles especially, were taken away in heaps. Jesuit

colleges, churches, and schools came into power; but this was not all. A large number of distinguished Protestant families were deprived of their property, and, as if that were not enough, it was decreed that no non-Catholic could be a citizen, nor carry on a trade, enter into a marriage, nor make a will; any one who harboured a Protestant preacher forfeited his property; whoever permitted Protestant instruction to be given was to be fined, and whipped out of town; the Protestant poor who were not converted were to be driven out of the hospitals, and to be replaced by Catholic poor; he who gave free expression to his opinions about religion was to be executed. In 1624 an order was issued to all preachers and teachers to leave the country within eight days under pain of death; and finally, it was ordained that whoever had not become Catholic by Easter, 1626, must emigrate. . . . But the real conversions were few; thousands quietly remained true to the faith; other thousands wandered as beggars into foreign lands, more than 30,000 Bohemian families, and among them 500 belonging to the aristocracy, went into banishment. Exiled Bohemians were to be found in every country of Europe, and were not wanting in any of the armies that fought against Austria. Those who could not or would not emigrate, held to their faith in secret. Against them dragoonades were employed. Detachments of soldiers were sent into the various districts to torment the heretics till they were converted. The 'Converters' (Seligmacher) went thus throughout all Bohemia, plundering and murdering. . . . No succour reached the unfortunate people; but neither did the victors attain their end. Protestantism and the Hussite memories could not be slain, and only outward submission was extorted. . . . A respectable Protestant party exists to this day in Bohemia and Moravia. But a desert was created; the land was crushed for a generation. Before the war Bohemia had 4,000,000 inhabitants, and in 1648 there were but 700,000 or 800,000. These figures appear preposterous, but they are certified by Bohemian historians. In some parts of the country the population has not attained the standard of 1620 to this day."—L. Häusser, *The Period of the Reformation*, ch. 32.

BOIANS, OR BOII.—Some passages in the earlier history and movements of the powerful Gallic tribe known as the Boii will be found touched upon under ROME: B. C. 390-347, and B. C. 295-191, in accounts given of the destruction of Rome by the Gauls, and of the subsequent wars of the Romans with the Cisalpine Gauls. After the final conquest of the Boians in Gallia Cisalpina, early in the second century, B. C., the Romans seem to have expelled them, wholly or partly, from that country, forcing them to cross the Alps. They afterwards occupied a region embraced in modern Bavaria and Bohemia, both of which countries are thought to have derived their names from these Boian people. Some part of the nation, however, associated itself with the Helvetii and joined in the migration which Cæsar arrested. He settled these Boians in Gaul, within the Æduan territory, between the Loire and the Allier. Their capital city was Gergovia, which was also the name of a city of the Arverni. The Gergovia of the Boians is conjectured to have been modern Moulins. Their territory was the modern Bourbonnais, which probably derived its name from them. Three important names, therefore, in European geography and history, viz.—Bourbon, Bavaria and Bohemia, are traced to the Gallic nation of the Boii.—Tacitus, *Germany*, trans. by Church and Brodribb, notes.

BOKHARA (Ancient Transoxania).—“Taken literally, the name [Transoxania] is a translation of the Arabic *Mavera-un-nehr* (that which lies beyond or across the river), and it might therefore be supposed that Transoxania meant the country lying beyond or on the right shore of the Oxus. But this is not strictly speaking the case. . . . From the period of the Samanides down to modern times, the districts of Talkan, Tokharistan and Zem, although lying partly or entirely on the left bank of the Oxus, have been looked on as integral portions of Bokhara. Our historical researches seem to prove that this arrangement dates from the Samanides, who were themselves originally natives of that part of Khorassan. . . . It is almost impossible in dealing geographically with Transoxania to assign definitely an accurate frontier. We can and will therefore comprehend in our definition of Transoxania solely Bokhara, or the khanate of Bokhara; for although it has only been known by the latter name since the time of Sherbani and of the Ozbegs [A. D. 1500], the shores of the Zerefschan and the tract of country stretching southwards to the Oxus

and northwards to the desert of Kizil Kum, represent the only parts of the territory which have remained uninterruptedly portions of the original undivided state of Transoxania from the earliest historical times. . . . Bokhara, the capital from the time of the Samanides, and at the date of the very earliest geographical reports concerning Transoxania, is said, during its prosperity, to have been the largest city of the Islamite world. . . . Bokhara was not, however, merely a luxurious city, distinguished by great natural advantages; it was also the principal emporium for the trade between China and Western Asia; in addition to the vast warehouses for silks, brocades, and cotton stuffs, for the finest carpets, and all kinds of gold and silversmiths' work, it boasted of a great money-market, being in fact the Exchange of all the population of Eastern and Western Asia. . . . Sogd . . . comprised the mountainous part of Transoxania (which may be described as the extreme western spurs of the Thien-Shan). . . . The capital was Samarkand, undoubtedly the Maracanda of the Greeks, which they specify as the capital of Sogdia. The city has, throughout the history of Transoxania been the rival of Bokhara. Before the time of the Samanides, Samarkand was the largest city beyond the Oxus, and only began to decline from its former importance when Ismail chose Bokhara for his own residence. Under the Khahrezmians it is said to have raised itself again, and become much larger than its rival, and under Timour to have reached the culminating point of its prosperity.”—A. Vambery, *Hist. of Bokhara*, introd.

A. D. 1219.—Destruction of the city by Jingis Khan.—Bokhara was taken by Jingis Khan in the summer of 1219. “It was then a very large and magnificent city. Its name, according to the historian Alai-ud-din, is derived from Bokhar, which in the Magian language means the Centre of Science.” The city surrendered after a siege of a few days. Jingis Khan, on entering the town, saw the great mosque and asked if it was the Sultan's palace. “Being told it was the house of God, he dismounted, climbed the steps, and said in a loud voice to his followers, ‘The hay is cut, give your horses fodder.’ They easily understood this cynical invitation to plunder. . . . The inhabitants were ordered to leave the town in a body, with only their clothes, so that it might be more easily pillaged, after which the spoil was divided among the victors. ‘It was a fearful day,’ says Ibn al Ithir; ‘one only heard the sobs and weeping of men, women and children, who were separated forever; women were ravished, while men died rather than survive the dishonour of

their wives and daughters.' The Mongols ended by setting fire to all the wooden portion of the town, and only the great mosque and certain palaces which were built of brick remained standing."—H. H. Howorth, *Hist. of the Mongols*, v. 1, ch. 3.—"The flourishing city on the Zerfshan had become a heap of rubbish, but the garrison in the citadel, commanded by Kok Khan, continued to hold out with a bravery which deserves our admiration. The Mongols used every imaginable effort to reduce this last refuge of the enemy; the Bokhariots themselves were forced on to the scaling-ladders; but all in vain, and it was not until the moat had been literally choked with corpses of men and animals that the stronghold was taken and its brave defenders put to death. The peaceable portion of the population was also made to suffer for this heroic resistance. More than 30,000 men were executed, and the remainder were, with the exception of the very old people among them, reduced to slavery, without any distinction of rank whatever; and thus the inhabitants of Bokhara, lately so celebrated for their learning, their love of art, and their general refinement, were brought down to a dead level of misery and degradation and scattered to all quarters."—A. BOLIVIA: The aboriginal inhabitants.—"With the Toromonos tribe, who occupied, as Orbigny tells us, a district of from 11° to 13° of South latitude, it was an established rule for every man to build his house, with his own hands alone, and if he did otherwise he lost the title of man, as well as became the laughing-stock of his fellow citizens. The only clothing worn by these people was a turban on the head, composed of feathers, the rest of the body being perfectly naked; whilst the women used a garment, manufactured out of cotton, that only partially covered their persons. . . . The ornament in which the soft sex took most pride was a necklace made of the teeth of enemies, killed by their husbands in battle. Amongst the Moxos polygamy was tolerated, and woman's infidelity severely punished. . . . The Moxos cultivated the land with ploughs, and other implements of agriculture, made of wood. They fabricated canoes, fought and fished with bows and arrows. In the province of the Moxos lived also a tribe called Itonomos, who, besides these last named instruments of war, used two-edged wooden scimitars. The immorality of these Itonomos

was something like that of the Mormons of our time. . . . The Canichanas, who lived near Machupo, between 13° and 14° S. lat. and 67° to 68° W. long., are reputed by M. d'Orbigny as the bravest of the Bolivian Indians. They are accredited to have been cannibals. . . . Where Jujuy—the most northern province of the Argentine Republic—joins Bolivia, we have in the present day the Mataguaya and Cambas Indians. The latter are represented to me by Dr. Matienzo, of Rosario, as intelligent and devoted to agricultural labor. They have fixed tolderías [villages], the houses of which are clean and neat. Each town is commanded by a capitan, whose sovereignty is hereditary to his male descendants only."—T. J. Hutchinson, *The Parana*, ch. 4.—See, also, AMERICAN ABORIGINES: ANDESANS, and TUPÍ.

A. D. 1825-1826.—The independent Republic founded and named in Upper Peru.—The Bolivian Constitution.—"Upper Peru [or Las Charcas, as it was more specifically known] . . . had been detached [in 1776—see ARGENTINE REPUBLIC: A. D. 1580-1777] from the government of Lima . . . to form part of the newly constituted Viceroyalty of Buenos Ayres. The fifteen years' struggle for independence was here a sanguinary one indeed. There is scarcely a town, village, or noticeable place in this vast region where blood is not recorded to have been shed in this terrible struggle. . . . The Spanish army afterwards succumbed to that of the independents of Peru; and thus Upper Peru gained, not indeed liberty, but independence under the rule of a republican army. This vast province was incapable of governing itself. The Argentines laid claim to it as a province of the confederation; but they already exercised too great a preponderance in the South American system, and the Colombian generals obtained the relinquishment of these pretensions. Sucre [Bolívar's Chief of Staff] assumed the government until a congress could be assembled; and under the influence of the Colombian soldiery Upper Peru was erected into an independent state by the name of the Republic of Bolívar, or Bolivia."—E. 11th Century.—School of Law.—The Glossators.—"Just at this time [end of the 11th century] we find a famous school of law established in Bologna, and frequented by multitudes of pupils, not only from all parts of Italy, but from Germany, France, and other countries. The basis of all its instructions was the *Corpus Juris Civilis*. Its teachers, who constitute a series of distinguished jurists extending over a century and a half, devoted themselves to the work of expounding the text and elucidating the principles of the *Corpus Juris*, and especially the Digest. From the form in which they recorded and handed down the results of their studies, they have obtained the name of glossators. On their copies of the *Corpus Juris* they were accustomed to write glosses, i. e., brief marginal explanations and remarks."—J. Hadley, *Introduct. to Roman Law*, vol. 2. BONAPARTE FAMILY, The origin of the.—"About four miles to the south of Florence, on an eminence overlooking the valley of the little river Greve, and the then bridle-path leading towards Siena and Rome, there was a very strong castle, called Monte Boni, Mons Boni, as it is styled in sundry deeds of gift executed within its walls in the years 1041, 1085, and 1100, by which its lords made their peace with the Church, in the usual way, by sharing with churchmen the proceeds of a course of life such as needed a whitewashing stroke of the Church's office. A strong castle on the road to Rome, and just at a point where the path ascended a steep hill, offered

advantages and temptations not to be resisted; and the lords of Monte Boni 'took toll' of passengers. But, as Villani very naïvely says, 'the Florentines could not endure that another should do what they abstained from doing.' So as usual they sallied forth from their gates one fine morning, attacked the strong fortress, and razed it to the ground. All this was, as we have seen, an ordinary occurrence enough in the history of young Florence. This was a way the burghers had. They were clearing their land of these vestiges of feudalism, much as an American settler clears his ground of the stumps remaining from the primeval forest. But a special interest will be admitted to belong to this instance of the clearing process, when we discover who those noble old freebooters of Monte Boni were. The lords of Monte Boni were called, by an easy, but it might be fancied ironical, derivation from the name of their castle 'Buoni del Monte,'—the Good Men of the Mountain;—and by abbreviation, Buondelmonte, a name which we shall hear more of anon in the pages of this history. But when, after the destruction of their fortress, these Good Men of the Mountain became Florentine citizens, they increased and multiplied; and in the next generation, dividing off into two branches, they assumed, as was the frequent practice, two distinctive appellations; the one branch remaining Buondelmonti, and the other calling themselves Buonaparte. This latter branch shortly afterwards again divided itself into two, of which one settled at San Miniato al Tedesco, and became extinct there in the person of an aged canon of the name within this century; while the other first established itself at Sarzana, a little town on the coast about half-way between Florence and Genoa, and from thence at a later period transplanted itself to Corsica; and has since been heard of."—T. A. D. 1652-1653.—The last phase of the Fronde.—Rebellion of the Society of the Ormée.—Cromwell's help invoked.—Siege and submission of the city.—"The peace of Bordeaux in October, 1650, had left the city tranquil, but not intimidated, and its citizens were neither attached to the government nor afraid of it. . . . There, as at Paris, a violent element obtained control, ready for disturbance, and not alarmed by the possibility of radical changes in the government. . . . During the popular emotion against Épernon, meetings, mostly of the lower classes, had been held under some great elms near the city, and from this circumstance a party had taken the name of the Ormée. It now assumed a more definite form, and began to protest against the slackness of the officers and magistrates, who it was charged, were ready to abandon the popular cause. The Parliament was itself divided into two factions," known as the Little Fronde and the Great Fronde—the latter of which was devoted to the Prince of Condé. "The Ormée was a society composed originally of a small number of active and violent men, and in its organization not wholly unlike the society of the Jacobins. . . . Troubles increased between this society and the parliament, and on June 3d [1652] it held a meeting attended by 3,000 armed men, and decided on the exile of fourteen of the judges who were regarded as traitors to the cause. . . . The offending judges were obliged to leave the city, but in a few days the Parliament again obtained control, and the exiles were recalled and received with great solemnity. But the Ormée was not thus to be overcome. On June 25th these contests resulted in a battle in the streets, in which the society had the advantage. Many of the judges abandoned the conflict and left the city. The Ormée established itself at the Hotel de Ville, and succeeded in controlling for the most part the affairs of the city. . . . Condé decided that he would recognize the Ormée as a political organization, and strengthen it by his approval. . . . The restoration of the King's authority at Paris [see FRANCE: A. D. 1651-1653] strengthened the party at Bordeaux that desired peace, and increased the violence of the party that was opposed to it. Plots were laid for the over-

throw of the local authorities, but they were wholly unsuccessful. . . . The desire of the people, the nobility, and the clergy was for peace. Only by speedy aid from Spain could the city be kept in hostility to its King and in allegiance to Condé. Spain was asked to send assistance and prevent this important loss, but the Spanish delayed any vigorous action, partly from remissness and partly from lack of troops and money. The most of the province of Guienne was gradually lost to the insurgents. . . . Condé seems to have left Guienne to itself. . . . In this condition, the people of Bordeaux turned to Cromwell as the only person who had the power to help them. . . . The envoys were received by Cromwell, but he took no steps to send aid to Bordeaux. Hopes were held out which encouraged the city and alarmed the French minister, but no ships were sent." Meantime, the King's forces in Guienne advanced with steady success, and early in the summer of 1653 they began the siege of the city. The peace party within, thus encouraged, soon overthrew the Ormée, and arranged terms for the submission of the town. "The government proceeded at once to erect the castles of Trompette and Hô, and they were made powerful enough to check any future turbulence."—J. B. Perkins, *France under Mazarin*, ch. 15 (p. 2).

BORNEO.—"The formerly powerful kingdom of Brunei gives its name in a somewhat modified form to the great island of which it occupies the north-west coast. . . . Excluding the continental and polar regions, this island is . . . exceeded in size by New Guinea alone. . . . With the adjacent islets . . . it has a total area of nearly 300,000 square miles, or about two and a half times that of the British Isles. . . . "Java, seven or eight times smaller, exceeds it ten or twelve times in the number of its inhabitants; even the thinly peopled island of Sumatra is more than twice as populous. . . . This relative and absolute disproportion must be attributed to the zone of swampy and malarious forests which encircles nearly the whole of the coastlands. . . . Head-hunting is the only object with which many tribes approach their neighbors. . . . Sighted by the Portuguese probably in the first years of the sixteenth century, Borneo remained unknown to history till 1521, when the survivors of Magellan's expedition round the globe presented themselves before Brunei. Soon after this event, Jorge de Menezes established a factory on the west coast; the Dutch made their
